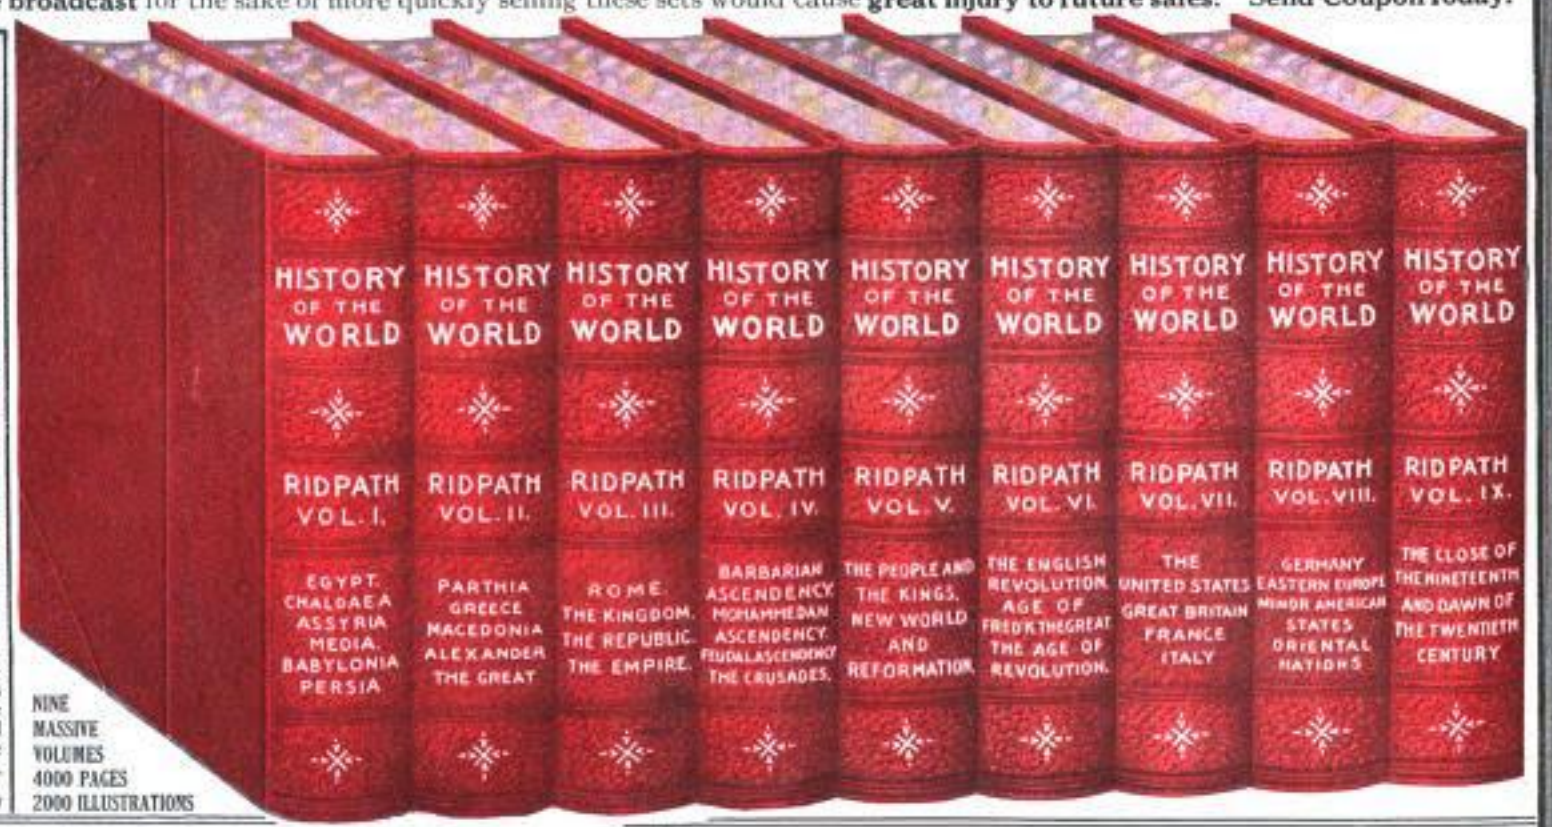
ADVANCE OF THE GRAND ARMY

NAPOLEON'S name fills more pages in the world's solemn history than that of any other mortal. The advance of his Grand Army into Russia is the turning point in his career and marks the beginning of his downfall. The picture shown herewith from Ridpath's History, the original of which was displayed at the World's Fair at Chicago, marks but one event out of thousands which are fully described and illustrated in the world-famed publication,

Ridpath's History of the World

THE PUBLISHER'S FAILURE placed in our hands the entire unsold edition of this monumental work for immediate sale. The sets are BRAND NEW, brought right down to date, beautifully bound in Half-Morocco. Hundreds have already availed themselves of this remarkable opportunity to secure the greatest History of the World ever written. We have only a few sets remaining. We offer these sets to THE SATURDAY EVENING POST READERS



At LESS than even damaged sets were ever sold

We will **name our price** and easy terms only in **direct letters** to those **sending the Coupon** below. **Tear off the Coupon,** write **name** and **address** plainly and **mail now before you forget it.** Dr. Ridpath is dead, his work is done, but his widow derives her income from his History, and **to print our price broadcast** for the sake of more quickly selling these sets would cause **great injury to future sales. Send Coupon Today.**

FREE

We will mail free a beautiful 46-page booklet of sample pages from Ridpath's History to every SATURDAY EVENING POST reader interested in our offer who **mails** us the **coupon** below. It contains Dr. Ridpath's Race Chart in colors, tracing all races of mankind back to the parent stock; the best map of the Panama Canal ever printed, two beautiful duotone reproductions of great paintings showing "Napoleon Before the Sphinx in Egypt" and "Queen Elizabeth Signing the Execution Warrant of Mary Stuart," together with portraits of Socrates, Cæsar, Napoleon, Shakespeare and other great characters in history. These specimen pages will give some idea of the wonderfully beautiful style in which the work is written.

Please mail without cost to me, your 46 page sample booklet of **Ridpath's History of the World**, containing photogravures of Napoleon and Queen Elizabeth, engravings of Socrates, Cæsar and Shakespeare, map of China and Japan, diagram of Panama Canal, and state me full particulars of your special offer to **The Saturday Evening Post** readers.

Name _____

Address _____

RIDPATH'S enviable position as an historian is due to his wonderfully beautiful style, a style no other historian has ever equalled. He pictures the great historical events as though they were happening before your eyes; he carries you with him to see the battles of old; to meet kings and queens and warriors; to sit in the Roman Senate; to march against Saladin and his dark-skinned followers; to sail the southern seas with Drake; to circumnavigate the globe with Magellan; to watch that thin line of Greek spearmen work havoc with the Persian hordes on the field of Marathon; to know the Past as you know the Present.

RIDPATH in your home means you need never spend a lonely evening. You can associate with the world's heroes; you can cross the Rubicon with **Cæsar,** after which Rome was free no more. You can sit at the feet of **Socrates,** the loftiest genius of the ancient world. It is enobling to commune with these children of destiny. To be associated with great men and events is to be great one's self, and you will add to your store of knowledge, which is power, and to the richness of your life.

RIDPATH takes you back to the dawn of history, long before the pyramids of Egypt were built; down through the romantic, troubled times of Chaldea's grandeur and Assyria's magnificence; of Babylonia's wealth and luxury; of Grecian and Roman splendor; of Mohammedan culture and refinement; of French elegance and British power; of American patriotism and religious freedom, to the dawn of yesterday. He covers **every race, every nation, every time,** and holds you spellbound by his wonderful eloquence. Nothing more interesting, absorbing and inspiring was ever written.

RIDPATH throws the mantle of personality over the old heroes of history. Alexander is there; patriot, warrior, statesman, diplomat, crowning the glory of Grecian history. Xerxes, from his mountain platform, sees Themistocles with three hundred and fifty Greek ships smash his Persian fleet of over a thousand sail, and help to mold the language in which this paragraph is written. Rome perches Nero upon the greatest throne on earth, and so sets up a poor madman's name to stand for countless centuries as the synonym of savage cruelty; Napoleon fights Waterloo again under your very eyes, and reels before the iron fact that at last the end of his gilded dream has come. Bismarck is there, gruff, overbearing, a giant pugilist in the diplomatic ring, laughing with grim disdain at France, which says "You shall not." Washington is there, "four-square to all the winds," grave, thoughtful, proof against the wiles of British strategy and the poisoned darts of false friends; clear-seeing over the heads of his fellow-countrymen, and on into another century, the most colossal world figure of his time.

Time Dragged So Slowly in That Great Bare Room

MR. WEATHERLEY, sole proprietor of the firm of Samuel Weatherley & Co., wholesale provision merchants of Tooley Street, London, paused suddenly on his way from his private office to the street. There was something which until that second had entirely slipped his memory. It was not his umbrella, for that, neatly tucked up, was already under his arm. Nor was it his newspaper, for that, together with the supplement, was sticking out of his overcoat pocket, the shape of which it completely ruined. As a matter of fact it was more important than either of these—it was a commission from his wife.

Very slowly he retraced his steps until he stood outside the glass-inclosed cage where twelve of the hardest worked clerks in London bent over their ledgers and invoices. With his forefinger—a fat, pudgy forefinger—he tapped upon a pane of glass. An anxious errand boy bolted through the doorway.

"Tell Mr. Jarvis to step this way," his employer ordered.

Mr. Jarvis heard the message and came hurrying out. He was an undersized man, with somewhat prominent eyes concealed by gold-rimmed spectacles. He was possessed of extraordinary talents with regard to the details of the business. He was withal an expert and careful financier. Hence his hold upon the confidence of his employer.

The latter addressed him with a curious and altogether unusual hesitation in his manner.

"Mr. Jarvis," he began, "there is a matter—a little matter—upon which I—er—wish to consult you."

"Those American invoices ——"

"Nothing to do with business at all," Mr. Weatherley interrupted ruthlessly. "A little private matter."

"Indeed, sir?" Mr. Jarvis interjected.

"The fact is," Mr. Weatherley blundered on with considerable awkwardness, for he hated the whole affair, "my wife—Mrs. Weatherley, you know—is giving a party this evening—having some friends to dinner first, and then some other people coming to bridge. We are a man short for dinner. Mrs. Weatherley told me to get some one at the club—telephoned down here just an hour ago." Mr. Weatherley paused. Mr. Jarvis did his best to grasp the situation, but failed. All that he could do was to maintain his attitude of intelligent interest.

"I don't know any one at the club," his employer continued irritably. "I feel like a fish out of water there, and that's the truth, Mr. Jarvis. It's a good club. I got elected there—well, never mind how—but it's one thing to be a member of a club and quite another to get to know the men there. You understand that, Mr. Jarvis."

Mr. Jarvis, however, did not understand it. He could conceive of no spot in the city of London or its immediate neighborhood where Mr. Samuel Weatherley, head of the firm of Samuel Weatherley & Co., could find himself among his social superiors. He knew the capital of the firm and its status. He was ignorant of the other things that counted—as ignorant as his master had been until a year ago he had paid a business visit in search of certain edibles to an island in the Mediterranean Sea. He was to have returned in triumph to Tooley Street and launched upon the provision-buying world a new cheese of astounding flavor—instead of which he brought home a wife.

"Anything I can do, sir?" Mr. Jarvis began a little vaguely.

"My idea was," Mr. Weatherley proceeded, "that one of my own young men—there are twelve of them in there, ain't there?" he added, jerking his head in the direction of the office—"might do. What do you think?"

Mr. Jarvis nodded thoughtfully.

"It would be a great honor, sir," he declared, "a very great honor indeed."

Mr. Weatherley did not contradict him. As a matter of fact, he was of the same opinion.

"The question is which," he continued.

Mr. Jarvis began to understand why he had been consulted. His fingers involuntarily straightened his tie.

"If I could be of any use personally, sir ——"

His employer shook his head.

"My wife would expect me to bring a single man, Jarvis," he said; "and, besides, I don't suppose you play bridge."

"Cards are not much in my line," Mr. Jarvis admitted, "not having, as a rule, the time to spare; but I can take a hand at loo if desired."

"My wife's friends all play bridge," Mr. Weatherley declared a little brusquely. "There's only one young man in the office, Jarvis, who from his appearance struck me as being likely."

"Mr. Stephen Tidey, of course, sir," the confidential clerk agreed. "Most suitable thing, sir, and I'm sure his father would accept it as a high compliment. Mr. Stephen Tidey, Senior, sir, as you may be aware, is next on the list for the shrievalty. Shall I call him out, sir?"

Mr. Weatherley looked through the glass and met the glance, instantly lowered, of the young man in question. Mr. Stephen Tidey, Junior, was short and stout, reflecting in his physique his aldermanic father. His complexion was poor, however, and his neck thick, and he wore a necktie of red silk drawn through a diamond ring. There was nothing in his appearance that grated particularly upon Mr. Weatherley's sense of seemliness; but he shook his head. He was beginning to recognize his wife's point of view even though it still seemed strange.

"I wasn't thinking of young Tidey at all," he declared bluntly; "I was thinking of that young fellow at the end of the desk there—chap with a queer name—Chetwode I think you call him."

Mr. Jarvis, human automaton though he was, permitted himself an exclamation of surprise.

"Young Chetwode! Surely you're not in earnest, sir!"

"Why not?" Mr. Weatherley demanded. "There's nothing against him, is there?"

"Nothing against him precisely," Mr. Jarvis confessed, "but he's at the lowest desk in the office, bar Smithers. His salary is only twenty-eight shillings a week, and we know nothing whatever about him except that his references were satisfactory. It isn't to be supposed that he would feel at home in your house, sir. But with Mr. Tidey, sir, it's quite different. They live in a very beautiful house at Sydenham now—quite a small palace in its way, I've been told."

Mr. Weatherley was getting a little impatient.

"Send Chetwode out for a moment anyway," he directed. "I'll speak to him here."

Mr. Jarvis obeyed in silence. He entered the office and touched the young man in question upon the shoulder.

"Mr. Weatherley wishes to speak to you outside, Chetwode," he announced. "Make haste, please."

Arnold Chetwode put down his pen and rose to his feet. There was nothing flurried about his manner, nothing whatever to indicate on his part any knowledge of the fact that this was the voice of Fate beating upon his ear. He did not even show the ordinary interest of a youthful employee summoned for the first time to an audience with his chief. Standing for a moment by the side of the senior clerk in the middle of the office, tall and straight, with deep brown hair, excellent features and the remnants of a healthy tan still visible on his forehead and neck, he looked curiously out of place in this

Digitized by Google

unwholesome, gaslit building with its atmosphere of cheese and bacon. He would have been noticeably good-looking upon the cricket field or among any gathering of people belonging to the other side of life. Here he seemed almost a curiously incongruous figure. He passed through the glass-paned door and stood respectfully before his employer. Mr. Weatherley—it was absurd, but he scarcely knew how to make his suggestion—fidgeted for a moment and coughed. The young man, who among many other quite unusual qualities was possessed of a considerable amount of tact, looked down upon his employer with a little well-assumed anxiety. As a matter of fact, he really was exceedingly anxious not to lose his place.

"I understood from Mr. Jarvis that you wished to speak to me, sir," he remarked. "I hope that my work has given satisfaction. I know that I am quite inexperienced, but I don't think that I have made any mistakes."

Mr. Weatherley was, to tell the truth, thankful for the opening.

"I have had no complaints, Chetwode," he admitted, struggling for that note of condescension that he felt to be in order—"no complaints at all. I was wondering if you—you happened to play bridge?"

Once more this extraordinary young man showed himself to be possessed of gifts quite unusual at his age. Not by the flicker of an eyelid did he show the least surprise or amusement.

"Bridge, sir," he repeated. "Yes, I have played at—I have played occasionally."

"My wife is giving a small dinner party this evening," Mr. Weatherley continued, moving his umbrella from one hand to the other and speaking very rapidly—"bridge afterward. We happen to be a man short. I was to have called at the club to try and pick up some one—find I shan't have time—meeting at the Cannon Street Hotel to attend. Would you—er—fill the vacant place? Save me the trouble of looking about." It was out at last and Mr. Weatherley felt unaccountably relieved. He felt at the same time a certain measure of annoyance with his junior clerk for his unaltered composure.

"I shall be very pleased, sir," he answered without hesitation. "About eight, I suppose?"

Again Mr. Weatherley's relief was tempered with a certain amount of annoyance. This young man's *savoir faire* was out of place. He should have imagined a sort of high-tea supper at seven o'clock, and been gently corrected by his courteous employer. As it was, Mr. Weatherley felt dimly confident that this junior clerk of his was decidedly more accustomed to eight o'clock dinners than he was himself.

"A quarter to tonight," he replied. "People coming for bridge afterward, you see. I live up Hampstead way—Pelham Lodge—quite close to the tube station."

Mr. Weatherley omitted the directions he had been about to give respecting toilet and turned away. His youthful employee's manners to the last were all that could be desired.

"I am much obliged to you, sir," he said. "I shall take care to be punctual."

Mr. Weatherley grunted and walked out into the street. Here his behavior was a little singular. He walked up toward London Bridge, exchanging greetings with a good many acquaintances on the way. Opposite the London and Westminster Bank he paused for a moment and looked searchingly around. Satisfied that he was unobserved, he stepped quickly into a very handsome motor car that was drawn up close to the curb. With a sigh of relief he sat as far back among the cushions as possible and held the tube to his mouth.

"Get along home," he ordered tersely.

Arnold Chetwode, after his interview with his employer, returned unruffled to his place. Mr. Jarvis bustled in after him. He was annoyed, but he wished to conceal the fact. Besides he still had an arrow in his quiver. He came and stood over his subordinate.

"Congratulate you, I'm sure, Chetwode," he said smoothly. "First time any one except myself has been to the house since Mr. Weatherley's marriage."

Mr. Jarvis had taken the letters there one morning when his employer had been unwell, and had waited in the hall. He did not, however, mention that fact.

"Indeed?" Chetwode murmured with his eye upon his work.

"You understand, of course," Mr. Jarvis continued, "that it will be an evening dress affair. Mrs. Weatherley has the name of being very particular."

He glanced covertly at the young man, who was already immersed in his work.

There Was Something Which Until That Second Had Entirely Slipped His Memory

"Evening dress," Chetwode remarked with a becoming show of interest. "Well, I dare say I can manage something. If I wear a black coat and a white silk bow, and stick a red handkerchief in underneath my waistcoat, I dare say I shall be all right. Mr. Weatherley can't expect much from me in that way, can he?"

The senior clerk was secretly delighted. It was not for him to acquaint this young countryman with the necessities of London life. He turned away and took up a bundle of letters.

"Can't say, I'm sure, what the governor expects," the senior clerk replied falsely. "You'll have to do the best you can, I suppose. Better get on with those invoices now."

Once more the office resounded to the hum of its varied labors. Mr. Jarvis, dictating letters to a typist, smiled occasionally as he pictured the arrival of this over-favored young man in the drawing room of Mrs. Weatherley attired in the nondescript fashion that his words had suggested. One or two of the clerks ventured upon a chaffing remark. To all appearance the person most absorbed in his work was the young man who had been singled out for such special favor.

II

IN THE topmost chamber of the last of a row of gray-stone, somber houses in Adam Street a girl with a thin but beautiful face and expectant eyes sat close to the bare, uncurtained window from which it was possible to command a view of the street below. A book that she had apparently been reading had fallen neglected on to the floor. Steadfastly she watched the passersby. Her delicate, expressive features were more than once illuminated with joy, only to be clouded a moment later with disappointment. The color came and went in her cheeks, as though indeed she were more sensitive than her years. Occasionally she glanced around at the clock. Time dragged so slowly in that great bare room with its obvious touch of poverty!

At last a tall figure came striding along the pavement below. This time no mistake was possible. There was a fluttering handkerchief from above, an answering wave of the hand. The girl drew a sigh of inexpressible content. She moved away from the window and faced the door. With lifted head she waited for the sound of footsteps upon the stairs. They arrived at last. The door was thrown open. Arnold Chetwode came hastily across the room and gripped the two hands that were held out to him. Then he bent down and kissed her forehead.

"Dear little Ruth!" he exclaimed. "I hope you were careful crossing the landing."

The girl leaned back in her chair. Her eyes were fixed anxiously upon his face. She completely ignored his question.

"The news at once!" she insisted. "Tell it me, Arnold."

He was a little taken aback.

"How did you know that I had any?" he asked.

She smiled delightedly.

"Know, indeed! I knew it directly I saw you. I knew it every time your foot touched the stairs. What is it, Arnold? The cheese didn't smell so bad today? Or you've had a raise? Quick! I must hear all about it."

Chetwode was already on his knees, dragging out an old trunk from underneath the faded cupboard.

"I am going to dine with old Weatherley," he announced.

The girl smiled a little wistfully.

"How funny! But you will get a good dinner, won't you, Arnold? Eat ever so much, dear. Yesterday I fancied that you were getting thin. I do wish I could see what you have in the middle of the day."

"Little mother!" he laughed. "Today I gorged myself on poached eggs. What did Isaac give you?"

"Mutton stew and heaps of it," the girl replied quickly. "Tonight I shall have a bowl of milk as soon as you are gone. Have you everything you ought to have to wear, Arnie?"

"Everything," he declared, rising to his feet with a sigh of relief. "It's so long since I looked at my clothes that to tell you the truth I was a little anxious. They may be old-fashioned, but they came from a good man to start with."

"What made Mr. Weatherley ask you?" she demanded.

"Wanted one of his clerks to fill up and found that I played bridge," Arnold answered. "It's rather a bore, isn't it, but after all he is my employer."

"Of course, dear, you must go and behave your very nicest," she replied. "Tell me, when have you to start?"

"I ought to be dressing in a quarter of an hour," he said. "What shall we do till then?"

"Whatever you like," she murmured.

"I am coming to sit at the window with you," he said. "We'll look down at the river and you shall tell me stories about the ships."

She laughed and took his hand as he dragged a chair over to her side. He put his arm around her and her head fell naturally back upon his shoulder. Her eyes sought his. He was leaning forward, gazing down between the curving line of lampposts, across the belt of black river with its flecks of yellow light. But Ruth watched him only.

"Don't think that I am foolish, dear," she begged. "Tonight I cannot look upon the river at all. I feel that there is something new here—here in this room. Don't you feel it? Can't you feel that you are going to a tragedy? Life is going to be different, Arnold, to be different always."

He drew himself up. A flicker of passion flamed in his own deep gray eyes.

"Different, child? Of course it's going to be different. If there weren't something else in front do you think one could live? Do you think one could be content to struggle through this miserable quagmire if one didn't believe that there was something else on the other side of the hill? Some day I'll take you over to Berlin or Vienna or one of those wonderful places. We'll leave Isaac to grub along and sow red fire in Hyde Park. We'll find the doctors. We shall teach you to walk again without that stick. No more gloominess, please."

She pressed his hand tightly. "Dear Arnold," she whispered softly, "I can't look out of the room tonight! The fancies won't come. Promise me one thing."

"I promise," he agreed.

"Tell me everything—don't keep anything back."

"On my honor," he declared, smiling. "I will bring the menu of the dinner if there is one, and a photograph of Mrs. Cheesemonger if I can steal it. Now I am going to help you back into your room."

"Don't bother," she begged. "Open the door and I can get there quite easily."

He set the door open and, crossing the bare stone landing, opened the door of another room similar to his. They were somber apartments at the top of the deserted house that had once been a nobleman's residence. The doors were still heavy, though blistered with time and lack of varnish. There were the remains of paneling upon the walls and frescoes upon the ceiling.

"Come and see me before you go," she pleaded; "I am all alone. Isaac has gone to a meeting somewhere."

He promised and returned to his own apartment. With the help of a candle that he stuck upon the mantelpiece

Digitized by Google

and a cracked mirror he first of all shaved, then disappeared for a few minutes behind a piece of faded curtain and washed vigorously. Afterward he changed his clothes, putting on a dress-suit produced from the trunk. When he had finished he stepped back and laughed softly to himself.

His clothes were well cut. His studs, which had very many times been on the point of visiting the pawnbroker's, were correct and good. He was indeed an incongruous figure as he stood there and, with a candle carefully held away from him in his hand, looked at his own reflection. For some reason or other he was feeling elated. Ruth's words had lingered in his brain. One could never tell which way new experiences might come!

He found her waiting in the darkness. Her long arms were wound for a moment around his neck, a sudden passion shook her.

"Arnold—dear Arnold," she sobbed, "I want to go too! Take me with you, dear!"

He was a little startled. It was not often that she was hysterical. He looked down into her convulsed face. She choked for a moment and then, although it was not altogether a successful effort, she laughed.

"Don't mind me," she begged. "I am a little mad tonight. I think that the twilight here has got upon my nerves. Light the lamp, please, won't you, Arnold? Light the lamp and leave me alone for a moment while you do it."

He obeyed, fetching some matches from his own room and setting the lamp when it was lit on the table by her side. There were no tears left in her eyes now. Her lips were tremulous, but an unusual spot of color was burning in her cheeks. He saw that while he had been dressing she had tied a piece of deep blue ribbon, the color he liked best, around her hair.

"See, I am myself now. Good night and good luck to you, Arnold! Eat a good dinner, mind, and remember your promise."

"There is nothing more that I can do for you?" he asked.

"Nothing," she replied. "Besides, I can hear Uncle Isaac coming."

The door was suddenly opened. A thin, undersized man in worn black clothes and with a somber hat of soft black felt still upon his head came into the room. His dark hair was tinged with gray and he walked with a pronounced stoop. In his shabby clothes, fitting loosely upon his diminutive stature, he should have been an insignificant figure, but somehow or other he was nothing of the sort. His thin lips curved into a discontented droop. His cheeks were hollow and his eyes shone with the brightness of the fanatic. Arnold greeted him familiarly.

"Hullo, Isaac!" he exclaimed. "You are just in time to save Ruth from being left all alone."

The newcomer came to a standstill. He looked at the speaker from head to foot with an expression of growing disgust, and he spat upon the floor.

"What livery's that?" he demanded.

Arnold laughed good-naturedly.

"Come, Isaac," he protested, "I don't often inflict it upon you, do I? It's something that belongs to the world on the other side, you know. We all of us have to look over the fence now and then. I have to cross the borderland tonight for an hour or so."

Isaac threw open the door by which he had entered.

"Get out of here!" he ordered. "If you were one of us I'd call you a traitor for wearing the rags. As it is, I say that no one is welcomed under my roof who looks as you look now. Why, confound you, I believe you're a gentleman!"

Arnold laughed softly.

"My dear Isaac," he retorted, "I am as I was born and made. You can't blame me for that, can you? Besides ——"

He broke off suddenly. A little murmur from the girl behind reminded him of her presence. He passed on to the door.

"Good night, Isaac," he said; "look after Ruth. She's lonely tonight."

"I'll look after her," was the grim reply. "As for you, get you gone. There was one of your sort came to the meeting of Jameson's molders this afternoon. He had a question to ask and I answered him. He wanted to know wherein wealth was a sin and I told him."

Arnold Chetwode was young and his sense of humor triumphant. He turned on the threshold and looked into the shadowy room dimly lighted with its cheap lamp. He kissed his hands to Ruth.

"My dear Isaac," he declared lightly, "you are talking like an ass. I have two shillings and a penny ha'penny in my pocket, which has to last me till Saturday, and I earn my twenty-eight shillings a week in old Weatherley's counting house as honestly as you earn your wage by thundering from labor platforms and articles in the Clarion.

"My clothes are part of the livery of civilization. The journalist who reports a lord mayor's dinner has to wear them. Some day when you've got your seat in Parliament you'll wear them yourself. Good night!"

He paused before closing the door. Ruth's kiss came wafted to him from the shadows where her great eyes were burning like stars. Her uncle had turned his back upon him. The word he muttered sounded like a malediction, but Arnold Chetwode went down the stone steps blithely. It was an untrodden land, this, into which he was to pass.

III

FROM the first nothing about that evening was as Arnold had expected. He took the tube to Hampstead Station and, the night being dry, he walked to Pelham Lodge without detriment to his carefully polished patent-leather shoes. The neighborhood was entirely strange to him, and he was surprised to find that the house that was pointed out to him by a policeman was situated in grounds of not inconsiderable extent and was approached by a short drive. Directly he rang the bell he was admitted, not by a flamboyant parlor-maid but by a quiet, sad-faced butler in plain dark livery who might have been major-domo to a duke. The house was even larger than he had expected and was handsomely furnished in an extremely subdued style. It was dimly, almost insufficiently lighted and there was a faint but not unpleasant odor in the drawing room that reminded him of incense. The room itself almost took his breath away. It was entirely French. The hangings, carpet and upholstery were all of a subdued rose color and white. Arnold, who for a young man was exceedingly susceptible to impressions, looked around him with an air almost of wonder. It was fortunate, perhaps, that the room was empty.

"Mr. and Mrs. Weatherley will be downstairs in one moment, sir," the man announced. "Mr. Weatherley was a little late home from the city."

Arnold nodded and stood upon the hearthrug looking around him. He was quite content to spend a few moments alone to admire the drooping clusters of roses, the elegance with which every article of furniture and appointment of the room seemed to fit into its place. Somehow or other, too, nothing appeared new. Everything seemed subdued by time into its proper tone. He began to wonder what sort of a woman the presiding genius over such perfection could be. Then with a quaint transition of thought he remembered the little counting house in Tooley Street, the smell of cheeses and Mr. Weatherley's half nervous invitation. His lips twitched and he began to smile. These things seemed to belong to a world so far away.

Presently he heard footsteps outside, and voices. The door was opened, but the person outside did not immediately enter. Apparently she had turned round to listen to the man who was still some distance behind. Arnold recognized his employer's voice.

"I am sorry that you are displeased, my dear Fenella, but I assure you that I did the best I could. It is true that the young man is in my office, but I am convinced that you will find him presentable."

A peal of the softest and most musical laughter that Arnold had ever heard in his life effectually stopped Mr. Weatherley's protestations. Yet for all its softness and for all its music there was a different note underneath, something a little bitter, unutterably scornful.

"My dear Samuel, it is true, without doubt, that you did your best. I do not blame you at all. It was I who was foolish to leave such a matter in your hands. It was not likely that among your acquaintances there was one whom I would have cared to welcome to my house. But that you should have gone

Modern Business and Medieval Law

By Albert J. Beveridge

THE people need relief, not sham battles. Business needs certainty, not confusion. But the people have no relief; business no certainty. Business—the commercial activities of all the people—goes on because of our inconceivably vast resources, the necessity of supplying ninety million of people, whose productive energy no folly of legislation can entirely neutralize.

But if we were Germany, with her sixty-five million people in a land smaller than Texas, having much poorer natural resources than Texas, we should, under our present policy, be in sorry case. Diminutive Germany, using her miserly resources with common sense, equals us in domestic prosperity, excels us in comparative foreign trade, shames us with both when we consider our infinite natural advantages over her.

True, Germany has her business troubles also; but, all things considered, they are insignificant—nothing at all—compared with ours. We have only ninety million of people; but if we had as many people to the square mile as Germany has we should have more than a billion people. Think what our condition would be in that case! Think what it would be if we had only five hundred million of people! Yet Germany, with more than ten times our population and less than one-tenth of our natural wealth—considering comparative areas—gets along better than we do.

What is the matter? Our unscientific tariff, for one thing. For another, the fact that politicians in and out of power "play the game" for little partisan advantages and to the people's hurt. But principally, the attempt to fasten onto this most modern and active of nations the economic methods of Europe in the time of King James. For that is precisely what our so-called antitrust law tries to do.

The Sherman Law has been on the Nation's statute books for almost a quarter of a century. Yet during that time the growth of trusts has been greater than in any other similar number of years in the world's history. Indeed, the years covered by this antitrust law will be known as the trust period in American annals.

How Judicial Minds Change

DURING this time five administrations have invoked this antitrust law—four of them Republican and one Democratic. Eight attorneys-general have dealt with the statute—two of them Democratic and six of them Republican. More than one hundred legal actions, civil and criminal, have been commenced and decided under this national ordinance against the trusts; almost one hundred laborious and frequently learned opinions have been delivered by many courts in applying it to various phases of the trust evil.

Yet after almost a quarter of a century of legal warfare under this law, not only do we see trusts more numerous and powerful than ever but we see lawyers, business men, laborers, the whole people more confused as to its meaning and effect than at any time since the hour it was enacted. What is far worse, the Nation stares in the face the fact that these trusts are still almost entirely free from national control or regulation of any kind. Except for such incidental regulation as our railway law affords, trusts do practically as they like. Their evils are entirely unchecked, except in detached instances.

At several stages of the long series of decisions under this antitrust law the people were told that a decisive victory had been won against organized capital; yet in every instance these so-called victories have turned to what has been little better than defeat. When the Supreme Court rendered its decisions in the Trans-Missouri Freight Association and Addyston Pipe and Steel cases, showers of editorials, both legal and lay, declared that at last the trusts were checked and competition was restored. But aggregated wealth, resorting to newer and simpler devices, continued to grow stronger, as though stimulated instead of repressed by those decisions.

Again, when Morgan and Hill's Northern Securities Company was "dissolved," we were told that we had entered the promised land of liberty from trust abuses. Yet that decision ended in nothing practical; for harmony in the operation of the Great Northern Railway and the Northern Pacific Railway, which the Northern Securities Company was created to effect, went right on and exists today.

And finally we have the fresh decisions of the Supreme Court in the historic Oil and Tobacco Trust cases. Again we were authoritatively informed that at last these great combinations were to be dissolved; and that unrestricted competition, the end of the commercial rainbow which our modern ancients had so long been chasing, actually had been overtaken.

To reach these latter decisions the Supreme Court had to and did reverse itself, and practically inserted into the law the word "reasonable," which Congress had refused to do. But so necessary was it to clear up the whole matter, in order that the people might know where they are under this law, that nobody would have complained of the insertion if these decisions in reality had accomplished that desired purpose. Twenty years had accustomed the people to the twistings and turnings of courts and public men as to the meaning and effect of the antitrust statute; and the people, though surprised, were not shocked at this legal somersault. They were quite prepared for Mr. Taft's sudden about-face. In his special message in January, 1910, he said of the proposition to insert the word "reasonable" into the law:

"This is to put into the hands of the courts a power impossible to exercise on any consistent principle which will insure the uniformity of decisions essential to just judgment. It is to thrust upon the courts a burden that they have no precedents to enable them to carry and to give them a power approaching the arbitrary, the abuse of which might involve our whole judicial system in disaster."

Thus wrote President Taft in 1910. But when the Supreme Court, reversing itself, did the precise thing the President that year denounced as dangerous, even though done by Congress, he proclaimed in many speeches the wisdom and correctness of these trust decisions. He even went so far as to declare that the Sherman Law now needs no amendment, and that, standing untouched as it is, it must be enforced against all violators—which would be all right if this course had done any good during the last twenty-five years, and if a person had any way of telling whether he was a violator or not.

Thus we see how judges on the bench and presidents on the stump march uphill and down again in trying to make head or tail out of this law. If such men do not know where they are from year to year—almost from month to month—under this law, is it any wonder that the people and business in general are desperate with confusion, uncertainty, suspense? The people are sick of this eternal chasing the devil round the stump and never touching him—sick of getting nothing done, sick of being laughed at by the whole civilized world because of our childishness in dealing with this problem which other nations have handled successfully.

Here are the Oil and Tobacco Trusts "dissolved" chiefly in legal fiction but not in practical effect; here is competition "restored" largely in assertion but not in fruit-bearing fact. The independent tobacco manufacturers, in protesting against the plan for the reorganization of the Tobacco Trust—which now has been adopted—declared: "The plan would result in legalizing monopolies instead of restoring competition. Its effect would be more injurious than the continuance of the present illegal monopoly." Their attorney asserted, as to one important item, that if it left the United Cigar Stores Company intact "the Supreme Court's decisions might as well have been a sheet of blank paper."

Indeed, the practical result of the "dissolution" of the Oil and Tobacco Trusts more than justifies the master-key sentence of Justice Harlan's dissenting opinion in the Standard Oil case: "The subsidiary companies are in effect informed [by the Supreme Court] that, although the New Jersey corporation [the Standard Oil Company] . . . must go out of existence, *they* may join in an agreement *to restrain commerce* among the states, if such restraint be not '*undue*.'" The italics are Justice Harlan's. And, indeed, can anybody deny that, so far as the people are concerned, both trusts will go on substantially as before?

Establishing an Autocracy

LET us then frankly and briefly look at the situation that faces us. After nearly twenty-five years of the long-drawn-out battle under this antitrust law, we find the end of these latest cases to be that, whereas before their "reorganization" these mighty corporations theoretically were under the ban of the antitrust law and in possible danger from the courts, under this latest interpretation of the law and the course pursued under it they now can proceed with the express written approval of our judicial tribunals.

This last is the most serious phase of the whole tragic comedy. It has been said by those favoring this policy that complete national control of these corporations, rather than their "dissolution" and the "restoration of competition," would be state socialism. But where does the Supreme Court's trust decisions and the policy followed under them leave us, from the point of view of state socialism? Just here: Business can go on or not go on only as and *in just the manner* that some Federal officer decides. That these officers are judges makes the matter worse; because, though presumedly learned in the legal precedents of bygone ages, they are not business men and have had no wide, practical experience in business.

Any interstate business is liable at any moment to have all parts of its machinery submitted to these inexpert Federal officers, who may order a cog taken out here and placed yonder; who may either rearrange the whole mechanism or permit it to remain as its designers built it or destroy it altogether. And no interstate business can know whether it is thus to be torn to pieces and "reorganized," because it cannot determine whether it is in reasonable or unreasonable restraint of competition until some Federal judge so declares.

This is far worse than anything the most extreme state socialist ever proposed, in that it is an equal government autocracy over business, but wholly unscientific, utterly without system. The government autocracy proposed by state socialism has at least the merit of being logical and clear. But the government autocracy over commerce that is now being established in this country is as irresponsible and haphazard as the irades of an Abdul Hamid.

Digitized by Google

Not only is this shown in the reorganization of the Oil and Tobacco Trusts, but by the fact that some business enterprises not in court have been asked publicly by the Nation's highest officials to make such new detailed business plans as the Attorney-General may approve, or suffer a suit to dissolve them and force such a reorganization as some Federal judges may approve. No socialist ever dreamed of a scheme so eccentric, czarlike and bizarre. It is a practical return to the capricious granting of privileges of Queen Elizabeth, which led to the passage of the very statute of which the Sherman Law is the reënactment. If such whimsical power as is now being exercised should become our settled policy, every business, little and big, would be liable to destruction; and a venal or ambitious president, by secret threats of its exercise, could force into his campaign coffers a corruption fund that would make the history of debauchery look noble in comparison.

This, then, is the net result of nearly twenty-five years of the Sherman Antitrust Law. Does it not appear to you that this test of experience justifies the harsh words spoken by some of the ablest men in public life when it was first presented in the Senate?

Does it not, for example, confirm the burning denunciation by Senator Orville H. Platt, of Connecticut, who I think is admitted by all to have been one of the ablest minds, if not the ablest, in American legislative life since the Civil War? In speaking of this bill as reported by Senator Sherman, Senator Platt said: "There is in this bill nothing at all which will meet the evils complained of. The people who are suffering from the abuses of unlawful associated corporations are asking relief; and when they ask for bread, the Senator from Ohio proposes to give them a stone; when they ask for a fish, he proposes to give them a serpent."

Or this from Senator George, of Mississippi: "The people call to us for redress. . . . Are Senators willing to give these crying and supplicating millions a mere sham?"

Though all the Senators but one voted for the bill as it finally was reported and became law, yet it is well known that most of them did so with grave misgiving. They did it because of the fierce demand of the whole nation for *some* relief; and because at that time nothing better had been thought of than the ancient method of ruthless knock-down-and-drag-out commercial riot called unlimited competition.

At that time not one present-day work on modern economics had been written, no constructive thought, from the viewpoint of those modern industrial forces that have revolutionized trade, had been devoted to the subject by our lawmakers. So nothing was conceived of to end the evils of the purely modern development of industry better than the statute to insure competition enacted by the British Parliament in the reign of James I, about three hundred years before. It is a fact known to few that our antitrust law is the substantial reënactment of this mediæval law of the seventeenth century, before the steamship, railway, telegraph and telephone were even dreamed of.

Americans Bound by James' Laws

INDEED Senator Sherman himself, in opening the debate on the bill, declared that it "does not announce new principles of law, but applies old and well-recognized principles of the common law to our state and Federal Government. Similar contracts . . . now by common law are null and void. . . . The purpose of this bill is to enable the courts of the United States to apply the same remedies against combinations which injuriously affect the interests of the United States."

So we see that the Sherman Law was admitted by its original author to be an application to the conditions of today of legislation enacted to meet the conditions of centuries before in England, a country at that time primitive and comparatively insignificant. Yet today the railroad and the telegraph bind together our ninety millions more closely than the few inhabitants of any English county were bound in King James' time. The steamship and cable have bound the whole commercial world far more closely together than England and Scotland were bound in the time of Lord Bacon. It was to these new conditions, created by the miracle wrought by steam and electricity, that the ancient idea of primitive, haphazard, unregulated competition as the only cure for the evils of trusts was applied.

The truth is that most of our public men have been so absorbed in playing politics that they have had no time or inclination for thorough study of this grave economic question. They have accepted the thinking of men who have been dead for ages upon conditions as unlike those of today as a two-wheeled oxcart is unlike an aeroplane. Their mental attitude is precisely that of a certain fanatical Dukhobor, who rejected the American self-binding harvester as the invention of Satan and stubbornly stuck to the hand-sickle used by his Slavic ancestors on the steppes of Russia a thousand years ago. So we still have this medieval law applied to modern conditions and, under it, sometimes a policy of puzzled inaction, sometimes a policy of terrific prosecution, at all times a fruitless agitation that does not get anywhere.

And what has it all come to? Absolutely no benefit to the people, the utter confusion of business, that uncertainty which is the paralysis of commerce and, finally, a deep and dangerous distrust by the average citizen of all public officials and especially of the courts. But that is not the worst. The existence of this law has prevented the enactment of any statute sternly and rigidly regulating these corporations, forbidding and punishing their oppression of the people, making them the servants instead of masters of our millions. But for the Sherman Law these trusts could and would have been made the Nation's industrial slaves; by reason of the Sherman Law they now are to the Nation what the monster was to Frankenstein.

The people were told that the Sherman Law was an all-sufficient remedy for their wrongs. Here and there a voice protested; but it was as "the voice of one crying in the wilderness." The general chorus, with a succession of political choruses chanting "Put somebody in jail," was to the effect that the Sherman Law could end all trusts and their nefarious doings if only it was enforced. Of course if that was true, national regulation and control of these corporations were not necessary or desirable.

Suppose we had provided merely that our railway systems should be dissolved and had refused to enact the rate and other railway regulations now on the statute books—refused to create the Interstate Commerce Commission or to give it any power. Yet this is the exact course we have pursued in regard to the trusts.

Either the policy of dissolving the trusts and restoring competition under the Sherman Law is or is not genuine—that is, it will or will not be successful. If successful—if these corporations in truth and fact are dissolved and competition in truth and fact is restored—then we shall have a period of profound business disturbance throughout the length and breadth of the land while this long readjustment is going on—a disturbance injuring all business. For the Nation's commercial activities are inextricably interwoven. The little business concerns of the country especially will, and already do, feel most seriously the effect of this policy, since they have but a narrow margin of capital to go on. The big concerns, even if "dissolved," can weather the storm.

Therefore, if this ancient and reactionary law is kept at work, and unlimited, artificial, lawmade competition actually is restored for a time, the mighty economic forces which at bottom created these great modern organizations of industry will in the end create them again. For the aggregation of capital engaged in industry is caused primarily by natural forces called into action by modern conditions. That phenomenon is not peculiar to this republic. In other countries, notably England and Germany, trusts exist, and in the latter country they are encouraged to do business, but are rigidly regulated and sternly controlled by the government.

So when these years of business depression are over we shall again be under the sovereignty of these same trusts with all their evils unabated—but minus any national control or regulation of them. Our work will have to be done all over again; and done over with public opinion weary, disheartened, discouraged, disgusted.

If, on the other hand, the trusts are not really dissolved and competition not really restored, then the whole thing is a sham. The people have been fooled and betrayed; business has been upset for nothing, and we have the old order existing in its full power—but again minus any national regulation and control; again minus anything that will relieve the people from the injuries these colossi of capital have inflicted upon them, or that will heal business of that creeping paralysis which this policy is causing throughout the body of American trade.

In short, whether the policy is successful or not successful, the people are still without relief, business without a chart to steer by. Yet genuine relief and a plain chart to steer by are what the people and business must have. To paraphrase the great utterances of Senator Platt, of Connecticut—"The people want bread and not a stone; a fish and not a serpent."

Whether the policy of dissolving the trusts and restoring competition by the Sherman Law is or is not successful, will it remedy any wrong the people suffer from trust abuses?

Will it prevent the watering of a single issue of stock? Nobody pretends that it will.

Will that policy reduce the cost of living? Unless history is false, that policy will increase it.

Will it prevent those malign activities in politics and legislation which the agents of trusts have practiced? On the contrary, that policy will strengthen the empire of that invisible government by giving it greater inducements to protect itself.

The Only Practical Remedy

SHOULD we, then, longer temporize? Should we longer follow this policy of disappointment? Should we not think this problem out for ourselves in the light of existing facts, instead of letting dead men do our thinking for us in the light of bygone ages?

What is a trust? What forces created it? What good does it do? What wrongs does it practice? Why has the Sherman Law always failed and why must it always continue to fail to remedy those wrongs or solve the problem?

In examining these questions, I am aware that I am repeating the substance of what I have contended for during the whole twelve years of my public life. In my Nebraska speech on the trust question, in 1900, I showed that the trusts are a natural evolution of modern industrial conditions, and said:

> There is only one possible way of regulating trusts. That is by the Congress of the Republic controlling corporations.

Again in 1902, as chairman of the Indiana Republican State Convention, in my speech opening the Republican state campaign, devoted largely to the trust question, I took the same position and said:

> That law—the Sherman Law—will reach them—trust evils—if it is sufficiently broad, wise and modern. If it does reach them, but in reaching them lays the ax to the root of our industrial development itself, the effect of that will be clear to the whole people; and that ancient law will be repealed or modified.

Five years ago in my debate with Mr. Bryan on the trust question I gave all the facts that could be collected down to that time, showing how and why trusts have developed, pointing out their benefits, and describing their evils and the absolute necessity for their national control and regulation. In that debate I suggested a national incorporation law and simpler remedies. So, though in this article I only restate the position I have taken for years, I am doing it because the question has finally come to a focus and is a burning issue of the day, and the hour of action at last has struck.

In its purely economic aspects every form of what is known as a trust is merely the greater saving of human energy, the more perfect using of resources, the simpler and more effective organization of effort. The saving of energy, the using of resources, the organizing of effort

The Moving Picture Writes

AND THE BELLA HIRSHKIND HOME NEARLY MAKES A HAUL

"I Seen the Other Evening a Filium by the Name The Return of Enoch Aaron"

By Montague Glass

ILLUSTRATED BY J. J. GOULD

WHEN Max Schindelberger opened the door leading into the office of Lesengeld & Belz his manner was that of the local millionaire's wife bearing delicacies to a bedridden laundress, for Max felt that he was slumming.

"Is Mr. Lesengeld disengaged?" he asked in the orotund voice of one accustomed to being addressed as Brother President three nights out of every week, and he cast so benevolent a smile on the stenographer that she bridled immediately.

"Mis-ter Lesengeld," she called, and in response B. Lesengeld projected his torso from an adjacent doorway.

"Miss Schimpf," he said pleadingly, "do me the favor and don't make such a *Geschrei* every time somebody comes in the office. Goes through me like a knife yet."

Max Schindelberger's smile took on the quality of indulgency as he advanced slowly toward B. Lesengeld.

"How do you do, Mr. Lesengeld?" he said, proffering his hand; and after glancing suspiciously at the extended palm Lesengeld took it in a limp clasp.

"I already suscribed to that—now—asylum, ain't it?" Lesengeld began, for his experienced eye had at once noted the fraternal society charm, the I. O. M. A. lapel button, and the white tie that proclaimed Max to be a philanthropist.

Max laughed as heartily as he could.

"Ain't it funny," he said, "how just so soon as anybody sees me they think I am going to do something charitable? As a matter of fact, Mr. Lesengeld, I am coming here to see you on a business matter which really it ain't my business at all."

Lesengeld grudgingly held open the door, and Max squeezed past him.

"You got a comfortable place here, Mr. Lesengeld," he began, "plain and old-fashioned, but comfortable."

Lesengeld removed some dusty papers from a chair.

"It suits me," he said. "Take a seat, Mr. ——"

"Schindelberger," Max said as he sat down.

"Used to was Schindelberger, Steinfeld & Company in the underwear business?"

Max nodded and his smile began to fade.

"My partner Belz got a couple of the composition notes in the middle compartment in our safe for six years already," Lesengeld continued. "He keeps 'em for sowveneers, on account the feller he took 'em off of—a relation from his wife's—was no good neither, which you was telling me you wanted to see me about a business matter."

Max Schindelberger cleared his throat.

"Anybody could have reverses in business," he said.

"Sure, I know," Lesengeld commented. "Only there is two kinds of reverses, Mr. Schindelberger, reverses from up to down and reverses from down to up, like when a feller couldn't pay his composition notes, Mr. Schindelberger, and two years later is buying elevator apartments yet in his wife's name, Mr. Schindelberger." He tapped the desk impatiently. "Which you was saying," he added, "that you wanted to see me about a business matter."

Max coughed away a slight huskiness. When he had started from his luxuriously appointed office on lower Nassau Street to visit Mr. Lesengeld on East Broadway he had felt a trifle sorry for Lesengeld, so soon to feel the embarrassment and awkwardness incidental to meeting for the first time, and all combined under one frockcoat, the District Grand Master of the I. O. M. A., the President of the Bella Hirshkind Home for Indigent Females, and director and trustee of three orphan asylums and of an eye, ear and throat infirmary. With the first reference to the defunct underwear business, however, Max began to lose the sense of confidence that the dignity of his various offices lent him; and by the time Lesengeld had mentioned the elevator apartment houses he had assumed to Max all the majesty of, say, for example, the Federal Grand Master of the I. O. M. A., with Jacob H. Schiff and Andrew Carnegie thrown in for good measure.

"The fact is," Max stammered, "I called to see you about the three-thousand-dollar mortgage you are holding on Rudnik's house—the second mortgage."

Lesengeld nodded.

"First mortgages I ain't got any," he said, "and if you are coming to insinivate that I am a second-mortgage shark, Mr. Schindelberger, go ahead and do so. I am dealing in second mortgages now twenty years already, and I hear myself called a shark so often, Mr. Schindelberger, that it sounds like it would be a compliment already. I come pretty near getting it printed on my letterheads."

"I didn't said you was a second-mortgage shark, Mr. Lesengeld; a man could be a whole lot worse as a second-mortgage shark, understand me, and do a charity once in awhile anyhow. You know what it stands in *Gemara* yet?"

Schindelberger settled himself in his chair preparatory to intoning a Talmudical quotation, but Lesengeld forestalled him.

"Sure, I know," he said, "it stands in *Gemara* a whole lot about charity, Mr. Schindelberger, but it don't say no more about second mortgages as it does about composition notes, for instance. So if you are coming to me to ask me I should give Rudnik an extension on his Clinton Street house, you could learn *Gemara* to me till I would become so big a *Melammed* as you are, understand me, and it wouldn't make no difference. I never extend no mortgages for nobody."

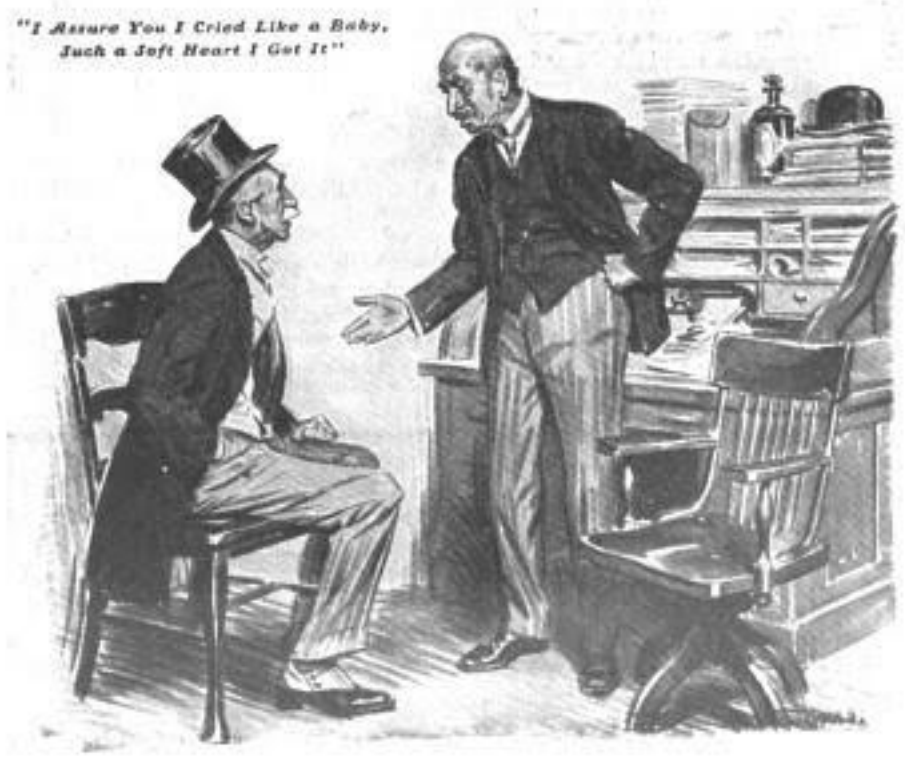
"But, Mr. Lesengeld, you got to remember this is an exception, otherwise I wouldn't bother myself I should come up here at all. I am interesting myself in this here matter on account Rudnik is an old man, understand me, and all he's got in the world is the Clinton Street house; and furthermore he will make a will leaving it to the Bella Hirshkind Home for Indignant Females, which if you want to go ahead and rob a lot of poor old widders of a few thousand dollars, go ahead, Mr. Lesengeld."

He started to rise from his chair, but he thought better of it as Lesengeld began to speak.

"Don't make me no bluffs, Schindelberger," Lesengeld cried, "because, in the first place, if Rudnik wills his house to the Bella Hirshkind Home, what is that my business? And, in the second place, Belz's wife's mother's a cousin got a sister which for years Belz makes a standing offer of five hundred dollars some one should marry her, and finally he gets her into the Home as single as the day she was born already."

"One or two ain't widders," Schindelberger admitted, "but they're all old, and when you say what is it your business that Rudnik leaves his house to charity, sure it ain't. *Aber* it's your business if you try to take the house away from charity. Even if you would be dealing in second mortgages, Mr. Lesengeld, that ain't no reason why you shouldn't got a heart once in a while."

"What d'ye mean I ain't got a heart?" Lesengeld demanded. "I got just so much a heart as you got it, Mr. Schindelberger. Why, last night I went on a moving pictures, understand me, where a little girl gets her father he should give her mother another show, *verstehst du*, and I assure you I cried like a baby, such a soft heart I got it." He had risen from his chair and was pacing excitedly up and down the little room. "The dirty dawg wants to put her out of the house already on account she is kissing her brother which he is just come home from twenty years on the Pacific Coast," he continued; "and people calls me a shark yet, Mr. Schindelberger, which my wife and me is married twenty-five years next *Sucos Halamode* and never so much as an unkind breath between us."



"That's all right, Mr. Lesengeld," Schindelberger said. "I don't doubt your word for a minute, but when it comes to foreclosing a mortgage on a house which it, so to speak, belongs to a home for poor widders and a couple of old maids, understand me, then that's something else again."

"Who says I'm going to foreclose the mortgage?" Lesengeld demanded.

"You didn't said you was going to foreclose it," Schindelberger replied, "but you says you ain't never extended no mortgages for nobody."

"Which I never did," Lesengeld agreed; "but that ain't saying I ain't never going to. Seemingly also you seem to forget I got a partner, Mr. Schindelberger, which people calls him just so much a shark as me, Mr. Schindelberger."

"*Aber* you are just telling me your partner is putting into the Bella Hirshkind Home a relation from his wife's already, and if he wouldn't be willing to extend the

"I Assure You I Cried Like a Baby, Such a Soft Heart I Got It"

Digitized by Google

mortgage, Mr. Lesengeld, who would? Because I needn't got to tell you, Mr. Lesengeld, the way business is so rotten nowadays people don't give up so easy no more; and if it wouldn't be that the Bella Hirshkind Home gets from somebody a whole lot of assistance soon it would bust up sure, and Belz would quick find himself stuck with his wife's relation again, and don't you forget it."

"But ——" Lesengeld began.

"But nothing, Mr. Lesengeld!" Schindelberger cried. "Here's where the Bella Hirshkind Home is got a show to make a big haul, so to speak, because this here Rudnik has got something the matter with his liver which it is only a question of time, understand me, on account the feller is an old bachelor without anybody to look after him, and he eats all the time in twenty-five-cent regular dinners. I give him at the outside six months."

"But are you sure the feller makes a will leaving his house to the Bella Hirshkind Home?" Lesengeld asked.

"What d'ye mean am I sure?" Schindelberger exclaimed. "Of course I ain't sure. That's why I am coming up here this morning. If you would extend first the mortgage on that house, Mr. Lesengeld, Rudnik makes the will, otherwise not; because it would cost anyhow fifteen dollars for a lawyer he should draw up the will, ain't it, and what's the use we should spend the money if you take away from him the house?"

"But if I would extend first the mortgage, Schindelberger, might the feller wouldn't make the will maybe."

Schindelberger clucked his tongue impatiently.

"Just because I am so charitable I don't got to be a fool exactly," he said. "If you would extend the mortgage, Mr. Lesengeld, I would bring Rudnik up here with a lawyer, and before the extension agreement is signed Rudnik would sign his will and put it in your safe to keep."

Lesengeld hesitated for a minute.

"I'll tell you, Schindelberger," he said at length; "give me a little time I should think this matter over. My partner is up in the Bronix and wouldn't be back till tomorrow."

"But all I want is your word, Mr. Lesengeld," Schindelberger protested, "because might if I would go back and tell Rudnik you wouldn't extend the mortgage he would go right away to the river and jump in maybe."

"Yow, he would jump in!" Lesengeld cried. "Only the other day I seen on a moving pictures a fillum which they called it Life is Sweet, where an old man eighty years old jumps into the river on account his grandson died in an elegant furnished apartment already; and when a young feller rescues him he gives him for ten thousand dollars a check, which I wouldn't believe it at all if I didn't seen the check with my own eyes yet. I was terrible broke up about the grandson, Mr. Schindelberger, *aber* when I seen the check I didn't got no more sympathy for the old man at all. Fifty dollars would of been plenty, especially when the young feller turns out to be the son of the old man's boy which he ain't heard from in years."

"Sure, I know," Schindelberger agreed, "*aber* such things only happen in moving pictures, Mr. Lesengeld, and if Rudnik would jump in the river, understand me, the least that happens him is he would get drownded and the Bella Hirshkind Home would go *Mechulla* sure."

"Well, I'll tell you," Lesengeld said; "you could say to Rudnik that I says I would extend the mortgage supposing my partner is agreeable, on consideration he would leave the house to the Bella Hirshkind Home, and Rudnik is to pay three hundred and fifty dollars to my lawyer for drawing the extension agreement."

"*Aber*, Mr. Lesengeld ——" Schindelberger began. He was about to protest against the size of the bonus demanded under the guise of counsel fee when he was interrupted by a resounding, "*Koosh!*" from Lesengeld.

"That is my last word and the very best I could do," Lesengeld concluded, "except I would get my lawyer to fix up the will and *schenk* it to you free for nothing."

II

"I DON'T know what comes over you lately, Belz," Lesengeld complained the following morning. "Every day you come down looking like a bear *mit* a spoiled tail."

"I got a right to look that way," Belz replied. "If you would got such a wife's relation like I got it, Lesengeld, there'd be no sitting in the same office with you at all. When it isn't one thing it's another. Yesterday my wife's mother's a sister's cousin gets a day off and comes round and gets dinner with us. I think I told you about her before—Miss Blooma Duckman. Nothing suits that woman at all. The way she acts you would think she lives in the bridal soot at the Waldorfer, and she gets my wife so mad, understand me, that she throws away a whole dish of *Tzimmus* in the garbage can already—which I got to admit that the woman is right, Lesengeld—my wife don't make the finest *Tzimmus* in the world."

"Suppose she don't," Lesengeld commented. "Ain't it better she should spoil some *Tzimmus* which all it's got into it is carrots, potatoes and a little chuck? If it would be that she makes a failure *mit Gänse oder* chickens which it really costs money, understand me, then you got a right to kick."

"That's what I says," Belz replied, "*aber* that Miss Duckman takes everything so particular. She kicks about it all the way up in the subway, which the next time I get one of my wife's relations in a Home, either it would be so far away she couldn't come to see us at all or it would be so near by that I don't got to lose a night's rest seeing her home. I didn't get to bed till pretty near two o'clock."

He stifled a yawn as he sat down at his desk.

"All the same, Lesengeld," he added, "they certainly got a nice place up there for them old women. There's lots of respectable business men pays ten dollars a week for their wives in the Catskills already which they don't got it so comfortable. Ain't it a shame, Lesengeld, that with a charity like that which is really a charity, people don't support it better as they do?"

"I bet yer!" Lesengeld cried. "The way some people acts not only they ain't got no hearts, y'understand, but they ain't got no sense neither. I seen a case yesterday where an old *Rosher* actually refuses to pay a month's rent for his son's widder *mit* a little boy, to save 'em being put out on the sidewalk. Afterward he goes broke, understand me, and when the boy grows up he's got the nerve to make a touch from him a couple of dollars and the boy goes to work and gives it to him. If I would be the boy the old man could starve to death; I wouldn't give him not one cent. They call us sharks, Belz, but compared with such a *Haman* we ain't even sardines."

"Sure, I know," Belz said as he consulted the firm's diary; "and if you wouldn't waste your time going on so many moving pictures, Lesengeld, might you would attend to business maybe. Yesterday was ten days that feller Rudnik's mortgage is past due, and what did you done about it? Nothing, I suppose."

"Suppose again, Belz," Lesengeld retorted. "A feller was in here to see me about it and I agreed we would give Rudnik an extension."

"What!" Belz cried. "You agreed you would give him an extension! Are you crazy *oder* what? The way money is so tight nowadays and real estate gone to helland-all, we as good as could get a deed of that house from that feller."

"Sure we could," Lesengeld replied calmly, "but we ain't going to. Once in a while, Belz, even in the second-mortgage business circumstances alters cases, and this here is one of them cases; so before you are calling me all kinds of suckers, understand me, you should be so good and listen to what I got to tell you."

Belz shrugged his shoulders resignedly.

"Go as far as you like," he said, "*aber* if it's something which you seen it on a moving pictures, Lesengeld, I don't want to hear it at all."

"It didn't happen on a moving pictures, Belz, but just the same if even you would seen it on a moving pictures you would say to yourself that with a couple of fellers like you and me, which a few hundred dollars one way or the other wouldn't make or break us, understand me, we would be all kinds of crooks and highwaymen if we would went to work and turn a lot of old widders out into the street."

"Lesengeld," Belz shouted impatiently, "do me the favor and don't make no speeches. What has turning a lot of old widders into the street got to do with Rudnik's mortgage?"

"It's got a whole lot to do with it," Lesengeld replied, "because Rudnik's house he is leaving to a Home for old women, and if we take away the house from him then the Home wouldn't get his house, and the Home is in such shape, Belz, that if they wouldn't make a big killing in the way of a legacy soon they would bust up sure."

"And that's all the reason why we should extend the mortgage on Rudnik?" Belz demanded.

"That's all the reason," Lesengeld answered; "with three hundred and fifty dollars a bonus."

"Then all I could say is," Belz declared, "we wouldn't do nothing of the kind. What is three hundred and fifty dollars a bonus in these times, Lesengeld?"

"But the Home," Lesengeld protested.

"The Home should bust up," Belz cried. "What do I care about the Home?"

"*Aber* the widders?" Lesengeld insisted. "If the Home busts up the widders is thrown into the street. Ain't it?"

"What is that my fault, Lesengeld? Did I make 'em widders?"

"Sure, I know, Belz; *aber* one or two of 'em ain't widders. One or two of 'em is old maids and they would got to go and live back with their relations. Especially," he concluded with a twinkle in his eye—"especially one of 'em by the name Blooma Duckman."

"Do you mean to told me," Belz faltered, "that them now—widders is in the Bella Hirshkind Home?"

"For Indignant Females," Lesengeld added, "which Max Schindelberger is president from it also."

Belz nodded and remained silent for at least five minutes.

"I'll tell you, Lesengeld," he said at last, "after all it's a hard thing a woman should be left a widder."

"You bet your life it's a hard thing, Belz!" Lesengeld agreed fervently. "Last week I seen it a woman she is kissing her husband goodby, and the baby also kisses him goodby—decent, respectable, hard-working people, understand me—and not two minutes later he gets run down by a trollyer car. The next week they take away from her the furniture, understand me, and she puts the baby into a day nursery, and what happens after that I didn't wait to see at all. Costs me ten cents yet in a drug-store for some mathematic spirits of ammonia for Mrs. Lesengeld—she carries on so terrible about it."

Belz sighed tremulously.

"All right, Lesengeld," he said; "write Rudnik we would extend the mortgage and he should call here tomorrow."

III

"IF I GOT to lose the house I got to lose it," Harris Rudnik declared as he sat in B. Lesengeld's revolving chair on the following morning. "I ain't got long to live anyhow."

He tucked his hands into his coat pocket and glared balefully at Schindelberger, who shrugged his shoulders.

"Nu, Belz, Ain't You Going to Congradulate Me?"

Digitized by Google

"That's the way he is talking right along," he said. "Did you ever hear the like? Mind you, it ain't that he's got anybody he should leave the house to, Mr. Belz, but he ain't got no use for women."

"What d'ye mean I ain't got no use for women?" Rudnik cried. "I got just so much use for women as you got it, *aber* not for a lot of women which all their lives men makes suckers of themselves working their heads off they should keep 'em in luxury, understand me, and then when the men dies, y'understand, right away the widders is put in homes and other men which ain't related to 'em at all must got to leave 'em their hard-earned *Geld*, Mr. Belz, so they could sit with their hands folded doing nothing."

"What are you talking nonsense doing nothing!" Schindelberger retorted. "Them old women works like anything up there. I told you before a dozen times, Rudnik, them women is making underwear and jelly and stockings and *Gott weiss was noch*."

Rudnik turned appealingly to Belz.

"Mr. Belz," he said, "do me the favor and let me leave my money to a *Talmud Torah oder* a Free Loan Association."

"Free Loan Association!" Lesengeld and Belz exclaimed with one voice.

"An idee!" Belz shouted. "What d'ye take us for, Rudnik? You are going too far."

"Cutthroats!" Lesengeld muttered hoarsely. "Stealing bread out of people's mouths yet. A lot of people goes to them *Roshoyim* and fools 'em into lending 'em money they should play *Stuss* and *Tarrok*, while their families is starving yet. If you want to leave your house to a Free Loan Association, Rudnik, you might just so well blow it up *mit* dynamite and be done with it."

"*Aber* a *Talmud Torah* School," Rudnik cried; "that's something which you couldn't got no objection to."

"Don't talk like a fool, Rudnik!" Schindelberger interrupted. "When you got a chance to leave your money to a Home for widders, what are you fooling away your time making suggestions like *Talmud Torah* Schools for? A young feller would get along in business if he never seen even the outside of a *Talmud Torah, aber* if the widders lose their Home, understand me, they would starve to death."

"Yow, they would starve to death!" Rudnik said. "You could trust a widder she wouldn't starve, Mr. Schindelberger. Them which didn't got no relations they could easy find suckers to give 'em money, and them which did got relations, their families should look after 'em."

Belz grew crimson with pent-up indignation.

"Loafer!" he roared. "What d'ye mean their families should look after 'em?"

Belz walked furiously up and down the office and glowered at the trembling and confused Rudnik.

"Seemingly you ain't got no feelings at all, Rudnik," he continued. "Schindelberger tells you over and over again they are working them poor widders to death up there, and yet you want to take away the roofs from their backs even."

"No, I didn't, Mr. Belz," Rudnik said. "I didn't say nothing about a roof at all. Why, I ain't even seen the Home, Mr. Belz. Could you expect me I should leave my money to a Home without I should see it even?"

"My worries if you seen it *oder* not!" Belz retorted. "The thing is, Rudnik, before we would extend for you the mortgage you must got to make, not a will but a deed, which you deed the house to the Bella Hirshkind Home, keeping for yourself all the income from the house for your life, because otherwise if a man makes a will he could always make another will, *aber* once you give a deed it is fixed *und fertig*."

This ultimatum was the result of a conference between Belz and his counsel the previous evening, and he had timed its announcement to the moment when he deemed his victim to be sufficiently intimidated. Nevertheless, the shock of its disclosure spurred the drooping Rudnik to a fresh outburst.

"What!" he shouted. "I should drive myself out of my house for a lot of widders!"

"*Koosh!*" Schindelberger bellowed. "They ain't all widders. Two of 'em is old maids, Rudnik, and even if they would be all widders you must got to do as Mr. Belz says, otherwise you would drive yourself out of your house anyway. Because in these times not only you couldn't raise no new second mortgage on the house, but if Lesengeld and Belz forecloses on you the house would hardly bring in auction the amount of the first mortgage even."

Rudnik sat back in his chair and plucked at his scant gray beard. He recognized the force of Schindelberger's argument and deemed it the part of discretion to temporize with his mortgagees.

"Why didn't you told me there is a couple old maids up there?" he said to Schindelberger. "Old maids is horses of another color; so come on, Mr. Schindelberger, do me the favor and go up with me so I could anyhow see the Home first."

He slid out of his chair and smiled at Schindelberger, who stared frigidly in return.

"You got a big idee of yourself, Rudnik, I must say," he commented. "What do you think I ain't got nothing better to do as escort you up to the Bella Hirshkind Home?"

"Rudnik is right, Schindelberger," Lesengeld said; "you should ought to show him the Home before he leaves his house to it."

"I would show him nothing!" Schindelberger cried. "Here is my card to give to the superintendent, and all he is got to do is to go up on the subway from the bridge. Get off at Bronix Park and take a Mount Vernon car to Ammerman Avenue. Then you walk six blocks east and follow the New Haven tracks toward the trestle. The Home is the first house you come to. You couldn't miss it."

Rudnik took the card and started for the door, while Belz nodded sadly at his partner.

"And you are kicking I am cranky yesterday morning," he said. "In the daytime is all right going up there, but in the night, Lesengeld, a bloodhound could get twisted. Every time I go up there I think wonder I get back home at all."

"I Guess You are Trying to Make Me a Compliment"

"I bet yer," Lesengeld said. "The other evening I seen a fillum by the name Lawst in the Jungle, and ——"

"Excuse me, gentlemen," Schindelberger interrupted, "I got a little business to attend to by my office, and if it's all the same to you I would come here with Rudnik tomorrow morning ten o'clock."

"By the name Lawst in the Jungle," Lesengeld repeated with an admonitory glare at Schindelberger, "which a young feller gets ate up with a tiger already; and I says to Mrs. Lesengeld: 'Mommer,' I says, 'people could say all they want to how fine it is to live in the country,' I says, 'give me New York City every time,' I says to my wife."

IV

HARRIS RUDNIK had been encouraged to misogyny by cross eyes and a pockmarked complexion. Nevertheless, he was neither so confirmed in his hatred of the sex nor so discouraged by his physical deformities as to neglect shaving himself and changing into a clean collar and his Sabbath blacks before he began his journey to the Bella Hirshkind Home. Thus when he alighted from the Mount Vernon car at Ammerman Avenue he presented, at least from the rear, so spruce an appearance as to attract the notice of no less a person than Miss Blooma Duckman herself.

Miss Duckman was returning from an errand on which she had been dispatched by the superintendent of the Home, for of all the inmates she was not only the youngest but the spryest, and although she was at least half a block behind Harris when she first caught sight of him she had no difficulty in overtaking him before he reached the railroad track.

"Excuse me," she said as he hesitated at the side of the track, "are you maybe looking for the Bella Hirshkind Home?"

Harris started and blushed, but at length his misogyny asserted itself and he turned a beetling frown on Miss Duckman.

"What d'ye mean am I looking for the Bella Hirshkind Home?" he said. "Do you suppose I come up here all the way from Brooklyn Bridge to watch the trains go by?"

"I thought maybe you didn't know the way," Miss Duckman suggested. "You go along that there path and it's the first house you are coming to."

She pointed to the path skirting the railroad track, and Harris began to perspire as he found himself surrendering to an impulse of politeness toward this very young old lady. He conquered it immediately, however, and cleared his throat raspingly.

"I couldn't swim exactly," he retorted as he surveyed the miry trail indicated by Miss Duckman, "so I guess I'll walk along the railroad."

"You could do that too," Miss Duckman said, "*aber* I ain't allowed to, on account the rules of the Home says we shouldn't walk along the tracks."

Harris raised his eyebrows.

"You don't mean to told me you are one of them indignant females?" he exclaimed.

"I belong in the Home," Miss Duckman replied, coloring slightly, and Rudnik felt himself being overcome by a wave of remorse for his bluntness. He therefore searched his mind for a sufficiently gruff rejoinder, and finding none he shrugged his shoulders.

"Well," he said at last, "there's worser places, lady."

Miss Duckman nodded.

"Maybe," she murmured; "and anyhow I ain't so bad off as some of them other ladies up there which they used to got husbands and homes of their own."

"Ain't you a widder too?" Rudnik asked, his curiosity again getting the upper hand.

"I ain't never been married," Miss Duckman answered as she drew her shawl primly about her.

"Well, you ain't missed much," Rudnik declared, "so far as I could see."

"Why," Miss Duckman exclaimed, "ain't you never been married neither?"

Rudnik blinked solemnly before replying.

"You're just like a whole lot of ladies," he said; "you must got to find out everything." He turned away and stepped briskly on to the railroad track.

"But ain't you married?" Miss Duckman insisted.

"No," he growled as he started off. "*Gott sei Dank.*"

For a brief interval Miss Duckman stood and watched his progress along the ties, and then she gathered her parcels more firmly in her arms and began to negotiate the quagmire that led to the Home. She had not proceeded more than a hundred feet, however, when a locomotive whistle sounded in the distance.

"Hey, mister!" she shouted; but even if Rudnik heard the warning it served only to hasten his footsteps. Consequently the train was almost upon him before he became aware of it, and even as he leaped wildly to one side the edge of the cowcatcher struck him a glancing blow. Miss Duckman dropped her bundles and plunged through the mud to where Rudnik lay, while the train, which was composed of empty freight cars, slid to a grinding stop a short distance up the track.

She was kneeling recklessly in the mud supporting Rudnik with both her hands when the engineer and the fireman reached them.

"Is your husband hurted bad?" the engineer asked Miss Duckman.

The tears were rolling down Miss Duckman's worn cheeks, and her lips trembled so that she could not reply. Nevertheless, at the word "husband" her maidenly heart gave a tremendous bound, and when the engineer and the fireman lifted Rudnik gently into the caboose her confusion was such that without protest she permitted the conductor to assist her carefully up the car steps.

"Sit ye down on that stool there, lady," he said. "As far as I can see your man ain't got no bones broken."

"But——" Miss Duckman protested.

"Now, me dear lady," the conductor interrupted, "don't ye go worritin' yerself. I've got me orders if anybody gets hit be the train to take him to the nearest company's doctor in the direction I'm goin'. See? And if you was Mister and Missus Vanderbilt, they couldn't treat you no better up to the Emergency Hospital."

THE CALL

By ARTHUR STRINGER

ILLUSTRATED BY F. VAUX WILSON

XX

IF UNA'S acceptance of Ruthven's invitation was a surprise to her, their belated supper together was an even greater one.

Una Carberry had been only too well initiated into the Philistine's attitude toward the stage-woman. She had known too many years on the road, facing the sallies of the managers of second-class hotels, discouraging the distasteful attentions of travelers, countering the advances of provincial stagedoor Lotharios who showed a fixed determination to regard the children of dramatic amusement as roving and most irresponsible daughters of Eve.

Una Grew to Like That Picture

She had looked for, during that supper, some outcroppings of this sort. Ruthven had shown no trace of them. There was, in fact, a certain old-fashioned pomposity about his attentions, a ponderous dignity which made his services something more than gallantry. If she had at first been needlessly afraid of him she had later been needlessly afraid for him. He was no experienced and artful "masher." He was aldermanic in his sobriety. During all that supper, even after his second glass of wine, he was as decorous as an undertaker. There was a rough honesty about the man, his companion decided, for all his uncouth doggedness. And there had been something flattering to her even in that doggedness.

It was Una who was facetious. She was desperately, experimentally light-hearted. She was studiously and expositionally gay. She wished to satisfy herself as to her own capabilities. She wished to see how thick the shell of age had fixed itself about her.

Her host found her gayety reassuring. He talked more freely as the supper proceeded. She could afford to lapse off-handedly into the backwaters of personalities. He had defied her to guess his age; but to do this she had discreetly refused.

"I'm not so old as I look," he said with his slow smile.

She essayed a shudder of mock horror. Her companion, with his childlike directness, was puzzled by it. She felt the need of explaining.

"But I'm older than I look," she cried. "Much older!"

She enjoyed the expostulatory cloud of denial that gathered on his honest face.

"Why, you didn't look much more than a girl the other night in that balcony scene!"

Una sat up, inwardly repeating the phrase: "Much more than a girl!" And one of her managers had implied that she was getting a little on for Juliet! For the second time an invisible spear stabbed through her heart. She was now no longer young! No longer young!

"Oh, it's terrible to be old!" she cried with a grimace that was not all mockery. "We women are such cowards!"

"You've nothing to be afraid of," he solemnly declared.

"Oh, I hate myself sometimes!"

"And I like you," he quietly confessed. "I like you a lot!"

She looked across the table at him. She tried to drive the wings of solemnity away by her ripple of laughter.

"So do other people," she protested. "We had nearly ten hundred dollars in the house last night." She stopped and laughed again. "That's what they brought me here for—to be liked!"

"I know it," he admitted a little disconsolately. "But I don't mean that way."

The ice, she felt, was growing perilously thin for so ponderous a figure; but the very risk, the very uncertainty of the situation, had its unexpected relish. And she was not unconscious of the fact that at a word she could draw him up short.

"That's the only way we can be liked," she went on. "Instead of staying a person, we grow into a sort of institution. You admire us about the same as you do a public library!"

"Oh, no, I don't!" was Ruthven's prompt retort.

"And we ourselves get the institutional feeling," Una went on. "We have to satisfy ourselves with a sort of denatured affection—the kind you really can't swallow, but is good for keeping the pot boiling."

His slow smile showed his appreciation of the figure—and she had once suspected he was a little stupid! She found herself relishing the chance of being candid with him.

"Then I can't see what you get out of it," he told her, studying her smiling face with his solemn eyes.

"Exactly what the little girl with the rag doll gets out of her makeshift," was Una's answer; "only we have the disadvantage of knowing the doll's nothing more than a doll!"

A look of surprise crept into Ruthven's face.

"You don't mean to say you're ever dissatisfied?" he asked.

"One gets tired of the hard work," Una acknowledged.

His look of surprise was superseded by one of hope. He spoke quietly, yet there was an undertone of eagerness in his voice.

"It's funny," he said, "but I never thought of acting as being hard work!"

She could afford to smile at his mistake.

"Well, take the part of Juliet, that you saw me play a couple of weeks ago. We put on a condensed version. My part was cut down to about seven thousand words. That means I had to learn off, by rote, not only those seven thousand words, but also the cues that led up to them, the movements with which they must be spoken, the steps and gestures which must fit in with the steps and gestures of the people on the stage with me. And the same week that those seven thousand words were being recited by me twice a day, before an audience, our company was coming together every morning at ten o'clock and I was reciting another part, a part of over seven thousand words. That's my part of Louise, for The Two Orphans—the part the audience is seeing this week. Besides making myself letter-perfect in that part, I was studying out the stage business, making sure each member of my company was doing what was needed, deciding on costumes and scenery, ordering props and revising the time or the tone of the performance as a whole. Besides that, too, at night, after I'd gone home from the theater, I was studying the script of Frou-Frou, which we'll put on next week. By Monday or Tuesday I'll have to know by heart practically that entire part of Frou-Frou. And she has to speak enough lines to fill six or seven solid columns of newspaper type. And that keeps up, of course, as long as the season lasts—week by week and month by month."

She enjoyed his stare of wonder.

"I should think you'd go mad!" he murmured.

"No; it's not that which worries stock actresses; it's the terrible fear that some day they may lose their memory. We always get to believe that some day our memories will just lie down between the shafts, like an overworked horse, and refuse to budge again!"

A slow look of pity surged up into the man's honest face.

"I used to think I worked hard," he finally said; "but what you've just been saying makes me think it was mostly soldiering."

She surrendered to a rising curiosity to know more about him, about what his life had been. There was something appealing about the sheer ponderous honesty of his face. She abhorred handsome men, she told herself; she had seen and known and worked with too many stage fops who were the center of their own little universe of egoism. She liked strength, resolute and self-reliant strength—and William Ruthven, she felt assured, was the possessor of that strength.

"What did your work used to be?" she asked.

"Nothing very romantic," he confessed. "I own the Ruthven Plow Works here. It took about fifteen years of good hard grinding to get 'em built up."

"And you've been successful, of course?"

"Oh, I guess I've made enough money to worry along on. My old-maid sister—she runs the house for me—says I've made too much. It makes me discontented."

"I suppose that means you're very rich."

"Not what you New York folks would call rich! But I've got a mighty comfortable home up here on Elmwood Avenue and a stockfarm out at Cedar Valley. I keep that just to play with; but, somehow or other, it just won't let me lose money on it!"

The wide-set hazel eyes were studying him with their pensively abstracted stare. He was carefully folding and refolding his table napkin. The quietness with which he spoke, as he went on again, seemed an achieved calmness—something sternly imposed on an ardor that might prove too apparent.

"I've been a widower for over eleven years," he said, not raising his eyes as he spoke. "I've got friends—and all that. I've traveled round a good bit. And I guess I've had a good enough time, as things go. But I've been lonesome somehow. I've wanted something!"

He lifted his eyes at this point, and his level gaze met that of the woman across the table from him.

"I never knew what it was I wanted until you came to this town and I watched you night after night. Then I found out what it was."

"Well?" she said, afraid to smile for fear of seeming to mock his solemnity.

"I knew I wanted you," he said.

His grave eyes were staring deep into her own.

"Me?" she laughed a little nervously.

He placed one large hand on the folded white napkin and leaned back in his chair.

"I wanted to know if you wouldn't marry me," he said, his deep voice slightly tremulous, as though the continued calmness of his face was something coerced and conscious.

There was no gayety in her quick little defensive laugh.

"But you don't know me," she argued.

"Oh, yes, I do," he proclaimed. "I know you well enough. I've watched you night after night. I've seen

"A Couple More Seasons of This Cheap Road Work'll Put the Indian Mark on You"

Digitized by Google

you do all those pieces of yours—every one of them. And I can't just explain it to you, but you've grown to stand for something I've been missing out of life—the other things; the things money and work and a fat stockfarm don't seem to bring in!"

She could feel her heart go down, stop by stop, against her will. Her shoulders heaved with a sigh which she could not control.

It was the old, the eternal error again. It was the never-ending mistake of confusing the stage rôle with the woman herself, of identifying the romance behind the footlights with its mere interpreter. It was the mistake which the uninitiated were forever making. She herself had nothing to do with this strange hunger of his; she was merely the vessel which carried the sacred oil. It was Juliet, bathed in the moonlit loveliness of a midnight garden, to whom his work-calloused heart had gone out. It was not to Una Carberry; it was not to the work-wearied body of the aging and disillusioned woman who wore the cap of Juliet. It was to the spirit of youth and romance—the spirit to which she was little more than a bond-servant.

Her face must have clouded involuntarily, for the man facing her moved in his chair and spoke again.

"You don't think you could do it?" he was asking in the same quiet voice as before. Yet this time a touch of pain seemed to make his calmness almost tragic.

"It's not a matter of whether I could or not," she told him with the sharpness of the indeterminate answering pain cutting through her. "It's because I wouldn't!"

"Why?" he demanded.

"Can't you see why? How it wouldn't be fair to you from any standpoint! How you'd find me out sometime and how it would be too late when you did find me out!"

"Find out what?" Ruthven asked her with his unimaginative directness.

"That I'd cheated you out of what you were looking for! That I wasn't what you took me for! That you'd carried home a heroine out of a book-story and found her nothing more than a woman with a sixty-dollar wig on—and the wrinkles beginning to show! It's not even good business! It'd be so much easier to buy the wig, for example!"

"It's not a question of business," he protested, disregarding her perverse and ironic bitterness. "It's something outside of business."

"That's exactly why it wouldn't be fair. It would be worse than buying a pig in a poke, as they say. It would only turn out that I wasn't at all what you expected!"

For all her bitterness there was a hunger which she could not explain eating at her heart. A sense of desolation settled about her—a desolation which she had felt more and more at times when she had allowed herself to be idle.

"I'd risk that," Ruthven was saying.

He hesitated a moment. Then he looked up with the eyes of a man steeled to face life's direst extremity. Again Una was touched with vague admiration at the thought of his doggedness. It would have been uncouth in a figure less suggestive of latent strength.

"Is there any one else?" he asked.

"There's nobody else," she answered him quite solemnly. "Of course there's nobody else." Then she added, she scarcely knew why: "You see, I have to work so hard! I've so much to do, so much to accomplish, before I—I get too terribly old!"

A silence fell over them. They seemed strangely like lifelong friends slowly approaching their friendship's first great understanding.

"Then I'm going to ask you just one thing," he finally said. "I'm going to ask it now, because in a couple of days I'll be away from Chesterville for the summer and you'll be gone before I get back. I'm going to ask you not to forget me. I'm ——"

"There's no danger of that!" she interrupted.

"Why?" he demanded.

"You have been so kind," was her answer.

"That's not what I mean," he went on with his painstaking and deliberate directness of manner. "I want you to remember that I'm always here."

He paused as though afraid of making a misstep.

"If anything should ever happen to make you change your mind; if you came to see differently or got tired of this work of yours, or got sick, or—or needed a change or anything, I want you to let me know. And this offer of mine will always stand good. I can wait if I have to. I ought to wait, I suppose. But I'd like to show you how good and square I could be to a little woman like you!"

Una, watching him, shook her head slowly from side to side. The homeliness of that phrase, "good and square," seemed to impress her. The quiet sobriety of this strange suitor seemed to dignify his importunacy into something touched with beauty. Yet it was absurd, impossible, from first to last.

"Can't you promise me that much?" he asked.

"It isn't fair," she replied.

"Why isn't it?"

"We'll Be Failures Together!"

She leaned forward a little in her chair, studying his weather-ruddied face with her shadowy hazel eyes from which the last trace of hardness had melted. He was very tanned, was her inapposite thought; so deep was that coloring of wind and sun that it would hide like a mask any emotion beneath it. He would always be inarticulate. Neither his voice nor his features could ever quite show what he felt. He might at that very moment, she told herself, be sitting before her the apparent picture of full-blooded health and at the same time be suffering keenly. She found a wayward relish in her woman's prerogative of holding a man's happiness balanced in the palm of her hand. The sense of power, the thought of controlling a strong man's joy or sorrow, was sweet in her breast; but she had to think of ways for making her answer to him less painful.

"Tell me," she said, "have you a place at your plow works where you keep the broken-down machinery—where you store away all the worn-out stuff?"

"Yes," he said, plainly puzzled.

"What do you call it?"

"The boneyard."

"The boneyard," she repeated. "That's the exact word I wanted. And that's what you've just offered to be for me. When I'm old and worn-out, when I'm good for nothing, you say you'll take me in!"

"You'll never be good for nothing!"

"When I've finished with my work—when I've eaten my pie, as they say—you'll let me run aground and lie there at your side door in my worthless old age!"

"Oh, I'd take you now if I could get you," Ruthven declared with his solemn smile. "But that's asking too much!"

"Just as the other would be asking too much," she added, "on my part!"

"That's where you're wrong," he persisted. "I think slowly. I guess I move slowly too. But I don't move until I know I'm right. You'll always mean a lot to me. I'll always want you. And I'd always be getting the best of the bargain."

She touched her fingers to her eyelashes as she laughed. He could never quite convince himself that it was a tear she had wiped away.

"You're too big-hearted," she said; "you're too good, too fine, to be imposed on!"

"Will you remember what I've said?" he asked as she pushed back her chair and looked dazedly about her like a sleepwalker returning to wakefulness.

"I'll remember," she said. An impulse which she could neither control nor fathom prompted her to hold out her hand to him.

He stood up, and there was something old-world in his ceremoniousness before he took her hand. His great fingers closed on her palm and held it while his eyes rested on her face.

Una permitted no emotion to show itself; she imposed on herself a rigorous justice; but he continued to hold her hand—a little hungrily, as though by that contact he were tapping some hidden and mystic reservoir of happiness.

Her fingers were conscious of the strength and warmth infolding them, draining something away from them, it seemed, which left her less able to depend on her own powers. It left her with that renewed sense of desolation which made all the future seem so ineffectual, so empty of purpose and promise. And when she withdrew her hand it was as though a circuit had been broken.

XXI

UNA'S talk with William Ruthven remained perplexingly fixed in her mind. Even during the rest of her busy summer season in Chesterville, in odd places and at unexpected moments, some phrase or speech of that strange night would flash up in her memory.

It was the same during her four busy weeks in New York, when the roar and dust of Broadway caused the green lawns and the quiet avenues of the smaller inland city to take on a beauty which she had not altogether appreciated. And during the winter, through the dully active and listlessly crowded months on the "road," she carried the memory of that talk in her breast secretly, bringing it to the light only furtively, as a young lover might look at a portrait-locket and then hide it hurriedly away.

The compact was ridiculous, she kept assuring herself. It was not even a compact. It was a pretty bit of sentiment too delicate for everyday handling—something to be kept in a cabinet by itself, like a piece of rare china. She would in all likelihood play no more summer stock engagements at Chesterville. It was unlikely that she and Ruthven would ever meet again. Yet she always found something consolatory in his "boneyard" idea. It kept recurring to her more often than she would have been willing to admit.

She faced the hardships of road life with less resentment. She took up her work with the veiled happiness of a child who remembers that she has a chocolate bar hidden away; but it was only a chocolate bar, she kept telling herself. It was a sweetmeat—nothing more. It was not to be confounded with the sterner issues of life.

These sterner issues of life went on, as such things must, companioned by the old vicissitudes, the old exactions, the old disappointments. The Una Carberry Company traveled from town to town and from city to city, going through the revolutions of its four-act romantic drama with the regularity and the monotony of a clock that has been duly wound up. And the mainspring of that well-ordered mechanism was always Una herself. She watched carefully for any signs of her company going stale; she insisted always on the best they could give; she became more and more exacting of her fellow workers, more and more careful of her expenditures. She was accepted as a wealthy woman by this time. Her supporting company had heard rumors of investments in Western real estate, of a stock or two in which their star had dabbled when a friendly tip had come from her business associates; but these were rumors and nothing more, for Una permitted no intrusions into her personal affairs. Her career became more and more isolated; she became more and more cut off from those easy-going and improvident associates who could not quite understand her.

Once, when some of her stage photographs turned out unexpectedly flattering, Una sent one to Ruthven. He sent back a carefully written letter, thanking her; and with the letter he sent, in turn, a photograph of his Elmwood Avenue home.

Una studied this picture with much care. It was a large, many-windowed house with wide verandas, partly screened by maples and beeches and elms. It looked provincial in its commodiousness, with its parklike lawns and its red-brick garage showing from the row of silver birches in the rear. There was also a grapevine pergola and a movable lawn fountain. Yet it was strangely appealing, with the flat sunlight on its many-angled side walls of cobblestone and cedar shingles. And beside the anomalous porte-cochère stood Ruthven himself, in light flannels, with a Great Dane resting its nose in his hand.

Una grew to like that picture. She had it cut down and mounted in a silver frame, carrying it in the top tray of her theatrical trunk and unpacking it, night by night, with her makeup box. She found herself susceptible to the sense of peace which seemed to dwell in it. She fell into the habit of turning to it in her hours of greatest worry or weariness. She grew to like the sunny, cedar-shingled façade, the shadow-dappled lawn, the solemn dog so adoringly regarding the solemn figure in flannels. It tranquilized her.

Yet some timidity or some fear which she could not define kept her from writing to Ruthven. She seemed to dread the thought of exploring a treasure chest which might, in the end, prove empty.

Once, when her company had figured in a mildly exciting railway accident and exaggerated accounts of it had crept into the newspaper dispatches, there had been an exchange of telegrams between her and Ruthven. At Christmas-time he sent her a large box of roses. With the roses came another box—a small jeweler's case; and this Una opened with an oddly uncontrolled fluttering of the breath.

It held a small baroque pearl pendant, hung on the frailest of gold chains. She held it up to the light, happy—and yet in some vague way disappointed. The smallness

Digitized by Google

of the box had for a moment misled her. She had been foolish enough to think that it might hold a ring.

It was at the end of March that the dull routine of her roadwork was broken by the advent of Weinert, the New York manager. He sat out in front for two performances, studying Una and her work. She responded to his presence there almost unconsciously, struggling to lift her rôle out of that mediocrity, that obviousness, which satisfied the simpler-minded audience of the road.

He made no appointment with her—he said nothing; but he met her the next morning apparently by accident at the railway station as she and her company made ready for their next jump.

He shook hands without enthusiasm. Then he looked from her to the company scattered about the bald platform. Those birds of plumage, so brilliant under the calciums, looked dishearteningly gray-tinted and neutral and draggled under the searching light of open day. Weinert seemed troubled in soul.

"Do you know where two years more of this is going to land you?" he demanded.

"Where will it land me?" asked Una, half challenging, half defensive.

"With the buckwheats for life!" was Weinert's retort.

"Would you mind speaking English?" she mildly suggested, fixing him with her level glance. She knew that behind that apparently artless derogation lay some ulterior motive. She resented his circuitiveness.

"I mean a couple more seasons of this cheap road work'll put the Indian mark on you. It always does. You can't get away from it!"

"Did I say I was trying to get away from it?"

Weinert stopped and looked about the bald and barren station platform again, at the lounging group, the pile of battered trunks and prop cases, the lonely tracks circling out into sordid and lonely-looking suburbs.

"You don't mean to say you're going to be satisfied with this?" he demanded.

"Why shouldn't I be?"

"Because you're able to do the other kind of work. Because you ought to be doing the other kind of work!"

"And?" prompted Una.

He saw the mockery in her worldly-wise smile. It enlightened him on more things than one; but, above all, it made him feel the futility of further equivocation.

"Miss Carberry, I've just bought the rights to a great play—a play by a big man; a play that's good for a solid year on Broadway."

"They always are!" remarked the woman at his side.

"But this play's different. It's got an idea behind it—it's original. And I'll tell you why. It's about a good woman!"

He seemed disappointed at her silence, puzzled that the novelty of the thing should so miss fire.

"I'm so sure of that play I'm going to put every dollar I own into it. And what's more, I'm coming to you first—to give you a chance for that part!"

"Why to me?" she asked. She found of late that she was growing more and more diffident as to the future. An autumnal sense of finality had grown up within her. She had begun to feel that day by day and month by month she was approaching some dim and undefined end.

"Because there's just one type of woman can play that part," Weinert was saying. "And that type isn't common. I've dug out three women. You're one of the three. You don't rank as high as the other two, but you're younger."

"What terms do you offer?"

He hesitated in the face of such immediacy.

"I'd rather you'd take the play along with you and read it. Then you'll see the sort of chance I am giving you."

"I'm sorry, but I shouldn't be able to read the play without knowing the terms first."

Discretion settled like a lowering drop across Weinert's sage and wrinkled face.

"What would you play the part for if I took you in off the road, gave you a crackerjack company and guaranteed a Broadway production by the end of next October?"

Una weighed the matter for one brief moment.

"My lowest terms would be two hundred and fifty dollars a week, with a percentage after the first four weeks' run."

Weinert sorrowfully shook his head.

"That would be out of the question!"

"Then we're only wasting time, I'm afraid."

He opened the handbag he carried as she turned back toward the depot. Her train had pulled in.

"Won't you take this copy of the play and read it? Go through it first and then let me know how you feel about it."

"That would be foolish when I know we couldn't agree on terms," was her answer.

"Make it two hundred a week and the thing's settled. That will mean Broadway, your own company and a production by October."

She was on the carsteps by this time, smiling pensively down on him.

"You see even Broadway by October and my own company don't excite me."

"But, good Heavens, woman, you don't even know what you're throwing down!"

"But I know what I want," was her answer.

"Well, what do you want?"

"I want money," she calmly replied; "for that's the only thing I'll ever get out of life."

Weinert contemplated her out of narrowed eyes.

"Say, you're not losing your ambition, are you?"

"I'm changing it," was her answer.

"Then here's the thing you want!" he exclaimed as he thrust the play into her hand.

"But what's the use when you haven't met my terms?"

"Oh, I'll give you your two hundred and fifty a week if you've got to have it," he admitted. "And I'll meet you in St. Louis a week from Sunday."

She knew that she had won. She knew that a new door of opportunity was being opened to her—that the Ultima Thule of all her career at last lay before her eyes; but no answering thrill of triumph crept through her tired and listless body.

XXII

WEINERT, like other astute and active theatrical managers, believed in taking Time by the forelock. While spring was ripening into summer and Una was still "on the corkscrew route" with her road company, he began his publicity work with an occasional discreet paragraph as to his coming production and Broadway's new star.

It was at Zanesville, at the end of an afternoon of ceaseless rain, that Una sat in her hotel room turning over the pages of a New York weekly paper Weinert had sent to her. She had read with a somewhat weary smile the overlaudatory press notice he had "planted" there. She had stared without emotion at the photographic reproduction of her own face. The paragraph, she felt, was as overflattering as the picture. Yet it was the same photograph, she remembered, that she had sent to William Ruthven.

She fell to thinking, as she turned from the outer world of driving rain to the disconsolate gray walls of her hotel room, of her life and what she had passed through. She pitied herself as a woman whose youth had been wasted. Another year had slipped away. In three days' time her company would disband. She would no longer have hard work to narcotize her discontent into quiescence.

She turned back to the picture of herself. She looked at the other pictures that stared out at her from other pages. The fact that they seemed unhappy and aggressive faces brought to her the thought that happy lives have no history.

Then, as she listlessly fluttered over the pages, her breath caught in her throat and the slow rise and fall of her breast was momentarily suspended—for there, facing her from the printed page on which her hand rested, was a picture of William Ruthven.

It was several seconds before her glance moved on to the inscription below the picture. Then she read the words: "William Ruthven, manager of the Chesterville Chilled Plow Works. Still another victim of the Implement Trust. He fought the combine and was forced out of business."

Una stared down at these words as though the message they carried were something that could percolate only a little at a time into her consciousness. Then she sat staring out through the rainswept window-panes, convincing herself of everything those words could mean. She turned back to the article which accompanied the scattered pictures of "Independent Plowmakers." She could not follow the intricacies of the Trust movement which had resulted in the obliteration of Ruthven. She only knew that he had met with misfortune—that he had been driven to the wall.

She had always prided herself on her practicality. She had always flattered herself that she was able to meet emergencies without hesitation. And the more she thought over it, the more she saw she was face to face with a great opportunity. A road to her one object in life seemed suddenly blazed through a thousand entangling timidities. She was possessed by a feeling of gratitude. At last, she acknowledged, all her sordid life of self-seeking could be redeemed; all her years of effort could be rationalized—could be given a meaning and a purpose. Ruthven's compact with her would no longer be one of sentiment. She could go to him now without any thought of imposition. She was being saved by a God-sent chance. It was an illusion, a theatricality, that had first exacted from him his strange promise to her. And now she could meet him without fear on that upper plane of emotionalism. He had forced on her brow a crown which could only have weighed her down; he had insisted on attributes which were of the theater and not of her. And now she could face him with the most appeasingly theatrical movement that could be conjured up. She would be the Good Fairy of the romance that no longer lived in a world of everyday work. She would step in and save him from his enemies.

She was filled with a joyous calm by this time, confident of herself, conscious of a solemn obligation to be fulfilled.

She made a strict appraisal of her available money. The largeness of the sum surprised her a little. Then she sent a telegram to Ruthven.

"A lucky accident will take me to Chesterville tomorrow afternoon at five," her message read. "Please meet me if you can."

She drove to the theater in a cab that night, through the driving rain. She made up with a preoccupation that might have been regarded as somnambulism. The "house," on account of the bad weather, was exceptionally small. To this she gave no thought. She went through her part automatically, with a dreamy unconcern for its dog-eared heroics, its saccharine absurdities, its tawdry imitation of life.

"It's a good thing the madam's on her last lap o' the tank route," Pop Wharton, the character man of the company, confided to Una's understudy, "or another night o' that trancework'd see you out there eating scenery!"

"She's even letting Baddie crab her points," murmured that mystified young lady as she stood watching the stage from the wings.

At the end of the performance Una called her company together, explained that she was unable to play the last two performances, surrendered her part to the trembling-fingered understudy and calmly and methodically packed her trunks.

She went back to her hotel and walked her room for an hour in a dull fever of restlessness. She tried not to think of the past. She struggled to escape from that sorrow which imposes itself on anything done for the last time, that valedictory regret which must mark any great divide in life. She remembered that she had felt much the same way when she stood on the gloomy stairs below Hempel's studio and called back that forlorn "Goodby!" to him.

With the thought of Hempel, too, awoke the memory that she had once come too late in her quest for possible happiness. Would she be too late this time?

A keen rapier of pain went through her breast at the mere suggestion of it. Ruthven was in

An Old Woman and a New One In the Old World

By CORRA HARRIS

ILLUSTRATED BY HENRY RALEIGH

FROM the time we landed in Liverpool, throughout the summer, Peggy looked forward to Paris. She is descended from the South Carolina Huguenots on her mother's side of the house and she has always claimed that her entire capillary circulation was French. She imagined that she would feel at home in France. I had my misgivings. After a woman is old enough to consent to wear a bonnet tied under her double chin with black ribbons, her mind becomes a sort of patchwork of memories and anxieties which she retains from what she has read and seen. Consequently the impressions I held of the French people were a rather fearful panorama of the Revolution, mixed with extraordinary varieties of fashions, and punctuated here and there with the frisky figures of Frenchmen that we see in America wearing curled whiskers and variegated socks. If you think about it the history of France is not the history of a sane people, but of a nation periodically subject to the most dangerous aberrations. And the fashions we get from Paris are not fashions most becoming to virtue and modesty, but they are designed chiefly to minimize the effects of both these qualities in the characters of those who wear them. Still I bore with Peggy's enthusiasms all the way from Berlin.

A Long, Looped, Winding Necklace of Gayly Dressed Women

We arrived in the Gare du Nord late at night—and received our first shock. Peggy pulled down the window of our compartment, stuck her nice little head out and beckoned to a porter. But just as he was about to enter the corridor he was appropriated by a Frenchman, who gave him his suitcase as delicately as if he had been a girl unable to carry it. My niece was indignant, but she made haste to summon another porter. This one was taken in the same manner by another Frenchman, who had calmly waited, observing her efforts, and had profited by them without making any himself. When the third porter walked off with the kit of a little spider-legged artist who had occupied the same compartment with us I came to my American senses.

"Get out of the way, Peggy," I exclaimed, following the Frenchman with our largest bag.

As he stepped down from the train I dropped the bag on him. There was a yell, a great commotion, and the greatest splutter of languages I have ever heard, on the ground outside. But I paid no attention; my dander was up! I stepped back, gathered up our rugs and the other bag and dropped them after the first. Then I stood in the doorway and watched that little man on his all fours, with his legs tangled up in our shawlstraps, struggling to rise. The dim light of the station showed a wide fan of faces circling round him, everybody gesticulating, everybody talking, everybody seriously concerned, nobody laughing except me. I had to laugh. He was so small, so indignant.

"Come on, Peggy," I said, descending carelessly upon our luggage and the Frenchman.

For the first time during our pilgrimage I realized that there was some advantage in not knowing the language of the country we were in. I suppose I should have been overcome if I could have understood the vituperations that followed us as we made our way to the cab rank, accompanied at last by a porter loaded with our rugs and bags. This was our advent into Paris; not graceful, but emphatic. And may my tongue cleave to the roof of my mouth if I ever repent of it!

Peggy was queerly silent as we drove along the streets to our *pension*. I do not know if she was ashamed of France or ashamed of me. But I made a note then in my mind that while she was looking up the advanced French woman I should endeavor to discover, if possible, the explanation of the French man.

To come into an ordinary French home is like entering a red gloom. The people are so fond of this color that even the soldiers wear red breeches. Once I saw in Paris what I never expected to see in this world—men whose lips were painted a bright feminine vermilion. Peggy stared that night at her inflated bed, covered with a carmine spread embroidered in deeper red. The chairs had red tidies and the table wore a red cloth. My own room was an exact copy. Through the red-curtained windows we looked upon a tiny garden outlined with an ivy-hung wall, and the blossoms with which the white walks were bordered glistened in the nightless city like wavering drops of blood. We were served with wine and bread, and retired to a kind of glowing, dreamless sleep.

I Had to Laugh. He Was So Small, So Indignant

The Remains of the Revolution

AT FIVE o'clock in the morning I was awakened by the passing of a light back and forth outside my window. I arose and parted the curtains enough to see two very old, bent women, with white caps on their heads, nodding and whispering together over the garbage can. They were the famous ragpickers of Paris. Every morning at this hour hundreds of them creep swiftly down into the city from Grennelle, where most of them live, it is said, in the cleanest houses in France, to overhaul the ash barrels and garbage cans. It gave me a gruesome feeling when I learned afterward that the most valuable thing they find is gray hair. From that day as long as we remained in France I kept my combings strictly to myself. These were the first French women I saw—awful, aged, dim figures flitting about noiseless in the gray dawn, with little lanterns in their hands and baskets on their arms. Their sisters may be seen everywhere under the eaves of overhanging houses in the narrow streets, pushing fruitcarts, washing dogs under the Solferino bridge, selling tightly wadded bouquets, or sitting beside old bookstalls along the banks of the Seine. They are never idle, always knitting if they are not selling something. One knows immediately that they are the same kind of women who sat in front of the guillotine more than a hundred years ago, knitting in a red thread for every head that fell into the bloody basket. Their features have not changed to this day. They all have whiskers, a black smear upon the upper lip, noses that squint fearfully at the corners, red skins, and fierce black eyes that glare at every passer-by through the rheum of age.

Two hours later I again started from my bed. It seemed to me that the world was coming to an end. The street was suddenly filled with a tremendous noise, the house trembled, far and near there was the sound of cries, broken snatches of frightful singing. I ran into Peggy's room and beheld her calmly sleeping, one arm thrown over her head, both of her black braids languidly crossed on her bosom. If the crack of doom comes at seven o'clock in the morning

Digitized by Google

Gabriel will be obliged to send extra angels to call the young people in time to dress for Judgment. They will sleep on through his loudest trumpeting!

"Peggy," I cried, shaking her, "get up! Something has happened!"

She started, raised herself upon one elbow, dazed with sleep.

"What is it?" she murmured.

"I do not know, but listen!" for the din was increasing, the ground giving out a hollow, rumbling, reverberating sound. There was a clashing of heavy metal. I rang the bell. The maid appeared, calm, smiling.

"*Déjeuner?*" she inquired.

It was some time before I understood that the pandemonium we had heard was only Paris waking up, throwing back the iron shutters of its windows, pouring into the streets, beginning the life of the day. Nothing that we ever hear of the French people can prepare nervous Americans for the noise they make merely living. They do everything with a bang. And the fact that the ground upon which this city stands is tunneled with a thousand great sewers makes the passing of an omnibus almost as distracting as an earthquake. Add to this the fact that every cabhorse wears a cowbell, and that those who have anything to do with the traffic are either singing or yelling, and you receive some impression of one part of the "gayety" of Paris. Everybody to his own notion, as the old lady said when she kissed the cow; but for me, I should infinitely prefer to live and die in a lazy, peaceful Southern town, where the signs of a new day are an opal dawn, the soft cooing of pigeons under the eaves, and with the sunrise the laughter of young children, than to be the grandest lady in such a bedlam city.

But it is not for me to describe Paris—this has been better done many a time in literature. One thing, however, the stranger must observe is the barrenness of the earth in all public places, as if it were now too old and desolate to grow grass, as if the streams of humanity that poured through the streets seared them. The very leaves of the trees are brown and parched even in midsummer, and the splendid forest of the Bois does not atone for it. One feels the fever of man everywhere. His breath has scorched the land there. All the great buildings and monuments stand out in a brazen, greenless glare. One's attention is also attracted by the fact that so much that is historical in Paris has been restored, not on account of the decay incident to age, but because in fits of national rage the French themselves have damaged and destroyed their own works. They appear to have been especially fierce about the nether extremities of the human figure. For example, I was astonished by the number of comparatively modern statues in the Louvre that had artificial legs, fresh white ones soldered on to the gray marble. We were always informed that the original limbs disappeared during the Revolution. It is only when one passes along some of the streets in the older part of the town and peeps over the vine-covered walls that one seems to look far down into the green heart of old monarchical France, across marble fountains half hidden in the shrubbery, into the gravely proud doorways that seem forever closed to the life of the republic. Inside dwell the royalist aristocrats, as remote from the France of today as the eighteenth century is from the twentieth.

Matching Peggy's Stockings

BUT during this first week we hurried by all these things on our way to the shops. This is the first inspiration of every American upon coming to Paris. It is the triumph of their commercial enterprise that the merchants and modistes of the place have imbued with the buying spirit every man and woman who visits it. I could not see that the shops presented any better or more attractive appearance than those of New York. This I have observed, however, that shops everywhere cater more to the extravagance and varied tastes of women than they do to the honest necessities of life. The difference between those in Paris and those at home is in the spirit of the people who serve in them. The sympathy, admiration and flattery of a Parisian shopgirl surpass anything of the kind known in America, where a "saleslady" is apt to give herself airs at your expense if you are not in a hurry to make your choice of a bargain. The sight of Peggy choosing her first frock at a fashionable modiste's in Paris was an occasion to be remembered. We were attended by two beautifully gowned shopgirls, each concerned to convince her that in that particular creation she was probably the most beautiful girl in France at that moment. She stood bemused between two mirrors, while a blonde girl knelt, studying the doubtful hem of the long train and another stood at a distance with her face rapt in an ecstasy and her hands raised like human accents as she exclaimed:

"Mon Dieu! but mademoiselle is a dream!"

Women show their weakness and strength in a queer way when they are contending with the desire to be beautiful at any cost. I sat watching Peggy's struggle with her decent upbringing and that indecently lovely gown. Jacob never wrestled harder with his angel than she did with her modesty. I reckon it is the occasion where many and many an American girl falls—sinks in the scale of things, I mean, to a mere sex valuation of herself. For this is certain—the more fashionable women's clothes are the more do they emphasize the physical at the expense of those virtues that should outlast all fashions.

"I just can't!" she sighed at last.

"I wouldn't, Peggy," I exclaimed. "You may be a dream in that dress, but you would never show to an

"Mademoiselle is a Dream!"

advantage morally in it. Dreams are irresponsible figments, neither moral nor immoral, merely unmoral. I'd stick to the American definition of womanhood, if I were you, and remain definitely moral."

We had many adventures that day, but none that startled my niece more than when she asked to see some silk hose. The clerk, who was a man this time, walked round the counter, bent his knees before Peggy, bowed his head low and inspected the stockings she had on.

"The kind you wear, mademoiselle, will be twelve francs," he announced nonchalantly, before she could recover from her indignant astonishment and kick him.

We left Paris at the end of two weeks and traveled leisurely about through France, which shone white and green and golden in the blond sunlight. We discovered that the people of the different provinces differed like separate nations, but all were touched with the same Latin brush. When you get to the real bottom of the contrast the women of Brittany do not differ so much from those of Normandy as does the cut of their caps. They are stingier, while those of Normandy are merely cleverer at getting sous, not at keeping them. We saw the beautiful old *châteaux* and admired the lonely, low, long-bodied cottages with their thatched roofs, hidden behind rows of Lombardy poplars and orchards and vineyards. The peasant women always manage to embolden themselves with some amazing dash of colors. They are often dirty, but never ragged. France must be the only country in the world where dirt and thrift go hand in hand. In America it is only the lazy and shiftless who submit to habitual filth, but in France your grand dame may have a dingy skin. A certain great lady of Paris, having engaged a peasant girl from one of the provinces as a nurse for her children, was advised by their English governess to see that the girl had a good tubbing.

"But," said madame, "it would kill her!"

The French housewife is always busy, apparently cleaning, but as a rule she never achieves that glistening, dustless orderliness common to the home of the average self-respecting American or English woman, to say nothing of the pluperfectly clean houses of the Dutch and the Germans. Part of this is due to the clutter of small objects in every French chamber and salon. These are always so full of ornaments, bric-à-brac, and so forth, that really there is no room for conversation. You must talk across tabourets, vases and little naked statues everywhere.

Contempt for American Frankness

WE WERE told over and over again upon our return to Paris that we could not judge the French by those we met and those we saw in public places. The real French people, our informants said, were away on their estates, and when they were at home they never mingled with the people, to say nothing of foreigners. In France the class that has the momentary advantage through the possession of wealth and power uses this to segregate itself and assume the airs of superiority that distinguish the same sort of persons in America, and everywhere else. But you may always judge a nation by the people who are most in evidence—the poor and the middle class. They are the majority. They retain and exemplify its real characteristics, while the exclusive class only resembles the same class in every other country. They are not national, but a sort of international dry rot with which we are all afflicted. We should not wish or expect America to be judged by her decadent idle rich, whose exclusiveness conceals many vices that the average citizen would never practice. The same is true in France. She is entitled to leave a better impression than her merely rich people give.

After our return to Paris we were some time in getting down to the study of the woman question. We found it very difficult to get any information, or rather Peggy did. In vain she struggled with the officials who had, or were supposed to have, the various statistics concerning social conditions at their tongues' ends. The trouble was that the French people are secretive, like little children with bad consciences. They not only do not wish to inform a stranger about their social conditions and subconditions, but they do all they can to mislead, hinder and confuse such insulting foreign curiosity. The French as a nation have a contempt for the frankness of Americans.

"It is foolish," said madame, our hostess, when Peggy complained of the reticence of the clerks in the Musée Social, where she had gone to find out something about the number of women who did this and that in France and where she was politely circumvented at every turn—"It is *plus* foolish to tell about ourselves. We do not do it. To be always, always speaking the truth like the Americans; to be giving ourselves away! It is like offering a diagram of your fortifications to the enemy. We do not commit that indiscretion, ma'mselle, even if we commit all the others!"

Still, Peggy went on painstakingly from one place to another, from one official to another. Later I shall set down some of the things she learned, but for the present I shall give some of my own impressions merely as an observer of the women of France, and of a few other things incidental to their condition. But you must bear this in mind: One candle always casts larger shadows and more of them than many candles. And the one taper mind does the same thing—makes fantastic, hobgoblin shadows of the impressions it receives. I have always thought that this is why the average passionate reformer is such a foolish, partial person. His little ego flame fluttering in the

THE BRAND DOCTOR

By Rufus Steele

ILLUSTRATED BY P. V. E. IVORY

THE odds against a rustler dying of old age were always so long that mighty few men openly made rustling their profession, even in its best-paying days. Probably the census man never turned up one single professional who admitted it in all the Pacific states. It was a side line. Rustling was a more or less promising game for a man to hang to up to a certain point; beyond that point it was likely to hang him. Successful rustlers were men who could tell with some certainty which side of the point any bunch of horses or steers happened to be ranging on. It wasn't the danger alone that kept the rustling trade from being overcrowded—it was the fact that most of the men who rode the unfenced plains found it more natural to respect a brand than not to.

It was some kind of an accident usually that set a man to rustling; and certainly accidents of a violent kind made lots of men quit it. If the pedler hadn't come into my stable and nagged me, probably I never would have tampered with a brand or driven off an animal that didn't belong to me. In the same way, after the double accident to Jeff Cull's lower members years later, I knew my rustling days had come to a peaceful end. Rest in peace; that's all there was left for me to do—you see me doing it.

An Oregon mist had kept up all day. The road was heavy and nobody traveled who could put it off until tomorrow. I spent the day building an easy runway to get bales of hay down from the loft of my little public stable without having to use the rope and pulley.

He got in at mid-afternoon, this German pedler, cussing the weather and mostly the mud that clung to his tires like it wouldn't let the wheels go round.

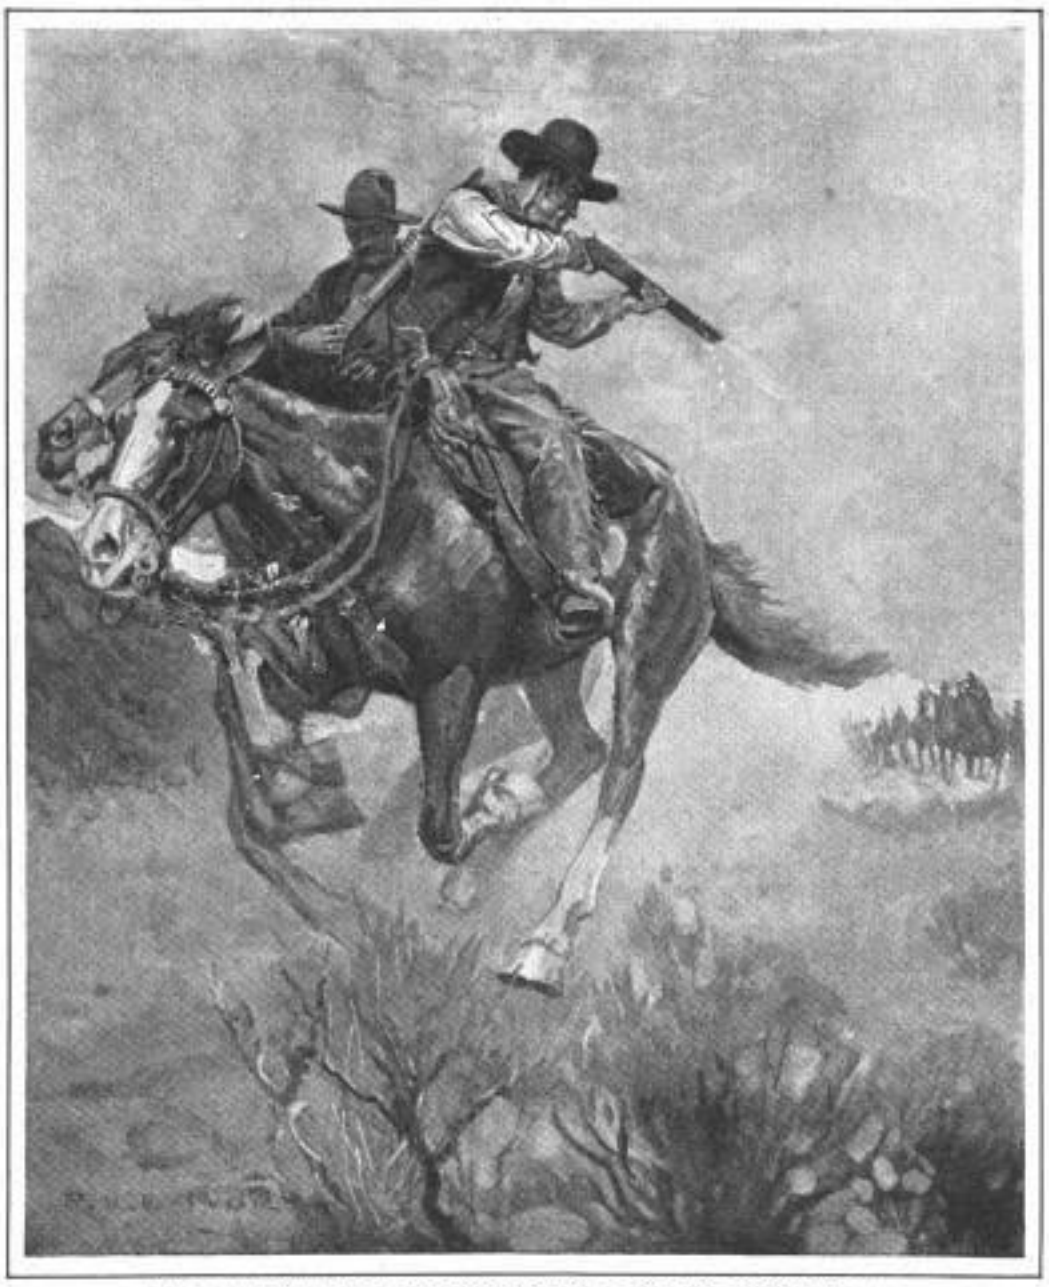
"No man could done it but me!" said the pedler. "No man could got through dose bad places in the road mit a ton and a half of tribleblated kettles and pans in the wagon—no man but me, what knows horses and how for to drive like me. Ernst and Yake is fine horses; but some other man, now, he could not pull it through even mit dot Ernst and Yake. You now—you never could. Ain't it? I know dot Ernst and Yake like they was men already; I know what they think even. I know them horses anywhere in the world, if they was painted green even. Such varts they have on the legs! In the dark even I know them by the feel."

The Pedler Who Knew it All

NOW what could a foreign pedler know about horses? He drove a good team of bays and he overfed them till they weighed two hundred more than roadhorses ought to weigh. When I went up in the loft to shoot a bale of oat-hay down the new slide the pedler kept right on talking, only this time he wasn't telling me how much he knew about the horses—he was telling Ernst and Yake how much more he knew about horses than a country stable buck ever could learn. I took a good while to find the right bale and let him run off at the head until he was through. Of course, maybe he didn't know I could hear his gab. When I came down he says:

"Ernst and Yake is fed. Where do I get mine eatings yet?"

"You get your rolled oats when I go to the shack and cook it," I told him.



"And dot is ven?"

"That is when I get this new hayslide finished. I find I didn't build it strong enough today—not by a good deal."

The pedler, being hungry, offered to help me and I let him. I let him help me drag in long scantlings and nail them underneath to strengthen the slide, and other scantlings to stand upright for braces; and last of all we nailed heavy cleats across all the way up the slide, though the pedler said: "What fools! Dot bale of hay could as easy slide up as down mit dese cleats on!"

In the morning the pedler's horses were gone. Ernst and Yake had been stolen. *"Mein Gott! Mein Gott!"* the pedler wept; and he was near crazy with anger and sorrow. The mist had changed to a downpour that would wipe out any track a horsethief would allow his prizes to leave along the way. We telephoned the sheriff, forty miles away, and gave him the brand and color. When we could find no trace of the big hoofs on the road in either direction the pedler thought the thieves must have fled up the river. So I locked the stable tight—to protect the hayloft; my own horses were at a stack in the corral—and we took saddle horses and a pack animal, and loaded up with guns and ammunition, and went into the rough, roadless country up the river. It was no use; every track we found proved old and a false scent. We came home worn out at the end of the third day. That night somebody stole some of the pedler's tins from his wagon. Next day he was ready to move on at any cost if he could only find a way to move. He must have a new Ernst and Yake. Couldn't I—wouldn't I take pity on a poor pedler and find a good span of horses that he could buy? I was willing to do my best and in the afternoon I sent for him to come to the stable to see a team of roadsters. They were bays, like Ernst and Yake, but a good hundred pounds lighter. Ernst and Yake had long manes, short bushy tails, warts on the legs, long teeth; and each had a white hind foot. The new span had roached manes, long, thin tails, all brown feet, short teeth, and clean legs, free of warts. The pedler's horses were branded with a small "D"; each of these was a "BB." The pedler, being a judge of horses, examined their limbs, hoofs and mouths, and estimated by the teeth that they were several years younger than the horses he had lost. He admitted they were in better shape for hard roadwork than his own lamented team, and cheerfully paid me three hundred and fifty dollars for the span. The pedler had got back his smile as he drove away.

It was Ernst and Yake he bought back from me! Four days in the loft without a mouthful of hay had reduced them nicely. Trimming down the teeth with the chain cutter was almost as easy as roaching the manes. Pulling out some of the hair of the bushy tails made the tails seem longer. A dark stain took the white stockings off the hind feet. The warts on the legs were not difficult—since boyhood I had known how to use the acid so that no part of a wart remained after two days—and no sore, either. "Hair branding" had changed the small "D" each horse wore to "BB"; with a knifeblade I had plucked out hair so as to form the new letters and curled the edges just like the iron had curled the hair in the original brand. In completing a nice job I had even made small barbed-wire scars by using a little acid, but the pedler overlooked these. Months later the hair brand would grow fainter, the hind feet whiter, the manes longer. The pedler might then jump to conclusions from his reading of the signs; some day he would pull up his team with a jerk, get down and go over his horses a square inch at a time. Then he would find those barbed-wire scars, such as Ernst and Yake never had; and the unchanging scars would wipe that mean suspicion out of his mind.

I Peppered Away Fast Enough for Us Both and Got Two of Their Horses

At one time I was punching for the Flying Circle when we moved to the Green Valley Range for the rodeo. Green Valley was considered about the safest range in the country. It was forty miles long, ten miles wide; and you couldn't get stock into it or out of it except at the ends. There was always a lookout at each end, so the outfits that grazed the valley never bothered their heads about rustlers. Rustlers weren't committing suicide, they said. The Flying Circle cattle were all in the lower end of the valley. The boss got us busy and we ironed a lot of our calves that there couldn't be any dispute about while waiting for the other outfits to come along. The boss was also the owner. The funny way I saw him looking at some unbranded heifers belonging to another outfit one day set me thinking. When he was standing by the branding fire alone I spurred out and dropped my rope on one of the heifers and dragged it in to the fire.

"Just having a little fun," I sung out to the boss. "Brought you a nice heifer to have ironed."

The Ironing Process

I SAT still in the saddle looking at him. With a single movement I could swish my rope loose and let the heifer go tearing off through the sage. I made as if to swish my rope and said to the boss: "This one ought to be worth a ten spot." He gave me a straight look then. I didn't swish the rope—not until ten minutes later—for the boss said: "Yes, Lengthy; I'll give you a ten spot for that one and for every one you bring in without starting a rumpus." He yanked his iron out of the coals and went over to the critter, while I took a short turn round the horn and looked the other way.

A little river ran straight down the valley. The rodeo always moved up the west side, branding everything under a year old according to the mark on the cow it followed; then crossed the river and worked down the east side. The day after the heifer episode I was bitten by a scorpion, and the boss told me to head for the home ranch and take care of myself. When I was out of sight of the outfit the scorpion bite got well. I circled and got up river ahead of the rodeo. I rode the range and cut out yearlings that had missed the last branding, until I had fifty of them. I put in a busy day making the bunch swim the river to the east side and a busy week keeping them in hand.

When I was sure the rodeo had passed by I crossed the restless young critters back to the west side and took my time ironing them with the flying circle—the boss' brand. Being just an ordinary puncher, of course I wasn't in the habit of inviting suspicion by loping round with a branding iron dangling from my saddle strings. Instead, I was

Digitized by Google

getting a corn on my ankle from an iron ring that nestled down inside my bootleg—an iron ring filed to a sharp outer edge so it would make a clean mark and not blotch. I would rope a calf and drag it up to the fire, then snake the ring out of the coals and handle it by thrusting two green willow sticks through and twisting the ends—a simple enough trick with practice.

Handling half a hundred yearlings all by myself was a slick and risky thing to do—maybe that's why I was willing to take a chance at it. I didn't care so much about the five hundred dollars the boss slipped me when I told him that next visit he would find fifty head more than he expected wearing his brand in Green Valley. I gave every dollar of the money to a monte game in Cheyenne in one night—I remember a woman was throwing the cards.

. . . . . .

"Broomtail" Bowen took me in as his pardner. His nickname was a mighty good one, for when he wasn't rustling cattle he was rustling broomtail mustangs. "Broomtail" Bowen could do more funny things about brands and still contrive to keep up his standing in the range country and his friendship with the sheriff than any man I ever knew. I woke up to him when he played a game on a horsewrangler named Naylor. This Naylor lived at his ranch-house twenty miles from the railroad. He had a dozen horses in the barn-corral and seven of them were horses of good breeding. One night seven horses disappeared from the corral—the seven good ones.

So many bands of horses were being moved over the roads that Naylor gave up trying to track the rustler. Instead, he made for the railroad station, where horses were being shipped to Ogden and Kansas City, and got himself a front seat on the fence so as to size up every horse that took the runway into a car. Naylor's forty-five was in nice working order. He didn't find his horses; he didn't even see any horses like them except some in a bunch of twenty that were trotted through the chute just as the horsetrain was due to pull out. Naylor's lost animals carried his iron "TN." The horses that resembled his were "JM." His brand might have been enlarged into the other with a running iron, but even the lightest running iron makes a sore that doesn't heal in two days. Yet those were his stolen horses that Naylor watched a squint-eyed man yipyip up the runway into the car.

Handling Half a Hundred Yearlings All by Myself Was a Slick and Risky Thing to Do

"Broomtail" Bowen's Little Game

HAIR branding! The slickest I had ever seen. I found out that the squint-eye was "Broomtail" Bowen of the Horseshoe cow outfit. In a couple of days I showed up at Horseshoe headquarters and took on at punching. I was sent out to join Bowen. "What's your shine?" he asked me—meaning was I best with my rope or what.

"Hair branding," I answered him—and that was about the last thing a sane man would confess in the range country.

"What's your name?" asked "Broomtail" Bowen, trying to find out whether I was crazy.

"Pardner!" I told him, smiling.

"All right, pardner," he said, taking in the situation like the sensible man he was; "but hair branding isn't any good off a horse range, and this happens to be a cow ranch. However, maybe we can find some other method just as good."

We did. Last summer was our busy season—"Broomtail" Bowen's and mine. We looked after the outer rim of the range—just us two. We would down a critter that wore the horseshoe and rebrand, making "O" out of the horseshoe and tacking on "H" to make "OH." We used care in setting the iron to the critter through a wet barley sack, turning out a beautiful brand with the raised skin and curled hair edges—that would heal completely in a week! It might not last more than three months, but we only asked it to last three weeks.

At the roundup, when the owners were on hand to boss the cutting out for beef sales, our punchers brought in more than a hundred head that carried this "OH" brand. One of our owners showed a circular letter from a stranger outfit two counties away asking that a lookout be kept for a big bunch of strays. The iron they gave was "OH." Our owners were strictly square; and when the roundup was over they sent Bowen and me to take the strays home. We took them to a distant railroad station and shipped them into the city, where they brought a good price.

Bowen was a real rope artist. Nothing he shot his loop at ever got away. When we left the Horseshoe outfit we put in a season rustling horses. We had three carloads of "tops" within half a day of the railroad when the sheriff of the county rode into camp. It took Bowen about a minute to find out that the officer was on the trail of half the bunch we were keeping in a near-by cañon until the rebranding sores healed. "Broomtail" and the sheriff sat round the fire most of the night discussing ways to nail the rustlers and recover the horses. Bowen was a most ingenious man, with many bright ideas. Before they rolled over in the blankets the sheriff had persuaded him to join in the chase and had sworn him in as a deputy. After breakfast they were off for a three days' trip back into the mountains, where Bowen led along a fresh trail made plainly by a band of horses being moved in a hurry. They overtook the band, routed the rustlers after some poor shooting, in which nobody was hit, and captured a nice bunch of stolen mustangs. The sheriff said they were not the band he was trailing, but he knew by the brand that they were horses with a reward hanging over them; so he was satisfied. He and Bowen drove the horses home and divided the reward. Bowen was glad to have been of assistance to the sheriff, and while he kept the officer busy in the mountains I slipped the three carloads of horseflesh out of our cañon and safely aboard a train for St. Louis.

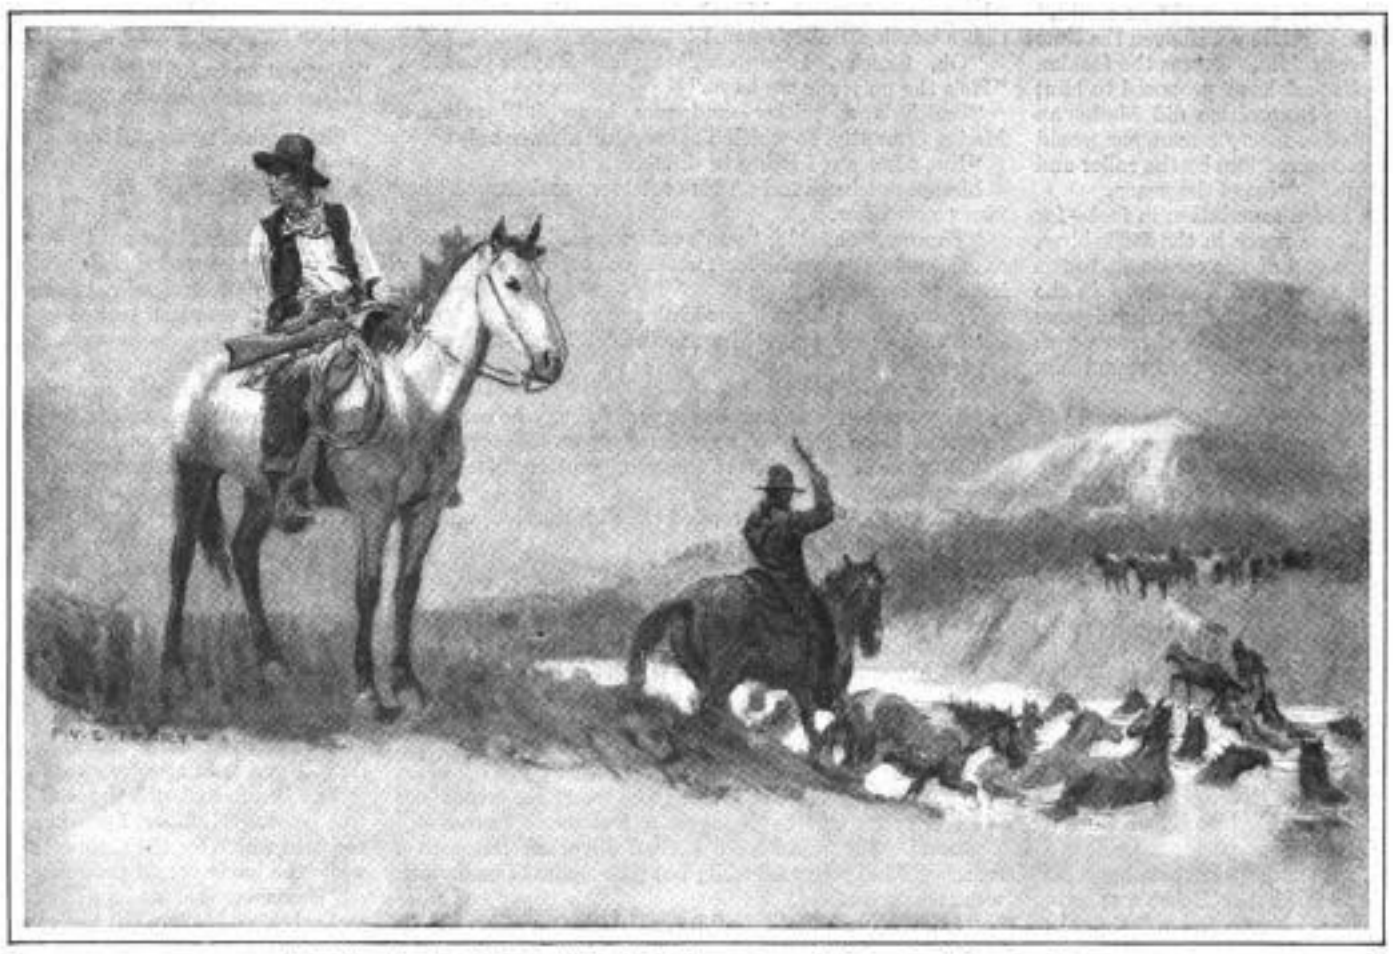
When we separated "Broomtail" Bowen changed the scene of operations. He gathered a few horses here and a few there and was trying to keep them covered until he could ship. He had the animals in a corral in the woods that he rented from a half-witted fellow when he learned that the sheriff was on his trail. Bowen was a humorist. He called the half-wit out and said to him:

"I've got to go away for a day and I want you to look after my horses. If anybody comes snooping round here and wants to know who owns them just say that you do—that you are in full charge." Then Bowen changed counties.

Next morning the sheriff rode up and said: "Fine bunch of horses—whose are they?"

"All mine," declared the looney—"I'm in full charge."

The sheriff flashed his gun.



"You are the man I'm looking for!" he hollered. "Put out your wrists for the cuffs!"

A Lightning-Change Artist

FATE plays jokes on the rustler just the same as on people who don't have to step so lively in making a living. Fate played it low on me once when I was getting out of the state with a pardner to set up elsewhere. No man likes to go to a new range without taking along something to show; so we had gone on to the grazing lands and gathered up twenty head of good saddle stock, every one branded with a "U." We were almost out of the state when my pardner, who had doubled on the back trail to see whether there were any signs of life, caught up and reported that a posse was coming along about ten miles behind. Our hope of avoiding trouble lay in doing some fancy hair branding and doing it mighty quick.

We got our horses into some outfit's old night corral and began to use our ropes and then our pocketknives. We plucked, snipped and curled hair the fastest we had ever done until every one of those "U" brands read "4." The job would answer if the posse weren't sure they were on the right trail and would be satisfied to inspect the brand as they loped by—in case they overtook us. We got out of the old corral and hustled the band

MADGE FIREBOOT'S HUSBAND

By PHILIP CURTISS

ILLUSTRATED BY C. D. WILLIAMS

WHEN Madge Fireboot married Arthur Stone the great world simply lay back and gasped; the little world, which aped the great, gasped twice; while the tiny worlds which radiated in all directions from the other two fairly wriggled with emotion. It was a tremendous upheaval in the ocean of society, that sent its waves and circles through bay and harbor until it was finally reflected, by rockings and shakings, in every little creek and inlet on tidewater.

It was not that there was anything the matter with Arthur Stone—in fact, that was just where the wonder lay; for, if Madge Fireboot had come home, some evening, with an Austrian riding master, an aviator, or the leader of the Black Hand for a husband, society would simply have settled back complacently with an "I told you so!" attitude and reflected how nice it was for proper spheres to fit into each other.

For Madge was a dynamite bomb, a lyddite shell, a cordite cartridge in a society of naturally high explosives. As a hoyden of a child she startled a community not easily startled by galloping madly and wild-haired through its streets. She played baseball with boys long after such things were considered decorous, and when other maidens were politely introduced to society she entered with a running broad jump, the momentum of which carried her name over half the telegraph lines of the United States, and acquired such a reputation for her that when the society columns could think of nothing else to do they printed her picture in every costume, from ball gowns to bathing suits, with plates that were kept in stock for emergencies.

Madge, in short, was the kind of girl who was destined to elope with either a chauffeur or a royal duke. An intermediate destiny did not enter into the range of possibilities.

So when, one day, quiet, unobtrusive little cards appeared, announcing her marriage to Mr. Arthur Brainbridge Stone, of Chester, Massachusetts, society gulped and then asked who in the world he was! In due course of time he appeared, not with one of Madge's wild leaps, but quietly, naturally, officially—like a new postman—and entered into his duties as Madge Fireboot's husband.

He didn't shoot—much; though Madge shot better than most men. He didn't swim—much; though Madge could do double dives off the raft with the youngsters. He didn't drink—much; though most of the men of Madge's world took their meals after the manner of a chaser. He was big, but without the bigness that convinces; he was good-looking because he wasn't bad-looking; and when he talked it was as if to say: "My little body is aweary of this world."

Where Madge got him was a puzzle which even the time and the place could not quite explain. It was the fashion to say that Madge herself must have proposed to him; though, to tell the truth, the supposition did Madge an injustice—for, had she wanted to marry a man, she would not have proposed to him, but seized him by the collar and marched him off to the nearest justice of the peace.

In short, this latter idea had a foundation in fact—for three months before, at a house party in the Berkshires, Madge, who leaped from one end of the continent to the other, like a glorified grasshopper, had seen Stone in the corner watching the world with pathetic, bewildered gaze; and, breaking through the perpetual circle of men which surrounded her, she had wound a silken cord round him and tethered him in matrimony.

Meantime the entire masculine half of the Beach, which, in the end, half expected to marry its ex-playmate, looked on aghast and mourned for the waste of Madge's talents.

"Here come Mr. and Mrs. Madge Fireboot!" whimsically remarked Tom Taylor as he and Lorimer strolled listlessly along the boardwalk after dinner and the trim, aggressive figure of Madge, with the bulking, uncertain outline of her husband, loomed out of the darkness. It was typical of the two that, whereas Madge had not even a wrap over her evening gown and the wind was blowing her hair every which way, her husband was wound gloomily in a huge tweed coat, while a golf cap surmounted the big black cigar that was apparently the only instrument on which he performed with any aptitude.

Married life, however, had not changed perceptibly Madge's range of activities; and, exactly as of old, she fell into line arm in arm with Taylor, while Lorimer followed at a distance with the silent partner.

"Tommy," said Madge, who had always acted as a sort of power behind the throne in all the Beach's sporting activities and apparently continued to do so, "whom are you going to play against Longmouth tomorrow?"

When the Society Columns Could Think of Nothing Else to Do They Printed Her Picture

"You know that Mercer broke his collarbone at Point Judith?" asked Taylor, who talked to Madge exactly as he would to a trainer.

"Yes, I do know it," replied Madge decisively. "And who goes in instead of him? You haven't got anybody that's worth a tinker's dam!"

"Oh, Smithy, I suppose," replied Taylor wearily. "He's the only one we have."

"Smithy's a quitter—and you know it!" rejoined Madge promptly, to which Taylor could answer only:

"But what am I going to do?"

Madge put her hand on his coatsleeve and turned him, face toward her.

"Tommy," she said, "you've always said you would do anything in the world for me. I want you to play my husband tomorrow."

Taylor gave a long, low whistle.

"Can he play polo?" he asked. "Where—where has he done it?"

Madge shook her head.

"Never mind where he has played. I say he can do it and that is enough!" she replied sharply.

"But, Madge," protested the team captain, "he hasn't any ponies."

"I have the mounts," replied the girl, unrelenting. "I want him to play."

Taylor looked dazed.

"Holy smoke, Madge!" he replied. "I only wish you could play yourself. You could have any place you wanted all season."

But Madge refused to be flattered.

"He knows more about the game in two minutes than I do in two years," was her answer.

"I don't believe it."

"Are you going to let him play or aren't you?" asked Madge, refusing to leave the main issue. "Yes or no!"

Used as he was to Madge's ultimatums, Taylor still hesitated. He would have burned down his house in a minute if Madge had asked it; but polo against Longmouth was another matter!

"I tell you what I'll do," he said at last. "I've got to play Smithy at least part of the time, because I've promised him; but if your husband is down at the field in his clothes, and the game goes right, I'll put him in for at least two periods."

And that ended the conversation, for the footsteps of its subject clumped perilously near on the boardwalk.

At that minute, back in the darkness, Stone was saying to Lorimer:

"Look at that! Did you ever see anything like it?"

"What?" asked Lorimer in listless curiosity.

"That faint gray line on the horizon. You can always catch it on the sea at just this hour. It looks almost as if the day were coming up and night were just as long as the distance from east to west."

"Oh, piffle!" muttered Lorimer within him.

. . . . . .

True to the promise which she had exacted, Madge sent her ponies to the polo field the following afternoon; and as the crowds began drifting into the grounds she sprang lightly from the motor which she always drove herself and, followed by her husband, took up a position inside the ropes in the exact center of the field, while the early spectators looked curiously at the brown boots that projected from under the greatcoat of her husband and the neckscarf that suggested that other than conventional attire was worn beneath.

Time was called to the minute; and immediately the rustling hum of conversation, the chug of motors and the moving picture of people that had been filling the sidelines gave way to dead silence, broken only by the click of the ball, the patter of the ponies' feet and an occasional shout from one player to another. Up and down in mad rushes surged the game, in whirlwind gallops, while bits of turf shot out behind; and the audience rose and sat in bursts and subsidings of excitement. The game was going with the Beach team; and Madge watched with jealous eyes the sharp, accurate work of Smith, who always played well when his team was winning.

"Just wait until some pony gets the legs of him!" she muttered to her husband, who was sitting with feet stretched out on the grass beside her, puffing the inevitable cigar and apparently watching a faint pink line over the low hills to the west, where the sunset was beginning to look autumnlike for the first time of the year. He did not answer, and she glanced toward him with a queer motherly look that the Beach had never seen.

"What are you thinking about, infant?" she asked.

Her husband laughed—a big, deep-throated chuckle.

"I was trying to think," he said whimsically, "what lines come just ahead of '"The night is fine," the Walrus said. "Do you admire the view?"'"

His wife laughed with him. Her active little mind seldom forgot anything, and she supplied:

"'But not on us,' the Oysters said, and turned a little blue. 'After so much kindness that would be a dismal thing to do.'"

She laughed again and together they finished it in chorus:

"'The night is fine,' the Walrus said. 'Do you admire the view?'"

"But what has that got to do with polo?" asked Madge.

Her husband smiled and turned back to the sunset; but his wife's glance rested pettingly on him a minute longer, she reached over and turned up the collar of his coat.

"Remember—you haven't any sweater on, dear," she said, "and it's pretty crisp for September."

Half a dozen people on the sidelines behind them saw the movement and smiled; but immediately the attention of the entire field was absorbed in the game, which had taken a new and exciting turn; for the Longmouth players, after allowing a couple of easy scores, had suddenly made a fluke goal, which braced them into fighting trim—and at the moment they were simply running away with the Beach. Madge leaped to one knee and crouched there, quivering with excitement—just as you have seen the substitutes do along the sidelines at a football game—her mouth drawn tense and her eyes watching every stroke.

Though the game had been strung up to concert pitch, Taylor was apparently equal to the occasion; and with a few daring strokes himself, just to give his men confidence, and with a few quiet orders, he smoothed his team into its gait and held his opponents.

The Beach had still the lead of a goal, and Smith, who was playing Number Two, began a magnificent carry up the field which for the moment put the ball out of danger, while the home crowd shouted.

"Heavens, what a carry!" yelled an excitable man in a motor behind Madge; but the latter snorted contemptuously to her husband.

Digitized by Google

"He isn't doing it!" she muttered. "It's Tommy Taylor feeding the ball out to him. He hasn't got the nerve to go into the scrimmage after it!" For, like few other people on the field, she knew that it was not the spectacular playing of Smith that was holding the game, but the quiet commands of the captain, who was ruling his men as if he held every one of them at the end of a string.

Better than any one in the game, she knew and appreciated the mind that was working and directing in that sweating, pushing mass of men and horses—knowing just when to encourage, just when to signal and just where to aim; for, odd as it was, a mind like that was the one thing she valued most of anything she knew.

Poor, gallant little Wildfire, that was her real secret; and, unformed as it might be, even in her own mind, it was the whole basis of her devotion to her crude, queer husband. The one thing she lacked in this world was the power of original, constructive thought; and consequently that was the one thing she regarded with simple and whole-hearted adoration.

You can see the thing work out in everything, from crusades to selling carpets. You find great, grizzled veterans, who could squeeze their officers to death in each hand, following beardless boys just out of school—and doing it gladly, without question. You find men who can draw a page like a steel engraving working in perfect faith for men who can hardly write their own names legibly, much less draw a straight line. It is simply that the men with bodies and hands fall back inevitably upon those who can see what has been, who see what is now, and who know, by the instinct of intellect, what is going to be. In her way, Madge was very much a leader; but she was a leader like Mad Anthony Wayne, who would storm hell if necessary—but required some one else to plan the attack. The only reason that people didn't see the truth in Madge and her husband was that one was a man and the other a woman—such a woman!

Still crouching, with tense lips, Madge watched the rushing game through the second period and into the third. She saw Taylor's system build itself up inch by inch and then go to pieces in a flash by sheer force of riding from the other team. His quiet, easy words of command had pulled the Beach out of one crisis, but another of a different sort now rose and the system began to lose its effect, like a stimulant too mild; for Longmouth was a big, hard-riding team, on very fast ponies—poor on the turns, but hopelessly outclassing its opponents on a straight run down the field. So long as the ball was kept in scrimmage and the play tied in a knot, the Beach could dribble all round the big fellows; but the landslide had started the other way and the fifteen-hand ponies were tearing into their opponents like battering-rams. Keen, accurate, billiard-like player that he was, Taylor was not the man to face this kind of crisis. It needed a leader of bigger stamp.

Following with her eyes the maddened rushes up the field, Madge suddenly caught sight of her husband—and her heart leaped within her. He had risen to his feet, watching the game; his fists were jammed into his pockets; his head was bent almost to a crouch, while the big jaw that every one thought so ugly was set in a shape that was positively brutal. Fascinated, she looked at him again and again. She knew! She knew!

The rushes of the Longmouth battering-ram were growing harder and harder, while the Beach's defense was tearing like paper. Disconsolate, but thrilled, the audience gasped and then broke into a cheer as one final rush, one final effort, sent the ball over the line.

At the same moment, halfway down the field, three or four men and half a dozen stable boys were jumping over the boards—for out on the turf a pony lay kicking and rolling, while Taylor's white form lay motionless a dozen feet away. Before help reached him, however, he was on his feet, holding his hand in pain to his side.

He Gave One of Those Rifle-Shot Strokes of His

"Oh, thunder!" exclaimed Madge. "It's that rib of his again."

She had had too many spills herself to be greatly frightened by them, and she regarded the arms and legs of the players about as she did those of her horses and dogs.

The pony rolled once more and rose to its feet, shaking itself until the stirrups rattled, while a man slipped Taylor's arm over his shoulder and helped him, limping, to the sidelines. The first person he met was Madge, who was up with the stable boys.

"It's an ill wind that blows nobody any good," he said, grinning through his pain. "I'm done for this match. Can your husband go in?"

"Are you hurt much, Tommy?" asked the girl; but, before he had time to reply, "No—not very much," she was waving frantically for her grooms at the end of the field, where her ponies were stationed.

"Come on, infant!" she said, turning to her husband; and listlessly the big man turned and followed her.

"Give me Boxer," she said to the groom. "I want something heavy." And while her husband slipped out of his coat she waved the man aside and slipped a knowing finger under the pony's girth as she tightened it.

Stone grasped a mallet, twirled it once or twice and then approached the pony—his wife holding the stirrup—and clambered aboard. She regarded him with a critical eye.

"Your leather's too long," she snapped; and as her husband drew his foot from the stirrup she gave the strap a pull, jerked it up a couple of holes and yanked it back into place, repeating the operation on the other side, while half the grandstand smiled and two grooms, leaning over under pretense of squeezing a sponge, winked at each other.

"Now go it!" she said, hitting the pony a slap on the flank and sending him galloping into the field.

Any game slackens somewhat after an accident, and this one was no exception; so the period finished with no further scoring. In the next, however, the Longmouth men, eager to pursue their advantage, opened again with their sledge-hammer tactics—and no one was surprised when they drove a goal soon after the throw-in. Tommy Taylor, sitting with Madge in her old place on the turf, positively writhed with anguish.

"Either Lorimer or Smithy could hit all round them if he chose," he complained; "but those chaps have simply got their goat. They're sliding downhill. I couldn't stop it when I was in the game—and goodness knows what'll happen now!"

But Madge was on her feet with a little cry. The big Longmouth Number Two had taken the ball again and pounded it down the field in one of his great, ground-gaining strokes, while both teams were racing for it as fast as their ponies could leap. Lorimer, the Back, looked anxiously at his own goal and edged toward it; while McDermott, the Number One, followed after the field. Smith, as Number Two, was racing for the ball with the man who had hit it, while Stone and two Longmouth men completed the galloping mass. Twenty yards from the ball Smith and the Longmouth Number Two were neck and neck; but the visitor, contemptuously throwing over his pony's neck, crowded the Beach man out of the way.

An exultant yell arose from the Longmouth captain, but the next minute the winning rider saw the neck of a big brown pony loom up beside him; there was a squash of horseflesh and he felt himself forced aside like a leaf in an eddy, while Stone, reaching over his own pony's neck, sent the ball singing up the field in a raising backhander that cracked like a rifle. Three ponies were jerked into the air, three ponies clamped their hind legs to the ground and, turning on a penny, leaped away for the race back after the ball.

Stone shoved his helmet down over his eyes.

"Rough it up! That's what they need!" he said in a hoarse voice to McDermott as he passed him; and the little Irishman, who had been waiting to hear that all the afternoon, nodded gleefully and dug his blunt spurs into his pony, riding off the first man he saw, on general principles.

Stone watched him do it and grinned.

"Get after that Back and stick to him like a bur," he muttered as they galloped near each other. And from that minute at least two of the Beach team were playing together.

The effect of the sudden change in tactics was so electrical that even the sidelines felt it, and excited murmurs began to run up and down; but the fast ponies of Longmouth were still on the winning streak and another goal was pushed in before the period ended, though not without a good deal of scrimmaging.

There was a dead silence as the two teams lined up for the fifth period, broken by a sudden yell as the ball rolled on to the field. Astonished, the Longmouth Number One missed it; and, before any one knew what was happening, little McDermott was scurrying down the field all alone, Stone galloping madly behind him.

Diagonally across the field, riding easily, came the Longmouth Back, expecting that McDermott, like a proper Number One, would leave the ball to the other man and try to clear the Back out of the way; but, instead, just before the Back reached the line of attack, there was a rush and a plunge, and Stone was on him like a landslide, while little McDermott scuttled the ball all the way through the goalposts.

With the score three to two in favor of Longmouth and no penalties, both teams rose up for a whirlwind finish. Realizing that there was again a leader in command, Lorimer was defending his goal right and left, while Stone,

Ole Reliable Advertises a Hero Who Couldn't Stand the Gaff

Part II

DECKLIGHTS glowed dimly and foghorns gasped out their strangling cry. In a raincoat, gray as the night, Colonel Spottiswoode had been leaning against the rail where the mist blew in until it sheathed him with silver like a fine white frost.

When the big gambler approached Colonel Spottiswoode with that demand for a division of winnings it was too dark for him to see the flush that overspread the Southerner's face. Neither did Cap Wright know the other man well enough to realize the danger in which he stood. The Colonel remembered distinctly that it was on Cap's deals that he had made various lucky draws, but never once supposed it to be anything more sinister than a caprice of the cards. It was well for both men that Spottiswoode did not understand, that he had to stop and think—well that he got control of his temper before muscles and tongue began! Zack came shuffling aimlessly around the corner and stopped. He saw the Colonel facing the big man, standing with both hands behind his back as if afraid he might be tempted to use them. Zack sidled up closer and heard Cap Wright say: "Me and Joe couldn't figure out how you happened to let that sucker get off with a six-hundred-dollar pot."

The Colonel spoke; and Zack knew from his suppressed tones that something active was going to take place. "I don't understand you. How did I let the sucker get away?"

Cap felt easier—his man was beginning to talk hoss sense—and he warmed up. "It was just this way: that was the only trick we turned where you made a good scoop that I did not deal. You remember how I dealt you an ace to fill, a seven to make fours, two flushes under the whip and always had some good hands out against 'em."

The Southerner flinched—each item in the account was perfectly true. He clasped his hands tightly behind him and let Cap go on.

"That young fellow Shields don't know a thing about cards; he never watches nobody. Joe fixed 'em up and I slipped him a cold deck; that's how you got the king-full against Eaton's jack-full. We expected you to hit him for his stack; he was drinkin' and bettin' wild."

"You infernal scoundrel!" Colonel Spottiswoode spoke under his breath, but there was no mistaking what he said and no doubt that he meant it. Zack edged nearer. "You common thief! You ——"

Cap Wright needed the hide of a rhinoceros; he was so accustomed to being denounced; but the suddenness of this surprised him into a movement toward his pocket.

Quicker than thought the Colonel grasped both of his wrists. "No, you don't—not on me!"

"Cunnel, Cunnel, he's got a knife!—got a knife!" Zack called from behind.

Colonel Spottiswoode held Cap's wrists firmly and whispered: "You stand still! Zack, chuck that knife in the creek." Overboard went a long knife in a leather sheath. "Now feel his pockets."

Zack searched diligently. "Ain't got nothin' else, Cunnel."

The big gambler breathed heavily; he would have been no match for a seasoned bear hunter who could sit his saddle for a week. Before the Colonel released Cap's wrists they had a one-sided talk, but mighty straight. "Don't you leave this deck until I come back. Zack, watch this door and holler if he tries to come in. I'll hear you."

"Yas, suh, Cunnel." Zack's teeth gleamed and his eyes showed white, like a runaway mustang, as he looked at the bulky Cap. "I'll sho holler."

Spottiswoode, without another glance at Cap, turned inside and vanished down the grand staircase. He strode back to the poker game, which was still running five-handed, stepped abruptly into the room and left the door open.

Except for Joe Sloan, the men were all losers, playing for even; and Joe was playing to win. That made a tight game and no sociability. The players scarcely noticed his entrance. Shields flung down a worthless hand.

"Well, Mr. Spottiswoode, have you come back to get the rest of our chips?" he said pleasantly. "Sit in."

"No, thank you; I won't play." The Colonel dropped into a vacant chair and pushed back his hat. With one hand he pulled out his wad of money and with the other stopped Reifenstein from dealing. "I beg your pardon, gentlemen, for interrupting you; but this game is crooked ——"

"Crooked!" exclaimed Shields. "What do you mean?"

"Just what I say—the game is crooked! Sit down and don't get excited."

Both Italians nervously stuck their money into their pockets and hung over the table as the Colonel announced: "I have seven hundred and eighty-five dollars which doesn't belong to me ——"

"What!" they ejaculated in one breath—then looked at each other suspiciously.

"It has been a swindle, you say?" Reifenstein spoke quite deliberately; laying aside the cards he arose and stood with his left hand resting on the table. "May I inquire who is the swindler? Who has the money?"

"I have the money—here it is."

"But I do not understand," the German said with a wrinkled brow and his gaze concentrated upon the American.

Joe Sloan kept his mouth shut, but a pocket opened and his money disappeared somewhere. He fidgeted away from the table and glanced toward the door. Why didn't Cap come back? It took Cap to handle an awkward holler.

"Mr. Shields," asked the Colonel, "would you mind telling me how much you are loser?"

"Certainly not." Shields rapidly ran over his banknotes and little stack of sovereigns. "I have been doing better lately; I am one hundred and twenty dollars loser."

The Colonel set down these figures. "And you, Count Castle—Cass ——"

"Castelleone!" The Italian supplied his name with emphasis.

"And you, Count Castelleone, how much are you the loser?"

There was no need for the Italian to recount his money. After every pot he knew exactly how he stood. "I have lost fifty-two sovereigns, sir."

"Say two hundred and sixty dollars—I understand that better. And you, Signore Torreale?"

"Five hundred and forty-five dollars," that gentleman promptly responded.

The Baron von Reifenstein had been figuring his cash. Now he volunteered quietly: "I lose two hundred and ninety dollars."

The Colonel footed up these items. "That makes twelve hundred and fifteen dollars. I am winner seven hundred and eighty-five dollars, which leaves four hundred and thirty dollars to be accounted for."

He stepped to the door and called: "Zack! Zack! Go at once and find Mr. Eaton; and say to him I shall be greatly obliged if he will come to this room at once."

While Zack was gone the Colonel turned to Joe Sloan and asked abruptly:

"How do you stand, sir?"

Joe answered straight. "Sixty dollars winner."

The Colonel put that down. "That leaves three hundred and seventy dollars between Mr. Eaton and the man you call Captain Wright." And Joe Sloan squirmed at the way the Colonel said "Captain."

"Jholy, Missy, You is Heerd 'Bout Cunnel's Shootin'!"

Zack returned in a few moments. "Mr. Eaton say he's tolable tired tonight an' don't reckon he'll come back here for a while."

The Colonel arose. "I think he will come," he said, and went out of the door. Within five minutes he reëntered behind Mr. Eaton. "Now, Mr. Eaton, I should be pleased to know how you stood in this game."

"Well," remarked the other languidly, "I think I won something in the neighborhood of two hundred and eighty dollars."

"Exactly how much?"

"Exactly that; beastly nuisance!" And Eaton turned to go.

"Wait a minute, Mr. Eaton; don't hurry off—we want to settle up this game."

"The game is already settled as far as I am concerned," Eaton responded.

"But not so far as I am concerned." He added up the figures and showed the result:

Winners		Losers	
Sloan	$ 60.00	Shields	$120.00
Cap Wright	90.00	Reifenstein	290.00
Mr. Eaton	280.00	Torreale	545.00
Col. Spottiswoode	785.00	Castelleone	260.00
	$1215.00		$1215.00

"Now, gentlemen, the only way is to call the game off!" Colonel Spottiswoode began shoving the money into the center of the table. Eaton turned toward the door and the Colonel closed it with his foot. "I beg you, Mr. Eaton, not to hurry; we should like to settle this game properly."

"The game is settled, for my part," Eaton repeated doggedly.

Torreale and Castelleone had been whispering together, their eyes fixed on the gold—they were sitting directly across the table. Torreale reached out his hand and succeeded in getting it on the money.

"It's a swindle and you have my money. I want that five hundred and forty-five dollars!"

"I want my two hundred and sixty dollars!" added Castelleone.

Shields shook his head. "Wait a moment!" he urged.

Reifenstein said nothing.

Spottiswoode glanced into each of their faces as if asking for suggestions. The Italians seized upon what they supposed to be a moment of weakness and indecision. With all of that money in sight they lost control of themselves. They arose together and demanded: "You must give us our money! If you don't we will ——"

Colonel Spottiswoode swept the money from the table, folded up the bills and poured the jingling sovereigns into his pocket. "Don't say 'must' to me! I tried to straighten this game. Now I shall do as I like. You have not let me tell you what was wrong. Now you may protect yourselves as best you can."

The Italians drew close to the big German, while Reifenstein suggested: "It seems to me, sir, that the men to whom this money belongs should be consulted."

"Seven Hundred and Eighty-Five Dollars—Who Sent This?"

Digitized by Google

Colonel Spottiswoode was thoroughly angry by this time and his face began to flush again. "I tried that," he said abruptly; "but you foreigners are too infernally crazy to get your clutches on a dime."

Castelleone suddenly pointed his finger and said, like a dog barking through a fence: "You're a cheat! You're a cheat!"

The Colonel dashed a deck of cards into his face.

"You are a swindler!" Reifenstein spoke in a low tone.

"You are a liar!" retorted the Colonel.

For the first time Shields rose from his chair and stood calm, self-possessed and alert.

"You shall fight me!" Castelleone's face was beginning to bleed slightly; he fumbled in his pocket for a cardcase and tossed his card on the table in front of the Colonel.

"Of course you shall fight me!" added Reifenstein.

"And you shall fight me also!" said Torreale with the courage of two men between himself and danger.

Reifenstein's case held but a single card, which was soiled by a spot of ink. He apologized for its condition.

"That's all right," remarked the Colonel. "It's plain enough for me to read."

In the confusion Joe Sloan slunk out of the door and got away.

"Mr. Shields"—the Colonel turned to that gentleman—"give me your card and make it complete."

Shields shook his head and almost smiled. Being a hardheaded American, the affair struck him as a bit of opera bouffe.

"I insist upon it; I want your name and address," said the Colonel.

"Very well." And Shields gave him the card.

"Like yourself," remarked the Colonel, "I see no sense in fighting over a card game."

"You *must* fight! You *must* fight!" chorused the Italians.

"Or be forced to fight!" Reifenstein added with a sneer.

Slowly the blood mounted into Colonel Spottiswoode's face, then faded out again, leaving him quite pale. If these men had understood weather signs they would have recognized that as a most auspicious moment to leave old Beverley Spottiswoode alone.

"Very well," he said coolly; "if there's no way to get out of it. Zack! Oh, Zack! Go get those two pistols that Doctor Paulding gave me when we left home."

While Zack was gone no one spoke a word; there was scarcely a change in the positions of the men. The Colonel sat drumming on the table with his fingers. Shields leaned against the sideboard; the German and the Italians stood close together.

"Here dey is, Cunnel." Zack put down a heavy box.

Colonel Spottiswoode laid out a pair of blue-barreled six-shooters with buckhorn handles.

They were not ladylike, but they were honest, would never kick up, and shot true as a rifle.

"Gentlemen, I have the choice of weapons. Here we are. Fifty paces, fire; advance and fire at will. That is simple." He shoved one of the pistols across the table. Nobody touched it.

Colonel Spottiswoode rose, put the weapons back in the box and handed it to Shields. "Mr. Shields, will you kindly take care of these until we get to Gibraltar? That is a suitable place. A gentleman will meet me there to act as my second. Count Castelleone, I believe you are the first; Baron von Reifenstein comes next, and then I shall have the honor of meeting Signore Torreale."

The terms he named meant that somebody might get hurt. Castelleone, being first, began to realize that he stood a chance of having something unpleasant happen to him.

Young Shields walked out of the cabin some distance behind the Colonel. "Well," he thought, "I can't make out how much of this is bluff. And I'd hate to be in those fellows' shoes—shivering all the way to Gibraltar and hoping it's a mistake."

After breakfast next morning the Colonel went upstairs and Zack found him pacing, with a problem. Up and down the slippery deck he went; up and down the long, long lanes of dripping canvas, passing an interminable line of empty chairs, with here and there a disgusted passenger swearing at the weather. Every three minutes the foghorn let out its awful noise; to the left a hidden steamer was tooting another horn; behind them still another. Back and forth he went, with hands behind him, once in a while dropping into his chair, with a pad and pencil, and trying to figure how much he had won from each of those men on Cap Wright's crooked deals; but there was no way to untangle the complications of the poker game. If the other winners had agreed to call the game off and restore the original stacks it would have been easy. Whatever the others did, the Colonel must square himself. He could not carry that sort of money in his pocket.

Zack tagged at his heels, full of enthusiasm over the big concert, when "li'l' missy was goin' to play." He tried to tell about it, but after many shakes and turns caught the idea that the Colonel did not want to talk.

Meeting Mr. Shields, the men nodded. Neither made an advance. There the matter stood.

The Italians and Reifenstein kept together, close together, walking or standing. They moved along jerkily, stopped, circled around each other, put their heads together and talked in whispers. Every time the Colonel passed they were looking the other way.

"Cunnel," said Zack, "what you reckon ails dem gent'mens? Yistiddy dey axed mo' questions dan enuff 'bout li'l' missy an' de fiddle. Jes now, when I say 'Good mornin',' dat biggest one kinder nodded, but dem yuthers never said nuthin'—'cept 'bout 'barbrous murder.' Dey sholy got sumpin' on dey min'."

As a matter of fact, the three had quit discussing that all important seven hundred and eighty-five dollars, speaking instead of those pistols guardedly and evasively, even with each other. Castelleone modified his original enthusiasm at being the first man to get in a challenge.

Eaton came up blandly to the Colonel with a greeting more than effusive. Colonel Spottiswoode cut it short. "Our acquaintance, sir, began—and ended—last night!"

The Colonel Dashed a Deck of Cards Into His Face

The Colonel resumed his tramp, while Eaton stood staring. "Dear me, dear me! What can be the matter with the fellow?" When the Colonel turned and started back Eaton dragged his bulldog around the corner and gave him a vicious kick.

A stir at the head of the stairs attracted Zack's attention. He ran up to watch the triumphant progress of Signorina Aurora into the music room. Zack loved the orderly confusion of a grand entrance at the beginning of the main circus. He watched with open mouth.

First came the maid, Constanza, who entered the music room and, with artistic eye, chose the divan upon which Aurora would recline; the color scheme must harmonize. Deck stewards brought rugs and shawls; maids brought pillows, maids brought magazines, maids brought flowers, hung toilet bags over the back of the signorina's divan, placed bonbon dishes and dainty baskets of fruit. Constanza stepped back, eyed it critically; then a touch here, a pat there, and all was ready. Aurora emerged from her cabin—radiantly, smilingly emerged. Fussy assistants draped her properly on the divan and covered one of her pretty feet. The other pretty foot was left accidentally and artistically visible, with a sufficient visibility above it to indicate what the other ankle and stocking were like. The signorina affected purples and lavenders this morning—a purple deck-bonnet of Puritan primness, such as Priscilla might have worn to keep the wind from tossing her hair, leaving the streamers for the wind to play with.

"Sit here, *carissima*," she said to Doris.

Doris wore no purples, lavenders or jewels—just a simple skirt and waist; her firm, round forearms were bare of bracelets and her fingers devoid of rings. She had brushed her hair in soft curves from her forehead and it billowed round her head. Perhaps the signorina had thought of the effective foil that this gentle Southerner would make for her own voluptuous magnificence. And Doris lost nothing by the contrast.

Aurora's confident eyes turned to the happy brown ones. "Come now, *carissima*, we must talk about your benefit—what will you play?" Doris astounded the signorina by her familiarity with the world's great music. "Very well, you shall play what you choose. You will surprise us—yes, yes. Captain, come here." She beckoned to the bewhiskered sailor. "I give a benefit, you know, for this young lady. She will play so wonderfully. I shall sing three times—three songs."

The gallant sailor bent over her. "When have we such happiness?"

"This night—this very night. I cannot sleep until *carissima mia* is provided for."

Doris moved uneasily and would have run away had not the other held her. "Please don't!" she whispered.

"Tut-tut-tut! It is their privilege. They feed their pigs and stable their cattle; such an artist as yourself comes once only in a lifetime. Captain, post a notice at once that Aurora will sing tonight at eight; tickets, five dollars. I shall myself buy twenty. It is worth twenty tickets to hear that violin."

The singer's enthusiasm gained strength like a rolling stone. She called passenger after passenger to her side; they were glad to come, proud to buy tickets from her own hand by the twos and fives and tens.

Zack stood grinning at the door; something important was going on—something that made the "li'l' missy" look very flushed and happy. When Doris caught sight of him she touched Aurora's hand.

"There's that old black man; you said you wanted to hear him talk."

"Call him, my dear; call him—he is so amusing."

Doris nodded cordially and Zack came sidewise into the big room.

"What are you laughing at, Uncle Zack?" she inquired. Aurora sat up straight to hear what the negro said.

Zack grinned. "I jes been alookin' at all dis water an' studyin' 'bout sumpin'."

"What is it?" Doris drew him out.

"You say 'tain't nuthin' but water up dataway?"—pointing toward the north. Doris nodded. "An' nuthin' but water down dataway?"—indicating the south. Doris nodded again. "An' de onliest banks is over yonder an' back yonder whar we come from?" Zack broke into a loud laugh. "I war jes studyin': Ef all de men was on one side an' all de wimmen on de yuther—an' 'twarn't no way to walk round dat water—it jes fell in my min' to laff at what a mighty scufflin' dere'd be to learn how to swim!"

Aurora leaned back and laughed, which tickled Zack into showing all his teeth. Doris kept him talking.

"Now, Uncle Zack, what did you say your name is?"

Zack bowed profoundly and brushed his cap against the crimson carpet; then he straightened up. "Zack Foster, ma'am; but everybody, white an' black, in de whole entire city o' Vicksburg, dey calls me 'Ole Reliable.'"

"Old Reliable!"

"Yas'm. Everybody sho do call me dat."

"What does he mean?" Aurora whispered, and Doris interpreted:

"People in America nickname a man for some trait of his character; and in that part of the country they call Uncle Zack 'Ole Reliable.'"

"What a splendid reputation!"

The Russian Treaty

PERHAPS it is possible to spin a fine technical argument in international law over the Russian treaty. Citizens of the two nations, says the treaty, shall have liberty to enter the territories of each party and "shall enjoy the same security and protection as natives of the country on condition of their submitting to the laws and ordinances there prevailing." Natives of Russia who are Jews enjoy very little security and protection. The laws and ordinances there prevailing oppress them in many ways and deny them most of the essential rights of free citizenship. Russia claims, in effect, that in refusing to honor American passports issued to Jews she is not violating the treaty, but merely enforcing her own laws relative to that race. This refusal to honor American passports in the hands of certain of our citizens began about forty years after the treaty was signed, or about forty years ago. For a generation it has been a subject of futile negotiation and protest by our State Department.

Imagine the United States passing a law that forbade Episcopalians to travel in this country, and when Great Britain protested that we were excluding her citizens in violation of our treaty obligations we replied that the treaty imposed no obligation to treat British Episcopalians any differently from American Episcopalians, and we must be left free to manage our internal affairs as we saw fit! Probably we could spin an argument on that; but Great Britain's answer undoubtedly would be that a treaty which we construed in that way imposed an intolerable humiliation on her and must be abrogated—if our laws required us to insult British citizens she must decline to deal with us. That, of course, had to be our answer to Russia.

The Government and Bank Failures

IN FORTY-NINE years, to October 31, 1911—the date covered by the last report of the Comptroller of the Currency—the net loss to depositors in national banks that have failed and been liquidated was thirty-seven million dollars. This is only a negligible fraction of one per cent a year of the deposits in national banks. From the comptroller's report it appears, moreover, that sixty per cent in number of these failures were caused by acts in direct violation of the national-bank law; and the heaviest losses generally occur where violation of law is most flagrant.

It is safe to say that one-tenth of a cent deducted from each dollar of individual deposits now held by the banks would cover all losses that depositors have sustained in forty-nine years through failures where there was no violation of law; and it is well known that of late years national-bank inspection has become more rigorous and efficient, tending undoubtedly to prevent violations of the law.

In normal times everybody, broadly speaking, trusts the banks, and with good reason—that is, everybody except the Government itself. It is one of the anomalies of the present banking situation that the Government, which assumes guardianship of the national institutions in order that everybody else may have confidence in them, will not itself trust them at all—demanding that its own deposits be secured by bonds. Periodically distrust of the banks becomes widespread—to the country's great harm and loss.

How much the Government's example may have to do with inspiring this periodic distrust it would be hard to say; but there is soon to be, we hope, a different and much better relationship between the Government and the banking system.

Increasing Soldiers' Pensions

THE first important act of the House at this session was to pass the Sherwood Bill, granting a pension of thirty dollars a month to every surviving soldier of the Civil War who served a year or more; twenty-five dollars a month to those who served nine months and less than a year; twenty dollars to those who served six to nine months; and fifteen dollars to those who served three to six months. If passed by the Senate the bill will increase the amount on the pension roll by about fifty million dollars a year. The House struck out the original provisions that old soldiers with incomes of a thousand dollars a year or more should not be eligible, and that no pensioner receiving twenty-five dollars a month or more under the bill should be admitted to a Soldiers' Home.

In striking out these provisions of the Sherwood Bill, no doubt there was considerable politics and fear of the old-soldier vote.

On the other hand, pension records show that in the year ending June 30, 1911, almost forty thousand survivors of the Civil War—on the Union side—departed this life. Mortality during the last fiscal year is estimated at fifty thousand—and must increase steadily; for the average age of the survivors is upward of seventy years. It was brought out in debate that the last Congress passed nine thousand six hundred private pension bills, while something over ten thousand such bills are now pending before the Committee on Invalid Pensions. These two sets of facts mean that the half million Civil War survivors have but a few years to live, and that those among them who possess a little influence can readily procure a pension increase by way of a private bill.

We prefer the Sherwood Bill to the deluge of private-pension bills. The country should at least treat these old men impartially.

Where the Money Is

THE United States holds one-quarter of the world's visible supply of gold and silver; the people of this country have sixteen billion dollars deposited in banks, and the aggregate assets of our banks exceed twenty-three billion dollars. No other country comes anywhere near to matching these figures; but the money is very unevenly distributed. Nearly one-half of the aggregate assets of our banks—state and national—and of the individual deposits in banks is found in three states: Massachusetts, New York and Pennsylvania.

The state of New York alone holds almost thirty per cent of the total in both items, and this means mostly the city of New York, just as the great accumulations of money in Massachusetts and Pennsylvania are largely in the industrial centers rather than in the rural regions. Individual deposits—excluding the deposits of one bank with another—in New York exceed such deposits in all the rich Middle Western states combined, and are more than three times as great as the aggregate in thirteen prosperous Southern states.

This doesn't imply that Massachusetts, New York and Pennsylvania are the happiest regions. On the contrary, it might be laid down as a general rule that where there is the most money a head there is also the most misery a head.

A Kansas farmer with a moderately mortgaged quarter section and not a dollar of money to his name is certainly more fortunately situated than a wage-earner on the lower East or West Side of New York whose possessions consist of a few hundred dollars in a savings bank. It does, however, imply where the banking headquarters of the country are going to be for a long while to come.

Combination and Regulation

MR. CARNEGIE, in his latest contribution to economic literature, writes: "The cheapest mode of production of articles in general use is best for the nation as a whole. Granted combination, there must be regulation. . . . It follows that an industrial court must be formed which shall fix maximum prices that the consumer may be protected against extortion."

No one whose views are worth considering doubts the economic advantage both of grand-scale production and of restriction of competition; but a great many who see that industrial combination is inevitable refuse to see that regulation of the combine in the interest of the public is equally inevitable. As President Butler, of Columbia, recently said: "The era of unrestricted individual competition has gone forever. No president, attorney-general, court or Congress can restore it." And if there is no escape from combination there can be no escape from Government supervision and control, because uncontrolled combination would be intolerable. Industrial combination will go on, compelled by the law of economic development. Government regulation will go hand in hand with it, likewise compelled by the necessities of the case. Perhaps this will eventually mean an industrial commission, with the power even to fix maximum prices in certain cases, as Mr. Carnegie suggests; but no one can turn back the hand of that clock any more than he can turn back the hand of the other clock which has marked the irrevocable passing of unrestricted competition.

The Fake Stock Swindle

COMMISSIONER RUDOLPH proposes for the District of Columbia a law similar to that of Kansas requiring reports from concerns that offer stocks for sale, with power to bar those that will evidently prove profitable to nobody except the promoter. Other states undoubtedly will follow Kansas' lead—there being no valid reason why any state which pretends to protect its citizens against theft in other forms should countenance by inaction this biggest and cruelest of modern swindles. A pickpocket, perforce, leaves his victim's clothes, and a burglar leaves the most useful articles of furniture. No such physical limitations are imposed upon the pedler of fake stock, and in many cases he makes a clean sweep. Any state is able to discourage the selling of wildcat securities within its own borders.

The interstate traffic in worthless engravings is conducted largely by means of advertisements, and it will probably be found possible to discourage this by putting the responsibility where it belongs—that is, upon the publication that circulates the advertisement. No publication can perform the office of tout for a wildcat stock by carrying its advertisement and escape the moral responsibility. It should no longer be possible for such publications to escape legal responsibility.

White and Negro Population

FOR thirty years the ratio of increase in white population has been nearly double that of negro population. The total increase in the period, in round numbers, is thirty-eight million whites and three and a quarter million negroes. In the last decade the white population, irrespective of immigration, increased in a greater ratio than the black. In the South itself, for thirty years, the proportion of negroes has slowly but steadily declined, until now the colored race is less than thirty per cent of the total. In 1880 there were roughly ten and a half million whites to six million blacks. There are now twenty and a half million whites to eight and three-quarter million blacks. In every state of the old South the ratio of white increase during the last decade much exceeded the ratio of negro increase. In South Carolina it was twenty-one per cent to seven; in Florida, forty-nine to thirty-four; in Alabama, twenty-three to ten; in Mississippi, twenty-three to eleven; in Louisiana, twenty-nine to ten; in Texas, thirty-two to eleven.

We hope these facts and others presage a speedy end of that prepossession with the race question which has made Southern politics so lopsided and which has often robbed the South of her due weight in settling national problems.

The Two Necklaces

AS MR. BRANDEIS astutely points out, the report that one of our most eminent Trust magnates bestowed upon his spouse at Christmas a pearl necklace costing five hundred thousand dollars, recalls that celebrated diamond necklace which Napoleon said was one of the three causes of the French Revolution. The one necklace does recall the other; but our conclusions from the coincidence differ from those of Mr. Brandeis.

Probably the scandal over the diamond ornament did as much to destroy the prestige of the French monarchy as half a dozen years of wild blundering in finance or half a hundred oppressive laws; but the scandal, it should be remembered, was a fake—and Marie Antoinette no doubt was quite innocent.

So probably our Trust magnate's half-million-dollar pearl necklace will stick in the crops of a good many people whose minds are rather hazy as to the steel tariff and who have already forgotten—if they ever knew—that the Trust worked men twelve hours a day for seven days in the week. And this pearl necklace, no doubt, is also a fake. If there is any such article—which is doubtful—we presume it cost somewhere in the neighborhood of fifty thousand dollars instead of five hundred thousand, and was presented by the magnate to his daughter three or four years ago—or, even if there should be a veritable half-million-dollar necklace, there is no public harm in that.

One necklace recalls the other because both illustrate how easy it is to provoke resentment over the wrong thing.

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

Hunting Cox

TAKE the words of the gang for it and it's a shame and a disgrace the way these young squirts are mixing in nowadays, and not only putting politics at sixes and sevens but making that profession a most precarious pursuit by disturbing the even tenor of the graft.

All the boys have tales of woe. Things have come to such a pass that there is a terrible howl if a few of the crowd try to colonize a hundred or so floaters in a lodging house, and the shaking down of public-utility corporations and contractors for campaign money is as hazardous as it is non-productive; while the taking of a few dollars for a vote excites resentment in circles where the practice once was a recognized industry.

Likewise, the people who have hitherto voted as they were told, or had their votes counted as others chose—which amounts to the same thing in the end—are beginning to think they have rights. They are opposed to courts owned by politicians and to judges that work for bosses. They look with disfavor on municipal rake-off and have so far lost their perspective that they cannot see any merit in taking toll from vice. They think they should have a hand in running their own city and suburban affairs, and are actually insisting that men not approved by the bosses—and amenable to them—shall be elected to positions of trust.

The game is not what it once was. The graft is petering out. The dread alternative of work or hunger faces many a politician. Bosses have been pulled up and thrown on the dump in many cities and in many states; and here comes Cincinnati—a little tardy to be sure, but hand in hand with Philadelphia, also a little tardy—and asks for enrollment in the Amalgamated Association of Cities That Intend to Clean Up—Cincinnati—for years and years a typically boss-ridden city.

Everything must have a type, you know. When one speaks of a boss one cannot think of all the bosses—of the Quays and Platts and Buckleys and all the rest—all good types too; but one must establish a standard and use that for illustrative purposes. Hence, when it has been necessary in the past to talk about bosses, the basis of comparison has been George B. Cox, the boss of Cincinnati, Ohio, otherwise known as "Coxey, Old Boy." If, on occasion, a demand had been made, say, by certain ambitious residents of a young and flourishing city for information that would enable them to construct a boss, the plans and specifications of George B. Cox would have been furnished instantly by any person who knows about bosses and appreciates their finer slants.

Cox bossed Cincinnati for a good many years—bossed Cincinnati and grew rich and powerful, and ramified until he directed absolutely all the municipal machinery of that big city. Elections went as Cox directed. The votes were cast as Cox said. He ran things, elected mayors and councilmen and judges and law officers, and sat in a room above a saloon in the daytime and issued orders. At night he shifted to a table in a beer hall and issued his orders from that throne.

Young Sleuth on the Trail

EIGHT years ago, when Cox was fully in power and none of this agitation by the fool people had arisen to disturb him, a young chap named Henry T. Hunt, recently graduated from Yale and having a license to practice law, thought he would like to go into politics a bit. He had heard of the election abuses in Cincinnati and had deprecated them, but had no actual experience at polling places; and he had an idea the stories might be political and exaggerated. He applied to the committee that had charge of whatever municipal fight was in progress on the side against Cox; and the committee made him a challenger at the polls in the Silver Moon District and gave him a list of names of suspected repeaters and floaters and colonized voters to challenge.

He went to the polling place with his list and began challenging. The Silver Moon District was so named because in that district the gang had a lodging house known as the Silver Moon which they used to fill with colonizers and floaters. Hunt challenged and was laughed at by the ballot officials. He stood there all day and saw illegally registered white men and negroes go in, vote and come out to a gang leader, who handed each a two-dollar bill on satisfactory proof that he had voted "right."

He was young and ardent and became indignant. He protested there and afterward; but nearly everybody laughed, admitted the condition and asked: "What are you going to do about it?" Hunt didn't know exactly, but he had an idea, rather vague as to details but fixed in a general sense, that something might be done to stop it; and he kept agitating. Two years later he was nominated for the legislature. It was a good year for him. The gang ticket was weak. Mr. Taft went to Akron and denounced it in a public speech. Hunt was elected.

He served in the legislature for three years. His experiences in the Silver Moon District had shown him the need of revised election laws. He accomplished some reforms and lost some, but he did a lot of good work and was very active in the appointment of two investigating committees for Cincinnati. The courts knocked out both these committees, but one of them sat long enough to show the illegal collection of "gratuities" on public funds deposited by the gang.

The gang prosecutor refused to proceed on the results of these investigations and there was a demand for a change. This was in 1908. Hunt was nominated for prosecutor and elected.

He is an earnest, serious, efficient young man, and he made appalling charges against the gang in that campaign, but in a most calm and convincing manner.

When Hunt took the office of prosecutor he began a three years' fight in the local courts. Hunt tried to investigate a public utility that was thought to have close relations with the gang, and he was blocked. He tried to get after protected vice, and he was held off. He fought desperately, but the gang influence was too strong. However, he was reëlected prosecutor at the end of his first term; and when he began the term, in January, 1911, he had on the bench of the criminal division of the Common Pleas Court—an antigang judge. This enabled Hunt to get a grand jury not selected by the gang, and he straightway started after Cox. He indicted Cox for perjury on the ground that, though Cox had denied under oath he had received any of the "gratuity" graft for illegally collected interest on public funds, there was evidence Cox did get sixty-five thousand dollars of that money. It took all of the resources of Cox to get out of this difficulty; and when he did get out Cox was broken as a boss in Cincinnati.

They nominated Hunt for mayor last fall. Cox picked the strongest man he could find from the regulars, and even secured an indorsement for his man from President Taft, who a few years before had advised all good citizens to vote against the Cox ticket. Hunt was elected, notwithstanding the efforts of Cox to defeat him and the support Cox's man had from the President.

Hunt is now the mayor of Cincinnati. He is only thirty-three years old and has ability, a high sense of civic responsibility—and believes in clean politics. So far as Cox is concerned, he is done. His day as a boss is over. A thirty-three-year-old man, backed by courage, energy and an awakening public conscience, has thrown him on the municipal ashheap. And Cox was a perfectly good boss too! He made his henchmen perform for years and years, and grew to be a banker. In his opinion the country is skidding for ruin and Cincinnati is already there; and what he thinks of Henry T. Hunt ——

Beware, young man; the postal regulations are below you!

A Deadly Expert

A CERTAIN great Chicago physician and A. S. Trude, a lawyer of that city, are close friends, but one time when the physician was called as an expert witness in a case Trude was on the opposite side and had to cross-examine the physician.

The physician had given his expert testimony. It upheld the contention of his side perfectly.

When it came Trude's turn he squared away, glared at his friend and, after the usual preliminary questions, began the examination:

"Doctor——, you are frequently called into consultation when prominent men are ill in this community, are you not?"

"I am."

"Were you in attendance on George M. Pullman?"

"I was."

"Where is Mr. Pullman now?"

"He is dead."

"Ah, yes! And were you called in by Mr. Marshall Field?"

"I was."

"Where is Mr. Field now, may I ask?"

"He is dead."

"Indeed! And were you in attendance on Philip D. Armour?"

"I was."

"And where is Mr. Armour now?"

"He is dead."

Trude knew that his friend was called in consultation in almost every big case in Chicago, and there was a malicious gleam in his eye as he named dead man after dead man and asked if the expert had attended them. After he had named about a dozen prominent citizens who had passed away he turned to the jury with a wave of his hand, as if to say "There's your expert!" and sat down.

Still a Drake

ALBERT G. FOSTER, a lawyer of Madison, Georgia, bought some Indian Runner ducks. His wife and her father were out in the yard looking at them.

"How can you tell a drake from a duck?" asked Mrs. Foster of her father.

"The drake has a curled feather in his tail," the old gentleman replied.

"Lord-a-mercy!" said Mrs. Foster. "Suppose he should lose his feather?"

"Well," said her father, after thinking of the matter for a minute, "he would still be a drake."

THE LIGHTED WAY

(Continued from Page 8)

to your employees—that, indeed, is funny! You do amuse me very much. Come."

The door was pushed fully open now and a woman entered, at the sight of whom Arnold forgot all his feelings of mingled annoyance and amusement. She was of little over the medium height, exceedingly slim—a slimness that was accentuated by the fashion of the gown she wore. Her face was absolutely devoid of color, but her features were almost cameolike in their sensitive perfection. Her eyes were large and soft and brown, her hair a Titian red, worn low and without ornament. Her dress was of pale blue. Her neck and throat, exquisitely white, were bare except for a single chain of pearls that reached almost to her knees. The look in Arnold's face as she came slowly into the room was one of frank and boyish admiration. The woman came toward him with a soft smile about her lips, but she was evidently puzzled. It was Mr. Weatherley who spoke. There was something almost triumphant in his manner.

"This is Mr. Chetwode, dear, of whom I was speaking to you," he said. "Glad to see you, Chetwode," he added with ponderous condescension.

The woman laughed softly as she held out her hand.

"Are you going to pretend that you were deaf, to forgive me and be friends, Mr. Chetwode?" she asked, looking up at him. "One foggy day my husband took me to Tooley Street, and I did not believe that anything good could come out of the yellow fog and the mud and the smells. It was my ignorance. You heard but you do not mind? I am sure that you do not mind?"

"Not a bit in the world," Arnold answered, still holding the hand that she seemed to have forgotten to draw away and smiling down into her upturned face. "I was awfully sorry to overhear, but you see I couldn't very well help it, could I?"

"Of course you could not help it," she replied. "I am so glad that you came and I hope that we can make it pleasant for you. I will try and send you in to dinner with some one very charming."

She laughed at him understandingly as his lips parted and closed again without speech. Then she moved away to welcome some other guests who were at that moment announced. Arnold stood in the background for a few minutes. Presently she returned to him.

"Do you know any one here?" she asked.

"No one," he answered.

She dropped her voice almost to a whisper. Arnold bent his head and listened with a curious pleasure to her little stream of words.

"It is a strange mixture of people you see here," she said, "a mixture, perhaps, of the most prosaic and the most romantic. The Count Sabatini, whom you see talking to my husband, is my brother. He is a person who lives in the flood of adventures. He has taken part in five wars, he has been tried more than once for political offenses. He has been banished from what is really our native country, Portugal, with a price set upon his head. He has an estate upon which nothing grows and a castle with holes in the roof in which no one could dwell. Yet he lives—oh, yes, he lives!"

Arnold looked across at the man of whom she was speaking—gaunt and olive-skinned, with deep-set eyes and worn face. He had still some share of his sister's good looks and he held himself as a man should.

"I think I should like your brother," Arnold declared. "Will he talk about his campaigns?"

"Perhaps," she murmured; "although there is one about which you would not care to hear. He fought with the Boers, but we will not speak of that. Mr. and Mrs. Horsman there I shall say nothing about. Just imagine where they belong."

"They are your husband's friends," he decided unhesitatingly.

"You are a young man of great perceptions," she replied. "I am going to like you, I am sure. Come, there is Mr. Starling standing by the door. What do you think of him?"

Arnold glanced across the room. Mr. Starling was apparently a middle-aged man—clean-shaven, with pale cheeks and somewhat narrow eyes.

"A Canadian, without a doubt," Arnold remarked.

"Quite right. Now the lady in the gray satin with the wonderful coiffure—she has looked at you already more than once. Her name is Lady Blennington and she is always trying to discover new young men."

Arnold glanced at her deliberately and back again at his hostess.

"There is nothing for me to say about her," he declared.

"You are wonderful," she murmured. "That is so exactly what one feels about Lady Blennington. Then there is Lady Templeton—that fluffy little thing behind my husband. She looks rather as though she had come out of a toy shop, does she not?"

"She looks nice," Arnold admitted. "I knew ——"

She glanced up at him and waited. Arnold, however, had stopped short.

"You have not yet told me," he said, "the name of the man who stands alone near the door—the one with the little piece of red ribbon in his coat?"

It seemed to him that, for some reason, the presence of that particular person affected her. He was a plump little man, sleek and well dressed, with black hair, very large pearl studs, black mustache and imperial. Mrs. Weatherley stood still for a moment. Perhaps, he thought, she was listening to the conversation around them.

"The man's name is Rosario," she replied. "He is a financier and a man of fashion. Another time you must tell me what you think of him, but I warn you that it will not be so easy as with those others, for he is also a man of schemes. I am sorry, but I must send you in now with Mrs. Horsman, who is much too amiable to be anything else but dull. You shall come with me and I will introduce you."

Dinner was announced almost at that moment. Arnold, keen to enjoy, with all the love of new places and the enthusiasm of youth in his veins, found every moment of the meal delightful. The guests took their places at a round table, with shaded lights artistically arranged so that they seemed to be seated before a little oasis of flowers and perfumes in the midst of a land of shadows. He found his companion pleasant and sympathetic. She had a son about his age who was going soon into the city, and of him she talked ceaselessly. On his left Lady Blennington made frank attempts to engage him in conversation whenever an opportunity arose. Arnold felt his spirits rise at every moment. He laughed and talked the whole of the time, devoting himself with very little intermission to one or the other of his two neighbors. Mr. Weatherley, who was exceedingly uncomfortable and found it difficult even to remember his few staple openings, looked across the table more than once in absolute wonder that this young man, earning a wage of twenty-eight shillings a week and occupying almost the bottom stool in his office, should be entirely and completely at his ease in this exalted company.

More than once Arnold caught his hostess' eye, and each time he felt for some unknown reason a little thrill of pleasure at the faint relaxing of her lips, the glance of sympathy that shone across the roses. Life was a good place, he thought to himself—for these few hours at any rate. And then, as he leaned back in his place for a moment, Ruth's words seemed suddenly traced with a finger of fire upon the dim wall. Tonight was to be a night of mysteries. Tonight the great adventure was to be born. He glanced around the table. There was, indeed, an air of mystery about some of these guests, something curiously aloof, something it was impossible to put into words. The man Starling, for instance, seemed queerly placed here. Count Sabatini was another of the guests who seemed somehow to be outside the little circle. For minutes together he sat sometimes in grim silence. About him, too, there was always a curious air of detachment. Rosario was making with his neighbor the small conversation that the occasion seemed to demand, but he, too, appeared to talk as one who had more weighty matters troubling his brain. It was a fancy of Arnold's, perhaps, but it was a fancy of which he could not rid himself. He glanced toward his employer and a curious feeling of sympathy stirred him. The man was unhappy and ill at ease. He had lost his air of slight pomposity, the air with which he entered his offices in the morning, strutted about the warehouse, went out to lunch with a customer, and which he somehow seemed

to lose as the time came for returning to his home. Once or twice he glanced toward his wife, half nervously, half admiringly. Once she nodded back to him, but it was the nod of one who gathers up her skirts as she throws alms to a beggar. Then Arnold realized that his little fit of thoughtfulness had made a material difference to the hum of conversation. He remembered his duty and leaned over toward Lady Blennington.

"You promised to tell me more about some of these people," he reminded her. "I am driven to make guesses all the time. Why does Mr. Starling look so much like an unwilling and impatient guest? And where is the castle of the Count Sabatini that has no roof?"

Lady Blennington sighed.

"This table is much too small for us to indulge in scandal," she replied. "It really is such a pity. One so seldom meets any one worth talking to who doesn't know everything there is that shouldn't be known about everybody. About Count Sabatini, for instance, I could tell you some most amusing things."

"His castle, perhaps, is in the air?" Arnold inquired.

"By no means," Lady Blennington assured him. "On the contrary, it is very much upon the rocks. Some little island near Minorca, I believe. They say that Mr. Weatherley was wrecked there and Sabatini locked him up in a dungeon and refused to let him go until he promised to marry his sister."

"There are a good many men in the world, I should think," Arnold murmured, "who would like to be locked up on similar conditions."

She looked at him with a queer little smile.

"I suppose it is inevitable," she declared. "You will have to go through it too. She certainly is one of the loveliest women I ever saw. I suppose you are convinced already that she is entirely adorable?"

"She has been very kind to me," Arnold replied.

"She would be," Lady Blennington remarked dryly. "Look at her husband. The poor man ought to have known better than to marry her, of course, but do you think that he looks even reasonably happy?"

Arnold was beginning to feel rather uncomfortable. He was conscious of a strong desire not to discuss his hostess. Yet his curiosity was immense. He asked one question.

"Tell me," he said, "if she came from this little island in the Mediterranean why does she speak English so perfectly?"

"She was educated in England," Lady Blennington told him. "Afterward her brother took her to South America. She had some small fortune, I believe, but when she came back they were penniless. They were living as small market gardeners when Mr. Weatherley found them."

"You don't like her," he remarked. "I wonder why?"

Lady Blennington shook her head.

"One never knows," she replied. "I admire her, if that is anything."

"But you do not like her," he persisted.

She shrugged her shoulders lightly.

"I am afraid it is true," she agreed.

"You admit that and yet you are willing to be her guest?"

She smiled at him approvingly.

"If there is one masculine quality that I do appreciate," she said, "it is directness. I come because I love bridge and because I love my fellow-creatures and because my own friends are none too numerous. With the exception of those worthy friends of our host and his wife who are seated upon your right—Mr. and Mrs. Horsman, I believe they are called—we are all of the same ilk. Mr. Starling no one knows anything about; Count Sabatini's record is something awful."

"But there is Rosario," Arnold protested.

"Rosario goes into all the odd corners of the world," she replied. "Sometimes the corners are respectable and sometimes they are not. It really doesn't matter so far as he is concerned. Supposing, in return for all this information, you tell me something about yourself?"

"There isn't anything to tell," Arnold assured her. "I was asked here to fill up. I am an employee of Mr. Weatherley."

She turned in her chair to look at him. Her surprise was obvious.

"Do you mean that you are his secretary or something of that sort?" she demanded.

"I am a clerk in his office," Arnold told her.

She was evidently puzzled, but she asked him no more questions. At that moment Mrs. Weatherley rose from her place. As she passed Arnold she paused for a moment.

"You are all coming in five minutes," she said. "Before we play bridge come straight to me. I have something to say to you."

He bowed and resumed his seat, from which he had risen quickly at her coming. Mr. Weatherley motioned to him to move up to his side. His face now was a little flushed, but his nervousness had not disappeared. He was certainly not the same man whom one met at Tooley Street.

"Glad to see you've made friends with the wife, Chetwode," he said. "She seems to have taken quite a fancy to you."

"Mrs. Weatherley has been very kind," Arnold answered.

"Enjoying yourself, I hope?" asked Mr. Weatherley.

"Very much indeed," Arnold declared. "It has been quite a treat for me."

Sabatini and Starling were talking earnestly together at the other side of the table. Rosario, bringing his wine down, came and sat at his host's other side.

"Beautiful vintage, this, Mr. Weatherley," he said. "Excellent condition too."

Mr. Weatherley, obviously pleased, pursued the subject. In a way, it was almost pathetic to see his pleasure in being addressed by one of his own guests. Arnold drew a little away and looked across the banks of roses. There was something fascinating to him in the unheard conversation of Sabatini and Starling, on the opposite side of the table. Everything they said was in an undertone, and the inexpressive faces of the two men gave no indication as to the nature of their conversation. Yet the sense of something mysterious in this house and among these guests was growing all the time with Arnold.

IV

MR. WEATHERLEY laid his hand upon his young companion's arm as they crossed the hall on their way from the dining room.

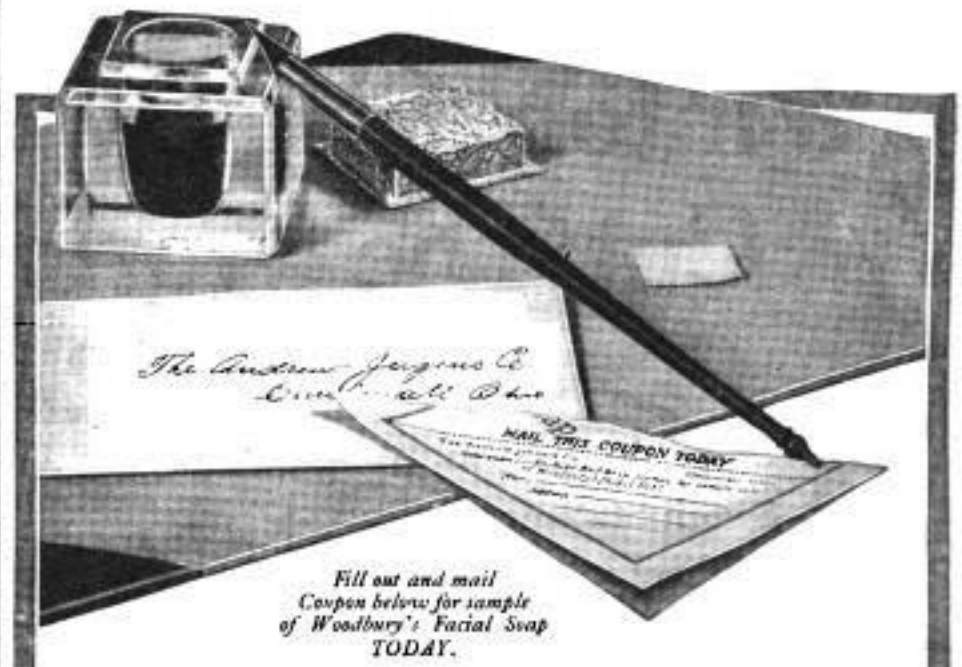
"We are going to play bridge in the music room," he announced. "Things are different, nowadays, to when I was a boy. The men have to smoke cigarettes all the time while they play cards. A bad habit, Chetwode! A very bad habit indeed! I've nothing to say against a good Havana cigar in the dining room or the smoke room, but this constant cigarette-smoking sickens me. I can't bear the smell of the things. Here we are. I don't know what table my wife has put you at, I'm sure. She arranges all these things herself."

Several guests who had arrived during the last few minutes were already playing at various tables. Mrs. Weatherley was moving about, directing the proceedings. She came across to them as soon as they entered and, laying her hand upon Arnold's arm, drew him to one side. There was a smile still upon her lips, but trouble in her eyes. She looked over her shoulder a little nervously and Arnold half unconsciously followed the direction of her gaze. Rosario was standing apart from the others, talking earnestly with Starling.

"I want you to stay with me, if you please," she said. "I am not sure where you will play, but there is no hurry. I myself shall not sit down at present. There are others to arrive."

Her brother, who had been talking languidly to Lady Blennington, came slowly up to them.

"You, Andrea, will wait for the baccarat, of course?" she said. "I know that this sort of bridge does not amuse you."



He answered her with a little shrug of the shoulders and, leaning toward her, spoke a few words in some tongue that Arnold did not at once recognize. She looked again over her shoulder at Rosario and her face clouded. She replied in the same tongue. Arnold would have moved away, but she detained him.

"You must not mind," she said softly, "that my brother and I talk sometimes in our native language. You do not, by chance, know Portuguese, Mr. Chetwode?"

"Not a word," he replied.

"I am going to leave all these people to amuse themselves," she continued, dropping her voice slightly. "I want you to come with me for a moment, Mr. Chetwode. You must take care that you do not slip. These wooden floors are almost dangerous. I did give a dance here once," she continued, as they made their way across the room, talking a little vaguely and with

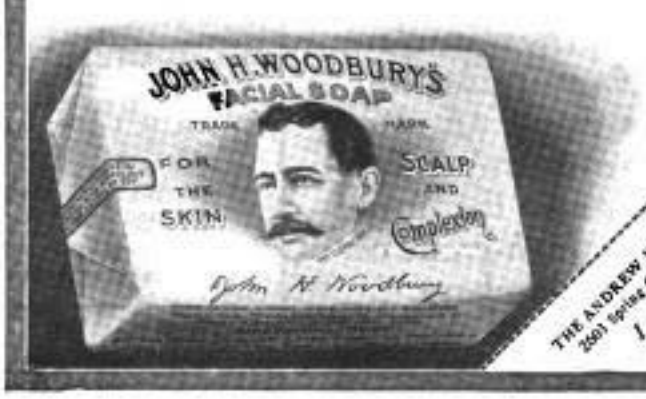
Fill out and mail Coupon below for sample of Woodbury's Facial Soap TODAY.

Prepare your skin for rough winds

This is the hardest season in the year on your complexion. The sudden changes and the sharp, harsh winds that roughen and chap, soon ruin an *unprepared* skin. This is when complexions are spoiled for months to come.

By proper precautions, you can keep your skin in an active, healthy condition in which it can *withstand* results from such exposure.



During bad weather, always rinse in cold water. Select your soap carefully. Woodbury's Facial Soap re-supplies what is exhausted by the wind, keeps your skin active and healthy. The regular use of Woodbury's and cold water protects your skin, gives it, all during cold weather, the delicate freshness and glow of health.

Woodbury's Facial Soap costs 25c a cake. No one hesitates at the price *after their first cake.* The feeling it gives the first time you use it is a promise of what its steady use will do.

For 4c we will send a sample cake. For 10c samples of Woodbury's Facial Soap, Cream and Powder. For 50c a copy of the Woodbury Book on the care of the skin and scalp and samples of the Woodbury preparations. The Andrew Jergens Co., 2503 Spring Grove Avenue, Cincinnati, Ohio.

Winton Six Owners, Traveling 744,00
Cut The World's Lowest Repair Expe
To 22.8 Cents per 1000 Mi

Sworn Statements

Every figure in this advertisement is supported by the **sworn** *statements of car owners whose names, addresses, and reports are printed on this page.*

Mileage Registered

The mileage credited each car was made by a regular stock-model Winton Six in the individual service of the owner, between the following dates, and was registered by odometer:

1911 records — April 1, 1911, to Nov. 30, 1911
1910 records — April 1, 1910, to Nov. 30, 1910
1909 records — Nov. 1, 1908, to June 30, 1909
1908 records — Nov. 1, 1907, to June 30, 1908

Total Repair Expense

The repair expense charged against each car is sworn to by the owner as "the total cost of repairs on said automobile between said dates (exclusive of tire repairs)."

Passed Upon by Judges

Each mileage and expense report was passed upon and accepted by a Committee of Judges having no connection with the Winton Company. These Judges exercised their own judgment without restriction, and have themselves sworn to their annual decisions.

Dependable Figures

Every possible precaution has been taken to render these reports free from error, in order that automobile buyers might have for their consideration an absolutely reliable set of figures showing **the actual cost of keeping a high-grade car in operation after purchase.**

Here are the Results for Four Years

Year	Cars	Total Mileage	Total Repair Expense
1911	20	394,333.9	$ 20.88
1910	10	165,901.9	6.96

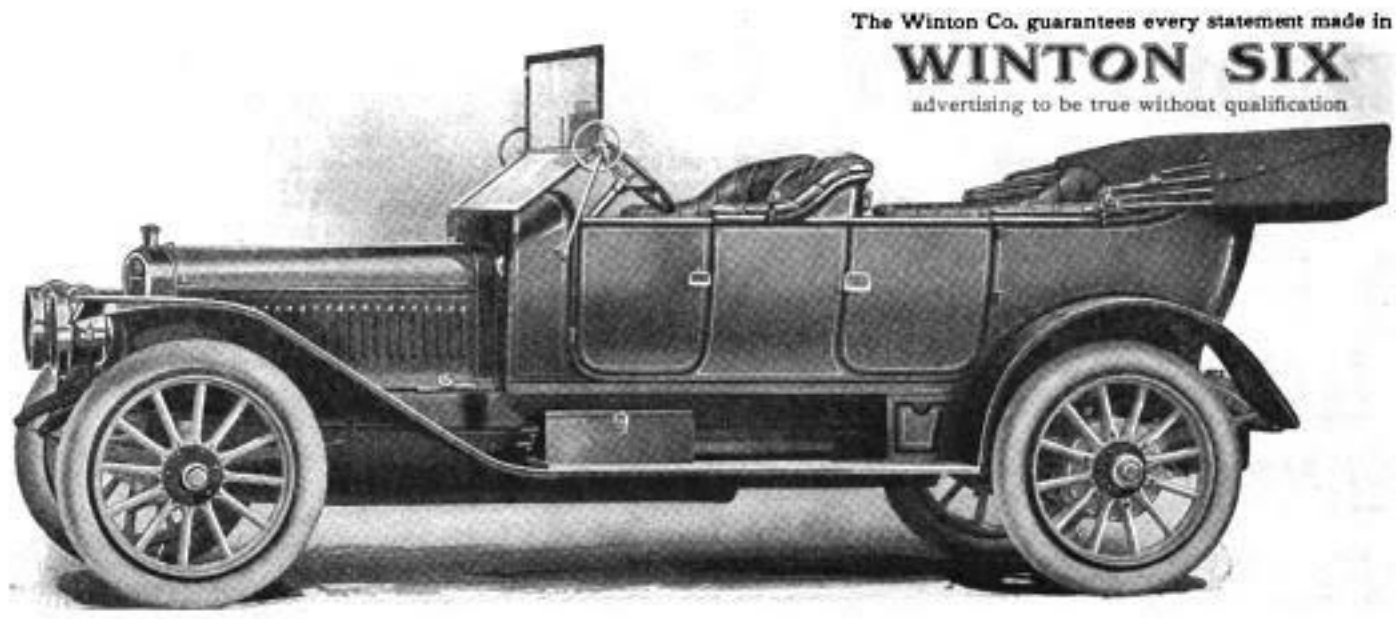
REPAIR expense is th
acid test of a car's merit

Low repair expense mean
vastly *more* than money saved

When repairs becom
necessary, expense is *onl*
part of the owner's loss.

For, every time a repair i
needed, the car owner lose
some of his respect for hi
car, some of his pride in it
ownership, and some of hi
faith in its merit.



Furthermore, every time
car goes into the repair shop
the owner suffers the loss o
its use. So that, financially an
otherwise, the man whose ca
is undergoing repairs is, tem
porarily at least, worse off tha
the man who has no car at all

advertising to be true without qualification

ility or Expense?

e motor car is a util-
ure and simple.
only value is in its
to carry its passengers
place to place.
l the measure of its
increases in proportion
able to do this safely,
y, quietly, comfortably,
urely.
ar in the repair shop
n every one of these
ts, and its failure costs
wner a repair bill that
the car just that much
of an expense to him.
the chagrin and humil-
of it all is that the
thereby pays an addi-
price to make his car

e, $4500

do the very work, service, that he supposed he paid for in the purchase price.

Little wonder, then, that repair bills and the losses they represent are the bugbear of motordom.

Little wonder, either, that car buyers want cars that will free them from repair expense burdens, annoyances, and losses.

These Owners are Satisfied

Winton Six owners know the joy of freedom from repair bills.

These sworn figures show how Winton Six owners, traveling stupendous mileage, in all parts of the country and in all seasons, during four years, were free from the repair expense bugbear, and had ***always at their service*** a car ready and able to carry its passengers from place to place, safely, quickly, quietly, comfortably, and ***surely.***

Winton Six owners know from experience the meaning of ***satisfaction.***

What the Winton Six has done for four years in the service of these owners ***it can do for you,*** for the Winton Six today is the same car we have been making continuously since June, 1907—four years without requiring a single radical change in design or construction.

Fifth Year of Success

In its fifth year of success, the Winton Six has a 48 H. P. self-cranking motor, ball-bearing, multiple-disc clutch, and four-speed transmission, 130 inch wheel base, spacious and comfortable ***four***-door body with operating levers ***inside,*** electric dash and tail lights, Booth Demountable rims, and 36 x 4½ inch tires all around. Price $3000. Compare it with cars costing $5000 or more.

Let us send you our library-size catalog, and also our Upkeep Book that gives complete data covering the cars that placed the world's lowest repair expense record at 22.8 cents per 1000 miles.

Clip the coupon and mail it today.

let's get acquainted!

Right out of the glorious West country this open-hearted message of sunshine and gladness and *real living* comes to you.

We men and women who *know* California and the Pacific Coast States—51,000 enthusiastic members of the Sunset League—want to know *you*, too, because

You're coming west some fine day; coming into this land of ever-blooming gardens; of wonderful days and nights; into the land of snow-capped mountains and sunny fields aglow with bountiful crops—a land blessed with joyous living—*your land*, of which you know so little.

Start *knowing* now—and knowing *right* about this big, wonderful West of *yours*.

Close by you there's a family who know California and the great Pacific Coast States; who can tell you facts that are so astonishing that you will marvel; facts that will prove you really do not know this beautiful and prosperous West half so well as you must.

We want to send you the name and address of that family. They'll be glad to know you and *help you* know the West country. You'll be glad to know them, too.

A 2c stamp will bring you a valuable fund of pictures and literature that carries the very atmosphere, the very spirit of the gorgeous West. For instance, a booklet describing the Panama Exposition in San Francisco in 1915; a sample copy of Sunset Magazine, with its magnificent four-color photographs of Western scenes; the big color poster of the famous Sunset Indian; an entertaining and informing volume of "California's Famous Resorts."

No obligations of any kind for you to become a member of the Sunset League—other than your agreement to pass on to your own neighbors what you learn about California and the West. We'll tell you all about that, too. For that same 2c stamp the full services of the Sunset Information Bureau are free to you. Ask any question you like about *California, Oregon, Washington, Nevada, Arizona, New Mexico.*

We'll help you more than you can realize. It's up to you to sign the following coupon—NOW—while you think of it.

"GET ACQUAINTED" COUPON

SUNSET MAGAZINE INFORMATION BUREAU,
San Francisco, Cal.

Gentlemen:—Enclosed find 2c stamp. Please send, fully prepaid, California literature, Rules for Panama Exposition booklet, worked copy of Sunset Magazine, and booklet about

_____, without any further obligation on my part.

an obvious effort. "I did not enjoy it at all. To me the style of dancing in this country seems ungraceful. Look behind, Mr. Chetwode. Tell me, is Mr. Rosario following us?"

Arnold glanced over his shoulder. Rosario was still standing in the same place, but he was watching them intently.

"He is looking after us, but he has not moved," Arnold announced.

"It is better for him that he stays there," Mrs. Weatherley said softly. "Please to come."

At the farther end of the apartment there was a bend to the left. Mrs. Weatherley led the way round the corner into a small recess out of sight of the remainder of the people. Here she paused and, holding up her finger, looked round. Her head was thrown back, the trouble still gleamed in her eyes. She listened intently to the hum of voices, as though trying to distinguish those she knew. Satisfied, apparently, that their disappearance had not occasioned any comment, she moved forward again, motioned Arnold to open a door and led him down a long passage to the front of the house. Here she opened the door of an apartment on the left-hand side of the hall and almost pushed him in. She closed the door quickly behind them. Then she held up her finger.

"Listen!" she said.

They could hear nothing save the distant murmur of voices in the bridge room. The room they had entered was in complete darkness, through which the ivory pallor of her arms and face and the soft fire of her eyes seemed to be the only things visible. She was standing quite close to him. He could hear her breathing, he could almost fancy that he heard her heart beat. A strand of her hair even touched his cheek.

"I do not wish to turn the light up for a moment," she whispered. "You do not mind?"

"I mind nothing," Arnold answered, bewildered. "Are you afraid of anything? Is there anything I can do?"

A sense of excitement was stirring him.

"Just do as I ask, that is all," she murmured. "I want to look outside in a moment. Just do as I ask and keep quiet."

She stole from him to the window and, moving the curtain a few inches, knelt down, peering out. She remained there motionless for a full minute. Then she rose to her feet and came back. His eyes were becoming more accustomed to the gloom now and he could see the outline of her figure as she moved toward him.

"Take my place there," she whispered. "Look down the drive. Tell me whether you can see any one watching the house."

He went down on his knees at the place she indicated and peered through the parted curtain. For a few seconds he could see nothing. Then as his eyes grew accustomed to the gloom he saw two motionless figures standing on the left-hand side of the drive, partly concealed by a tall laurel bush.

"I believe," he declared hoarsely, "that there are two men standing there."

She drew a little breath.

"Tell me, are they moving?"

"They seem to be simply watching the house," he replied.

She was silent. He could hear her breath come and go.

"They still do not move?" she asked after a few seconds.

He shook his head. She turned away, listening to some footsteps in the hall.

"Remember," she whispered, "I am standing where I can turn on the light in a moment. If any one comes you are here to see my South American curios. This is my own sitting room. You understand?"

"I understand," he assented. "Whatever you tell me to say I will say."

She seemed to be gathering courage. She laughed very softly as though amused at his earnestness. There was little enough of mirth in her laughter, yet somehow it gave him heart.

"What do these men want?" he asked. "Would you like me to go out and send them away?"

"No," she replied. "I do not wish you to leave me."

"But they are terrifying you," he protested. "What right have they in your garden? They are perhaps thieves."

"Hush!"

She sprang away from him. The room was suddenly flooded with light. She was leaning with her arm upon the mantelpiece, a statuette of black ivory in her hand.

"If you are really fond of this sort of thing," she began, "you should come with me to the South Kensington Museum one day. Who is that?"

The door had opened. It was Mr. Weatherley who appeared. Mr. Weatherley was distinctly fussy and there was some return of his pompous manner.

"My dear Fenella!" he exclaimed. "What on earth are you doing in here, with half your bridge tables as yet unarranged? Your guests are wondering what has become of you."

"Has any one fresh turned up?" she asked, setting down the statuette.

"A Lady Raynham has just arrived," Mr. Weatherley replied, "and is making herself very disagreeable because there is no one to tell her at which table she is to play. I heard a young man who came with her, too, asking Parkins what time supper was. I do not wish to criticise the manners of your guests, but really, my dear Fenella, some of them do seem to have strange ideas."

"Lady Raynham," she remarked coldly, "is a person who should be glad to find herself under any respectable roof, without making complaints. Mr. Chetwode," she continued, turning to him, "it is my wish to finish showing you my treasures; therefore, will you wait here, please, for a short time while I go and start another bridge table? I shall return quite soon. Come, Samuel."

Mr. Weatherley coughed. He seemed unwilling to leave Arnold behind.

"I dare say young Chetwode would like a game at bridge himself, my dear," he protested.

"Mr. Chetwode shall have one later on," she promised. "I think that very likely he will play at my table. Come."

They left the room together. She looked backward for a moment before they disappeared and Arnold felt his heart give a little jump. She was certainly the most beautiful creature he had ever seen and there was something in her treatment of him, the subtle flattery of her half-appealing confidence, that went to his head like wine. The door closed and he was left alone. He listened to their departing footsteps. Then he looked round him, for the first time forming some idea of his surroundings. He was in a very charming, homely looking apartment, with deep easy-chairs, a divan covered with luxurious cushions, numbers of little tables covered with photographs and flowers, a great bowl of hothouse roses, and in the farther corner of the room an oak cabinet with an oak background, which was packed with curios. After his first brief inspection, however, he felt scarcely any curiosity as to the contents of the room. It was the window that drew him always toward it. Once more he peered through the chink of the curtains. He had not cared to turn out the lights, however, and for several moments everything was indistinguishable. Then he saw that the two figures still remained in very nearly the same position, except that they had drawn, if anything, a little closer to the house.

A tiny clock upon the mantelpiece was ticking away the seconds. Arnold had no idea how long he remained there watching. Suddenly, however, he received a shock. For some time he had fancied that one of the two figures had disappeared altogether, and now, outside on the window-sill, scarcely a couple of feet from the glass through which he was looking, a man's hand appeared and gripped the ledge. He stared at it, fascinated. It was so close to him that he could see the thin yellow fingers, on one of which was a signet ring with a blood-red stone, the misshapen knuckles, the broken nails. He was on the point of throwing up the window when a man's face shot up from underneath and peered into the room. There was only the thickness of the glass between them, and the light from the gas lamp that stood at the corner of the drive fell full upon the white, strained features and the glittering black eyes that stared into the room. The chink of the curtain through which Arnold was gazing was barely an inch wide, but it was sufficient. For a moment he stared at the man. Then he threw the curtains open and stooped to unfasten the window. It was the affair of a few seconds only to throw it up. To his surprise the man did not move. Their faces almost touched.

"What the devil do you want?" Arnold exclaimed, gripping him by the arm.

The man did not flinch. He inclined his head toward the interior of the room.

Beauty Lines

Are in **every** woman's face. Those who have **fewest** should **cultivate** them, those who have **most** should **retain** them. **Millions** of women have found that

Bailey's Rubber Complexion Brushes
never failed to give the desired results in all cases.

"Rosario, the Jew," he answered thickly. "He is in the house there. Will you take him a message?"

"Ring at the door and bring it yourself," Arnold retorted.

The man laughed contemptuously. He stared at Arnold for a moment and seemed to realize for the first time that he was a stranger.

"You are a fool to meddle in things you know nothing of!" he muttered.

"I know you've no right where you are," Arnold said, "and I shall keep you until some one comes."

The intruder made a sudden dive, freeing himself with an extraordinary turn of the wrist. Arnold caught a glimpse of his face as he slunk away. While he hesitated whether to follow him he heard the door open and the soft rustle of a woman's skirts.

"What are you doing out there, Mr. Chetwode?"

He turned round. Mrs. Weatherley was standing just behind him, leaning also out of the window, with a little halo of light about her head. For a moment he was powerless to answer. Her head was thrown back, her lips parted. She seemed to be listening as well as watching. There was fear in her eyes as she looked at him, yet she made the most beautiful picture he had ever seen in his life. He pulled himself together as they stepped back into the room.

"Well?" she asked breathlessly.

"I was waiting here for you," he explained. "I looked through the curtains. Then I saw a man's hand upon the sill."

Her hand shot to her side.

"Go on," she whispered.

"I saw his face," Arnold continued. "It was pressed close to the window. It was as though he meant to enter. I threw the curtains back, opened the window and gripped him by the arm. I asked him what he wanted."

She sat down in a chair and began to tremble.

"He said he wanted Rosario, the Jew," Arnold went on. "Then when he found that I was a stranger he got away. I don't know how he managed it, for my fingers are strong enough, but he wrenched himself free somehow."

"Look out once more," she implored; "see if he is anywhere round. I will speak to him."

He stood at the window and looked in every direction.

"There is no one in sight," he declared. "I will go to the corner of the street if you like."

She shook her head.

"Close the window and bolt it, please," she begged. "And draw the curtains tight. Now come and sit down here by me for a moment."

He did as he was bidden with some reluctance.

"The man was a villainous-looking creature," he persisted. "I don't think that he was up to any good. Look! There's a policeman almost opposite. Shall I go and tell him?"

She put out her hand and clasped his, drawing him down to her side. Then she looked steadfastly into his face.

"Mr. Arnold Chetwode," she said slowly, "women have many disadvantages in life, but they have had one gift bestowed upon them in which they trust always. It is the gift of instinct. You are very young and I know very little about you, but I know that you are to be trusted."

"If I could serve you ——" he murmured.

"You can," she interrupted.

Then for a time she was silent. Some new emotion seemed to move her. Her face was softer than he had ever seen it, her beautiful eyes dimmer. His mind was filled with new thoughts of her.

"Mrs. Weatherley," he pleaded, "please do believe in me, do trust me. I mean absolutely what I say when I tell you there is nothing in the world I would not do to save you from trouble or alarm."

Her moment of weakness was over. She flashed one wonderful smile at him and rose to her feet.

"It is agreed," she declared. "When I need help—and it may be at any moment—I shall call upon you."

"I shall be honored," he assured her gravely. "In the meantime please tell me—are we to speak of this to Rosario?"

"Leave it to me," she begged. "I cannot explain to you what all this means, but I think that Mr. Rosario can take care of himself. We must go back now to the bridge room. My husband is annoyed with me for coming away again."

Mr. Weatherley met them in the passage. He was distinctly irritable.

"My dear Fenella!" he exclaimed. "Your guests do not understand your absence. Mr. Rosario is most annoyed and I cannot imagine what is the matter with Starling. I am afraid that he and Rosario have had words."

She turned her head as she passed and smiled very slightly.

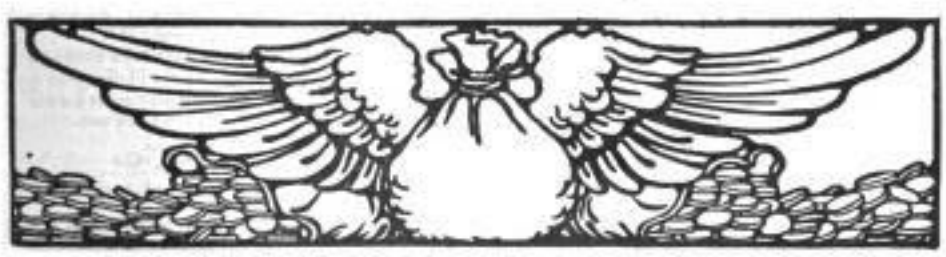
"I have no concern," she said, "in the quarrel between Mr. Starling and Mr. Rosario. As for the others ——" She made a little gesture. "Mr. Chetwode and I are quite ready for bridge now," she added. "We are going in to do our duty."

(TO BE CONTINUED)

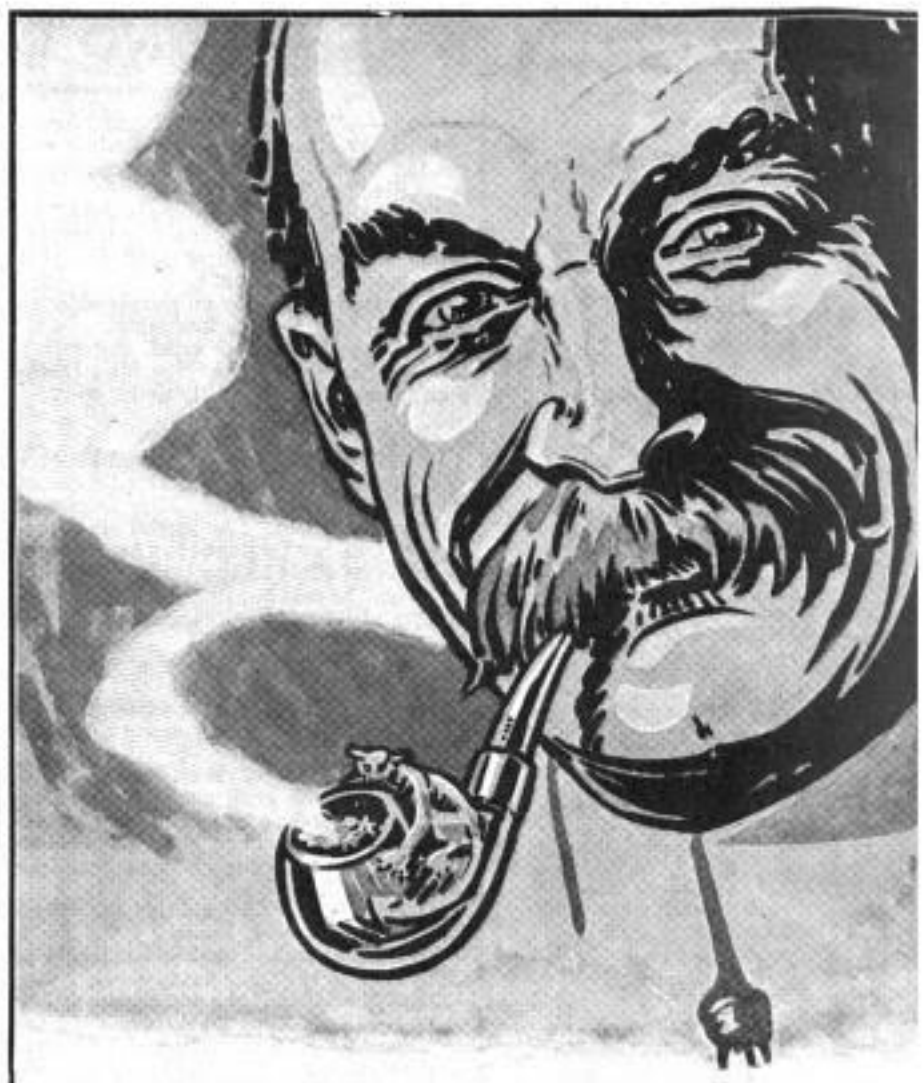
Me and Yem

VE GOT little faller har,
Name ban Yem;
Das whole ralroad over dar
Blong to hem.
Beld it purty doggone kvick
From San Pol to Passafick,
An he turn kvite many trick,
Das same Yem.

Fallers laugh ven he come har,
Das man Yem;
But he ain't ban fraid for scare,
Not for hem.
Call das ralroad strak o' rust
An say Yem vill go clean bust;
But he keep still an he yust
Vork for Yem.



Val, Ay tal you Ay don laugh,
Ay explode,
Van his inyine kal my calf
On das road;
An Ay shak my fist an svar
At das doggone inyinaar
An Ay vish das Yem ban har
Van Ay knowed.



An Ay say my calf ban kal
On das track;
Ay skol fight das man Yem Hal.
Ay don lak
Suts a tang as das, Ay say,
Tak das ralroad kvick avay,
An das oxcart he skol stay,
Breng him back.

Val, Ay wrote das note to hem
On das calf;
An a faller har say Yem
Had big laugh;
An he wrote me letter too
An say: "Ole, Ay lak you,
An how much you tenk ban due
On das calf."

Val, das calf ban purty fine
(Van hees dead),
An Ay wrote das Yem a line
An Ay said:
"Ay vil lat das ralroad run
For tan doller in gude mun—
Das calf vood have veighed a ton,
Yust lak lead."

Val, Ay got my gude hard mun
From das Yem,
An Ay lat das ralroad run
Yust for hem;
An Ay tenk das Nortvest har
Yump ahead gude many yar
Yust by not ban fraid for scare,
Me an Yem. —*J. W. Foley.*

Back to the good old jimmy for real smoking pleasure. Prince Albert shows the way. No matter what your grouch, no matter what kick you've had—simply forget 'em. You *can* smoke a pipe, smoke it long, smoke it steady, if you load up with this *different* tobacco.

PRINCE ALBERT

the national joy smoke

simply hits it right off with every pleasant idea you ever could have about a pipe smoke. Has all the mellow flavor and fragrance of real tobacco but none of the old kicks. That's why P. A. is different. The sting and the rankness and sogginess that you used to look for in a pipe tobacco—they don't get into *this* tobacco because of our exclusive, patented process of preparation. Prince Albert CAN'T BITE YOUR TONGUE.

You can buy P. A. in any city, town, village or crossroads in America. 10c in the tidy red tin. Also in 5c bags wrapped in weather-proof paper and pound and half-pound humidors.

THE MOVING PICTURE WRITES

(Continued from Page 10)

"But——" Miss Duckman began. Again she attempted to explain that Rudnik was not her husband and again the conductor forestalled her.

"And if he's able to go home tonight," he said finally, "ye'll be given free transportation, in a parlor car d'ye mind, like ye'd be on your honeymoon."

He patted her gently on the shoulder as he turned to a waiting brakeman.

"Let her go, Bill," he cried, and with a jubilant toot from the engine Miss Duckman's elopement was fairly under way.

V

WHEN Harris Rudnik opened his eyes in the little white curtained room of the Emergency Hospital, Miss Duckman sat beside his bed. She smiled encouragingly at him, but for more than five minutes he made no effort to speak.

"Well," he said at length, "what are you kicking about? It's an elegant place, this here Home."

Miss Duckman laid her fingers on her lips.

"You shouldn't speak nothing," she whispered, "on account you are sick, *aber* not serious sick."

"I know I am sick," Rudnik replied. "I was just figuring it all out. I am getting knocked down by a train and ——"

"No bones is broken," Miss Duckman hastened to assure him. "You would be out in a few days."

"I am satisfied," he said faintly. "You got a fine place here, Missis."

Miss Duckman laid her hand on Rudnik's pillow.

"I ain't a Missis," she murmured. "My name is Miss Blooma Duckman."

"Blooma," Rudnik muttered. "I once used to got a sister by the name Blooma, and it ain't a bad name neither." He was not entirely softened by his mishap, however. "But, anyhow, that ain't here or there," he said. "Women is just the same—always kicking. What is the matter with this Home, Miss Duckman? It's an elegant place already."

"This ain't the Home," Miss Duckman explained. "This is a hospital, which when you was hit by the engine they put you on the train and took you up here."

"*Aber* what are you doing here?" he asked after a pause.

"I come along," Miss Duckman said; "and now you shouldn't talk no more."

"What d'ye mean you come along?" he cried. "Didn't you go back to the Home?"

Miss Duckman shook her head, and Rudnik turned on his pillow and looked inquiringly at her.

"How long am I up here anyhow?" he demanded.

"Four days," Miss Duckman said, and Rudnik closed his eyes again. For ten minutes longer he lay still and then his lips moved.

"What did you say?" Miss Duckman asked.

"I says Blooma is a pretty good name already," he murmured, smiling faintly, and the next moment he sank into a light sleep.

When he awoke Miss Duckman still sat by the side of his bed, her fingers busy over the hem of a sheet, and he glanced nervously at the window through which the late afternoon sun came streaming.

"Ain't it pretty late you should be away from the Home?" he inquired. "It must be pretty near six, ain't it?"

"I know it," Miss Duckman said; "and the doctor says at six you should take this here powder."

"*Aber* shouldn't you got to be getting ready to go back to the Home?" he asked.

Miss Duckman shook her head.

"I ain't going back no more," she answered. "I got enough of them people."

Rudnik looked helplessly at her.

"But what would you do?" he said. "You ain't got no other place to go to, otherwise you wouldn't got to live in a Home."

"Sure, I know," she replied as she prepared to give him his powder; "but *Gott sei Dank* I still got my health, and I am telling the lady superintendent here how they work me at the Home, and she says I could stop here till I am finding something to do. I could cook already and I could sew already, and if the worser comes to the worst I could find a job in an underwear factory. They don't pay much, but a woman like me she don't eat much. All I want is I could get a place to sleep, and I bet yer I could make out fine. So you should please take the powder."

Rudnik swallowed his powder.

"You says you could cook," he remarked after he had again settled himself on his pillow. "*Tzimmus*, for instance, *und Fleisch Kugel?*"

"*Tzimmus und Fleisch Kugel* is nothing," she declared. "I don't want to say nothing about myself, understand me, because lots of women to hear 'em talk you would think wonder what cooks they are, and they couldn't even boil a potater even; *aber* if you could eat my *Gefüllte Rinderbrust*, Mister ——"

"Rudnik," he said as he licked his moist lips—"Harris Rudnik."

"Mister Rudnik," she proceeded, "*oder* my *Tebeches*, you would got to admit I ain't so helpless as I look."

"You don't look so helpless," Rudnik commented; "I bet yer you could do washing even."

"Could I?" Miss Duckman exclaimed. "Why, sometimes at the Home I am washing from morning till night, *aber* I ain't kicking none. It really agrees with me, Mr. Rudnik."

Rudnik nodded. Again he closed his eyes, and had it not been that he swallowed convulsively at intervals he would have appeared to be sleeping. Suddenly he raised himself on his pillow.

"Do you make maybe a good cup coffee also?" he inquired.

"A good cup coffee I make in two ways," Miss Duckman answered. "The first is ——"

Rudnik waved his hand feebly.

"I'll take your word for it," he said, and again lapsed into quietude.

"D'ye know," he murmured at length, "I ain't drunk a good cup coffee in years already?"

Miss Duckman made no answer. Indeed she dropped her sewing and passed noiselessly out of the room, and when she returned ten minutes later she bore on a linen-covered tray a cup of steaming fragrant coffee.

"How was that?" Miss Duckman asked after he had emptied the cup.

Rudnik wiped his mouth with the back of his hand.

"All I could say is," he replied, "if your *Tzimmus* ain't no worser as your coffee, Miss Duckman, nobody could kick that you ain't a good cook."

Miss Duckman's faded cheeks grew pink and she smiled happily.

"I guess you are trying to make me a compliment," she said.

"In my whole life I never made for a woman a compliment," Rudnik declared. "I never even so much as met one I could make a compliment to yet except you, and *mit* you it ain't no compliment after all. It's the truth."

He lay back on his pillow and gazed at the ceiling for fully a quarter of an hour, while Miss Duckman sewed away industriously.

"After all," he said at last, "why not? Older men as me done it."

"Did you say something?" Miss Duckman asked.

Rudnik cleared his throat noisily.

"I says," he replied, "you should please be so good and don't bother yourself about that—now—underwear factory job till I am getting out of here."

VI

"A HOME is a Home," B. Lesengeld said as he and Belz sat in the office nearly a week later; "but if Schindelberger wouldn't show up here with Rudnik today yet, Belz, we would foreclose sure."

"Would we?" Belz retorted. "Well, I got something to say about that too, Lesengeld, and I'm going to give the Bella Hirshkind people a couple days longer. Today is Blooma Duckman's day out again, and me and Mrs. Belz we sit home last night and we couldn't do a thing on account Mrs. Belz is dreading it so. Think what it would be if that woman is thrown back on our hands."

"If she is so terrible as all that why do you let her come at all?" Lesengeld asked, and Belz heaved a great sigh.

"I'll tell you, Lesengeld," he said, "she's really got a very good heart, y'understand; *aber* is it Mrs. Belz's fault she ain't such a A-Number-One cook? Every time that

Types of properties of American Real Estate Company, whose Assets include 60 Buildings and 4,500 City Lots; total value over $23,000,000

ON the ownership of these extensive New York holdings are based its 6% Gold Bonds. These Bonds are adaptable

FOR INVESTING JANUARY FUNDS

¶ They are issued in these two forms:

6% Coupon Bonds—For those who wish to invest $100, $200, $300, $400, $500, $1,000, etc., earning 6% interest (from exact date of purchase) payable semi-annually by coupons attached. These Bonds afford an ideal investment for large or small amounts, and provide a number of conveniences.

6% Accumulative Bonds—For those who wish to accumulate $1,000 and upward by investing $25 or more a year. They pay 6% compound interest on annual instalments, and provide the safest, most practical means for accumulating definite capital at a given time.

THE BEST NEW YEAR'S HABIT you can form is to start saving money systematically and thus provide a competency for your future. Just note the possibilities of systematic savings invested in A-R-E 6% Accumulative Bonds:

Annual Instalment	Term	Matures in Cash
$25.65	20 Years	$1,000
40.53	15 Years	1,000
71.57	10 Years	1,000

¶ A-R-E 6s have paid 6% for 24 years, returning to investors nearly $8,000,000 in principal and interest without loss or delay.

¶ Write to-day for booklet describing A-R-E 6s, and handsome book of views of New York City, free.

Any Woman Can Make Good Waffles

with the Griswold Waffle Iron—the famous old Southern kind with the real home-made flavor.

Griswold's Waffle Iron bakes waffles right because its thick, heavy pans distribute the heat evenly. Scorched or doughy waffles are impossible with the Griswold.

Griswold's Waffle Iron

has wood handles, set in air-cooled sockets. This prevents burning of fingers.

Look for trade mark on every iron

"American"

No lifting of pan is necessary in turning waffles. This is due to the patent ball-socket joint. Base or ring has an extended groove which prevents grease or batter from overflowing. All dealers sell the Griswold—95c and up. If yours should not be supplied, write and we'll send name of dealer nearest you who is.

GET OUR NEW BOOKLET

Blooma Duckman comes round she rubs it in yet, and she snoops under beds to see is it clean *oder* not, and she gets the girl so worked up, understand me, that we are hiring a new one every week. At the same time the woman means well, Lesengeld, but you know how that is: some people means so well you couldn't stand 'em at all."

Lesengeld nodded.

"Sure, I know," he said. "I seen it last week a case where a feller all the time means well and is trying to do good. He is taking pity on a tramp, understand me, and the tramp *gunsers* his silver spoons and everything, and I says to Mrs. Lesengeld: 'Mommer,' I says, 'it only goes to show,' I says, 'if you feel you are beginning to take pity on a feller,' I says, 'you shouldn't got no mercy on him at all,' I says. 'Otherwise he will go to work and do you every time,' I says. So that's why I am telling you, Belz, I guess the best thing we could do is we should right away foreclose Rudnik's house on him. Then if Schindelberger is such a charitable sucker as all that, let him buy in the house for the Bella Hirshkind Home and be done with it. All we want is our money back and we would be satisfied. What is the use we consider Rudnik's feelings. Ain't it?"

"Do you think I am holding off on Rudnik's account?" Belz exclaimed indignantly. "I never even got an idee to take pity on the feller at all. An old snoozer like him which he's got only one house to his name, understand me, he don't deserve no better. So go ahead and ring up Schindelberger and tell him that's what we would do."

Lesengeld turned to the desk, but even as he took the telephone receiver from the hook Schindelberger himself came in.

"*Endlich!*" Belz exclaimed. "We was expecting you the whole week yet. Are you ready to fix up about Rudnik's mortguge?"

Schindelberger sat down and carefully placed his hat on Belz's desk.

"The mortgage I didn't come to see you about exactly," he said. "I got something else to tell you."

"Something else I ain't interested in at all," Belz rejoined. "We was just going to telephone and ask you why don't Rudnik fix it up about the mortgage?"

"I am coming to that presently," Schindelberger said. "What I want to say now is, Mr. Belz, that I am very sorry I got to come here and tell you an information about your wife's cousin, Miss Blooma Duckman."

"Blooma Duckman!" Belz exclaimed. "What's the trouble; is she sick?"

Schindelberger shook his head.

"Worser as that," he explained. "She disappeared from the Bella Hirshkind Home a week ago already and nobody sees nothing from her since."

For a brief interval Belz stared at his visitor and then he turned to Lesengeld.

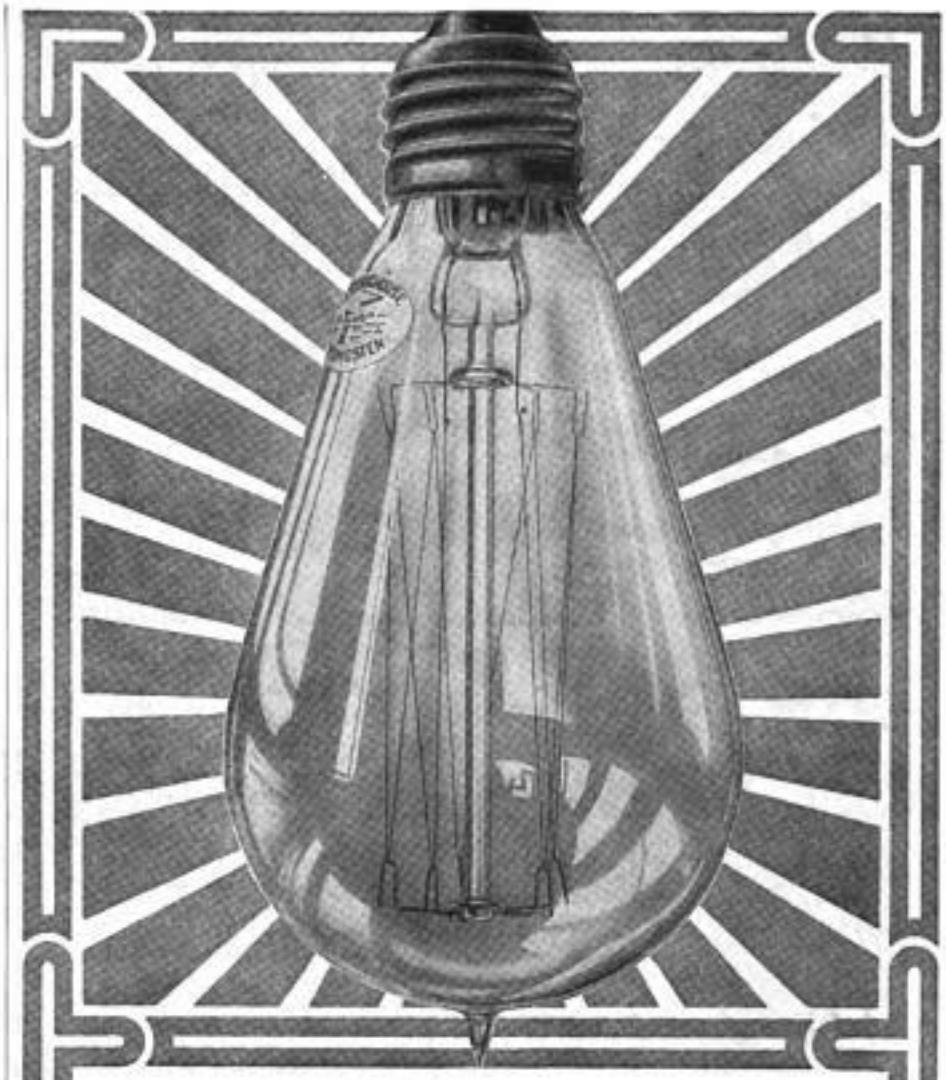
"Ain't that a fine note?" he said.

"All we are discovering is a couple packages she got with her, which the superintendent sends her over to West Farms she should buy some groceries, and on her way back she drops the packages and disappears."

"Might she fell down a rock maybe," Lesengeld suggested. "The other day I am seeing a fillum where a feller falls down a rock already and they search for him a hundred people yet. They get near him as I am to you, Schindelberger, and still they couldn't find him anyhow on account the feller is too weak to say something."

"How could she fall down a rock?" Schindelberger interrupted. "It's all swamps up there. But anyhow, Belz, we are wasting time here talking about it. The best thing is you should ring up the police."

"What d'ye mean wasting time?" Belz cried. "You're a fine one to talk about wasting time. Here the woman disappears a week ago already and you are only just telling me now."



Schindelberger blushed.

"Well, you see," he said, "we all the time got hopes she would come back." In point of fact he had purposely delayed breaking the news to Belz in order that the settlement of Rudnik's mortgage extension should not be prejudiced. "But now," he added ingenuously, "it don't make no difference, because Rudnik telephones me yesterday morning that the whole thing is off on account he is married."

"Married!" Lesengeld cried. "Do you mean to told me that old *Schlemiel* gets married yet?"

"So sure as you are sitting there. And he says he would come round here this morning and see you."

"He should save himself the trouble," Belz declared angrily. "Now particularly

WINSLOW'S Skates

THE BEST ICE AND ROLLER SKATES

that Blooma Duckman ain't up there at all, I wouldn't extend that mortgage, not if he gives a deed to that Home to take effect right today yet. I shouldn't begun with you in the first place, Schindelberger."

Schindelberger seized his hat.

"I acted for the best," he said. "I am sorry you should get delayed on your mortgage, gentlemen, *aber* you shouldn't hold it up against me. I done it for the sake of the Bella Hirshkind Home, which if people gets sore at me on account I always act charitable, that's their lookout, not mine."

He started for the door as he finished speaking, but as he placed his hand on the knob some one turned it from the other side and the next moment he stood face to face with Rudnik.

"So!" Schindelberger exclaimed. "You are really coming up here, are you? It ain't a bluff, like you are taking my card to go up to the Home and you never went near the place at all."

Rudnik shut the door behind him.

"What d'ye mean I didn't go near the place at all?" he said angrily. "Do you think I am such a liar like you are, Schindelberger? Not only did I go near the place, but I got so near it that a hundred feet more and the engine would knocked me into the front door of the Home already."

It was then that Lesengeld and Belz observed the stout cane on which Rudnik supported himself.

"I come pretty close to being killed already on account I am going up to the Home," he continued; "and if nobody is asking me to sit down I would sit down anyway, because if a feller gets run over by a train he naturally don't feel so strong, even if he would escape with bruises only."

"Did you got run over with a train?" Schindelberger asked.

"I certainly did," Rudnik said. "I got run over with a train and married in six days, and if you go to work and foreclose my house on me today yet, it will sure make a busy week for me." He looked pathetically at Belz. "Unless," he added, "you are going to give me a show and extend the mortgage."

Belz met this appeal with stolid indifference.

"Of course, Rudnik," he said, "I'm sorry you got run over with a train; but if we would extend your mortgage on account you got run over with a train and our other mortgagees hears of it, understand me, the way money is so tight nowadays, every time a mortgage comes due them suckers would ring in trollyer-car accidents on us and fall down coal-holes so as we would give 'em an extension already."

"And wouldn't it make no difference that I just got married?" Rudnik asked.

"If an old feller like you gets married, Rudnik," Belz replied, "he must got to take the consequences."

"An idee!" Lesengeld exclaimed. "Do you think that we are making wedding presents to our mortgagees yet, Rudnik?"

"It serves you right, Rudnik," Schindelberger said. "If you would consent to the Home getting your property I wouldn't said nothing about Miss Duckman's disappearing and Belz would of extended the mortgage on you."

"I was willing to do it," Rudnik said, "*aber* my wife wouldn't let me. She says rather than see the house go that way she would let you gentlemen foreclose it on us, even if she would got to starve."

"I don't know who your wife is," Schindelberger rejoined angrily, "but she talks like a big fool."

"No, she don't," Rudnik retorted; "she talks like a sensible woman, because in the first place she wouldn't got to starve. I got enough strength left that I could always make for her and me anyhow a living, and in the second place the Home really ain't a home. It's a business."

"A business!" Schindelberger cried. "What d'ye mean a business?"

"I mean a business," Rudnik replied, "an underwear business. Them poor women up there makes underwear from morning till night already, and Schindelberger here got a brother-in-law which he buys it from the Home for pretty near half as much as it would cost him to make it."

"*Rosher!*" Max Schindelberger shrieked. "Who tells you such stories?"

"My wife tells me," Rudnik replied.

"And how does your wife know it?" Belz demanded.

"Because," Rudnik answered, "she once used to live in the Home."

"Then that only goes to show what a liar you are," Schindelberger said. "Your wife

The man that is "Always Tired-Out" will soon be worn out

If the day's work fags you—

If an ill-chosen meal upsets your digestion—

If a sleepless night spoils the next day—then you are *not normal*, but are below par, unnecessarily, yes, and shamefully.

You were given a body that had an abundant *reserve fund of energy* to draw upon in just such hours of need.

The Thompson Course

of Exercise is a rational, pleasant and easy means of securing and maintaining that reserve power which your body originally had and which you have dissipated by unthinking neglect.

My Course benefits (by natural movements scientifically applied) the *governors* of the bodily machine, i.e., the lungs, heart, stomach, intestines, etc. All these are *muscular* and can be strengthened by proper exercise. Yet it is an amazing fact that until my Course was evolved, no systematic treatment existed that was based on this axiomatically natural method.

The clearness of your mind, the strength of your nerves, your hopefulness and joy in living, all depend on the tone and vigor of your vital organs.

I offer you something that will benefit every inch of your body and your mind through every minute of your life, and I offer it on free-trial terms that make it impossible for you to lose a penny.

Are you interested enough in making yourself a normal human being to send for and read my book, "Human Energy" (sent free and postpaid)? You will find it very startling yet obviously true.

PERKINS & CO. Lawrence Kans.

couldn't of been in the Home on account it only gets started last year, and everybody which went in there ain't never come out yet."

"Everybody but one," Rudnik said as he seized his cane, and raising himself from the chair he hobbled to the door.

"Blooma *leben*," he cried, throwing the door wide open; and in response Mrs. Rudnik, née Blooma Duckman, entered.

"*Na*, Belz," she said, "ain't you going to congradulate me?"

Belz sat back in his chair and stared at his wife's cousin in unaffected astonishment, while Schindelberger noiselessly opened the door and slid out of the room unnoticed.

"And so you run away from the Home and married this *Schnorrer?*" Belz said at length.

"*Schnorrer* he ain't," she retorted, "unless you would go to work and foreclose the house."

"It would serve you right if I did," Belz rejoined.

"Then you ain't going to?" Mrs. Rudnik asked.

"What d'ye mean he ain't going to?" Lesengeld interrupted. "Ain't I got nothing to say here? Must I got to sacrifice myself for Belz' wife's relations?"

"*Koosh*, Lesengeld!" Belz exploded. "You take too much on yourself. Do you think for one moment I am going to foreclose that mortgage and have them two old people *schnorring* their living expenses out of me for the rest of my days, just to oblige you? The mortgage runs at six per cent and it's going to continue to do so. Six per cent ain't to be sneezed at neither."

"And ain't he going to pay us no bonus nor nothing?" Lesengeld asked in anguished tones.

"Bonus!" Belz cried; "what are you talking about bonus? Do you mean to told me you would ask an old man which he nearly gets killed by a train already a bonus yet? Honestly, Lesengeld, I'm surprised at you. The way you talk sometimes it ain't no wonder people calls us second-mortgage sharks."

"But lookyhere, Belz ——" Lesengeld began.

"'Senough, Lesengeld," Belz interrupted. "You're lucky I don't ask you you should make 'em a wedding present yet."

"I suppose, Belz, you're going to make 'em a wedding present too, ain't it?" Lesengeld jeered.

"That's just what I'm going to do," Belz said as he turned to the safe. He fumbled round the middle compartment and finally produced two yellow slips of paper. "I'm going to give 'em these here composition notes of Schindelberger's, and with what Blooma knows about the way that *Rosker* is running the Bella Hirshkind Home she shouldn't got no difficulty making him pay up."

He handed the notes to Rudnik.

"And now," he said, "sit right down and tell us how it comes that you and Blooma gets married."

For more than a quarter of an hour Rudnik described the details of his meeting with Miss Blooma Duckman, together with his hopes and aspirations for the future, and when he concluded Belz turned to his partner.

"Ain't it funny how things happens?" he said. "Honestly, Lesengeld, ain't that more interesting than most things you could see it on a moving pictures?"

Lesengeld nodded sulkily.

"It sure ought to be," he said, "because to go on a moving pictures you pay only ten cents, *aber* this here story costs me my half of a three-hundred-and-fifty-dollar bonus. However, I suppose I shouldn't begrudge it 'em. I seen the other evening a fillum by the name The Return of Enoch Aarons, where an old feller stands outside on the street and looks through a winder, and he sees a happy married couple *mit* children sitting in front of a fire. So I says to my wife: 'Mommer,' I says, 'if that old snoozer would only got married,' I says, 'he wouldn't got to stand outside winders looking at other people having a good time,' I says. 'He would be enjoying with his own wife and children,' I says, and I thinks right away of Rudnik here." He placed his hand on Rudnik's shoulder as he spoke. "But now Rudnik is married," he concluded, "and even if he wouldn't got children he's got a good wife anyhow, which it stands in the *Siddur* already—a good wife is more valuable as rubies."

Rudnik seized the hand of his blushing bride. "And," he added, "rubies is pretty high nowadays."

All our salesmen do is to let your own business argue the need of a Multigraph

WOULD you expect a window-display of paint-cans to lead to the purchase of a Multigraph? It did.

Passing a Boston show-window, a Multigraph salesman was attracted by a display of paint-cans.

The labels were lithographed; but the name of the color in the can was imprinted from type.

"Here," said the salesman to himself, "is a need for the Multigraph." So he made a note of the paint-maker's name, and sought an interview.

All he did was to demonstrate what the Multigraph could do. The paint-maker's business-needs argued the case.

THE MULTIGRAPH
Produces real printing and form-typewriting, rapidly, economically, privately, in your own establishment

How the Facts Talked

The Multigraph could be operated in the paint-maker's office. Labels need not be sent to the printer for imprinting. Here was convenience.

The Multigraph could imprint a lot of labels in the time a boy would take to go from the paint-factory to the printing-office. Here was time-saving.

And besides the shorter time required, the Multigraph could be operated by unskilled labor. Here was money-saving.

Convenience, speed, economy—and any one of them worth the price of the Multigraph! It didn't take long to get the signed order—and the purchaser is enjoying a much greater profit from his purchase than we made on the sale.

You can't buy a Multigraph unless you need it

The foregoing incident is unusual in its details; but it illustrates how the Multigraph is introducing efficiency and economy into many a business.

Moreover, it illustrates the principle that controls every sale—making your own business argue your need of the Multigraph. You needn't fear the salesman's silver tongue. Unless your business can *prove* a profit from the Multigraph, we shall not sanction a sale. We mean that, absolutely.

Nevertheless, we shall be glad to aid any investigation you wish to make. Near you we have a representative whose time and suggestions are at your service. We shall be glad to send literature, specimens of work, and any data we may have pertaining to your line of business.

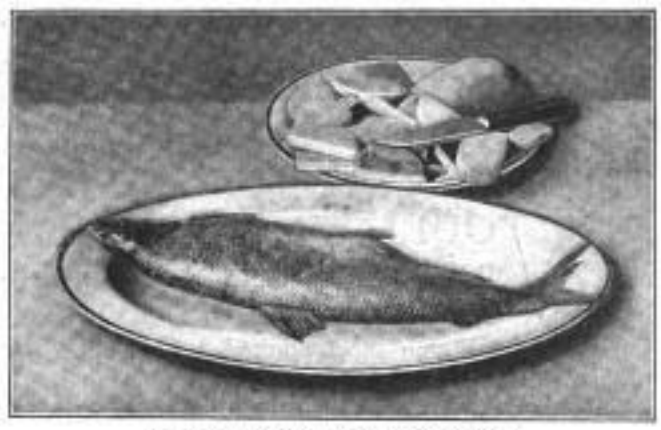
Crisco makes white cake equal to angel food in whiteness

An Absolutely New Product



Foods fried in Crisco are light and flaky

A Scientific Discovery Which will Affect Every Kitchen in America

TWO years ago, a new and heretofore unknown food was discovered. This discovery remained a secret while the food was submitted to every possible test. Then, within the last year, it was furnished to a large number of chefs and domestic science teachers to experiment with. The tests were successful and proved that the food was *ideal*, something that the American housewife had always needed.

The many advantages of this new food may seem unbelievable to women who never have had an opportunity to use it, but they are now known, proven facts in domestic science schools and in hotel kitchens, where cooking is a science or business.

This product is purely vegetable and is to be used in cooking wherever you now use animal fats, such as butter or lard. There is not a meal served in your home in the preparation of which Crisco, the new product for frying, for shortening, and for general cooking, is not needed. It is impossible to give here *all* the advantages of Crisco, but the ones which come closest to home are outlined.

Fry Fish, then Potatoes in the same Crisco
The Potatoes will not Taste of the Fish

This Seems Impossible Until You Do it Yourself

YOU can fry fish in Crisco, and the Crisco will not absorb the fish odor! You then can use the same Crisco for frying potatoes without imparting to them the slightest fish flavor. Heretofore, you may have hesitated to fry fish because it meant the wasting of so much lard. With Crisco, not a drop need be thrown away; it can be used and re-used, which makes it very economical. Will you not make this fish and potato test and learn for yourself that it is possible to fry food after food in the same Crisco without imparting to one food the flavor of another?

Dry Frying—A Radical Change

THERE is another unusual feature of Crisco which makes a radical change in frying. You have noticed that the quicker you fry, the better results you secure. All cook-books say "Heat your fat smoking hot." Lard smokes and burns at 400 degrees, and any temperature above this point is not practical, owing to the discoloration and the quantity of smoke given off. You can heat Crisco very much hotter than lard (455°) and it will not burn nor smoke. To realize fully the advantages of this high frying point of Crisco, cook potatoes in it.

Cut the slices a quarter of an inch in thickness; soak them in cold water; then thoroughly dry them in a cloth.

Heat the Crisco very hot and put in just a few potatoes at a time.

Do not put in too many at once, or they will cool the Crisco and you will lose the benefit of its high frying point.

Crisco fries so quickly that a crust forms instantly and prevents absorption; thus the full flavor is retained and the potatoes are more healthful than when soaked with grease. The outside is a rich, golden brown and the inside is light and mealy, like a baked potato. No black specks spoil your food, and no "frying odor" permeates your dining-room and kitchen. When you use Crisco for frying, the improvement is so marked that you can see the difference at once.

Have you Hesitated to Eat Pastry?

FROM a standpoint of health, the discovery of Crisco is of great value. Pie has been called the great American dessert, and many have eaten it *in spite of the fact that they believed it to be indigestible*. Crisco makes foods more digestible. Doctors are the strongest advocates that Crisco has. Many physicians personally are recommending it to their patients, because the vegetable ingredients of which it is made are more readily assimilated than are animal fats. They know that Crisco has great nutritive value, and since its discovery you can eat freely foods that heretofore you could not digest.

A New Standard

UNTIL Crisco was discovered, butter was the standard for good cake-making. Crisco gives a richer, finer flavored cake than can be made with butter. Butter is nearly *one-fifth* water, while Crisco contains no moisture, but is *all* shortening. Cake made with Crisco may be kept longer without loss of its original fine flavor and soft texture. Both table and cooking butter vary in flavor and richness during the different seasons. Crisco never varies. There is but one quality—the best. Every package is as rich as the first one. This unfailing richness, this absolute uniformity, enable you to make your cake delicious with regularity. Your results in cake-making do not vary in the exasperating way they have done heretofore, so you never waste foods because they do not "turn out" well. You get actually better results than with butter, *at about half the cost*. Crisco makes as fine and wholesome a cake as rich cream, with an equally delicate and delicious flavor.

Butter Nearly One-fifth Water

Every Woman is Interested in This

FROM the viewpoint of economy, Crisco, the new product for cooking, excels. Foods fried in Crisco absorb less, consequently there is more Crisco left. In deep frying, it is apparent how little Crisco is used—how much of it is left, as one woman said, so little Crisco was absorbed that it seemed to her as though she had just as much when she finished as when she started to fry. This is another reason why Crisco is so economical.

Crisco also keeps excellently. It does not become strong. It is so clean and pure in origin and manufacture that it stays sweet and fresh. Crisco is never sold in bulk, but is put up in immaculate packages, perfectly protected from dust and store odors. No hands touch it, no unsanitary paddles nor wooden boats. You are sure that every package of Crisco is wholesome.

Lard Two-thirds Gone

Dip out a spoonful and look at it. You will like its very appearance, for it is a pure cream white, with a fresh, pleasant aroma. It is crisp and flaky, just the proper consistency to make it ideal for creaming in cake or for working into pie crust.

Crisco Two-thirds Left

THESE are strong statements, but they are facts which you can prove for yourself. Give your grocer an order for a package today. It requires no experimenting—you use it where you now use butter or lard, and in just the same way. Make the fish and potato test; try it for "dry" frying; try Crisco pastry, Crisco white cake, best of all try Crisco biscuits, and you will become a Crisco enthusiast and realize why its discovery will affect every family in America.

On request we shall mail a fully illustrated booklet, showing many other advantages of Crisco, the new, and heretofore unknown, strictly vegetable product for frying, for shortening and for general cooking. Address Dept. K.

Sold by grocers at 25c the package except in the Far West

Crisco—Better than Butter for Cooking

Crisco is being placed in the grocery stores as rapidly as possible. If your own grocer does not yet keep it, you probaby will find it in one of the other stores in your neighborhood; if not, we will send you by mail or express, charges prepaid, a full sized package for 25c. If you order from us, write plainly your name and address, and also let us have the name of your grocer. Not more than one package will be sent direct from us to any one customer. THE CROOKED DEAL

(Continued from Page 21)

Zack smiled broadly at the lady's praise and opened his mouth so wide that if it hadn't been for his ears the top of his head would have been an island.

"Yas'm. I got a pow'ful good reputation down yonder in Vicksburg—an' mos' everywhar. Ef you don't believe what I sez you jes go an' ax Cunnel."

"Do you always travel with the Colonel?" asked Doris.

"Yas'm; me and Cunnel allus goes together. He's gwine to Afriky now to he'p me larn dem niggers how to raise cotton."

Reifenstein and the Italians drifted in and stood talking within a few feet of Aurora, without noticing her—which was very insulting. They drew her attention from the diverting negro. Very distinctly she heard Torreale say: "Seven hundred and eighty-five dollars." Then she called: "Torreale! Reifenstein! My dear Count! Come here. You stupid creatures—to talk about money! How vulgar, when I am giving a benefit tonight!"

The three men bent over and listened quite politely until Reifenstein heard Zack say:

"Yas'm; me an' Cunnel sojered durin' de entire war. An' sence den we ben together all de time—continual—continual. Mos' in generally us hunts."

"The Colonel is a good shot, I suppose?" suggested Doris.

"Good shot? Did you say 'Good shot'? Sholy, missy, you is heerd 'bout Cunnel's shootin'!"

Reifenstein did not intend a rudeness to Signorina Aurora, nor did Torreale—and Castelleone, who had followed her over three continents, had no thought of being ungallant; but the three turned from the lady and listened to the negro.

Zack sidled round until he could watch the door; then took the bridle off of his imagination and roamed through the gory field of Colonel Spottiswoode's hunting exploits, with details of certain marvelous shots. The three listened eagerly—and Zack did his best.

"But the gentleman is getting old; his eyes ——" Castelleone inquired.

"Lordy! suh; 'pears like de Cunnel is jes now gettin' de hang o' dem eyes. I looks fer 'im to be at his best dis comin' fall."

"Has he killed anybody lately?" asked Torreale.

"No, suh; 'cept in de war. Dat war wouldn't lasted no time ef Cunnel hadn't been tuk down sick an' I had to tote 'im home. While he wuz outen his head wid fever de s'render come. You jes ought to heerd Cunnel stomp an' cuss when dey tole 'im dat! Fust he say he war gwine to git right up from dat bed an' have de fightin' all over agin. Fer de longest time nobody couldn't 'swade him dat Marse Robert done s'rendered—he wouldn't never believe dat 'til his own ma say 'twuz so. Doctor Paulding kep' 'im full o' medicine, so he'd lie down and be still. Ef 'twarn't fer dat medicine, 'tain't no tellin' what moughter happened. Lordy! gent'men, you all oughter see de Cunnel ketch holt o' his bridle wid his teef an' take a six-shooter in each han'! He'd go gallopin' round a saplin' an' put every one o' dem twelve bullets smack in de middle. Dat warn't nuthin'! Everybody done dat or dey couldn't stay in his army."

Doris Stanton turned her face away and gazed out of the porthole; she hated to let Zack see her laughing. At the first symptom of a halt Doris touched him off again.

"Has he got in a good humor yet about the war?"

Zack laughed. "Yas'm. Cunnel kin sorter smile 'bout it sometimes, 'cept when he sees one o' dem biggety niggers in Washington; but, scusin' dem biggety niggers, Cunnel say now he is sho glad he got tuk down sick, so everything passed off nice an' pleasant. I heerd Cunnel speak dem very words to a passel o' white gent'men in N'Yawk."

"All of that—that shooting, must be in—what do they call it?—the Wild West?" Torreale put the question in a whisper to Castelleone. Then he spoke aloud to Zack. "Does he kill many people in duels?"

"No, suh; Cunnel wouldn't hurt a fly. But he don't git no chance. Dey won't fight no mo' dools wid 'im—done quit dat long ago. When folks notices de Cunnel

Dioxogen

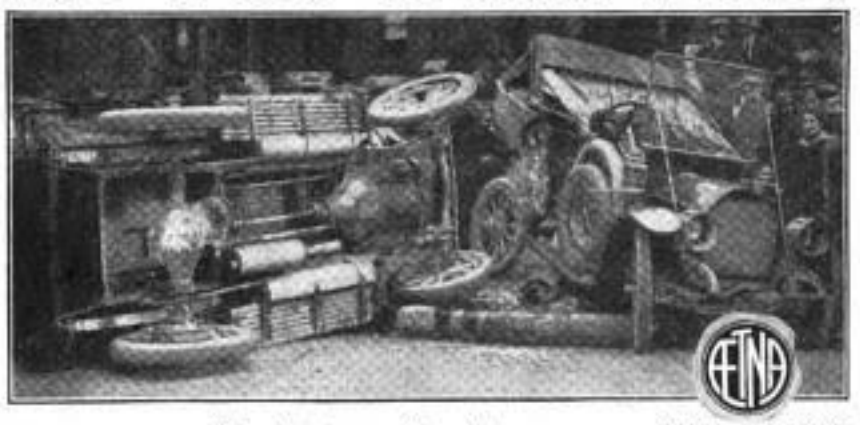
First Aid—in the Factory

EVERY manufacturing plant in the world should have—ready for instant use—a supply of Dioxogen.

In the case of injuries—great or small—Dioxogen protects the workman against infection. It quickens the process of healing. It helps to shorten the period of inefficiency;—for no man is at his best with a sore thumb.

You are using Dioxogen in your home today—everyone is—see that it is made equally available in every emergency in your factory.

A penny's worth of Dioxogen at the right moment has saved many a man dollars in the end.



Dioxogen is a germicide—a germ destroyer—not merely an antiseptic. It is absolutely harmless too.

Tire Protection Pays You Profits You Cannot Measure in Money Alone

WHEN you ride on unprotected tires, you bear three or four times the tire expense you need to bear—but the money is far from being all you lose. Delays, exasperations, roadside repairing toil—missing trains, business appointments and pleasure engagements—the strain on your mind and the discomfort to those riding with you—doesn't all that amount to heavier burden than even the money expense of tire troubles? And you need not endure any of it! You can save every dollar of tire repair expense, save three-fourths or more of your first tire costs, and make every moment of your motoring full of uninterrupted pleasure—just by equipping your car with

Standard Tire Protectors

Made of the only practical materials for tire protection—rubber, a new rubber, the toughest ever produced—and high grade Sea Island Cotton Fabric, so hard woven that it's almost like armor plate around your tires. Skidding protection is added to your tire protection by our famous non-skid tread, which you may have instead of plain tread if you desire,—getting both tire protection and skidding protection at the cost of one. Prices on Standard Tire Protectors for this year have been reduced on an average of 20% by our new manufacturing advantages—a bigger value at a lower price—the greatest motoring economy ever put at your service.

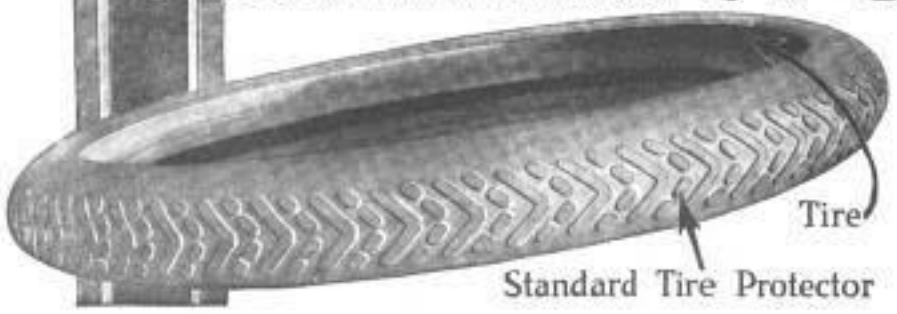
Standard Tire Protectors really cost you nothing—they quickly reimburse you with money saved and pay a big profit besides. Not only do they save all your tire repair expense—but they save you the expense of buying new tires every few months. They make your tires last years instead of months. These Protectors are the greatest of all motoring economies—beyond comparison with any other money-saving or pleasure-giving feature of automobile equipment.

No mechanical attachments—the Protectors are easily applied and held firm and tight on your tires simply by inflation pressure. Sand or gravel cannot get between the Protectors and the tire. Standard Tire Protectors give you protection against every form of tire trouble—and keep 90% of your motor car up-keep costs in your pocket.

Free Book on Tire Protection

It explains the construction of Standard Tire Protectors and proves their economy, their pleasure-giving value. Writing for this *Free Book* will open the way for you out of your tire troubles and tire repair expenses forever. And ask us for a Free Sample of Standard Tire Protector rubber—so you can test its amazing toughness. Write us today.

Dealers: Bigger Business, Better Discounts



Every motor car user in the country will be made to know of Standard Tire Protectors by our great 1912 advertising campaign. Advance orders show the 1912 demand will be at least five times that of 1911. Lower prices to consumers are accompanied with larger discounts to dealers. We share with you and the motor car owner the advantage of our new manufacturing equipment.

If you have not placed your order in preparation for large 1912 sales on Standard Tire Protectors, write us today for our new price list and particulars of the co-operation we offer you.

Ask the Man Who Uses Them

Standard Tire Protector Co.
109 E. Market Street, AKRON, OHIO

gittin' riled dey jes goes out in de woods an' climbs a tree. Dat makes Cunnel grin; an' he sez: 'It's all right, boys; you-all come down again and let's be friends.' 'Tain't no yaller dog in Vicksburg what can't make friends wid Cunnel—scusin' dem times when he's pestered."

Zack's audience kept growing, which encouraged the negro to take another deep breath. "I ain't seen Cunnel mad—what yer call reel mad—fer de longest—'til jes befo' us lef' home. He was settin' in front of de hotel, him an' some mo' gent'men; up come a white man from some place or 'nuther an' butted in. Cunnel warn't sayin' nuthin' to dat white man; warn't studyin' 'im; warn't payin' 'im no min'. Dem gent'men war talkin' friendly politics 'mong deyselves; dis man he gits up outen his chair and walks over whar dey wuz an' 'lows he war one o' dem—I can't zactly call de words like he said it; but some kind o' standpatter—dat's how he spoke—an' he didn't care who knowed it. Cunnel got up and sez sumpin' to 'im, soft an' low; dis white man lifted one han' an' popped it down in de udder han' wid a loud cuss word; an' 'twarn't but two licks passed—Cunnel hit dat white man an' dat white man hit de groun'. I ain't seen Cunnel wid dat kin' o' look on his face no mo' 'til las' night. Sumpin' sho is pestered de Cunnel. Dat's why I ain't gwine near 'im today."

"Is he very, very rich?" inquired Aurora.

"Cunnel, he got aplenty; but, lady, he gives away money jes same as ef 'twuz buttons—fo' bits here an' a dollar yonder. Folks jes laff an' say de onliest thing Cunnel is stingy 'bout is ammynition—he sho do hate to waste none o' dat. I been wid 'im, man an' boy, fer nigh on to fifty years, an' he ain't never wasted none to my knowin'—— Comin', suh; comin'!" Zack reached down, grabbed his hat and hustled out of the door, for the Colonel had appeared and beckoned him.

The foreigners stared at each other. Castelleone wasn't satisfied. "Mees Stanton, what does the black mean when he says 'stingy 'bout ammynition'?"

Doris laughed outright. "He says the Colonel never misses a shot—always gets something for each bullet. Hates to waste a shot, just as you hate to waste a dollar—to throw it away and get nothing for it. Do you understand?"

"*Si*, signorina—oh, y-es—mees——" Castelleone answered slowly.

Later in the afternoon Colonel Spottiswoode sat in his steamer chair still thinking, still figuring. Zack leaned against the rail and gazed upon the water.

"Zack! Oh, Zack! If you had some money that you didn't want what would you do with it?"

Zack grinned. "Well, Cunnel, you know how niggers is. Dey's mighty ginrous wid money what dey ain't got. But ef I had a lot o' money what I didn't want I'd buy tickets to missy's concert. She sho is one high-qualified young lady an' ain't got no bizness puttin' her foot to de groun'. Dem gent'men is plumb crazy 'bout de way she plays dat fiddle."

The Colonel straightened up in his chair. "Zack, you've got more sense than a lead mule. Go find that little sharp-faced steward and bring him to the writing room." Then the Colonel disappeared.

In the corner of the writing room, where nobody could see him, Colonel Spottiswoode placed seven hundred and eighty-five dollars in an envelope. Then he took the four cards—Reifenstein, Castelleone, Torreale and Shields—put them in with the money and sealed the package.

"Steward," he said, "take this envelope straight to Signorina Certosa and tell her it is from these gentlemen whose cards are inside—one ticket each. If you mention my name you don't get a cent; if you keep your mouth shut I'll give you five dollars."

As he started for the music room the steward's mouth could not have been opened with a jimmy. Colonel Spottiswoode hurried out on deck and watched through a porthole. He saw the steward as he laid the envelope in the signorina's hand and delivered the message accurately.

"Four more tickets sold, my dear!" The singer laughed and patted Doris' hand; but when she saw the large size of the bills, their number, and the gold besides, her eyes widened. Excitedly she counted: "Seven hundred and eighty-five dollars—who sent this? Who——" She looked up, but the steward had vanished. A card dropped out. "*Carissima*, look—it's that dear, dear Reifenstein. Where is he? Where is he? Come, we must find him—dear, generous Reifenstein!" The signorina sprang up and led Doris to the deck.

Reifenstein was standing near the forward screen, talking confidentially with the two Italians. Colonel Spottiswoode flattened himself against the wall as the signorina dragged the unwilling girl and went rushing by him.

Signorina Certosa ran up behind Reifenstein, pulled him round, put both hands upon his shoulders and kissed his cheek. "Oh! you generous, generous darling!" The German stepped back amazed; the Italians looked on with blank and stupid faces. "How splendid of you!—princely! And when I heard you say 'Seven hundred and eighty-five dollars' I thought you were taking no interest in my benefit—oh!"

None of the men had spoken. "Seven hundred and eighty-five!" Reifenstein repeated vaguely; then he reached out and took the card from her hand—his own card, with the inkspot. "Who sent this?"

"You sent it—with the money—such an odd amount—seven hundred and eighty-five dollars!"

The three men glanced wonderingly at each other.

Halfway down the long deck Colonel Spottiswoode was standing. Reifenstein went up to him and presented the card.

"Did you send this, sir, to Signorina Certosa?"

"I did, sir."

"And you sent her the money that was in dispute—for the young lady's benefit?"

"I did, sir."

Reifenstein tore up the card and extended his hand. "I shall make any apology you demand; you must be my friend."

"I never wanted to be anything else!" The Colonel wrung his hand warmly and the men leaned against the corner of the passage, laughing at the untangling of their troubles.

Zack came along and pulled the Colonel's sleeve. "Look out; dey's comin'."

And they were coming—the signorina still dragging Doris by the wrist. After her came the chattering and excited Italians, radiant with delight. Behind them the Colonel saw, or imagined, hundreds and hundreds and hundreds of curious eyes. They had seen her kiss the German and were watching to see what the signorina was going to do next. Every human being on the vessel drifted toward them. The Colonel gave one look—just one. "I can't stand the gaff!" he whispered to Reifenstein; then melted backward behind the corner, turned and fled.

"Where is he?" demanded the breathless signorina. "Where is that dear, dear American prince?"

"Gone." Reifenstein choked out the word, his face very red.

"Run away? From me? Me?" Then the singer turned upon Zack and berated him. "So, your terreeble, terreeble fighter is run away—run from a woman?"

"No, ma'am; no, ma'am, he ain't run from you. I seen Cunnel look at his watch—he got er engagement downstairs to kill a man."

They could not embrace the Colonel; so Castelleone and Torreale embraced each other.

THE CALL

(Continued from Page 15)

no way bound to her. She knew nothing of what had happened to him outside of his business disasters. He might have found friendship in other quarters, consolation at other hands. He might, and this would be doubly tragic, have experienced some inner and personal change of feeling. She had never confided to him how much she needed him, how essential he was now to her happiness. She had given no sign. She had done nothing to hold him. He might have grown away from her. He might have ascended from his valley of illusion into the sanities and lucidities of everyday life.

These thoughts were still torturing her when she went to bed. They kept her awake, tormenting her with the same white light of wakefulness that had so often come to her from overstudy with her stockwork.

It was long after midnight when she got out of bed and began a search for her box of sleeping tablets. She remembered, when she had the tablets in her hand, that she had left a call for the early morning train. It would be foolish to drug herself into a sleep that could last only two or three hours at the most. So she sat in the worn plush armchair, holding in her hand the picture of Ruthven and the Great Dane. She continued to look at it passively until a sense of peace settled over her. Then she crept into bed and slept until awakened by the call.

. . . . . .

The rain had ceased falling by the time Una's train drew into the station at Chesterville. From this fact she extracted a ghostly comfort, forlornly insisting that a symbol of better things lay in the clearing weather.

Her face was calm—calm with the tragic fortitude that comes with last chances—as she stepped from the car and looked about the crowded platform.

She saw Ruthven waiting, with a waterproof hung over his arm, startlingly close to her—almost at her side. A tremor sped through her tired body as she beheld him, for his own face was calm and strangely altered.

It had lost much of its ruddy look. It seemed leaner and longer, touched with an austerity which secretly terrified her. She stared at him a second or two before she realized that he was dressed entirely in black.

"I have the car waiting," he said very quietly as he shook hands with her.

Her heart slowly sank. There was something so non-committal in that handshake—something that was so fixed and sorrowful in the face with which he regarded her.

"Has anything—happened?" she asked with a second tremor creeping through her limbs.

"My sister died ten days ago," he said. He was leading the way to the far end of the platform, where the automobile stood.

"And you never told me!"

He turned and faced her again as he opened the tonneau door for her.

"That would not have been generous!" he said.

"But surely ——"

She stopped, faltering on the cry that surely she had a right to be told; but that claim, she remembered, was foolish.

"You look tired," he said out of the silence as they stood face to face.

"I am tired," she acknowledged.

He was helping her into the seat.

"I'd like nothing better than an hour now in the open air—in the country!" she confessed. That confession, she knew, conceded nothing.

She heard Ruthven say a brief word or two to the man in the driving seat. It was the same boyish-faced chauffeur who had once driven them from the Country Club to her hotel. Then Ruthven drew on his waterproof and stepped in beside her. Neither of them spoke as they threaded and rocked their way out to the open country, splashing through the mud and water that still covered the roads.

She waited, she scarcely knew for what, fighting back the tears which she felt welling up to her eyes.

"I saw that you were to play in New York this fall," he said without looking at her; "that you were to have a wonderful new play."

"Yes," she murmured—"a new play."

"That means a great step forward, doesn't it?"

ALCO
1912

6-cylinder, 60 H. P. Landaulet	$6750
6-cylinder, 60 H. P. Limousine	6750
6-cylinder, 60 H. P. Berline Limousine	7250
4-cylinder, 40 H. P. Landaulet	5500
4-cylinder, 40 H. P. Limousine	5500
4-cylinder, 40 H. P. Berline Limousine	6000

THE charm in the Alco is the *culture in little things*. The tilted, deep cushions, the width of doors, the generosity of room within, the comforts in petit appointments, the smartness of finish, and yet the quiet dignity of style that goes always with the superior thing—a daintiness and good taste that catch the fancy.

One little point of compelling interest in the Alco is the *illumination of the step at night* when the tonneau door is opened. The lighting is accomplished automatically with the opening of the door by a concealed electric bulb.

This and other little things, uncommon to motor cars, give the Alco a rare motor personality.

One may observe also a new beauty in motor car lines in the 1912 Alco. This the touch of an artist. He has made the Alco a car of enticing—irresistible—beauty.

The new catalog shows and tells more about the Alco. Sent on request.

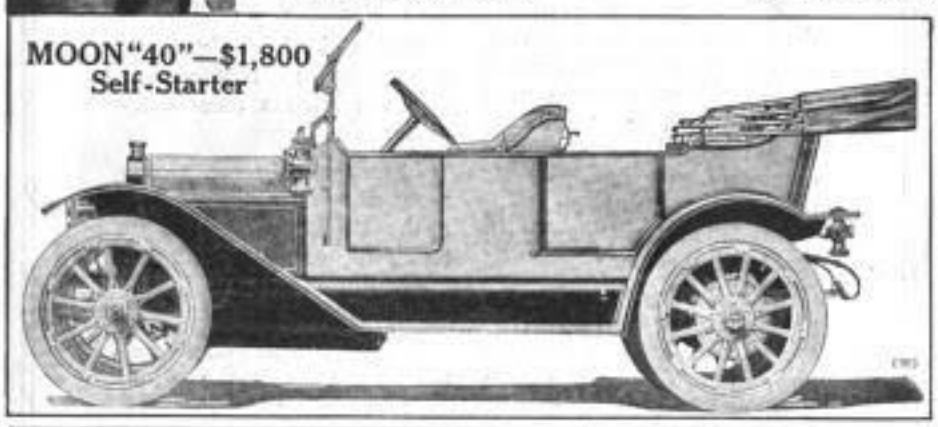
How An Experienced Buyer Figures His Car

He gets right down to the value of the things that *make* a car—the engine—the materials—the grade of workmanship. Size, color and shape are important features. But he looks at these *after* he goes over the essentials.

MOON "40" is built for the rigid inspection of the *experienced* buyer. He sees the famous MOON 45-horsepower T-head Motor, perfected by five years' hardest tests. He notes the 4½-inch bore and 5-inch stroke—the *long stroke* motor—with strong four-bolt Connecting Rods and three-bearing Crank Shaft; the **Self-Starter** with three years of experiment behind it. He sees the big 36-inch Wheels, with bigger spokes than any other car at the price—Demountable and Quick Detachable Rims—36 x 4 Tires, front and rear.

Then he takes in the MOON "40's" long Wheel Base, 120 inches—its beautiful, roomy, all-metal body in nickel and black finish. He observes the Full Equipment—more equipment than has ever been listed before.



MOON "40" has more *Real Values* for the experienced buyer than can be even mentioned here.

Write for 1912 Catalog and the MOON Book of Charts and get it all.

A spirit of untimely perverseness seemed to possess her. Her weakness of body left her almost childlike in her willfulness, pitifully in need of a sustaining hand.

"Yes, it's a great step forward," she echoed. Yet she added after a moment's silence: "But I want to go backward!"

"Backward! How?" he asked with his direct and candid literalness.

"To the boneyard!" was the cry that was on the tip of her tongue—but she did not have the courage to utter it.

"That's the way I've been going," he said after waiting for the answer she did not speak.

"How?" she asked.

"I've lost my business," he told her. "It's a terrible thing for a man to lose his business. There isn't much left to take its place—with a man like me!"

A surge of pity swept through her. It carried away at a stroke the willfulness that had weighed on her.

"My dear, dear friend, I know it," she said with calm and bell-like clearness. "I know everything. I know what you have lost. That is what brought me here!"

A lunge of the car flung her swaying body against his. The hand with which she steadied herself still clung to his arm.

"And I'm going to save you," she went on. "You don't know how rich I am—how I wondered what I could ever do with that foolish money!"

"Save me from what?" he asked.

"From ruin!" she cried with the happy tears of which she was no longer ashamed, even as he stared down at her.

"But I'm not ruined," he said with his grim candor. "They took over my works and put me out; but you don't suppose I let them do it without paying me well for it?"

"Then you're not—not ruined?" she cried in terror.

"No. My pocketbook isn't empty," he said with his slow and solemn smile—"only my life is."

She saw it all at a glance. She, the child of the theater, had been the victim of a theatricality.

"Then I can't help you?" she said almost in a wail. "Then I never should have come!"

He had turned in the seat and taken her two helpless hands.

"Only if you will go backward," he said very quietly as his hungry eyes met hers.

"Back to what?" she said. He smiled a little as he looked down at her. There was neither merriment nor mockery in that hesitating smile. It seemed more self-derogatory, more touched with a sober wistfulness. It was the smile of a much-traveled man finally somewhat uncertain of his way. "Back to what?" she repeated.

"To the boneyard," he said, wise with the wisdom of a great love. "To the boneyard—and be a failure!"

He did not wait for her to speak. His old-time honest strength seemed to justify itself—to make all things clear. He took her in his arms and held her there, watching the shadowy hazel eyes to which the tears were still welling.

"We'll be failures together!" he said as her yearning arms crept up and clasped about his shoulders. And she clung to him wistfully, abandonedly, as he bent low and kissed her wet eyelids.

(THE END)

All Bets Off

THERE is a certain New York celebrity noted for three things—his size, which is tremendous; his apparel, which is dazzling; and his appetite, which beggars description.

On a certain morning he went into a swagger Fifth Avenue restaurant and ordered, among other things, a double portion of ham and eggs, some country sausage, mush and milk, corned-beef hash and buckwheat cakes with maple syrup.

All these things were brought to him at once. He put them all on one enormous platter and proceeded to slice everything up together. Two women watched him in horror from the next table.

"My dear," said one, "that is the most appalling thing I ever witnessed! I'll wager a box of candy he eats that mess with his knife."

"I'll take the bet," said the other. "He is dressed like a gentleman and, despite his barbaric taste in food, I wager he'll eat it with a fork."

They both lost. He ate it with a spoon.

"Yankee" Tools provide cleverer ways of working—saving time and effort.

"Yankee" Automatic Push Drill **No. 44** is *the only drill with adjustable tension spring.*

By turning the cap (as illustrated) the spring in the handle is made shorter or longer and the tension greater or less—as is best for the work in hand; whether in hard or soft wood, with large or small drills.

The adjustable tension saves breakage of drill-points.

Drill-magazine has the opened end *up*, making the drill-points easily accessible. Eight drill-points, 1/16 to 11/64, in plain sight.

MADGE FIREBOOT'S HUSBAND

(Continued from Page 19)

just ahead of him, took his passes with great, driving swings and drove them well up to midfield; but there they met the stone wall, for Longmouth, massing in defense, formed the scrimmage at that point, and Smith, key to the situation, seemed unable to break it. In the middle of the period two clean drives looked like a goal, but the Longmouth Back and Number Two pounced on the ball and held it in the tangled mass of horses beyond any extricating. Smith, though unguarded, hovered on the edge and made a futile pass at it, but his horse wavered and backed deliberately out of the mix-up.

"The horse is pony-shy!" yelled the would-be expert in the motor car behind Madge and Taylor, but the latter muttered:

"Pony-shy nothing! No horse will do more than he's made to. It's Smithy that's quitting. You see what I was up against."

Madge's eyes were sparkling however.

"Just wait a minute!" she said. "If I know the shoulders on that husband of mine something's going to happen."

And happen it did, for again Smith refused to mix it up; and the third time, just as he hung on the outskirts of the group, there was a leap from the big horse behind him. Stone appeared suddenly at his side; there was a little flash as a spur—not that of his rider—dug into Smith's pony, and the startled animal leaped square into the bunch, scattering the Longmouth ponies right and left.

Besides the grooms, probably not three people on the field saw what had happened; but they knew immediately that something had occurred, for Smith, wheeling his pony, came face to face with Stone, livid with anger.

"What the devil do you mean by that?" he roared; but the big man's jaw stuck out in its ugly way and he raised his mallet, pointing down the field toward the ball.

"Get where you belong and shut up!" he roared; and, without a word, Smith turned and went, while the crowd, who knew Smith and inwardly gloated, tried to look as if nothing had happened.

The one weak link in the Beach team's chain had been strengthened, however, for Smithy was the kind of dog that fawns on the hand that beats him, and the play of the home team held its opponents without another score.

By the sixth period ponies that had played before began to reappear, while the men themselves showed very visible signs of wear; and the attack and defense were by fits and starts. Stone's leadership was now tacitly acknowledged, for the Beach players were looking to him constantly for their cue; but apparently a waiting game was the one he wanted. Once, in the middle of the period, Longmouth tried again its sledge-hammer tactics; but there was a hoarse command from Stone which everybody understood; little McDermott went after his Back like a flying tackle, Stone himself rode off the Number Two until his pony's wild eye was pleading for mercy, and the game relapsed into very ladylike proportions.

"I guess they won't try that again," said McDermott to Stone gleefully as they rode off for the change of ponies. "They're afraid of you—and everybody on the field knows it."

All this, however, did not change the fact that Longmouth still led by one goal, and Taylor stamped excitedly on the sidelines in spite of his pain, while Madge stood with clenched hands beside him. She had not gone near her husband in any of the rests since he had started, and evidently the big man was best left alone, as the very first play in the next period showed that something had been brewing. When the teams lined up, instead of McDermott taking his place at Number One, Stone faced the referee, while the little Irishman crouched like a pigmy behind him. It was really an infinitesimal matter; but, as McDermott had said, the Longmouth players were actually afraid of the big stranger; and, just as a misplaced shoestring will take the nerve of an overexcited athlete at a critical moment, the mysterious change made them anxious and uncertain.

The result was that Stone had not the slightest difficulty in getting the throw-in and carrying the ball well down the field, while McDermott broke through the line

"HE TOOK IT AWAY FROM ME"

BEECH-NUT PEANUT BUTTER

WHEN children clamor for more Beech-Nut Peanut Butter you don't have to worry about its hurting their teeth or digestion. It is cram full of nourishment and is easily digested.

Made solely of fresh peanuts, roasted and salted and ground to a rich creamy nut butter. No wonder it tastes good.

Eat some on cracker or bread, as you would jam or cheese, and you'll always keep it on hand for luncheons, picnics or 'tween-meal snacks. Should be on every table.

Beech-Nut Peanut Butter is never sold in bulk, always in glass jars with all the freshness, moistness and fragrance protected by airless sealing. Be sure you get *Beech-Nut Brand.* Order a 15c. jar from your grocer *today.*

Made by Beech-Nut Packing Company, Canajoharie, N. Y.

Taste Beech-Nut Bacon baked. Send 15c for special Bacon Rack. Also free copy "Beech-Nut Breakfast News."

THE HOME-SEEKERS
ALABAMA GEORGIA
OPPORTUNITY THAT WAS OVERLOOKED

It is in Alabama and Georgia, and consists of low-priced land that earns more net money than land which costs three or four times as much where unimproved land is scarce.

Other advantages of the country served by the Central of Georgia's two thousand miles of modern railway are, an exceptional opportunity for the general farmer in the nearby markets and large local demand, at good prices, for all his products; long growing seasons with abundant rainfall, making more than one crop each year; and a healthful, mild climate, suited to fruits and truck crops.

We want more farmers along our lines, and to prove these advantages, will mail a free book profusely illustrated with diatone engravings, supported by signed statements from the men who grew the crops and raised the live-stock; and tell how we can help find just the farm you want. Write TODAY.

At Last—A Comfortable Motorcycle

THE NEW

Harley-Davidson

"The Silent Gray Fellow."

THE seat springs on the ordinary motorcycle have about one-half inch action either way. This means when the rider strikes a stone or crossing, say 3 inches high, that the ordinary motorcycle saddle springs absorb only the first ½ inch of the jolt, and the rider's back bone gets the rest. These jolts, and in fact all vibrations, are entirely eliminated in the new Harley-Davidson by the incorporation of a *Ful-Floteing* Seat, the greatest comfort device ever built. The saddle springs, the only shock absorbers of the ordinary motorcycle, are retained, and these, combined with our *Ful-Floteing* Seat, give a range of action of about 4 inches as against the scant 1 inch of the ordinary motorcycle.

This means that the new Harley-Davidson is four times as comfortable as the ordinary motorcycle. For four years the Harley-Davidson has held the world's official record for economy. The Harley-Davidson is not a racing machine, but is built primarily for comfort and service. In addition to the *Ful-Floteing* Seat, the new Harley-Davidson incorporates the *Free-wheel* control, the latest and greatest invention of Mr. Wm. S. Harley, the world's foremost motorcycle designer and engineer. This ingenious device has done away with the hard pedaling or the necessity for running alongside the machine, and permits the Harley-Davidson to be started like an automobile. Send for catalogue.

and raced after. Again the Longmouth Back diagonaled across the field; but, on the instant, the situation struck him exactly as it struck every spectator on the sidelines who saw the odd situation of the little man rushing after the big one. Two periods before the two had done exactly the same thing in reverse order, and had played the game exactly as it shouldn't be played. What they were up to now the Back couldn't imagine. He wavered, hesitated and was lost, for a galloping pony does not give one much time for deliberation; and, before he could make up his mind, both Stone and McDermott were by him with an absolutely clear field, for Lorimer and the renovated Smith were holding their men like vises—and McDermott shot in the goal.

Back on the sidelines, Taylor and Madge simply doubled with laughter. They shook hands; they tore up handfuls of grass; they did almost everything that joyous persons do except embrace each other, while the grinning Beach players trotted back for the throw-in.

By all rules of the drama, Stone should have waited until the next and last period to win his game; but Stone was not staging a drama—he was winning a polo match, and he knew that now was the minute to do it; so from the instant the ball was thrown in his men were after it like tigers. It was now their advantage, and they pushed the ball on and on until it rolled past the Back toward the goalpost. There was the usual shout, the usual turning of horses, the usual mad dash—and then from the bunch, as if he had been saving this one shot for himself, rode Stone with his opposing Number Three hard beside him. Whichever man got the ball, he would have to take it on the backhand; but it is easier to shoot backward than it is to shoot forward on the near side, and the Longmouth man had thus the advantage as, neck and neck, they plunged for the rolling white sphere, each trying to crowd the other away from it.

Which won? Were there two ways that race could come out? Waiting for the exact minute when the push would unbalance the other, Stone threw his whole great strength against the opposing rider—and then, reaching over the neck of his own pony, he gave one of those rifle-shot strokes of his and the ball rose squarely between the posts.

There must have been an eighth period—there generally is in a polo game; but nobody remembers much about it, as most of the spectators were cranking motors and putting on veils to go home. When the players reached the boundaries after the finish, little Madge was among the grooms and the stable boys to meet them. Her husband slid deliberately off his horse and into the greatcoat that she held for him.

And then, though strangers edged curiously round them, and the little kiddies began shouting and swarming after the spent balls—while half the Beach crowded in to shake his hand—the little Wildfire fished out the neckscarf and reached it carefully round her husband's yielding neck.

"It's a bit sharp, deary," she said simply, "and you must be awfully careful not to get cold."

Every one heard her—the tough little stable boys, the cynical old grooms, the wits of the Beach; every one watched her wrap the scarf deliberately round the great awkward figure that stood foolishly before her—and even tuck in the ends; but, strange to say, not one of them smiled.

Ready Repartee

MARTIN LITTLETON, the Congressman from the Oyster Bay District, says he crossed from Europe last summer with two Englishmen of a serious and conservative turn of mind. Though they shared the same stateroom, had seats at the same table and sat side by side in their deck-chairs, neither spoke to the other—they hadn't been introduced. Finally, though, on the last day, when the shores of New York loomed dead ahead and the pilot was coming out to take the liner in, one of them decided the time had come to waive conventionalities and get acquainted with his fellow countryman.

They were lounging side by side on the rail. The one with the more initiative thought out a timely introductory remark and said:

"Hem! Goin' over?"

"Yas; rather thought I would," said the second Englishman. "Are you?"

THE BRAND DOCTOR

(Continued from Page 17)

along to where we understood a bridge spanned the Big Sandy. We came to a good-sized muddy stream, but there was no bridge in sight. There was nothing to do but take chances in swimming the treacherous current.

I sat in my saddle up on the bluff watching the back trail while my pardner stampeded the band down the bank and into the water. The last horse was climbing out on the other bank when I made out a party of riders a mile away. I spurred down the bank, got across with a nasty wetting, and rode up to where my pardner was sitting in the middle of the dripping bunch scratching his head and wearing a painful sort of grin.

"What river did you call this?" says he.

"Guess it's the Big Sandy."

"You guess wrong," he answers; "it is the miraculous River Jordan that changes the leopard's spots and other things. These horses were all '4|' when they jumped in, but they were sure all '⊔' when they climbed out!"

It was too true. The muddy water that plastered down the long hair of the horses' coats was too much for our dainty hair brands; our own lines had simply disappeared and the old brand stood out like a forty-five aimed in your face.

"Posse's coming," I said.

"All right," pardner replies cheerfully; "I lays down my hand to Providence; they'll find these nice miracle horses right here. Bet you ten dollars I can beat you down into Montana!"

He didn't beat me, because my saddle animal could run some too. We had gone a good many miles when my pardner pulled up and I saw he was swaying like a man about to throw a fit. He wasn't sick; that was his way of laughing.

"I was just thinking," he finally jerks out, "that those mustangs will sure dry out into '4|' horses again; and when the posse gets them home maybe the '⊔' boss won't be able to identify his own property!"

. . . . . .

Jeff Cull was one of the gamest men I ever worked with, but he was not born lucky—and nobody needs luck like a rustler. We were out to pick up a bunch of saddle stock and we were doing well: we had about forty—all "tops." We kept to the mountain roads and risked traveling by daylight except where the ranches were thick. We trotted out of timber into a meadow and bumped right into a horse rodeo. We would have given a good deal to have been a little more careful. The boss of the rodeo, an old fellow with a long white beard, loped over and sized up our band and asked where we were going.

"Pulling East," was all I answered him.

"You've got some good horses there; they act gentle."

The Sheriff's Posse Sighted

We had been working in cattle, I told him, and were going home with the saddle stock—the remuda. He wanted to trade us unbroke animals, two for one; but I was afraid every minute his eye would light on a brand he knew, so I refused and we went along.

Next morning we guessed somebody was on our trail. We had no mixup that day or that night, for we never stopped going. The next day we lost time in hunting water—in Nevada water is a mighty scarce article to find sometimes. I camped a mile down the back trail that night and I didn't do much sleeping. At sunup I climbed a steep little hill for a look round. Seven or eight miles off a pillar of white dust was boring up into the sky. The horsemen making that pillar were moving rapidly; they ran away from their dust. I knew it was a posse—you can tell men on a man hunt as far as you can see them. One, two, five, ten—I didn't wait to pick out any more, but slid down and spurred along to where Jeff was broiling strips of bacon on a stick.

"Company coming!" I told him.

He made no remark—never glanced round—this Jeff Cull. He handed me some bacon and crackers, and then poked shells into his rifle and forty-five until neither would swallow another one. With a rock for a table, he wrote a letter to a horse-dealer in town on a piece of paper the bacon had been wrapped in. When he had finished he jumped up and said:

"How soon?"

"Middling quick, unless we let the stock go and make a run for it," I told him.

When Jeff swung into the saddle and began to shout at the horses I knew he hadn't any overpowering notion of leaving them behind. We got going at a gallop.

By-and-by a bullet ripped the air just over our heads. Then another. Then the ground round us and under us began to go "Pack! Pack!" The men who were shooting at us over their horses' ears were getting the range. It is a mean sound—that "Pack! Pack!" You lean low over the horn and urge on the flying bunch with yell and quirt. They are your prizes; you want to get away with them. But that "Pack! Pack!" gets you by-and-by in spite of yourself. Your mind gets off what's in front of you and swings round to what's behind you.

"Pack! Pack! Pack! Pack!"

Retreat Under Fire

"All right!" Jeff sung out to me, meaning we would give up the stock; and we cut round and came back to the road in front of the band. The posse knew by that sign that we gave up the animals, but they were not satisfied—it was us they wanted. Some dropped out to look after the horses we turned over to them, but most of them came on. Their lead spattered the dust like it was hailing. We turned in the saddle and let them have it back. We had plenty of cartridges and we filled that road as full of unhealthy possibilities at one end of a moving two-hundred-yard stretch as it was at the other.

The sheriff and his friends began to get enough. I could see them heading back, one at a time, to help with the band of horses. It seemed like the storm was about over when Jeff called out: "They got me!"

"Where?" I shouted.

"Leg—the right one; bone busted!" Then he said, just like it was some other fellow's right foot that was flapping out of his stirrup: "Shoot hell out of 'em! Scare 'em off! We'll make our getaway yet!"

We passed the rifles back and forth—I doing the shooting and he the loading; for, with his leg swinging, he couldn't turn in the saddle to shoot. They came on harder when they saw that Jeff wasn't doing any more shooting, but I peppered away fast enough for us both and got two of their horses. At that they let us run away from them, though they kept pumping as long as we were in sight.

I asked Jeff how he was feeling. "Leg hurts," he said; "but I can keep going. When can we reach water?" I told him we could make a mud-spring I knew in an hour if he could stand to travel fast. "Go it!" was all he said.

We had gone five miles and I was doing some mighty tall scheming to see daylight out of a hard situation when something happened. Jeff was using his hands to hold his leg—to keep the tourniquet we had put on in place; so, when his mustang put his foot in a badger hole, Jeff couldn't check him and they went down. I turned back and had the horse up and off him before I took time to get out of the saddle.

"Stick out your good leg and give me your hand," I told him as I slid down. Jeff, lying there on his side, threw me a funny look. I leaned over and took hold and started to set him on his one good peg—and then he let it out:

"Lengthy, so help me, the left leg's busted too!"

I was ready to ride back hard, waving my shirt, and surrender to the posse—we needed help so bad I didn't care where it came from. Jeff simply wouldn't have it. His face was about the color of the alkali he was lying on, but he tried to jerk a smile on to it and said: "My pegs are a mite wobbly, maybe; but if you will sling me back on my mustang I can ride all right."

He could and he did; but it took more than the cantle to keep him from toppling over backward, and he couldn't use the stirrups to save himself from going out sideways. Jeff's horse came trailing up to the spring without any rider at all, and I rode up to it like I had a baby in my arms. It was a ride! One of us cussed about every rod of the way—and it wasn't Jeff.

It was just a white alkali mudhole such as Providence sticks in the Nevada wilderness so strangers won't get the place mixed up with hell itself—just an alkali hole, half full of stuff that looked like coffee; but,

COLT AUTOMATIC PISTOL

This allows you to put a COLT in your pocket, hand-bag or other convenient place LOADED AND COCKED — READY FOR INSTANT USE without risk of accidental discharge. The SLIDE LOCK SAFETY can be thrown on *if desired*, making the COLT DOUBLY SAFE. This is an additional rather than an essential protective device. The COLT is always safe — it takes care of itself — *and you.* The COLT HAMMERLESS AUTOMATIC PISTOL has no working parts exposed — no hammer to catch in the pocket. The COLT SAFETIES indicate whether or not the pistol *is* cocked. *Remember* COLTS have *proved* their superiority over all others.

Catalogue No. 85 mailed free. It's full of interest.

Keep in Touch With The Folks Back Home

If you're country bred you never forget the old home and the folks back there. If you're city bred you like to hear about them. There's something about farm life—its bigness, freshness and sincere simplicity—that appeals to us all. Besides, you know, we're all going back some day.

FARM JOURNAL

Unlike Any Other Paper

Farm Journal will keep you in touch with The Folks Back Home. It mirrors their lives with an appreciative sympathy that makes the picture *real.* It is the very voice of the farm and its inhabitants. Quaint humor, homely philosophy, sound advice and sympathetic heart interest crowd its pages.

Farm Journal is *not* a mere farming guide—*not* a "handy reference" for crop statistics—*not* a "first aid" to sick animals. It has none of that dreary, dry-as-dust quality which is common to most farm papers. It teaches a doctrine of common-sense farming in a bright, original and interesting way that makes it as readable as a novel.

Farm Journal also contains valuable housekeeping hints—good practical suggestions which even city housewives will find immensely helpful.

This wise and cheerful little paper is as welcome in city residences as in country homes. In the cities of Philadelphia, New York and Chicago alone it has over 20,000 subscribers. Its appeal is as broad as humanity, and its variety is infinite. Send a dollar for five years. It's perfectly safe to do this, as we will refund any part of your money any time you ask for it.

FARM JOURNAL, 158 N. Clifton Street, Philadelphia

If you order promptly, we will send, absolutely free, "Poor Richard Revived"—our splendid new Almanac for 1912.

The Curtis Publishing Company, Philadelphia

There's money in merchandise

And there are big opportunities right now for good men in the retail field. Why not start a profit making retail store of your own? It's my business to find places where new stores are needed. I know about towns, industries, rooms, rents, etc., in every part of the U. S. On my list are many places where a new store can start with small capital and pay a profit from the beginning. No charge for information. And a two hundred page book telling how to run a store goes free. Edward B. Moon, 416 W. Randolph St., Chicago

for welcome scenery, I don't think I ever came across anything that quite equaled it. I got Jeff's clothes off him by feeling, not by seeing, for Jeff's head was lying back comfortably on the rim of the hole and his body was sunk in the coffee. Dropping him from the saddle into the hole couldn't make his garments any wetter than they were already, and Jeff was just crazy to let every pore of his broken body begin drinking at the same instant. It was good, he told me after five minutes—it was good to be there.

When I could take my hands off him I cut willows that grew by the spring and trimmed up a dozen sticks of the same size. I tore our outside shirts and a blanket into strips and cut the leather tie-strings from the two saddles. It would have been awful enough even with a real surgeon. Jeff never cheeped, except once when he whispered up at me that I wasn't hurting him bad enough to make me cuss so hard.

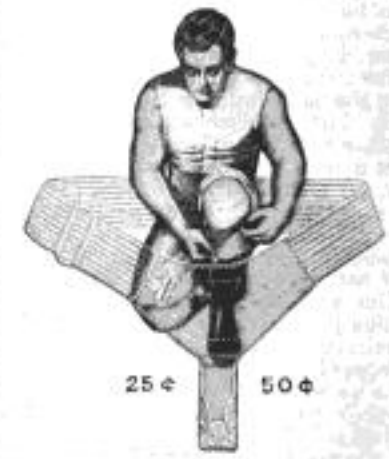
We camped right there for the night, because water meant life. Once I dozed off—and woke up in time to reach over and take Jeff's gun out of his hand. He had thought he heard some of the posse slipping up, he told me, and maybe that's why he was caressing his hardware; but I laid the gun out of reach, so he wouldn't be tempted to look down the barrel to see if she was working easy on the trigger.

At daylight I was riding round looking for two poles—two poles of any kind or description. Somehow I found them, which probably exhausted the pole supply in that neighborhood. I rigged Jeff's horse by tying a pole on each side of the saddle and letting the ends drag behind the animal, Indian fashion. I slung saddle blankets between the poles to make a hammock and lifted Jeff Cull in. We set off very slowly—and he said it wasn't so bad.

About noon I climbed a little rise and looked back. Five miles off I saw it—that dust-cloud mounted men make when they are hunting humans. It wasn't hard to guess what had happened—somebody had found a red spot by the road where we stopped to put on the tourniquet and they were just like hounds. I went down and told Jeff we were going to have company and begged him to give it up. Jeff Cull shook his head—I guess he was thinking of me mostly. So I dragged him as far up in the rocks of the hillside as we could get, handed him his gun, and we prepared to make a stand—likely a last one. And that crazy posse, riding their fresh horses like wild men and not watching the tracks of the poles, sailed past and never saw us!

Keeping away from the roads as much as we could, we traveled two terrible days and two terrible nights and one more terrible day—taking a long chance every time I exposed myself to get water and food for my patient—and then we reached a doctor. Jeff Cull's gameness won that doctor on the spot. He kept us both under cover in his own house for a good many weeks, until Jeff was able to ride his crutches without being bucked off. He had a beard now and it was black; but his hair wasn't—his hair was white. I got him back to his old home in Montana, to friends he knew as boys; and they found him a job as keeper of a toll bridge, where he could make a living sitting round. I handed him half of everything I had—it wasn't enough to keep me from telling about it now—and we shook hands.

"Going back to the old trade?" says Jeff Cull, the bridgekeeper.



I went and took my best rope out of my valise and spread it out on the ground. Then I got out my old jack-knife and snipped the honda off the loop—which, in cowboy, means either that a man is plumb loco or that he has got enough.

A Prudent Statesman

ONE time when Private John Allen, of Mississippi, was in Congress the subject of pensions came up. After several members had been heard Allen rose up.

"Mr. Speaker," he drawled, "this matter interests me deeply. As far back as the spring of 1864 I gave a good deal of consideration to this subject. I resolved at that time to do what I could to spare this country the great burden of pensions that would one day be laid upon her. In fact, sir, so profound was my consideration that on one occasion I retreated across three states, and if the Gulf of Mexico hadn't been in the way I should have retreated still farther."

An Old Woman and a New One In the Old World

(Continued from Page 18)

wind of his preconceived notions is the only light he gets upon a situation. The same criticism may apply to a foreigner taking impressions of a people different from her own in their standards of living. I am admitting this at the start. It is the doubt you are entitled to cast over what is set down here in regard to France and French women. It may be a kind of bigotry to judge them by the standards that obtain in Georgia for women, but in the fear of the Lord I have made up my mind to tell as much of the truth about them as I could discover, which is what I hope no French person will ever undertake to do about us. We are so much more apparent he would have too much the advantage.

In every community there is some woman who is "talked about." In the community of nations it is the French woman. She has such good ideas of style and such original notions about putting it on that she has attracted undue attention to herself. She is so artificially pretty to look at that she has become noticeable. I think her genius for dressing herself consists in the fact that she follows no fashion slavishly, as we do, but adapts all of them, subjugating them to her particular needs. She knows how to make a collar which reaches halfway down her back behind, and to her knees in front, look like a collar and not a cape. Then she knows how to show herself. She never distracts your attention while you are looking at her by suggesting any train of thought that might lead away from just her. She can be very deliberate. We saw a beautifully dressed woman enter our compartment at Rouen early one afternoon wearing a hat so large that she was obliged to sit upon the edge of her chair to give the brim room behind. But, so far as I could see, she did not move hand or foot until we reached Paris at nine o'clock in the evening. There you have it. If a French woman is in a public place she considers that she is on exhibition and behaves like a well-hung picture in the Louvre.

This is the difference between the French woman and the German woman: The latter appears to have been made by God on the morning of the first day, when the calm had not been broken by any odd fancies in creation. She has the dignity of a phenomenon of Nature—with rather thick ankles, to be sure, but intended for a noble purpose. On the other hand, the French woman appears to have made herself.

What France Has Appropriated

In appearance she differs from the American in that, although she shows much of the same fragile delicacy, she has far better health. This is remarkable enough to require explanation, when you consider that she is less hygienic in her habits, keeps later hours and eats the most indigestible mixtures. As a matter of fact, the health of women does not depend so much upon pathological conditions as it does upon other conditions. For example, when a woman has the love she desires she enjoys good health and good spirits even if she outrages every law supposed to govern both. The French woman gives this impression. She has a way of looking beyond you, sweetly, dangerously preoccupied, as if she were radiantly conscious of a love letter tucked away under her jabot. One must not find fault with her for that. It all depends upon who sent her the letter. I have known many an American woman who could do more harm. No man is ever equal to his mind, either in the accomplishment of good or in the accomplishment of evil. But an American coquette can more than equal her power thinking or doing, right or wrong. One of our nice little society girls with a Molly Cottontail soul and a bisque-doll mind can do more mischief in a day without taking thought than the meanest man or the most accomplished French *demimondaine*, because she refuses to know what she does, while the French woman does not refuse to understand. It is "by my spirit," saith the woman always, never by mind or by might, when she is in her most dangerous mood. Our American flirt has a fallacious spirit, while, on the other hand, the French mischief-maker has the courage of her evil, though she practices it with less art because she admits the evil to herself. The American of the same class never does. She clings to the lie of her innocency as if it were her virtue.

The French never see themselves as others see them. They have a self-centered egotism that is as naïve as it is invincible. Thus they have adapted some of the best and, as we think, most indispensable virtues to their Latin natures so thoroughly that an American cannot recognize them now as virtues at all. Still, one finds among them the same good women and clean men that exist everywhere, not powerful personalities, but personalities endowed with spirits that cast before them a light in which they walk sweetly entranced. I recall in this connection a young French matron.

"We think that the marriage relation with us is especially happy," she said. "In Germany the wife is far below her husband. She is merely the *Hausfrau*, his obedient servant. In America the wife is placed upon a pedestal; but in France she is the comrade of her husband, neither above nor below him. She shares all his successes, all his anxieties. He consults her about his business. They are together in everything."

The Tales the Women Tell

This French matron was an exception among those we met, in the clear effulgence of her spirit by which she lighted the social life of France and caused it to shine so beautifully. Others were especially spiteful toward their own sex. In Germany I observed that the average woman referred protectingly always to other women. Even when admitting a frailty she appeared to recognize the bond of a pathetic sisterhood. The English are only less so—like, you may say, quarrelsome sisters. In America every self-respecting woman is almost a passionate upholder of the honor and dignity of womanhood; but in nearly every instance I found that the French woman knew and believed the worst of her countrywomen and was willing to tell it—the only information you can get in France without difficulty! This, as much as anything else, accounts for the bad reputation they have. Whenever women talk about each other you learn the evil they do, added indiscriminately to the evil they are merely capable of doing.

The French are queer about this—they exploit their immorality as we do our ancestors at home. It is a kind of distinction they claim, the peculiar character of it.

On a warm summer evening we went with two American friends to dinner at Henri's; afterward we sat in front of the Café de la Paix and had our coffee. You cannot be said really to have been in Paris, properly speaking, until you can testify in regard to this experience. This is no compliment to Peggy and me, but if you are to understand one side of Parisian life you must sit for an hour in front of the Café de la Paix, between eleven and twelve o'clock, and see the jeweled city, shining in ten thousand lights of every color, and watch the people that go by, of all nations and of every kind in every nation.

"I have never been here any length of time," said our host, "without seeing some one I know at home."

He had scarcely finished speaking when a New York journalist passed whom we all knew. And the next moment Peggy and I recognized in a long, black-coated figure a preacher from Georgia.

No one seemed conscious of any one else; each jostled the other as straws in a swift flood swing round as they touch and are swept apart. A young man and a young woman carrying between them a heavy trunk made their way across the street, with the lonesome look upon their faces of travelers across the desert. They were accompanied by a dog with his head down and his tail at half mast. One inferred that the whole family had been kicked out of somewhere and were now seeking another home. A long, looped, winding necklace of gayly dressed women with painted faces and little feet that take hold upon hell seemed to be conscious of everybody, seemed to test every person they passed with a wild, enigmatical smile. I am an old woman, but that was the first time in my long life I ever saw the women of the street. And I was astonished at my own emotions. The tears filled my eyes. I began to sniff.

Have Your Own Fire Department

Adequate and efficient fire protection for your business, home or town, at *moderate* cost.

The "Ajax" for Towns and Cities and Volunteer Fire Depts.

THE AJAX Chemical Fire Engine

For Towns, Mills, Factories, Public Institutions, Country Homes, Stores, Etc.

throws a powerful chemical stream 80 feet, with a fire-fighting efficiency equal to thousands of pails of water; smothers flame instantly by acting like a blanket; saves water damage; simple and tremendously effective; it can be handled by anyone; chemicals can be secured at any drugstore for about a dollar a charge; has an efficiency just like the city fire-department chemical engines which extinguish a majority of all the fires in our large cities to-day—yet costs only a fraction of their price.

Protect your business or home with the **Ajax** shown in the lower corner, and exert your influence toward having your town purchase the **Ajax** shown in the upper corner.

The "Ajax" for Factories and Private Use of all kinds. Fire-fighting efficiency equal to 1000 pails of water.

The AJAX, after thorough tests, has been purchased by the Standard Oil Co., U. S. Steel Corporation, American Sugar Refining Co., U. S. Government, Mexican Government, Brazilian Government, and a large number of the best known private concerns and many towns, here and abroad.

Free Trial Offer:

We want to send you an **Ajax** on 30 days' free trial, entirely at our expense, and without obligation on your part. We want you to try it on a test-fire you can build for the purpose, or make any other tests desired. If it does not more than substantiate all our claims, return it at our expense. No deposit or red tape—a trial of the machine itself is our best advertisement. Fill in attached coupon, or write us a note, and we will send you pamphlet which explains everything about the machine, quotes prices, and gives particulars as to free trial.

What is the *Selling Price?*

Wholesale price	*$1 00*
Cost of doing business	*22%*
Retailer's profit	*10%*
Retail selling price	*?*

Basing your percentages on selling price the answer is not $1.32.

If you will answer this question, or ask how to answer it, we will send you free a 48 page book for retailers.

This book will explain why some retailers get rich while others go broke.

It will give you some inside information on getting at the *whole cost* of doing business.

Will explain how successful retailers are getting, every day, a statement of what each clerk is worth in *profit*.

Will tell you how to know every day, all the year around, what is on your shelves—which stock *moves* and which *doesn't*.

Why shouldn't *you* have at your fingers' ends as much success-producing information as any other retailer?

Why can't *you* make *your* business as profitable as the Country's *most successful* retail business?

We'll send the book to every retailer who tells us how *he* figures the problem.

Figure it on your letter-head, or ask for the book.

Retail Store Gets Statement of Monthly Business in 1½ Hours

MONROE MERCANTILE CO.
Monroe, Wash., Aug. 16, 1911
Burroughs Adding Machine Co.
Detroit, Mich.

Gentlemen—
With the assistance of the Burroughs Adding Machine, we now have time to separate our daily business by departments, both charge and cash sales, within half an hour after the close of the day, and make a complete statement of each day's business before the safe is locked at night.
Where we used to work four to five nights at the first of each month getting the accounts and sales into shape, we now work one and one-half hours on the night of the last day of month.
By the use of the Burroughs Adding Machine we get a total of our month's business ready to hand to our manager on the morning of the first.
Our employees are kept happy and willing to work, knowing that we try to relieve them of the heavy end of the labor to obtain results for us.
Yours respectfully,
MONROE MERCANTILE CO., Inc.

Burroughs Adding Machine Company

F. FOY, Box 4, Des Moines, Iowa.

"What is the matter?" exclaimed my niece in alarm.

"It's these girls, Peggy," I whispered "I never understood before. The poor things are insane. You can tell it by their ghastly smiles. I want to take them all home in my apron, and wash them clean and put them to bed!"

After twelve o'clock the character of the flood changed. The tide was in. The ebb began. The faces were paler. The women began to go by in bedraggled gowns without coats, shivering. The beggars crept up to the tables, lonely creatures, with their pathetic wares to sell. Nobody bought; they went on. Suddenly in the midst of the throng the figure of a man appeared, clad in a long white garment. His hair reached to his waist. He carried a shepherd's crook and walked barefooted, with his eyes lifted to the twinkling lights. No notice was taken of him and he appeared to see no one. He was a demented creature who thought he was John the Baptist, merely the idiot of a great salvation idea, left over in the midnight street of the most damnably gay city in the world. The impression one received was that if Jesus Himself had passed in that crowd, bearing His cross, no man would have stopped long enough to help Him carry it, no one would really have seen Him.

Editor's Note—This is the fourth of a series of articles by Corra Harris. The fifth will appear in an early issue.

The Sporting Instinct

THERE were once some rich young gentlemen who had a shooting preserve in Tennessee, where quail were quite abundant. One of them laid a wager with another that he could kill one hundred quail to his own gun in a day's shooting. Whether he did or not, the undertaking could scarcely be called sportsmanlike in America today. At last these young men, looking for something more exciting, went down into Texas and took up the sport of roping cattle, riding on the range with the cowpunchers. They declared that this was the finest sport they had ever had—and so it is, good sport and manly. Still better is wild-horse hunting, practiced not for the money but for the excitement of it by a few men who make it a business in Nevada and Arizona. That certainly is a man's game in every respect.

Japanese sometimes match cock quail against each other in the pit, as Cubans and Spaniards do game cocks. Not much can be said in favor of badger drawing, dog fighting and that sort of thing; yet somehow it seemed quite an amiable pastime in the far Southwest years ago to fight your pet tarantula against your neighbor's champion at, say, five dollars a side. Which recalls Mark Twain's sport of jumping frog.

The principle of matching one creature against another in its specialty has odd exemplification in the linnet matches that are sometimes even yet carried on in London or other cities of Great Britain. Quite often it is only the roughest of men who engage in this singular sport. The decision is made by skilled judges, who pass without hesitation on the qualities of each bird's voice, penalizing what is called a "rough" note and making their awards on the basis of the number of points scored by each competitor in the several tests of good bird song.

A curious and rather practical sort of sport not known to very many persons today is hunting the wild hog. In England the man who would shoot a fox would be barred from society; in India the man who would shoot a wild boar would equally be shunned as a social pariah. In America we sometimes shoot foxes with the shotgun in New England, and in the West you may shoot wild hogs with the rifle. This, however, is utilitarianism and not sport.

In the early days settlers used to turn hogs loose on islands in the Mississippi River, where they fed on nuts and roots. Each farmer had a share in the total product, increase and all, and the rights of each were carefully regarded in the fall harvest time—when the hogs, of course, had to be shot to be secured.

In the Spanish Southwest the peccary, a savage little wild hog that ranges in herds and takes a delight in fighting buzz-saws, is one of the most dreaded creatures of the wilds. A noted bear hunter once told the writer that he was more afraid of one Mississippi wild hog than of a dozen bears. Turn the creature loose and let him go wild for a generation or so, and the amiable stockyards product is apt to be a problem.

The Country Woman

Will find in forthcoming issues of

The Country Gentleman

articles and photographs dealing with the work and activities of the woman in the farm or other country residence. Articles are particularly desired discussing subjects covered by the following departments:

The Handy Housewife

Descriptions and photographs of inexpensive conveniences designed to save steps and time in performing household-operations will be welcomed. Plans of cupboards, pantries, kitchens, storage cellars and closets which contain new and helpful ideas that will be suggestive to other women are particularly desired.

Home Furnishings

Discussions of the buying and making of the essential furnishings of a well appointed house in the country. The choice of carpets, rugs, furniture, bedding, pictures, stoves, ranges, utensils, curtains, fabrics for decoration, wall paper, etc., treated in helpful articles will be carefully considered.

Home Management

How to perform the essential duties of the home with the minimum of labor and time, the management of helpers, the housewife's plans who has no help, the care of children and similar problems as successfully worked out by farm women.

Country Cooking

The food problems of the farm family, the choice of food stuffs, storage, canning, preserving, purchasing supplies. Methods of cooking and serving common and rare dishes that may be available in every garden, new methods of doing the routine duties of the home to eliminate the drudgery.

All articles and photographs will receive prompt attention, and when available will be paid for at current rates. Send all manuscripts to the

The Welch Club

Get on the Welch-Wagon for 1912

WELCH'S is a *man's* drink. Served plain and *cold* it has just the tart-sweet taste that a man likes. As a Welch Grape Ball—chunk of ice, high glass, fill half with WELCH'S, half with charged water—it goes to "the spot." There are many other ways to mix it and fix it.

The man who wants "something before breakfast" finds that something in WELCH'S. It is a drink without a drug and without a *drag*.

It satisfies the thirst. It is a true tonic without an evil aftermath. It ends the craving for something; it is a natural drink, with natural effects.

The National Drink

Welch's

The National Drink

Grape Juice

WELCH'S is nothing but the real, pure juice of the finest Concord grapes grown. No sugar or sweetening is added. We pay a bonus for the best of that wonderful crop grown in the great Chautauqua belt. We designate the day grapes shall be gathered. A few hours after these grapes leave the vines we have washed and rinsed them, stemmed and pressed them, and the juice is hermetically sealed *in glass*. When you open a bottle of WELCH'S the juice is *exactly* as it was in the grape. It is this unvarying method that has made WELCH'S *the National Drink*.

You will find Welch's at all soda fountains and in all drug stores, cafés, restaurants, hotels, clubs, dining cars, etc., where the best is served. Get the Welch Habit—for it's one that won't get you.

Keep a case at home. Dozens of times you will serve it to callers, and dozens of times your family will use it in dainty desserts and delicious drinks. Our booklet of recipes for the family use of WELCH'S is sent free on request. Write us for this valuable little book *today*. Your dealer will supply you, but if for any reason you are unable to get WELCH'S we will ship, express free east of Omaha, a trial dozen pints for $3.00. We would be glad to send a four-ounce sample bottle, by mail, 10 cents.

Do more than ask for Grape Juice—ask for Welch's—And Get It

MODERN BUSINESS AND MEDIEVAL LAW

(Concluded from Page 7)

and prevention of waste mean united action instead of disunited action. Men recognize this in the simplest things—the building of a log hut or dirt road.

The very germ of civilized industry is the idea of well-ordered mutual work instead of disordered antagonistic work—a helpful and common-sense coöperation rather than a riotous and haphazard competition. Is harvesting by hand, which wasted the work of many men but gave them poorly paid employment, or harvesting by machinery, which saves the work of many men but sends them to better paid employment in other things, the wiser method of gathering the bread materials for mankind?

This latter furnishes an apt illustration. As a farmer boy I drove the first self-binding harvester sold in Central Illinois. It did the work of many men. There was furious outcry against it by farmhands, who believed it would take away their occupation. One of these first machines actually was burned. Today harvesting could not be done without them. Yet the self-binding harvester is a mechanical trust.

The Balance-Wheels of Business

The organization of labor is the manifestation, in that field, of the same civilized idea of associated effort as against the savage theory of "everybody for himself and the devil take the hindmost." In short, every form of successful modern industry, whether it be the self-binding harvester or the industrial trust or the railroad, or the labor union or the consolidated bank, has at the heart of it the idea of constructive coöperation rather than destructive competition. The elimination of waste, the using of by-products, the saving of cross-freights, the quicker and better service of the people—these and other benefits of mutual effort in industry and commerce are conceded by all men. And there are many others.

Organizations of industrial capital have steadied the whole business world. Formerly, if we happened to have good times, everybody "plunged" in order to make the most of them, not knowing what the morrow would bring forth. The invariable end was glutted markets, underselling, reaction, hard times, panics, railroads in the hands of receivers, manufacturers in bankruptcy, retailers smashed right and left. History shows that this has been the unfailing result of the cut-throat policy in the fields of both commerce and labor—the policy of the unintelligent, savage, unrestrained competition of hundreds of thousands of little enterprises or of millions of unorganized workingmen.

Also, the modern organization of industry gives a constant employment to labor unknown and impossible under the old procedure of business. Some trusts overwork and underpay their laborers just as some other employers do; the Sherman Law does not prevent this evil, but encourages it. For its idea is absolutely unlimited and remorseless competition among the toilers as well as among employers.

These great industrial and commercial organizations of capital tremendously help our foreign trade. But for them it would be difficult, if not impossible, to invade foreign markets successfully against the systematic, powerful efforts of similar great industrial and commercial organizations of rival countries. This is a serious matter for all of us; for upon the sale of our surplus products abroad our prosperity at home considerably depends. If we do not sell this surplus abroad we have a congestion at home which means the shutting of mills, the discharge of labor, and hard times generally. Common sense suggests that we encourage our foreign trade; but the Sherman Law and our present policy discourage it. It goes on because of the energy and resourcefulness of American business men, our vast natural riches and those very organizations of industry which the Sherman Law would dissolve but cannot—those organizations of industry whose evils the Sherman Law is not designed to remedy and does not remedy.

Then, too, the vastness of these modern aggregations of industrial capital has concentrated upon them the eyes of the whole nation—of the world even. Their business has become the people's business. The very agitation of this question shows that the humblest citizen of the Republic is coming to take part in the policy and business of these mammoth corporations. In the old days of small concerns nobody except their managers would or could know anything about what they were doing. The theory of unrestrained hit-or-miss competition was that every man's business was "nobody's business but his own." But today the Steel Trust's business is decidedly somebody's business but its own; and so is the Beef Trust's business and the Oil Trust's business and the Tobacco Trust's business, and so on down the list.

Their business is not their business only, but our business as well. We propose that their business shall be run, not alone to make money for themselves but also to serve us well and honestly. Their managers must recognize that their business is no longer private but public; and that they are trustees, not for their stockholders only but for the people also. Trusts of and for the people, not trusts of and for Wall Street—that is what trusts must be made.

But the theory of the Sherman Law is to prevent associated effort and restore competitive effort; so that law does not reach the evils of the trusts. It does not pretend to do that. Its purpose is to dissolve trusts; but it fails to accomplish even that purpose. Had we not better, then, strike at trust abuses directly?

What are those abuses? How can they be eliminated? After all is said and done, these are the real questions. The first of these evils is overcapitalization—all will agree on that. A corporation has assets and business actually worth $10,000,000; it issues and sells stock for $100,000,000. To make that stock pay dividends the corporation increases the price of its product. Thus every dollar of watered stock becomes a mortgage on the American people for all the future. That is the chief of the artificial causes of the high cost of living.

Does the Sherman Law prevent this? Quite the contrary. Even if under the Sherman Law the Tobacco Trust should in truth and fact be divided into four great corporations, each of these separate corporations could grind out additional millions of watered stock. So could every one of the various corporations into which the Oil Trust is supposed to be divided. And with the greater number of these separate "competitive" corporations distracting the people's attention, various streams of watered stock would flow unnoted, which, if combined, would startle the Nation into fear and into action.

The next evil is the arbitrary raising of prices—particularly raising them in one locality and lowering them in another—and the attendant abuses with which all are so familiar. Does the Sherman Law prevent that? Not in the least. Under the old lack of system that is exactly what did occur, and what will occur again if the present policy succeeds in placing us commercially where the English people were when the prototype of the Sherman Law was enacted in King James' time. For that is exactly what the Sherman Law is supposed to do. That is its very theory and purpose.

The Trusts in Politics

The third great evil practiced by the trusts is their interference in politics and their corrupting of the people's legislatures. In the campaign last year I termed this secret banding of the trusts for the perpetration of this treason to the Republic, "the invisible government." Not only does it try to govern the people's Government, but in doing so it practices flagrant, specific wrongs.

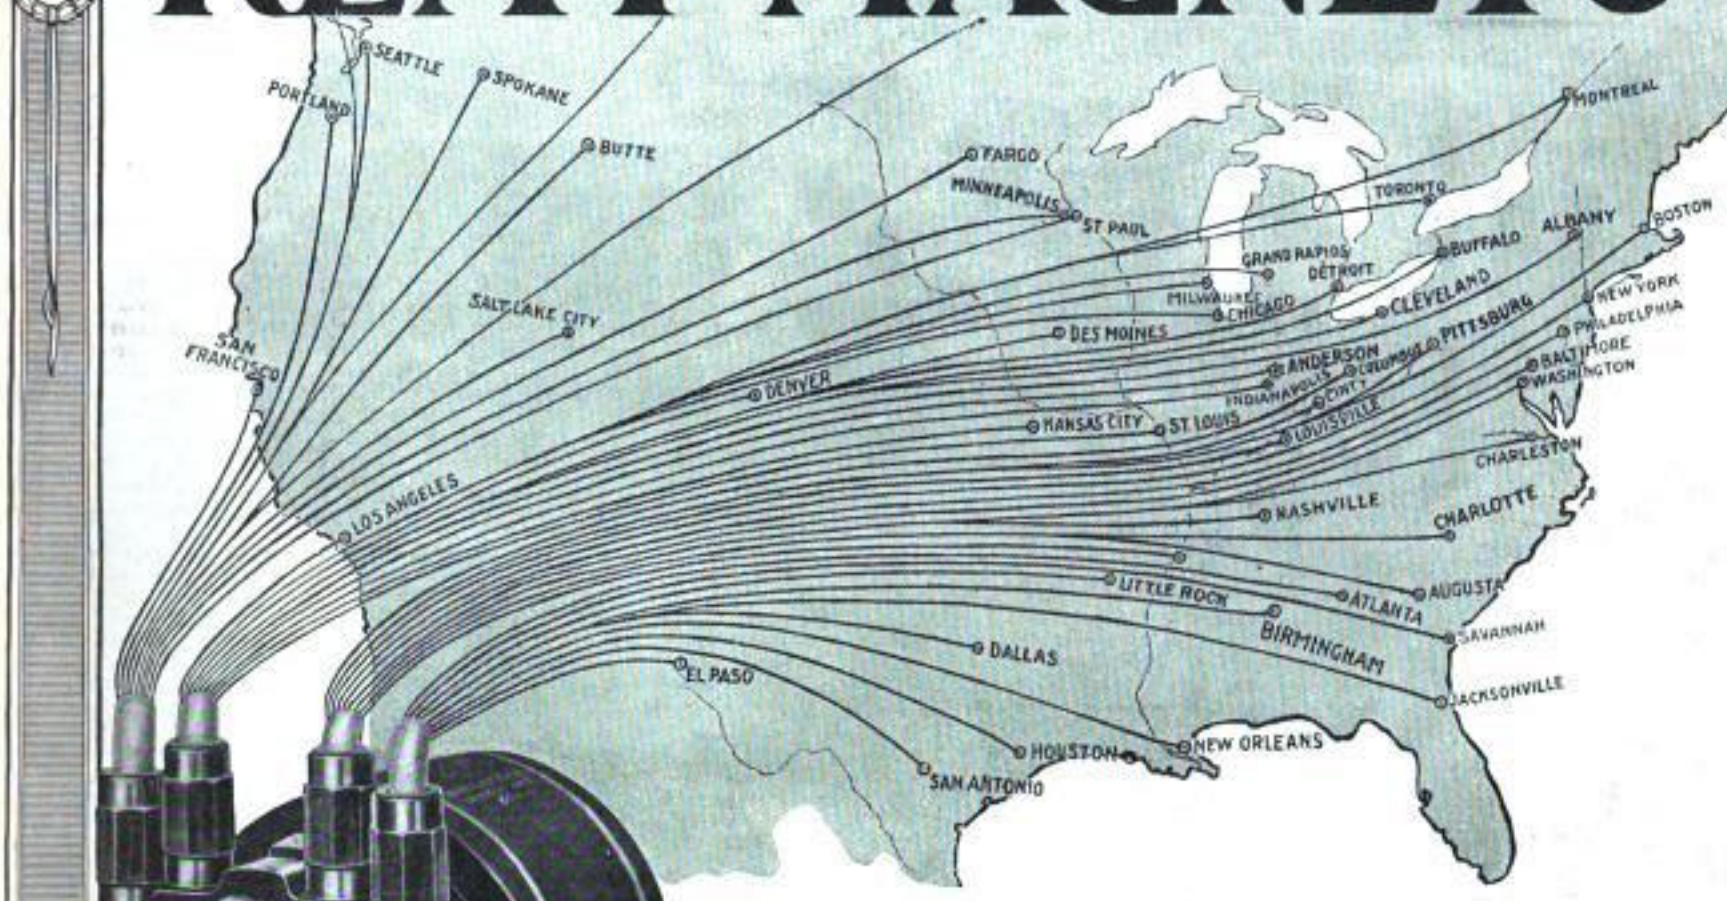
But does the Sherman Law prevent the operations of this invisible government? Does it dissolve the invisible government? Indeed not. It furnishes new inducements for the strengthening of this political confederacy of plunder.

How then is this question of the hour and of the ages to be answered? The German people—who next to the American people have the most numerous and most powerful trusts in the world—have answered it long ago by a thoroughgoing and rigid law by which every trust in the Empire is under the strictest regulation. The English people—who next to the American and German people have the strongest and most numerous combinations of capital in the world—have answered it less well but more simply than the German people, by a law requiring every corporation selling securities to the public to state the actual worth of the tangible assets and business income of the concern issuing those securities.

Though neither the German nor the English method is the best that we Americans can do to meet our own conditions, yet either is better than the Sherman Law. But neither could exist along with the Sherman Law—nor, for that matter, could any other method that effectively prevents the abuses of the trusts.

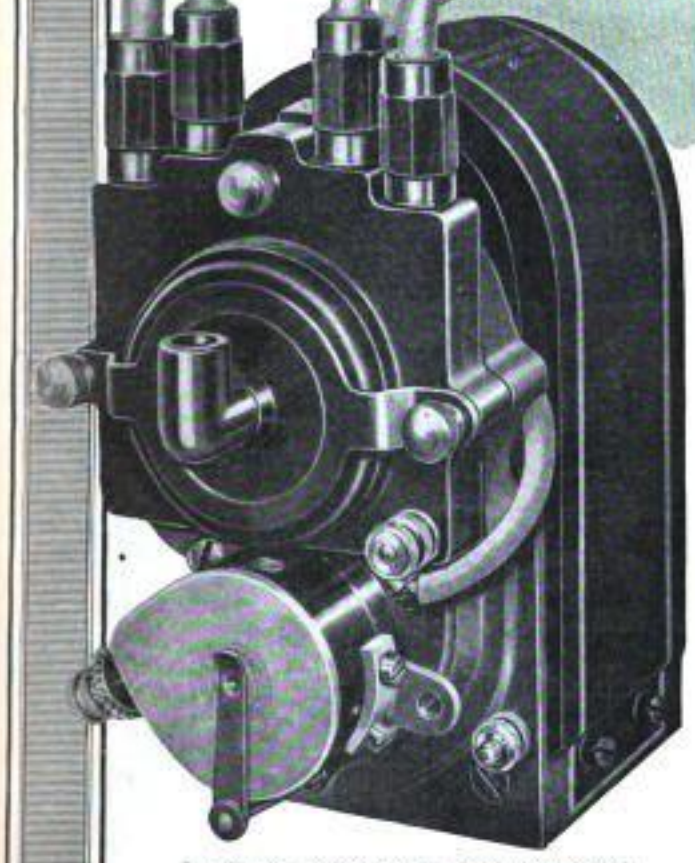
A National Incorporation Law

More than four years ago I proposed as the best method of solving this problem the enactment of a national incorporation law. Such a law should compel interstate corporations to organize under it and prevent, in the very charters of their existence, overcapitalization, unjust lifting of prices, and other evils that can thus be reached.



The objection to that plan, that nearly every corporation in the country does interstate business, and that such a system might become too cumbersome, applies also to the plan of an interstate trust commission. Yet either compulsory national incorporation or an interstate trust commission is greatly preferable to the Sherman Law, which is inconsistent with and antagonistic to both. For if you compel a trust to exist under a national law that rigidly controls and regulates it, you cannot subject it at the same time to the Sherman Law, which says that it should not exist at all. It is a contradiction in terms. It is a *non sequitur* in logic. It is absurd. It is impossible.

Cannot a simpler way be found to end the abuses I have discussed? Merely as a matter of suggestion, consider a national law with the following conditions: First, that every interstate corporation shall publish annually, for a certain number of days in one or more newspapers of general circulation, the exact state of its business—assets, liabilities, and so forth—as various insurance companies and all national banks now publish similar statements; and that for a misstatement of fact the directors and responsible officers be made criminally liable. Second, that when any interstate corporation issues any stock it shall make the same statement and also give reasons why the stock is issued, and the purposes under which the money for it is to be applied; that not a share shall be issued unless there are behind it assets to justify it; and that this statement shall be made to each individual purchaser of stock—all with criminal liability for misstatements. The above is substantially the English law today. Third, that no interstate corporation shall sell any stock for less than one hundred cents on the dollar. This suggestion was made by Mr. James J. Hill in a recent interview, with the assertion that this method would prevent overcapitalization; and that, of course, is true. Fourth, that every interstate corporation shall sell its products at the same price at the same time in every part of the country, allowing only for a difference in transportation charges. Fifth, that our patent laws shall be repealed, with a proviso that the present law shall be continued as to existing holders of patents for a fixed and short number of years, so that capital honestly invested on the faith of the patent should not be treated unjustly. Our patent laws are the strongest artificial and uneconomic aid that trusts have to support their raising of prices and to justify their overcapitalization. The theory that patents stimulate inventions is questionable. At all events, it is a deplorable fact that not one in ten thousand of the real inventors ever get financial benefit from their inventions; it is the capitalist who gets that.



I have outlined the above law and mentioned a Federal incorporation law or the establishment of an interstate trust commission merely as suggestions. If these are not the best methods of dealing with this all-important subject surely some effective method will be devised—for present conditions can no longer be tolerated; and there is no problem affecting the welfare of the American people that is so complex or difficult that the American people cannot and will not solve it.

REMY MAGNETO

Consider this map seriously — This list of Remy Service Stations is of utmost interest to every motorist

Remy Magneto—Automobile Type. There is a Remy for every kind of gas and gasoline engine.

This is the Inside of the Remy. Consider its simplicity and strength. A plain stationary winding—a solid steel shaft revolving on ball bearings.

Service for You

Whether you own a car or are going to buy one,—Watch the magneto equipment. It's of the most vital importance.

Remy Service means more than making the best magneto. It means the world's greatest magneto factory behind your car. It offers branches and service stations in every motoring center. It gives every user of Remy equipment maximum efficiency anywhere and always.

Each Remy Service Station has a corps of ignition experts at your disposal—to solve your ignition problems.

There's Always One Best

In Magnetos, it's the Remy. The public knows this fact. More owners (250,000) use it. They find it does the work better than any other. It has helped cars win the greatest races.

A Remy was on the only car that ever traveled 142 miles per hour. The superior efficiency, reliability and endurance have been publicly proved over and over again. The greatest drivers, Burman, Harroun, etc., know the value of the Remy and use it.

Look at the "inside of the Remy" at your left.

It's as simple as a monkey wrench—and just as sturdy.

No revolving wires—No sliding contacts—No brushes—No delicate adjustments—No frail parts to break—Nothing to go wrong.

Water—Oil—Dust—Dirt—Abuse, can not "faze" the white-hot Remy spark.

That's why so many manufacturers equip with the Remy.

That's why so many people demand the Remy.

Do NOT Invite Ignition Trouble.

Specify Remy on Your Car.

Write, 'phone or visit our nearest station.

THE POWER OF THE PLACE

How a President Goes About Renominating Himself

DRAWN BY M. L. BLUMENTHAL

By SAMUEL G. BLYTHE

AS EXECUTIVE jobs go, the job of being President of the United States is a reasonably good one and much desired. The salary is large, the dwelling that goes with it is attractive and comfortable, the prestige is great and the influence incalculable. It is quite true there are perplexities, and troubles, and grief, and a universal misunderstanding of actions and motives, and extreme difficulty in pleasing any one. The bosses number some ninety millions of people, each one of whom has different ideas as to how the country should be directed and the laws administered; but none of these conditions prevents the eager seeking of the place and the intense desire to keep it once it has been attained. Now and then an eminent citizen places his hand on his chest and declaims he would not be president if he could, but the declamation is always inspired by acute knowledge that the person who thus rejects the presidency has no more chance than a Filipino of getting it. The fact is, there isn't a living American who, having a chance to be president, will not ardently embrace it; and the further fact is that many an eminent American, having no chance at all, embraces the shadow just as ardently. That statement goes for all dead Americans, too, when put into the past tense.

Twenty-six individuals have been presidents of the United States since George Washington was last inaugurated. These twenty-six men have had, of course, the most intimate knowledge of the pleasures as well as the pains of the office, and that knowledge has not kept many of them from aspiring to be president as long and as often as the circumstances and the people would permit. There are no statistics showing how many men have wanted to be president since that first inauguration, but a general average may be struck by taking the twenty-six and adding a handful of ciphers to it, truth and liberality in this regard going hand in hand.

The only man who knows all about being president is the man who is or has been president. He has had or is having the actual experience. Politics in this country revolves in well-defined circles. It circled one way in the early years of the republic, another way in the period preceding the Civil War, and still another in the period after the Civil War, which is just about at the end of its revolution at the present time. Politics also developed along definite lines during these various periods. The period that began, in a general sense, with the first nomination of Grant is about petering out at the present time, when a president is to be elected in 1912; that is, the political methods that reached their highest development during the years between the election of Grant and the election of Taft are now rapidly going into the discard. However, when they were efficient they were extremely efficient, and they brought to the flower of its powerful perfection the value of organization and the development of the boss idea.

In that period—between Grant and Taft—came also the latter-day development of the power of the presidential office as an influence for securing a renomination. This was made basically possible, so far as the Republican party was concerned, by the conditions left by the Civil War. The South was Democratic. It was solidly Democratic. The North outnumbered the South and outvoted it, and in the North the Republican party flourished. Still the South was a part of the country, and was entitled to representation in the conventions that did the nominating. Hence, if there were not Republicans in the South it was easy to make a few for delegate purposes, and the way to make them was easy. Inasmuch as the president had the sole power to give out the jobs, the natural assumption was—and is—that the president, by controlling the jobs, controls the delegates.

Any Republican president wanting a renomination starts with the South practically assured. Then with the development of the organization and with the increasing and scientific application of patronage there is a chance to work on delegates in other sections of the country. Broadly speaking, that is about the way of it; but the details are interesting and there are many ramifications to the general scheme. Each president who wants to continue in the White House works in his own way, but the essentials of his procedure are identical. It may not be long until there will be a change in this situation; in fact, it will not be long. But at the present time and for the past forty years the processes of a president desiring either a renomination for himself or a nomination for a candidate of his selection have been strikingly similar.

To begin with, a man who is president and desires to be renominated after his first term has a great advantage over any other candidate for his place in his own party, unless, of course, his conduct has been such as absolutely to preclude his availability for renomination. Eliminating that, the president who has made a fair average record starts with this advantage: He is the titular head of his party. He is the leader. He is the man who symbolizes the policies of his party and who was elected on a platform stating those policies. If he thinks, and any considerable number of his friends think, that he has carried out those policies and has obeyed the commands of his party to the full extent of his ability, if he has been regular and in accord with the views of the sub-leaders of his party, if he has not been incendiary and has remained true to the basic principles, and with this record demands a renomination, he is almost certain to get it.

The reason is simple. He, as titular head of the party, claiming that his record is in accord with the pledges of the party and its policies and principles, desires a second term and says so. If he is refused that second term that refusal means a direct repudiation of the party principles and policies on which he was elected and under which he has operated. The president asking for renomination starts with that advantage over all other competitors for the nomination unless, of course, his own conduct has been such, in the minds of all the party leaders who control conventions, as to put him out of the party. If he is reasonably regular and reasonably Republican, say, to refuse

Digitized by Google

him the renomination he asks would be to repudiate Republicanism. It would be the same with a Democratic president desiring a renomination.

This advantage, of course, does not absolutely assure a renomination; but it is a great advantage, none the less, and no candidate but a candidate in the White House has it. Admittedly it is largely sentimental; but it has a vast force in determining the result of the national convention.

That much for the sentimental side of it. The rest of the game is severely practical. Nominations in national conventions and renominations are secured through but one medium—delegates. Delegates to a national convention are secured through mediums as various and as numerous as the delegates themselves; but every medium is distinctly a family relation to the great and overpowering medium, and that is patronage. The time may come when politics will not be a selfish pursuit. It may come, and so may the millennium.

There may be a man here and there who acts as a delegate or takes an office for the sole actuating purpose of relieving bad conditions or helping the people or attaining better government, but a reasonably extensive experience of twenty-five years has not disclosed very many of them to me.

There are two real reasons for seeking office—the first is pay and the second is power. This runs true from constable to president. All my life I have heard statesmen talk about the unselfishness of their motives, and have watched carefully to see some of that unselfishness work out. It rarely does.

Possibilities of Presidential Patronage

THAT makes it easy for the president who wants to be renominated. He sits in the commanding position. Other candidates may promise to do thus and so, to foster certain movements, to supply certain jobs, to do certain things; but the president, in addition to promising, can perform. He has the goods. He can deliver, not promises but places. What is at best an uncertainty in others is a certainty with him.

Now far be it from me to intimate even that any president would use patronage to advance his personal fortunes or to secure a renomination; but he might if he wanted to, and he might also use patronage to advance the fortunes of his political party. In fact, it is quite within the bounds of truth to say that the patronage of the presidential office is often used to advance the cause of the political party to which the president belongs. That is quite natural. We are not yet so altruistic that we do not think the victors should have a fair share of the spoils. And though a president may be utterly averse to applying patronage to any local or national situation or contingency, it is the lamentable fact that always there are men in his party who have no such scruples, and they usually can present convincing arguments at the White House, showing how the very political existence of the party in their states or districts depends on the stimulation that a few jobs will produce.

Just what patronage does a president possess? A year ago—on January 5, 1911—he had at his disposal 9846 jobs for which he was the sole appointing power, exclusive of army and naval officers and employees of the census. The number may have increased or decreased in the past year, but not much either way. These 9846 jobs were divided as follows:

State Department	441
Treasury	736
War—exclusive of Army	6
Justice	383
Post-Office	7953
Navy—exclusive of officers	11
Interior	272
Agriculture	3
Commerce and Labor	28
Civil Service Commission	4
Government Printing Office	1
Interstate Commerce Commission	7
Library of Congress	1
Total	9846

These jobs are all subject to confirmation by the Senate, but inasmuch as the appointments, before they are made, are mostly decided upon by the senators of the president's party, or the representatives thereof, or the state politicians, and decided upon for political purposes ninety-nine times out of a hundred, the Senate rarely refuses to confirm one, and then only when a senator has not been consulted and his friends in the Senate rally to him—for political reasons also.

Aside from these, the president has 993 appointments he can make without confirmation by the Senate. These are, ninety-four in the State Department, eight hundred and forty-six in the Department of Justice, forty-four in the Interior Department, eight in the Department of Commerce and Labor and one on the Civil Service Commission. Then, too, there are 262,608 employees of the Government protected by the civil service, who presumably do not figure—presumably, I said—and 411,322 employees in the various branches of the Government, exclusive of enlisted men and officers of the army and navy. Of course the president does not personally know of or appoint these 411,322 persons; but some politician does know of them, and that politician reports to some other politician higher up, and so on until the chain is complete between the White House and the clerk or laborer. Let a clerk be disturbed, and it will instantly be apparent where the connection is. He may be a very humble clerk, but he has an influence somewhere, and that influence got him his job. Also that influence has a higher influence to whom he reports and on whom he depends, and so on along up the line, until the very influential senator or representative or state leader or boss is found with direct communication to the White House.

The whole scheme of politics in this and in every other country is based on patronage. The boys are held in line because the boys get the jobs; and the boys in turn hold the others, and jobless, in line by their influence and because of the jobs the boys have. There have been and will be political leaders able to maintain organizations without patronage, but they are twelfth carbon copies of the leaders who have maintained and do maintain organizations by means of, or with the aid of, patronage. The leader who can get a few of his followers on the payroll is the leader who has the most devoted following.

Take this question of a presidential renomination: Under the present system the only way that a president can be renominated is by a national convention. The time is coming when presidents will be nominated by direct popular primary vote, but it isn't here yet. The convention system prevails. A national convention is a culmination of a series of smaller conventions. The district convention sends its delegates to the state convention, and the county or ward or precinct conventions send their delegates to district conventions. The state convention usually picks out the delegates at large. Then the selected bunch of delegates go to the national convention and register the will of the people—the people invariably being the bosses of the state.

In a Republican National Convention it is necessary to have a majority in order to nominate—a majority of the votes of the delegates only. The Democrats require two-thirds. The next Republican National Convention will have 1072 delegates, provided the usual plan of allotting delegates is carried out by the Republican National Committee, as it probably will be. This increase over the 980 delegates of four years ago is accounted for by the increase in the membership of the House of Representatives from 391 members to 433 members under the new apportionment, as the basis on which delegates are allotted is two delegates in the national convention for each senator and representative, and two delegates each from the territories, colonial dependencies and the District of Columbia.

A Ghostly Party Down South

THERE never has been more than a ghost of a Republican party in the South, and it is more diaphanous at present than it ever has been, because President Taft has appointed a good many white men to places down there, and most white men in the South are Democrats. Still there are a few white Republicans here and there, mostly holding Federal offices, and these gentlemen have two actuating ideas in politics—to have and to hold. They are largely Republicans for revenue only; not always, but mostly. They know they can have no jobs unless there is a Republican president, and as they are about the only Republicans in that section and have about all the jobs, it is their particular task to see to it that, in return for preferment, they maintain a skeleton organization of the party for the purpose of providing a convention that shall in turn provide delegates to the national convention.

These persons are not influenced by sentiment. If they were susceptible to that sort of thing they would not be Republicans in the South. Their only source of supplies is the man in the White House. To be sure, they reaped a rich harvest during the closing years of Cleveland's second term, when Mark Hanna sent down there and "induced" a lot of them to go to St. Louis and help nominate McKinley; but they performed loyally for McKinley a second time at Philadelphia, and were there with ringing cheers to help nominate Roosevelt in 1904. Likewise, having helped nominate Roosevelt, they showed themselves to be good and faithful servants and nominated Taft, Roosevelt's selection, in 1908, having held their jobs continuously since the days of McKinley, which began on March fourth, 1897.

Of the 1072 delegates that will make up the Republican National Convention in Chicago next June, the solidly Democratic states of the South, where Republicans are so few that they are curiosities, will furnish patriots, either

PROMPTLY at eight on the day the blind pool in Hocking Coal and Iron burst, the alarm clock at Mr. Mobley's bedside gasped loudly, and after a brief digestive creaking among its cogs and pinions it paused for a moment, then struck. Subsequently, or say in not more than two or three minutes at the most, the uproar was echoed by a groan.

"Buh!" said Mr. Mobley hazily. "Yes, aw yes!—what say?"

Mr. Mobley was a Wall Street man. Consequently he seldom if ever arose early. Aside from the many obligations, however, that keep Wall Street men up and out so late he also long had held in the financial world a position that enabled him to enjoy as much leisure as he liked. In short, as his daily vocation Mr. Mobley introduced new customers to a downtown investment house. No salary was attached to the place, but, instead, it paid on the commission basis.

Mrs. Mangin Grimly Blocked Him From Escape

The firm's business was marginal trading. Naturally this required on Mr. Mobley's part wide knowledge of financial methods, to say nothing of tact and good clothes, which he unquestionably had. However, since his presence in Wall Street was rarely needed before ten, the hour the market opens, Mr. Mobley arose ordinarily at nine or nine fifteen, though sometimes it was half-past nine. Of course on such occasions little leisure was left him to make the sort of toilet he liked, so after he had dropped in at the office for his mail and a brief study of the London and New York "openings" Mr. Mobley usually went over to the corner, where he had Adolf give him a hot towel and a few minutes' face vibration. In addition, like others in his calling, he was very fond of hair tonic. Afterward, or when he had been put in trim for the day, Mr. Mobley breakfasted at Fred's place on a cup of coffee and an Egyptian. The cigarette was of a special Wall Street brand. It had his own initials on it, naturally.

Today, though, Mr. Mobley's time was by no means all his own. It was so little his own, indeed, that, having glanced at the clock which now marked five minutes past, he leaped hurriedly to the floor. The fact is, his morning's engagement was imperative, for it not only involved a banking matter of some importance, but required his presence without fail at nine o'clock or sooner. "Pshaw!" he complained drowsily, and having stretched himself a little began hastily drawing on his clothes.

His hurry, however, though urgent, was doomed to interruption. Having stripped himself of his luxurious silk pajamas he was just reaching for his trousers when a strong, not to say resounding, hand knocked suddenly on his door. At the same time a voice unmistakably African called persuasively: "Misto Mobley, I say, sar! Is you up?"

Mr. Mobley knew the voice, though at the moment he made no reply. It was that of the kinky, écru-tinted youth who served in the lodgings as hallboy. At the club and downtown, though, Mr. Mobley often if idly referred to the youth as his valet. Possibly it was in the same spirit that Mr. Mobley referred also to the lodgings as "bachelor apartments," which, of course, was strictly the case, all the tenants being, in fact, bachelors. Next door to him was a lady who helped in a manicure parlor, while the one in the room at the rear was also unmarried. She was a settlement worker, so she said, and once Mr. Mobley had asked her out to dinner, but only once. She had, in short, ordered champagne. Other bachelors included a self-supporting book-agent who invariably came in late, and a fourth single person who sang scales from eleven A. M. onward, or whenever her windows were open. There were also five men.

Mr. Mobley knew none of the men. Frankly, he had long decided they were queer. At any rate none in the least looked like a clubman or of any sort he'd care to introduce at his own club, much less at the brokerage office. As he justly reflected, probably not one among the lot had money enough to margin a hundred shares of Allis-Chalmers or, say, a similar lot of Bay State Gas. Circumstances were such, however, that Mr. Mobley was presently to meet one of his fellow lodgers and then under the most unusual conditions.

But to return to the lad outside.

Persistently the youth kept up his tattoo on the door, at the same time iterating: "Misto Mobley! Misto Mobley! Ain't you hear me yet?"

It would have been difficult to avoid it. "Say, do you think I'm deaf?" Mr. Mobley presently inquired. As if still further to reassure the boy he added also that should he knock again he, Mr. Mobley, would take it on himself to open the door and "crock him one on the bean."

Instantly the knocking ended. "Yessar! yessar!" rejoined the boy; "only Mis' Mangin leave you a message, sar. She say she ain't see you yistirday."

Mrs. Mangin was the landlady. If she had failed to see Mr. Mobley yesterday, the same, however, could be said of the day previous as well as of others before. It was for almost a fortnight, in fact, that the lady had failed to see her lodger. "Eh, what?" he exclaimed. Naturally with so important an engagement at hand the interruption was provoking. However, when he spoke again his voice was more contained. "All right," he drawled indifferently; "tell the madam I'll be dressed and down in—let me see—why, in half an hour. Now be sure!" he directed, making it explicit; "say I'll be down in thirty minutes just!"

It took Mr. Mobley much less than that, though, to dress himself. In not more than a few minutes—five at the utmost—he was not only fully attired, but had on his hat and topcoat too. Afterward in a like haste, though quietly, Mr. Mobley opened his door, and having looked out stepped into the hall and closed the door behind him. In the same quiet way then—all of which, no doubt, was with a view to avoiding awakening the other tenants—he tiptoed down the stairway, and had just noiselessly opened the street door when a voice rather loudly spoke to him. "Mr. Mobley!" said the voice, then climbed a few octaves to say again: "You there. Mr. Mobley-ee-ee."

Apparently he did not hear Mrs. Mangin. Closing the door, in an incredibly brief space of time he reached the corner, which at the same brisk pace he turned. Obviously his appointment with the landlady had escaped him, or vice versa, as the case may be. As for the lady herself, however, having failed to attract his attention, she at once mounted to Mr. Mobley's bedchamber, where somewhat breathlessly she opened Mr. Mobley's trunk and all his bureau drawers. This, of course, restored her. At any rate, after she had counted over Mr. Mobley's shirts, his stock of knit silk ties and the four fancy waistcoats he wore in the Wall Street business—these and, finally, the other trousers he had placed under the mattress to stretch—Mrs. Mangin placidly sat down to half an hour's enjoyment of the letters in Mr. Mobley's trunk. Afterward, or when she had found on the bureau two dimes and a cent, which she pocketed, Mrs. Mangin went downstairs.

* * * * *

It is undeniably the truth that Mr. Mobley's morning engagement was of the utmost urgent importance. Not only must he be down in the banking quarter at nine o'clock or sooner but if for any reason he should be late the most serious consequences might ensue.

As it is well known Wall Street men transact a great deal of business at their clubs. Mr. Mobley was no exception. The club to which he himself belonged was, as he would have told you, a "small but exclusive affair in the Avenue"—though which avenue he omitted to denote. Be that as it may, however, Mr. Mobley was often at the club, for like so many other Wall Street men he was a capital type of the good fellow, the thorough man about town. An adept at both pool and billiards—pool in particular—he stood always ready to shoot you a string or roll a frame or two—"just to pass time, you understand!" or, say, for five a corner—at pool a dollar the frame, no more.

Auction or straight bridge, though, were his real diversions, the stakes being a dime a point. Of course some may think this high, but, on the other hand, the game rarely grew expensive—at any rate not for Mr. Mobley. Possibly this was because he played always with caution, then only among convivial friends. As for himself, though, Mr. Mobley rarely took anything—that is, not anything strong—anyway not while playing bridge.

But the night before there had come a lapse in his usual strict sobriety. At midnight, being somewhat ahead of the game, he had ordered for himself anchovy toast with a small one in a bucket on the side. So far so good; but the toast proving salty he had signed for a second pint, then a third. The result was almost immediate, for ere long he had begun to see two sets of opponents as well as two partners in place of one, and to find himself holding double hands when but a single hand had been dealt him. It is very difficult at bridge to play double hands, especially when one is purely imaginary. Consequently at three A. M., or when his partner announced somewhat abruptly that he'd had enough, Mr. Mobley had arisen $54.70 to the bad. Moreover, having proffered an I. O. U., as was his custom when he lost, he was astonished to hear the other gentlemen say "Nix," this being pronounced with the inflection strongly rising. Either cash or a check were the terms indicated, so rather than prolong the argument he had written out a check. It was for the full amount—$54.70.

Of course the transaction was trivial. Nor was the amount one that any Wall Street man would stop to consider seriously. Mr. Mobley himself, in fact, had more than once spent that much or more in merely dining some customer—that is, some customer he thought worth it. But of late there had come a change in this and other marks of Wall Street's well-known liberality. A period of retrenchment was in force—due, it appeared, to the market's serious technical position—in other words to the fact that the public was not "coming in." The truth was, the public's attitude fully reflected the well-known Wall Street adage, "The boobs buy only at the top," so that in Mr. Mobley's own case at any rate, though he had lately made quite a few new friends, not one of the lot had accepted his cordial invitation to drop in and see him.

Digitized by Google

The result, consequently, was disconcerting. To meet his night's draft of $54.70 Mr. Mobley had in the bank a balance of approximately seventy-nine cents ex interest to date.

"Gad!" exclaimed Mr. Mobley annoyedly, and buttoning his coat about him he hurried even more rapidly toward the near-by subway station. Of course overdrafts are by no means unusual in Wall Street and ordinarily he need not have worried. In this case, however, it was undesirable to take any chances, as only ten days before a check of his had gone to protest, greatly to his annoyance. What is more, the Mr. Bannerman who'd made such a fuss at the time was the same Mr. Bannerman who held his present draft of $54.70. If it came back there might be trouble at the club, Mr. Bannerman having, in fact, said so, and Mr. Mobley hated to think of it. For one so fond of bridge—pool and billiards too—the club was very valuable. Consequently, as will be seen, the morning's appointment was in every way vital, because if he failed to arrive at Mr. Bannerman's office at nine o'clock or sooner Mr. Bannerman might deposit the check in his bank.

To his satisfaction now Mr. Mobley saw that the clock in the subway station marked only eighteen minutes past. This would allow him ample time to reach Wall Street at the appointed hour, and greatly encouraged he stepped briskly up to the ticket window. No doubt, as he told himself, Bannerman would be clubby enough to give him a few days' grace on the draft, and with this reflection to cheer him he was feeling in his pocket, when with a start he paused abruptly and then gave vent to a muttered exclamation. Afterward Mr. Mobley began a hasty yet systematic search of each of his pockets in turn.

The search proved fruitless. That is to say, it revealed nothing more noteworthy than a few toothpicks, a crumpled tobacco coupon, a latchkey, an orange stick, a mustache comb and a bit of dog-eared pasteboard. This last, which was a battered visiting card, bore on its face the penciled legend, "I. O. U., $61.80," beneath which were ringed the giver's initials. The gentleman was a Mr. Osgood, a fellow club member as well as a Wall Street man. Briefly, Mr. Osgood had charge of the customers' room in a downtown brokerage office, so naturally his card, the I. O. U., was now quite yellow from age. With a snort of disgust Mr. Mobley was, in fact, about to tear it into bits when he reconsidered, and replacing the card in his pocket again resumed his search. At once, with a gasp, he remembered. That morning during his hasty dressing all his money had fallen to the floor and he had picked it up and had placed it on the bureau.

It was still there back at Mrs. Mangin's.

Only two courses remained open. Either he could walk or he could appeal to the ticket agent. Reflection told him, of course, that to walk was impossible. Wall Street was four miles away, and though indeed he must be there without fail at nine sharp or sooner Mr. Mobley realized that Wall Street life had not fitted him to do a Marathon.

All Dabblers in the Market Look for Action, and Mr. Hoag Had Got His

So desperately he approached the window. In his best manner and with the most dignified speech imaginable he stated the case. To his distress, however, the plea was received with coldness. "But you don't understand!" he warmly protested. "I have to be in Wall Street at nine o'clock—at nine sharp!" he repeated. "My engagement is of the most urgent importance!"

"Yaas, that's what they all say," rejoined the agent dryly, and in the same tone invited Mr. Mobley to stand aside.

The case grew desperate. Already the clock marked twenty-five after, its hands moving on with dispassionate regularity. "Gad! but don't you see?" cried Mr. Mobley for the fourth time, and he had just begun a more complete and graphic appeal, when suddenly, with a gasp of relief, he broke off and rushed hurriedly from the window. Coming down the stairway was a well-known figure, a familiar face and form.

"Why, Mr. Hoag! good morning! good morning!" he exclaimed, adding exuberantly: "This is indeed fortunate!"

Under any other than the most unusual circumstances—say, one like the present, or, for example, a midnight fire, a burglar or the like—Mr. Mobley might not have recognized the newcomer. It was, in short, a fellow lodger at Mrs. Mangin's, a young man who, as Mr. Mobley was aware, had the first counter from the door in a lower Broadway hatshop. Now, however, it being no time to split straws, to quibble over petty social quirks, Mr. Mobley, after warmly greeting him, made known his predicament. "You see, I've got a big appointment this morning," he explained; "otherwise, of course, I'd go back and get my roll of bills. Yes, I left them on the bureau too!" he added seriously. However, if the hat clerk would buy him a subway ticket, Mr. Mobley said he'd see to it that his secretary returned it by mail the moment he got to the office—or, rather, offices.

Hoag, the clerk, was delighted. Unquestionably he seemed flattered to be able to help Mr. Mobley, who, as he knew, held some important post in Wall Street. "Say, now," he inquired awkwardly, perhaps out of the fear of seeming obtrusive, "are you sure a nickel's enough?"

Mr. Mobley was quite sure.

"Still," he added tentatively, somewhat astonished to see the roll of banknotes the clerk produced, "if you could happen to spare two."

Hoag not only could spare the amount but did so willingly. Furthermore he insisted on buying the tickets as well, to which Mr. Mobley could make no reasonable objection. At any rate he said nothing, and Hoag having dropped the tickets in the box he thanked him briefly and abruptly hurried aboard the first incoming train.

As there was but one seat in the car Mr. Mobley took it. However, in no wise abashed or in the least conscious he was intruding, Hoag followed and helped himself to a near-by strap. At the same time, oblivious of how much he might intrude, he engaged Mr. Mobley in conversation.

"Say, old man," began Hoag confidentially, "I'm real glad now to have met you. Yeh! for quite a time I've been meaning to knock at your door some night."

Already Mr. Mobley had drawn out the orange stick with which every morning he whiled away the journey downtown. "Yes?" he murmured indifferently.

Not at all rebuffed the salesman, who was a round-faced, near-sighted fellow, now blinked smilingly through his glasses. "You see," he explained, "it was the old lady that sicked me on—Mrs. Mangin, you know!"

"Mrs. Mangin!" Mr. Mobley looked up sharply, his orange stick for the moment unemployed. Of course it was scarcely possible that the landlady had divulged anything confidential, but if she had —— "Say, look here!" began Mr. Mobley, his tone curt, when abruptly he bit his lip. Unconscious of his fellow lodger's air Hoag had interrupted, and to Mr. Mobley's inconceivable astonishment was shyly saying something or other about "investments."

"What?" said Mr. Mobley, his tone exclamatory. That one of Mrs. Mangin's lodgers should have reason to discuss investments seemed, on the face of it, almost farcical. Nevertheless such was the case. "Sure

It Was Rotten, He Told Himself, That With All the Money Coming to Him There Should be Any Hitch About It

thing!" assured Hoag, his manner perhaps a little conscious. "Last month I had a little money coming in. An uncle of mine died that was in the upholstery trade, you know!" Mr. Mobley didn't know, but now he was listening absorbedly. "Yass," added Hoag; "it was quite a round sum!" Letting go the strap he leaned down and at the same time lowered his voice to a confidential whisper. "More'n a thousand plunks!" said Hoag, his tone important.

It seemed incredible. Putting up his orange stick Mr. Mobley hastily moved along in the seat until there was ample room for two. "Sit down, Mr. Hoag," he said; and Mr. Hoag, nowise unwilling, sat down. "Now in regard to an investment," said Mr. Mobley, and loudly cleared his throat—"in regard to that it's just possible—barely possible, of course—that I may be able to help you. Tell me," he inquired, "do I understand you to say you already have the money in the bank?"

. . . . . .

It was just nine when Mr. Mobley entered the Broad Street offices of Rooker, Burke & Co. Despite the hour, however, Mr. Mobley no longer seemed so hurried as he'd been. The fact is, he'd decided to postpone his visit to Bannerman. Another more important matter now engaged him, for frankly it was a most excellent and unexpected piece of good fortune he'd stumbled on that morning. Besides, as he also reflected, his check was not likely to come through the clearing house before the following day.

In the customers' room only two others had arrived. One of these was the quotation clerk—the youth, that is, who sets up the figures on the priceboard. Tossing him a nod Mr. Mobley ignored the other early comer—a Mr. Pingree, who sat ensconced behind the pages of a newspaper—for though Mr. Mobley had himself introduced this client to the firm he now had little use for him. Months before he had given Mr. Pingree a tip on Reading; but while the tip had proved good and Mr. Pingree had made three points profit he had neglected afterward to come across with the usual acknowledgment, a percentage of his winnings. "A tin horn—a welsher!" Mr. Mobley thought him.

Crossing to a ticker that long before had begun to grind out the London opening Mr. Mobley glanced thoughtfully at the tape. It was the same old story: things were as stale as dishwater, and turning away he was biting his nails in deep thought, when Mr. Pingree first loudly cleared his throat, then spoke. "Say, Mac!"—it was Mr. Mobley he addressed—"seen this yet?"

For a moment Mr. Mobley didn't answer. He was pondering whether it would be worth while or only a waste of time to get after Mr. Osgood, the fellow clubman and Wall Street operator whose I. O. U. he had in his pocket. If Osgood could be made to pay up Mr. Mobley would need to worry no longer about the Bannerman draft, but could give all his attention to a matter that looked extremely promising. After a pause, however, he turned to Mr. Pingree. "Seen what?" he asked.

Holding out the newspaper Mr. Pingree pointed to an agate paragraph set under the heading "News for

Digitized by Google

Investors." It read: "Hocking C. & I. looks like a good gamble. From the undercurrent of activity in the stock developments may be anticipated."

If they were it was news to Mr. Mobley. However, one cardinal rule among Wall Street financiers is that if you know nothing never show it. Consequently, while he busied his wits trying to recall if he'd heard anything Mr. Mobley gazed at his former client knowingly. "Well?" inquired Mr. Pingree, "how about it?"

Still mentally active Mr. Mobley maintained his knowing air. "What's it to you?" he asked lightly.

Apparently it was much. Mr. Pingree was a middle-aged person with a lantern jaw and a long, pendulous nose, which in moments of perturbation he was accustomed to caress vigorously. Now having done this with even more than his usual animation, he also thrust a hand into his trousers pocket and loudly rattled his loose change. "Say, Mac!" he earnestly drawled, "if you really know something——"

One might well infer from Mr. Mobley's manner that he knew much. "You don't mean to say," he returned impressively, "that you haven't heard?"

"Heard what?" instantly demanded Mr. Pingree, his air alert.

Mr. Mobley put on an air of patronizing unconcern. Though he had himself heard nothing, of course, to be mysterious, as his Wall Street training had taught him, always lends one distinction. Consequently with a smile he turned his back on Pingree and moved off toward the offices in the rear.

Mr. Pingree, however, was not so easily rebuffed. "Here, you hold on!" he protested. Grasping Mr. Mobley by the elbow he observed urgently: "Say, you know something and I want to hear it." In a punk market like the present, as Mr. Pingree further observed, one had to scratch hard for dinner money, so if any melon was ripe to be cut he meant at all hazards to have a hack at the fruit himself—"and, well, here's the facts," abruptly added Mr. Pingree. "You put me wise and I don't mind saying I'm ready to do the handsome!"

This, as Mr. Mobley would have phrased it, was surely "talking turkey." However, until he'd browsed about a bit and heard the dope on Hocking it would never do to commit himself. So freeing his elbow from Mr. Pingree's convulsive grip he opened the door beside him. "You'll have to wait, Pink," he curtly announced. "I don't mind saying I know what's up, but I'm too busy now to stop. You see me later." Then he shook loose the fresh grip Mr. Pingree had on his arm and closed the door between them.

Once he was alone, however, Mr. Mobley's pressing urgency abruptly seemed to end. "Well, and what do you know about that?" he murmured to himself. "Luck? Why, I'm smeared with it!" he exclaimed, and leaning up against a counter he thoughtfully pulled out a toothpick and as thoughtfully employed it.

Hoag first, now Pingree too! However, the situation, unique as it was, required care. Of course in Hoag's case the matter was more or less easy, since the dub, as Mr. Mobley assured himself, would invest his thousand whichever way he was told.

Nevertheless, though this was so Mr. Mobley felt as much concern as if the money were his own, the fact being that he'd already arranged to be paid twenty per cent of whatever Hoag might win. The arrangement, however, though excellent, was defective in that before there could be any winnings, any bonus, Mr. Mobley must first pick a winner. And knowing Wall Street he frankly confessed—though only to himself, of course—that in calling the turn on the market he stood about as much chance as, for instance, a blind man up against a phoney faro case.

However, with Pingree the chances were far better; they were only two to one. Pingree had himself named the stock, Hocking, and, as was obvious, Hocking could do but two things—either go up or go down. To decide which would be easy he need only flip up a coin or——

A loud and startling gasp burst suddenly from Mr. Mobley's lips. "Holy smoke!" he cried, then instantly checked himself. Afterward, with a sly look about him, Mr. Mobley clapped himself on the knee, and flinging open the door rushed back into the customers' room.

"Say, look here, Pink!" he directed, his voice forceful.

Mr. Pingree had again ensconced himself behind his newspaper. Earnestly, with the utmost diligence he'd been searching its columns for some other reference to the mysterious activity in Hocking, and alive now to Mr. Mobley's manner he followed him hastily into a near-by corner.

"Listen!" said Mr. Mobley as he grasped him by the coat lapel. "You keep this under your hat now!" he ordered authoritatively, and added: "The fact is, yesterday for a few moments I saw old Cornell Roberts. Do you get that now?" he demanded meaningly.

Mr. Pingree got it fully. After savagely tweaking his nose he ejaculated "Sho!" emotionally and not without reason. Roberts was one of the Street's heaviest operators. Moreover, it was quite true Mr. Mobley had seen him. He had sat less than ten seats away from him in an uptown subway train, though this detail, for some reason, Mr. Mobley suppressed.

"By heck!" exclaimed Pingree with great excitement. "You don't mean they's a pool operating in the stock?"

"A pool?" If such were the fact Mr. Mobley hadn't heard of it. However, the suggestion made good material. "A pool?—why, of course!" he retorted. "Ain't that what I'm telling you? Now, understand," he added sharply as Mr. Pingree sought to edge away, "I'm not giving you the tip for my health. You'll have to fork over twenty per cent of your profits!"

A sly look had drifted into Mr. Pingree's eyes. "Twenty per? Say, you've got a nerve! Nix!" said Mr. Pingree all in a breath. In brief, having obtained, as he thought, Mr. Mobley's information, he had decided to make use of it without paying any bonus whatever. "Huh!" he grunted. "Pay twenty per when I knew as well as you the stock was going up? You must take me for a rube!"

Mr. Mobley, however, enjoyed too wide an experience in Wall Street practice to let himself so easily be outwitted. "Oh!" he remarked; "so you think, do you, that it's going up?"

"Hey, what!" exclaimed Mr. Pingree, startled. "You don't mean it's going down?"

A light, mocking laugh answered him. "You find out, Pink!" retorted his tormentor, and turned to walk away.

The sweat started on Mr. Pingree's brow. "Say, now," he abjectly murmured, "I was only fooling, Mac. Of course you'll get your twenty per if only you tell me what to do." Mr. Mobley, however, was not so easily placated, for if there was one thing he detested more than any other it was to have some one try to trick him in a money matter. All Wall Street men have this feeling. "Oh, come now!" pleaded Pingree abashed. "Just tell me—shall I buy or sell?"

Mr. Mobley meant to have held off a little longer, only at that particular moment he saw the door open to admit a familiar figure, a man who entered shyly, with embarrassment. It was Mr. Hoag, of course, and this being his first visit to a brokerage office it was only natural he should feel timid. Hurriedly Mr. Mobley turned to the now miserable Mr. Pingree. "Ain't you going to tell me, Mac?" Pingree was droning. "What's the card now—buy or sell?"

There was no time to be lost—Hoag was drawing near. "Sell!" said Mr. Mobley. "Sell!"—and instantly Pingree made a bolt for the cashier's window. Over his shoulder, as he turned to the hat clerk, Mr. Mobley heard the man give his order. It was gasped out wheezingly—"Say, sell me a hundred Hocking Coal! What price? Any price, of course!" vociferated Mr. Pingree. "Sell it at the market!"

"Pshaw! the piker!" Mr. Mobley murmured to himself. A hundred shares was nothing but a shoestring; but though disappointed, not to say disgusted, his face and tone were both urbane as he shook the hat clerk's hand. "On time, I see," Mr. Mobley uttered affably, and as genially added: "That's right! Promptness always pays, Mr. Hoag." Also in the same bland tone he inquired whether Hoag had his check made out.

It was not only made out but certified, as Mr. Mobley had requested. The salesman's hand trembled slightly as with a nervous little laugh he gave it up. "Sit down, Mr. Hoag," said Mr. Mobley kindly, and having closely examined the paper to make sure its indorsement was correct he briefly explained the investment he had in mind.

It was, as he said, a most attractive security. The stock was an active industrial, he announced, one whose fiduciary obligations were backed up by the most valuable commercial concessions. Though at the moment, of course, it happened not to be on a dividend basis Mr. Mobley was still in a position to say that shortly this would be arranged. Before he could say more, however, Hoag interrupted with another nervous giggle. "Say," he inquired, as he wet his lips, "am I agoing to buy or—er—am I going to sell?"

"Eh, what?" exclaimed Mr. Mobley, astounded.

"Why, you see," said Hoag uncomfortably, "one of the boys up to the store he was telling me there's only one way to make money in Wall Street. He says only the rubes buy stocks. Them that's wise to the game they sells 'em!"

For an instant a frown clouded Mr. Mobley's brow. That he was displeased was evident; inwardly he was filled with agitation. "Oh, well, of course, Mr. Hoag," he said curtly after a thought, "if you prefer some clerk's advice to mine, why here's your check!" In fact, he almost handed it back to him.

Hoag was at once all apologies. As he protested, his manner quite humble and abashed, he trusted implicitly to Mr. Mobley's judgment. He, in brief, asked nothing more than that Mr. Mobley would say, when he was ready, how the money had been invested.

Accepting the apology Mr. Mobley consented to tell him exactly. As the transaction was an investment it meant, naturally, a purchase not a sale. "The fact is," said Mr. Mobley in a tone of the most impressive revelation, "I am buying for you on ten points margin—ten! do you get that?—and at the market—the market, too!—one hundred full shares of the Hocking Coal and Iron Company."

It was a sterling investment. No one, indeed, in the least familiar with Wall Street's familiar finance can for a moment doubt its excellence. It was, in short, a transaction that could not lose—or not for Mr. Mobley anyway; for Hoag having bought and Pingree having sold, one or the other was bound to win. In other words, whether the stock went up or down Mr. Mobley had assured himself of his bonus of twenty per cent.

With some difficulty he repressed a strong desire to laugh. However, feeling he could not repress it long Mr. Mobley hurriedly escorted Hoag to the door and, having relieved himself with an inward chuckle, he bustled over to the cashier's window. There he turned in the check and its attached buying order. "Another boob's shoestring on Hocking," he smiled; and he and the cashier having

The Gifted Master of What You Might Call Parlor-Magic Oratory

The Modern Tom Tuckers

ILLUSTRATED BY PETER NEWELL

IT IS at this period of the year, when the winter solstice has finished solsticing and the official goose-bone is wearing itself to a thin and pallid shadow trying to live up to its November prophecies, that the dinner habit reaches its apogee, or, you might say, its height. In a case like this, however, where you are dealing with a subject so diffuse and so nifty, I would prefer apogee as being a more stylish word and one sounding as if it had been put up on a curling iron.

Nowhere on this hemisphere, however—and as a nation we are notoriously prone to dining and giving of dinners—does the apogee reach such an apogeewhizful altitude as in the city of New York. In New York there are countless societies, clubs, leagues and organizations that apparently exist for the sole purpose of giving at least one dinner during the winter and, wherever possible, more than one; also there are countless persons who seem to live from year to year in order to be able to attend them and to hear what is said back and forth across the festal board and among the festal bored at the conclusion of these dinners. Other towns may have a few professional after-dinner speakers, but New York has them by the uncounted phalanx. Their name is Legion—Cicero Hannibal Legion and Michael Angelo Legion and Patrick J. Legion, and so on down to Tommy Tucker Legion, the lyric barytone who sings for his supper instead of talking for it.

It has been said that, as a community, New York does not care for music; and also it has been said that oratory in New York is practically a dead art. Both of these are erroneous assumptions. New York likes music—loud orchestral, instrumental music—with its meals, and after its meals it then craves oratory—craves it in large, solid, indigestible, insoluble chunks and dornicks. Hence the presence in New York of the most extensive, the most diversified and the most constantly employed school of after-dinner speakers in the whole of the habitable globe.

Troupes of Verbal Prestidigitators

THE soil and the climate of this country are most suitable and fruitful for the production of a certain style of orator. I refer to the gifted master of what you might call parlor-magic oratory, who is prepared at all times to rise before any audience and turn back his cuffs to show he has no mustache to deceive you, and from an empty high hat—in many cases the empty high hat being on his head at the time—to produce the kicking white rabbits of humor, the sprouting flower-pots of poesy, the scented nosegays of sentiment, the screaming spread-eagles of patriotism, and eight or nine hundred yards of the red, white and blue ribbons of miscellaneous thought. Or, employing another simile, you might say he is the volunteer fireman of oratory who sleeps in his elocutionary pants and at the first tap of the gong slides down a pole into his gum boots of eloquence, throws the slicker of Demosthenes over his shoulders, and in another instant is off and away to the scene of disturbance, leaving in his wake sparks, fireworks, burning brands, live issues and the general atmosphere of an unsafe and insane Fourth of July. He is, commonly speaking, a lawyer by training and a candidate for office by profession. He can and will deliver offhand a few appropriate remarks before any gathering and on any occasion, from the laying of the cornerstone of the new Carnegie Library to the cutting of the first watermelon of the season. And in due course of time he discovers that the place of his birth has grown too cramped, cribbed and circumstanced to contain him and his talent both at the same time—and he emigrates to New York.

There he notes that oratory is not much employed in politics, there being another political argument very popular in New York which speaks louder than words and can be exchanged for food at any grocery store. Nor is it so very popular for use in the law courts, because, as a general proposition, the jurors are all more or less wearied business men who desire to get the verdict off their chests and start home before the subway rush begins; and the most successful pleader is the lawyer who can tot up the net results like a patent adding machine and pass out the totals like a cash register. So our Young Man Eloquent eventually finds a proper outlet for his talents as an after-dinner speaker, and it is a good, steady winter job.

It is estimated that between November fifteenth and March fifteenth there are, on the average, fifty dinners of a more or less public nature taking place in New York every night in the week except Sunday night. As for the amount of wit, invective, satire, sarcasm, salve and balm that is spilled at these functions on any given evening no one—not even the genius who wrote the Lord's Prayer on the back of a postage stamp, nor his uncle, the mathematical wizard who dedicated his life to approximating the number of seeds in a prize pumpkin for a cash bonus of five dollars and a patent clothes-wringer thrown in—ever had the patience to figure that out. There is hardly a hotel or a restaurant of any size where, in the season which is this season, at least one dinner with toasts and a set program of speeches is not taking place every night. There are large hotels, like the Waldorf and the Astor, which make a specialty of the thing, where from three to ten different dinners will often be going on simultaneously under the same roof at the same time. A three-ringed circus, with elevated stage and a hippodrome track, is nothing to it—absolutely. To begin with, some state society or some county society will almost certainly be having its dinner this night. This is a good, safe bet, because in New York there is a separate society for almost every county in the state and one for almost every state in the Union. This function in all probability will be going on in the main ballroom, with assembled beauty gazing down admiringly—and hungrily—upon assembled chivalry feeding itself at the tables. In the Red Room some Greek-letter fraternity is making merry and grease-spots on the carpet; in the Blue Room the Class of Eighty-Six of dear old Bergosh University is having its annual reunion; in the Green Room the Association for the Propagation of One-Piece Union Suits is holding forth and so forth with wine, wassail, song and the yearly report of the corresponding secretary; in the Pale Mauve Room the Society of Lineal Descendants of Hiawatha are imbibing copiously of their tribal laughing water at four dollars the quart; and in four or five other rooms of other and various colors are to be found four or five other groups, clubs, coteries and corporations, each with its own separate menu, its own separate corps of waiters in white cotton gloves too long in the fingers, and—most vital and important of all—its own performing troupe of after-dinner speakers.

The lobby of one of these hotels, as the shades of evening fall and the clans begin to gather in to be fed and talked to, is a sight worth seeing. The practiced eye has no difficulty whatsoever in picking out the different types as they pass through. There is the toastmaster, burdened with responsibility and a large mass of typewritten MS., which is short for manuscript and also short for mess, if anybody should ask you. There are the two custom styles of professional after-dinner humorists, each wondering whether the other hasn't been stealing his best stuff—one of them being burbly and unctuous and rich in proteids and butter fats, and the other being long and lean and mournful-looking, he having learned through long practice that his wheezes go best when issued from a face wearing the expression of an undertaker's assistant. There is a guest of high honor culled from some foreign consulate, who has sundry decorations upon his shellacked shirt and is immeshed in whiskers until he makes you think of a de luxe edition of that sterling work, Alone in the Jungle.

Among Those Present

THERE is also the celebrated Judge Dope, imported at great expense from a far city, whose toast is The Ladies—God Bless 'Em!—and who is therefore prepared to talk for about forty minutes on the tariff with particular reference to Schedule K; and also there are Congressman Coma and General Stupor and Major Laffan Gass, the noted wit, and Professor Morphine and Doctor Opiate, each with a speech in his system and a firm intention of working it off before it begins to mold on him. There is a reporter for a morning paper, remarking mournfully to himself that it looks like the same old bunch of junkdealers and the same old line of dope all over again, and trying vainly to elude divers distinguished gentlemen who come, one by one, offering him full transcripts of their remarks and each in turn urging the representative of the press to please remember that the middle initial is G and not K—that annoying mistake having crept into print several times lately. And finally there is a ravening horde of plain and fancy members at large, gentlemen who have come with a dress suit and an appetite, both well hollowed out in front, a high hat apiece and carfare home. This last group is bound to include the stout person who gets his dinners confused with aquatic sports and pastimes, and after imbibing his soup like a man bailing out a boat and feeding himself with the Australian or overhand crawl stroke, will go to sleep just as the speaking starts and not stir until the waiters begin to turn the lights out. Nor must we forget the acutely intellectual and skeptical diner. He will be there surely, needing only to be bound in half leather and to have a collector come round every Saturday to get the remaining installments on him in order to be a Complete Encyclopedia and Compendium of Human Knowledge. He is prepared to challenge the first erroneous statement of any speaker. That is his specialty. No dinner would be complete without him, ever. He is as much a part of the fitting as is the cocktail at each plate, said cocktail being drawn from a vat of cocktails that was put up in the early fall for dinner purposes during the winter.

Just as nearly all those who go to dinners fall into certain classifications, so the veteran observer at these affairs knows by a glance at the menu what the cost will be a plate. A dinner at two dollars a plate calls for a *compôte* of something, and a three-dollar dinner provides for a

Digitized by Google

timbale of something else, and no five-dollar spread is complete without some kind of a pale pink punch that tastes like perfumery, and a choice of three kinds of deceased cheese with the coffee. Similarly a glance along the serried ranks of the guest table discloses to the practiced eye the speaker who has a fine delivery but nothing to deliver, and the speaker who has a great deal to say, but won't be able to remember any of it when the time comes—and all the other reliable brands of speakers.

It is not the present intention of this writer to undertake to describe the remarks that are made at every dinner or at any dinner, that task having been competently attended to by Samuel G. Blythe in a brochure called We Have With Us Tonight, which may be found in the back files of THE SATURDAY EVENING POST. But I cannot forbear at this time to make some mention of one person who is invariably found tucked away somewhere, probably away down at the lower end of the guest table, where the waiters coming in and going out can step on him, and can spill gravy and stuff on him and otherwise add to his enjoyment of a truly festive occasion. I am speaking of that doomed wretch who is about to make his first speech.

All during the dragging hours, when others ate and bright eyes flashed, he has been sitting there in dumb agony, waiting for the deathwatch to rap on the bars of the cell and tell him the appointed time has come. Those who cannot bear the sight of suffering have already turned away their heads in silent sympathy. Others—persons who could look on unmoved at a bullfight or even at an amateur piano recital—openly gloat over his misery.

Ever since the fatal hour when he accepted this invitation he has been alternating between a cold perspiration and a hot flush. With the passage of his allotted hours the symptoms have become so merged and mingled in him that now he has a temperature of one hundred and six just back of the ears and eight below zero in his feet. The circulation below the ankles is entirely suspended and all the blood in his body has moved up to his brain. One end of him is perishing of high fever and the other is slowly freezing to death.

If we can believe the published accounts of most executions the condemned man is nearly always able to eat a hearty meal on the eve of being launched into the unknown, but not so in this case. This person is the exception. His tongue has swollen up until he feels that if it ever escaped from his mouth he'd never be able to crowd it back in his hat. He cannot swallow solids because his heart and his lungs and other things have moved up into his throat where he can taste them, and have blocked off the entrances. He has drunk of whatever is available—the cocktail, the sauterne, the burgundy, the sherry, the champagne—but the drink has only turned cold and clammy upon his stomach. He is goose-fleshy all over. That mussed and protruding appearance so often noted in connection with the bosom of a green after-dinner speaker's dress shirt is not caused by the bad fit of the garment in question, as many have supposed. It's the goose-flesh pushing the shirt out from him.

In this way several months drag by between eight-thirty and eleven P. M. Eventually, though, he knows that his hour has come; the toastmaster has been glancing at him speculatively. He clutches the cold, stark, dead corpse of a cigar just back of the gills with a convulsive grip, as though fearing it might turn upon him and bite him. He tries to remember his introductory remarks and nothing comes to him except the last words attributed to the late H. H. Holmes. From a long way off, as through fogs and across vasty deeps, he hears his own name called. He gets upon his feet, upsetting his neighbor's demi-tasse, bows vaguely in the general direction of the Tropic of Capricorn, opens his mouth and gasps like a fish. The scene swims before his eyes, and he might swim, too, were it not that he has cramps in both legs. With an effort he reaches down into the innermost recesses of his being and hauls out, from where he has mislaid it, a voice which he can recognize as faintly resembling his own. He then begins. This is a piteous spectacle and yet one of the commonest of our modern civilization. The ancient Roman emperors tortured slaves for the entertainment of their guests, following a dinner. We do the same thing still, but instead of slaves we use inexperienced speakers, which is cheaper.

He totters through an introduction that was meant, when he wrote it, to combine wit, wisdom, airy persiflage and ready repartee in exactly the right proportions; but everything remains tightly frozen up. There isn't a sign of a January thaw. He fights his way into his main theme, and at the conclusion of his strongest paragraph, when he pauses and tries to take a drink of water out of the celery dish, there is not a sound to break the ghastly stillness except the stealthy tread of a waiter advancing with the air of an undertaker about to screw the lid down and thus bring the sad rites to a fitting close. He reaches his loftiest climax and the ice doesn't even seem to soften up any round the edges, close to shore. He is reminded of a little anecdote—they're always reminded of little anecdotes at such a time as this—and starts off in the customary way:

"It seems there were two Irishmen named Pat and Mike; and Mike said: 'Begorra, Pat, and bejabers ——'"

Still the silent bergs rear aloft in frozen majesty and the glancing surface of the glacier dazzles the affrighted vision. In despair he turns loose the prize comic gem of his collection—the one that never failed to get a laugh when his lamented grandfather told it—and then, as his tottering legs give way under him and he sits suddenly down in his neighbor's lap, he sees a fat man at the center table double up in his chair and begin to gurgle loudly. For a moment he is cheered, but not for more than a moment. For the fat man isn't laughing—he has choked on a belated olive.

However, the seeds of the deadly after-dinner speaking habit have been instilled into his nature, and he, to all

(Concluded on Page 33)

DYSPEPSY

By Woods Hutchinson, A.M., M.D.

ILLUSTRATED BY B. CORY KILVERT

EVERYBODY knows, of course, that our American digestion is the worst in the world. But we are beginning to discover, in these Darwinian days, that though what everybody feels is pretty likely to be right, what everybody knows is often not so. Our hearts are pretty likely to be right, but our heads—the less said about them the better; and our stomachs—well, that question remains to be settled. They certainly resemble our hearts much more closely than they do our heads.

We are soundly convinced that we are a nation of dyspeptics. We were told so years ago by one Thomas Carlyle, and he ought to know, for he himself had the worst case of this disease ever seen in captivity. In fact, he was one walking, animated, incarnate indigestion, and incidentally grew it on the usual food and favorite culture medium of dyspepsia—Scotch oatmeal. Talk of the scholars, theologians and statesmen who were bred on that cheerful cereal; they were not one-tenth as numerous as the dyspeptics it produced. In fact, not a little of the dourness of Scotch scholars and divines was born of it, and the melancholy induced by it could only be neutralized by the fiery exhilaration of the other brand of extract of cereal for which Scotland is famous. Wasn't it Bishop Vincent who said "Most people think themselves religious when they're only bilious"?

Practically every visitor who has come to our shores since the time of Dickens has echoed this verdict upon the national stomach, and the fewer weeks he stayed the more positive was his dictum. So we have come meekly to accept as an article of faith, amounting almost to an axiom, the idea that our national gastronomic horsepower is exceedingly and distressingly low. We have never been reckoned lacking in the saving virtue of a fairly good opinion of ourselves, yet we meekly listen to Hans Breitmann boasting of his placidity, his self-control and breadth of beam, based on his matchless digestion; or to Timothy Tugmutton, pluming himself upon his ruddy complexion, unhurried movements and peaceful length of days as contrasted with our haggard nervousness and life-shortening hustle and excitability, due to his eupepsia and our dyspepsia respectively.

Right here we are furnished with one of the most beautiful illustrations of how little what a man believes about his health has to do with his actual physical condition. For in spite of our implicit and pessimistic belief that our digestion had gone to the dogs and our nerves were rapidly following its example, not only have we made the most astonishing national growth—in our century of dyspepsia

When a Dyspeptic Stops Living on Husks, He Usually Gets Well

B. CORY KILVERT

and neurasthenia—that ever was known in the world's history, but native-born Americans of the second or third generation exceed at all ages, from infancy upward, in height, weight and chest girth any other nation or race on the face of the globe. Instead of our neurasthenic and dyspeptic population becoming an easy prey to the eupeptic and vigorous nations of Europe, the bitterest wail that goes up from London to Constantinople, from Naples to Stockholm, is that Europe is becoming Americanized in business, in transportation, and even in politics and social life and forms of government.

As for nervousness and lack of judgment and national hysteria, if anything can be found to match the hysteroepilepsy of even the most cultured and impassive classes of the English people over the rank bugaboo of the German Invasion; or the riotous excitement and medieval race hatreds of France over the Dreyfus case; or the panic-stricken terror of the German financiers over the Agadir incident and its complications, it would be hard to discover it in the last half-century of American history. We can really begin to plume ourselves on being one of the coolest and least excitable nations of modern times, and can congratulate ourselves upon having not merely one of the oldest but one of the stablest governments in the civilized world—if that be altogether a matter of congratulation.

American dyspepsia, judging by its results, would seem to be a pretty good remedy to have in the family in case of sickness. It is not unlike the story of Grant's whisky. During the famous Vicksburg campaign some meddlesome busybodies kept bringing to Lincoln accounts of Grant's alleged drunkenness and addiction to liquor. Lincoln stood it as long as he could and finally burst out with: "I wish I could get a jug of Grant's whisky and send it to some of the other generals on this side of the mountains."

As a matter of fact, American dyspepsia, like many national traits observed by new-come travelers, was largely imaginary and due chiefly to the frankness with which the freeborn American of those days was willing to discuss his symptoms in public. The German or the Englishman suffers just as much from it, only it is against his social and moral code to eviscerate himself in public. But just wait until he gets you into a secluded corner of the smoking room and breaks through the frozen crust that surrounds him, and he will talk to you by the hour about his "private indigestion."

Another thing that helped to start the fairy tale—and fairy tales need only a start to be assured of immortality—was the astonishing, and to the tenderfoot appalling, habit of profuse and accurate expectoration that marked the untamed freeborn American citizen of that earlier day. Surely a stomach that was daily being robbed of the secretion of its salivary glands could not possibly be in anything like a healthy and prosperous condition.

As a matter of fact, there is nothing the matter with the American stomach. On the contrary, it does its work better than any other national stomach, because it is better fed, and supplied at more regular intervals with larger quantities of more nutritious foods than any other stomach in the world. The digestion, like the affection of the Queen Mother in Hamlet, grows by what it feeds on. The most serious malady that the stomach can suffer from

Digitized by Google

is emptiness, and that, fortunately, the American stomach has never experienced and never will—no matter whom it has to eat to fill itself!

The position of the stomach in the body politic is really one of remarkable ancestral dignity and present responsibility; yet we treat it as if it were a scullery maid. It is the Cinderella of the body household, sitting in the half-light of the basement kitchen down in the cellar among the greasy pots and pans, loaded with all the dirty work of the house, while its idle stepsisters, the lips and the eyelids and the hair, go forth to flaunt themselves in the sunshine and dance beneath the chandeliers. It is not even considered polite to mention its name in public, except when we want to complain of it or berate it for its shortcomings.

Yet if there be any place in the body that is the proper and logical seat of the soul, it is the stomach. When we lay our hand upon our heart in sign of utmost loyalty and devotion, we are really laying it upon the cardiac end of our stomach—but of course heart sounds better and more poetical. When we are cut to the heart by ingratitude or treason the anatomical structures that are really lacerated are the terminal filaments of the solar plexus in the mucous membrane of the posterior wall of the stomach. And almost every child knows where the famous knockout or solar-plexus blow of our most popular and intellectual form of debating is landed.

Starvation Is No Cure For Anything

A man may be cross-eyed, or bow-legged, or asthmatic, or half paralyzed, or racked with all the agonies of rheumatism or neuralgia, and still be a man; but the noblest hero or most sublime saint in the world is no better than a wisp of wet dishrag when he is sick at his stomach. The martyr may sing songs of lofty devotion while being burned at the stake, but fancy any one directing a battle or writing a poem when he was seasick!

When the Jellyfish Reigned Supreme

EYES, ears, hands and feet are parts of us; but they belong to us, not we to them. We speak, and they obey. But the stomach is "us," the self of our inmost self, and when it speaks it is with the still, small voice that compels obedience. And why shouldn't it? For all things in the realm of Nature there is a reason.

From a biologic and dynamic point of view the stomach is far and away our most important and most fundamental organ. Biologically, it is the oldest organ and best friend we have. Dynamically, it is the socket into which is inserted the plug of the wire that connects us with the world dynamo, with the powerhouse of the universe. Physically considered, we are simply proteid sponges in human shape, filled with sea water, galvanized into life by the great sun currents that flow into us through our sole and only port of entry for the energy of the outside world—the stomach.

Why is a stomach anyway? Listen and you shall hear. We were not always thus. In the happy childhood of the world when life first began, ere Nature tried her 'prentice hand on man, we really lived the simple life—though we never shall again; it takes too much time. We floated happy and carefree in the tepid, brackish waters of the marshy lagoons, brainless, armless, legless, careless little gobs of animal jelly, like tiny gumdrops without the sugar, sucking in nourishment at every pore. We did not worry about our daily bread, because it was supplied to us fresh every ten minutes; nor were we aware that the world owed us a living, since we never had the slightest difficulty in collecting it. We toiled not, but we did occasionally spin—round and round by means of the cilia on our surface.

We were not quite so simple as we looked. Though we had no eyes, it was because we were all eye and could perceive the light waves and sound waves with every pinpoint of our surface, so that we literally were, at a later stage of our development, as we have often been metaphorically accused of being—all eyes and ears. We had no legs, because we were able to make a leg on ten minutes' notice at any time by simply shoving out one of our corners into a tentacle.

We had no stomach because we were all stomach; and our method of engulfing food was simply to sidle up to it, half pour, half curl ourselves affectionately round it, suck out of it what might be digestible and then gently pour away from it again, leaving the insoluble remnants outside the breastworks. No chance for indigestion, for colic, for appendicitis! What would we not give nowadays to return to such happy and dignified simplicity!

By-and-by it occurred to our gumdrop ancestor that there was virtue in the division of labor, and beginning with the most important things first, he set aside a little area of his surface exclusively for purposes of engulfing and sucking the nutrition out of foodscraps. In order to hold the food in contact with itself, this little area first hollowed itself into a dimple and later into a pouch, and behold! the father of all organs and creator of man—the stomach—was born.

As there was no way of getting rid of any remnants that could not be melted, save by the rather clumsy and troublesome process of turning the pouch inside out, it soon became desirable to have some sort of inspection service established at the mouth of the pouch. Most things that are fit to eat smell good—even to this day—and therefore a couple of little spots on the skin of the creature, just above the mouth, began to specialize in the discrimination of odors and sank into pits, and thus formed the nostrils and olfactory nerves. At the same time a mechanism for barring out that which was bad became necessary, so the band of living tissue round the mouth turned itself into a ring of muscle, and the lips and jaws were born. To control the small pits there grew up a little nerve knot, the olfactory sense, and another set of nerves to direct the mouth ring. Then from the union of these two, in order that they might work in harmony, was born a most illustrious child, the brain.

Next came the necessity of testing the food by sense of sight and of seeing the dangers into which the body was led in pursuit of it, and two other little spots upon the surface above the mouth specialized on the light waves, and sinking into the body mass became the eyes and the optic nerves. A little later the sense of hearing was demanded for the same purpose. Two other little sensitive patches on the skin devoted themselves to the sound waves, shut themselves off and sank into the deepest parts of the head-end of the creature and became the ears and the auditory nerves. All these were successively coupled up with the nose-jaw combination.

The mouth-end of the creature became the head-end, because it was most frequently poked into danger. Then a department of superintendence of all these different and occasionally conflicting outlook departments was demanded and the cerebral hemispheres or upper brain budded out. The hemispheres have since become two-thirds of the brain total, but to this day the basal structure and main stem of the most huge and complicated human brain is composed of, first and frontmost, a pair of nose lobes and a pair of jaw lobes or ganglia, then a pair of eye lobes, then the ear lobes, and finally the balancing lobes, or cerebellum.

The stomach literally made the brain for its own purposes and use, and from a biological point of view the most highly specialized animal creature—man himself—is nothing but a cast of his own stomach. It is no wonder that we think much about our stomachs and squander gallons of printer's ink and untold cyclones of breath over our favorite foods and schemes of dieting.

A Mighty Organ Misunderstood

IT IS not always safe to judge by appearances or even by feelings. Though we hear more talk about indigestion, and distress after eating, and "misery" in the epigastric region than about any other evil that flesh is heir to, actual, definite, tangible disease of the stomach is a comparatively rare malady. Our stomach is not only our oldest organ but our most reliable, our most resistant and our best behaved. Nearly half the discomforts and disturbances that we put down as diseases of the stomach are really unselfish efforts it is making to protect the entire body or some particular organ.

Nine-tenths of all forms of so-called indigestion are not due to the condition of the stomach at all, but are caused by influences operating in other parts of the food tube or even in entirely separate and foreign parts of the body, miles away from the stomach, physiologically speaking. To attempt to cure indigestion, dyspepsia and discomfort after eating by dieting, or by methods of treatment directed to the stomach alone, is absurd and irrational.

The most distinguishing characteristic of the stomach, after its wonderful vigor and its efficiency, is its extreme good nature. Every organ in the body and every faculty in the mind can come to it with its troubles and receive its sympathy and assistance. It is the mouthpiece, the spokesman for every disaffection in the body, and sympathizes with every grievance and insult, from Welsh rarebits to disappointments in love.

The first and most frequent danger signal of the body is pain, but the next and far more arresting and fundamental is nausea. We hear of the massacre of women and babies by Indians, and turn sick and faint; the end of a log that we are handling slips and crushes one of our toes, and we sit down hurriedly, white and trembling and nauseated; we are knocked down and stunned by a blow on the head, and the moment we come to we begin vomiting furiously.

Why should the stomach take such an extraordinary and irrepressible interest in all these troubles, which concern it not in the least and in which its well-meant attempts at consolation are not only useless but a source of further embarrassment and distress? This is one of the most curious problems of biology. The only explanation that can be offered that has even a show of reasonableness is that the tendency is ancestral and a part of what may be termed the memory of our tissues.

The stomach being, as we have seen, our earliest and oldest organ and our chief port of communication with the outside world, our most serious primitive disturbances were naturally digestive ones, due to poisonous or improper food. Obviously when we were all stomach the only pain or malady that we could suffer was stomachache; and the quickest and most alphabetic method of relieving it was to empty the stomach. Apparently this quaint and childishly illogical habit still clings to us.

There is another explanation that is much more prosaic and matter of fact, and therefore probably more likely to be correct—namely, that the stomach alone of the entire ten yards of the food tube has any nerves connecting it directly with the brain. All the rest of the intestine is supplied by a network known as the sympathetic nerve system, which only indirectly and in a roundabout way, through the spinal cord, connects it with the brain center. The stomach, therefore, being the only part of the food tube that is, strictly speaking, able to feel, it becomes the mouthpiece—or from another point of view the scapegoat—for the entire alimentary canal.

The Problems of Indigestion

AS A MATTER of fact, many if not most of the distresses that we crudely term stomachache or pain in the stomach are really situated in the coils of the intestine and not in the stomach itself at all. It is also established as a matter of oft-tested medical and surgical experience that the two most sensitive structures in the body are the skin and the stomach. In an abdominal operation when the surgeon has cut through the skin, the most painful part of the operation is over until he touches the surface of the stomach.

What then are the causes of that most familiar and frequent disturbance—after headache—which the human mechanism suffers from, indigestion or dyspepsia? Though indigestion is the Latin and dyspepsia the Greek for one and the same discomfort, it is well for practical purposes to make a distinction between the two terms. As a mere rule-of-thumb distinction, for purposes of practical convenience, we term indigestion those gastric disturbances that occur fairly promptly after eating and disappear as soon as the particular food swallowed has been disposed of; while those forms of disturbance that have no special relation to meal hours and that either persist or recur at fairly frequent intervals, regardless of the kind or amount of food taken, we term dyspepsia. Indigestion, in short, is an accident; dyspepsia, a habit.

The distinction, crude though it be, is of real practical value, because it corresponds pretty closely to a wide difference in causation. The vast majority of attacks of indigestion are due, as might be expected, to the food eaten, and may be cured by getting rid of the offending meal. Such attacks can be prevented by greater care and cleanliness and more rigid inspection of food, or rarely by the avoidance of the particular thing that disagrees. Obviously there may be as many different causes for indigestion as there are qualities and kinds of food, but fortunately the problem is slowly but steadily simplifying itself in these later years in a somewhat unexpected manner. Up to twenty-five or thirty years ago, it was generally held in both popular and medical systems of dieting that there were great and serious differences in digestibility and wholesomeness between different kinds of food. One food was supposed to be suited to a particular age and sex while another equally nutritious food was held to be utterly unsuited, and it was commonly believed that people had to be extremely careful not merely what they ate, even of perfectly wholesome foods, but also how they combined the different varieties.

Now, however, we are practically agreed—with the exception of a few eccentrics who have dyspepsia themselves—that the only really important difference between foods is in their fuel value, and that the healthy stomach ought to be, and as a matter of fact is, abundantly able to digest at least ninety per cent of all the foods placed upon our tables, providing that these contain adequate fuel value, or calories, and are not inordinately bulky or fibrous. If a stomach cannot digest pork, for instance, the fault is not with the pork but with the stomach, and its

Digitized by Google

possessor ought to be ashamed of it—or rather of his bad habits of living that have brought it into such a weak and enfeebled condition.

"But," says some one at once, "why then do foods disagree with us, for every one has had bitter and convincing evidence that they do?" Chiefly for two reasons—one great and almost all-embracing, and the other very small. The first and most important is that foods, when they are eaten, often are in various stages of putrefaction or decay—as we say colloquially, "bad" or "spoiled." The second and minor reason is that certain individuals have a special susceptibility or idiosyncrasy toward certain articles of food that are perfectly harmless to all the rest of the community.

It is not too much to say that nine-tenths of all our cases of acute indigestion, acute gastritis or gastric catarrh, or colic or biliousness or diarrhea, to say nothing of cholera morbus, dysentery, and typhoid fever, are due not to the kind, or amount, or combinations of food eaten, but simply and solely to its decayed, fermented or putrefied condition. In fact, a large share of our most acute attacks of indigestion and of bowel disturbances are due to the multiplication in our own alimentary canal of bacteria and other germs or parasites introduced in the food that we have swallowed. Most of our attacks even of so-called food poisoning or ptomaine poisoning are due not so much to poisonous substances already formed in the foods—though these may be dangerous enough—as to the further multiplication and growth in our stomachs and intestines of the bacteria that have produced these putrefactions or spoilings.

What Every Nose Should Know

IN FINE, three-fourths of our indigestion is due not to the stomach or to the kind or amount of food eaten but to our carelessness, stupidity or ignorance in eating filth and poison in place of food. Incessant watchfulness and an intense, vivid and wide-awake horror of dirt and every appearance thereof in our foods, in our kitchens and upon our tables will cure—by preventing—nine-tenths of all attacks of indigestion.

It was not by accident that nature made our sense of smell the first and most fundamental of our senses, as it still remains to this day. Nothing will carry us back to the happy days of our childhood like the fragrance of new-mown hay or the scent of wild grape blossoms along moonlit woodland roads. If we would submit to the judgment of that most prominent and important of our features, the nose, every mouthful of food before we swallowed it and every breath of air before we drew it into our lungs, and if we would act promptly on its judgment, we should avoid at least half of all the evils that the flesh is heir to—either gastro-intestinal or pulmonary. Swallow only that which smells good and tastes good, and unhesitatingly reject all that does not, no matter where you are; keep on eating until you feel that you have enough, and you may trust the stomach to do the rest. This is the only "sure cure" for indigestion.

The other cause of indigestion—individual susceptibility—though far rarer, is at times exceedingly troublesome because it seems so unreasonable. "Why," protests the sufferer, "should anything that tastes as good as strawberries do and is perfectly wholesome for everybody else make my tongue swell, or my stomach burn, or my skin break out all over in hives? It is ridiculous!" Still the susceptibility exists and there is no use arguing or fighting against it, although I should not advise anybody to give up strawberries short of at least twenty trials under every possible variety of experimental conditions.

If, after careful and intelligent testing, you find to your own satisfaction that strawberries, or cherries, or bananas, or oranges, or clams, or oysters, or lobsters, or cucumbers, or melons, or eggs, or mutton, or onions, or cabbage, or tea, or coffee positively do not agree with you, just let them alone. There are plenty of other good things left.

The one thing that you must not do is to run amuck and start a crusade against the further use of these harmless and wholesome articles of diet by the rest of the world just because they do not happen to agree with you. Because you are bilious shall there be no more cakes and ale?

So far from indigestion being in any sense a modern malady it is one of the oldest in history and, instead of increasing, it is rapidly and notably diminishing and becoming rarer under civilization.

We have a cynical old proverb that God made food but the devil made cooks, and many other like ones to the same effect; and we denounce the cooking stove and the frying pan as two of the causes of modern degeneracy. We forget that they both perform one service of incalculable value, they kill the germs in our food before they can get into our stomachs. This service outweighs tenfold any trifling harm that they may have done to our digestions.

Indeed, strange as it may seem, this was probably one of the primal causes for the application of fire to food, which resulted in the invention of the art of cooking. The lower down we go in the scale of civilization, the more frequent and furious and fatal become attacks of indigestion and diarrhea, due to the eating of poisonous or putrefied food.

No wonder that sanitarians are insisting upon food inspection, and again food inspection, and always food inspection, as the most important and fundamental step in our campaign for health. It is not the length of time that even perishable foods are kept that makes them really dangerous for human consumption; it is the filthy, careless, ignorant way in which they have been sprinkled with decaying fertilizer; exposed to the dust of the streets, which is chiefly powdered horse manure; crawled over by flies that have come from garbage cans and refuse heaps in the neighborhood; handled by diseased hands, or sprinkled with water containing typhoid bacilli or summer dysentery germs. If we keep our food clean, just clean, surgically clean, we shall cut out at one stroke three-fourths—yes, even nine-tenths—of all our disturbances of the digestion.

So permanent and almost exclusive a part do "bugs" of one sort or another play in most attacks of indigestion that it is no longer considered necessary or even advisable to discontinue taking other food—providing that food be clean and sound—during the attack. Starvation is no cure for anything; seldom even a remedy. Indeed the very time the body most needs an abundant supply of wholesome, digestible food will be when it is engaged in fighting desperately against an attack of deadly germs introduced in some rotting meat or decaying vegetables. We not only feed fevers, but we also feed ptomaine poisonings and attacks of diarrhea; and a liberal dose of sound, wholesome food is often one of our best intestinal antiseptics.

The popular belief that savages in a state of nature have perfect digestions and irreproachable teeth, and are models of physical vigor and perfection generally is the purest of fairy tales, and has not a shadow more of respectable evidence to support it than has the delusion that our ancestors of a hundred or two hundred years ago were taller, stronger and more eupeptic than we are. All through savagery, barbarism and the lower half of civilization famines were as frequent as bank panics are now; and coarse, filthy, half-putrid food was ravenously devoured for at least three or four months out of each year by seven-tenths of the people. The result was a perfectly enormous mortality from gastric and intestinal diseases. As recently as two hundred and fifty years ago scurvy, a disease caused solely by the consumption of half-putrid salt meat and fish and spoiled flour and meal, with an absence of fresh vegetables and fresh fruit, raged in all the navies of Europe and devastated scores of inland country districts as well.

Three great factors contribute most to our indigestion and what we may term alimentary ill health: First, scarcity of food, particularly at certain seasons of the year; second, its corollary, the use of decaying or spoiled or badly preserved or poor food; third, monotony of diet with insufficient variety, so that the three great kinds of foodstuffs—meats, starches and fats—cannot be obtained in their proper proportions.

All of these factors the progress of civilization has wiped out or is wiping out one after the other. Our modern markets with their abundant supply of every imaginable variety of food the whole year round, the introduction of preserves and of canned goods, and the continuous supply of fresh vegetables and salads and fresh fruits have made the twentieth-century digestion the best in the world and the twentieth-century man the tallest, strongest, most long-lived and most efficient human machine that the sun has ever yet shone on.

How to Strengthen a Weak Stomach

NOW what is to be said as to those permanent, habitual, chronic disturbances of the digestion known as dyspepsia? First, that nine times out of ten it is idle to look for the cause in the stomach or even in the food. Food can cause chronic dyspepsia only by being chronically insufficient in quantity, bad in quality or monotonous in kind. In fact, the best advice that can be given in one sentence to the average dyspeptic is: Eat plenty of every real food for which you feel an appetite and watch the results.

If you are not relieved by this prescription, then you may feel reasonably certain, nine times out of ten, that the cause of your trouble lies outside of the realm of dietetics. If your dyspepsia tends to be of that unfortunate kind that is accompanied by want of appetite, then the thing for you to do is go and get one. And the only place to get it is the place where appetites, like all other wholesome plants, grow—out-of-doors.

Plain starvation, whether voluntary or involuntary, causes more dyspepsia than any other dietetic condition, and the foundation of many a boy's or girl's weak stomach or poor digestion is laid in early childhood by a system of skimping and dieting and disciplining and depriving them of the adequate supply of real foods they crave. When a dyspeptic stops living on husks and health-foods and hot water, like the Prodigal Son, and begins to eat real foods, he usually gets well.

By far the commonest and most potent cause of dyspepsia is lack of exercise in the open air; and the

THE VILLAIN OF THE PIECE

By Dorothea Deakin

ILLUSTRATED BY JOHN A. BAZANT

A GOOD place to break one's silly heart in is Marybeach. I can't imagine a more likely spot to dream vain dreams and waste one's youth and energy, thinking about sea-blue eyes and a flower face. There's a clump of Cottage Maid tulips in my garden which isn't half so delicate a pink as Hyacinth's cheeks, and there's a bed of La Grandeur not half so vivid a red as her lips.

Even before Harry Constantine came home I knew it was no good. She didn't care twopence for my garden. She thought my scholarly life a wasted one. Writing little books of essays and publishing them at my own expense was not work at all, she thought, because they did not sell and nobody wanted them. You see, Hyacinth herself was a born worker. She was always busy and she did everything well. The idea of helping me to live my idle life, looking after a big house with a dozen servants in it, obviously didn't appeal to her at all.

She wanted to overcome difficulties, to tackle big things, to clean Augean stables—to show, in short, what she could do! There was no doubt that she did most things superlatively well. Playing about in a sleepy old garden and scolding the maids when she found dust was no life for her.

And then Harry Constantine came home and told me why he had come. Marybeach was full of girls; and most of them, it is sad to relate, were loverless, for the simple reason that there weren't enough lovers to go round. It can easily be understood, then, that there was a certain pleasurable excitement in the town when it heard that Harry Constantine was coming home. Nobody remembered why he went away; but there hadn't been anything disgraceful about it. He hadn't left his country for his country's good. He had gone away to make his fortune, like the other young men; and had—if not a fortune—at least succeeded in making a decent living.

"It's certainly made a man of you, Harry," I said kindly. "You were a very lanky boy when you went away." I admired his broad shoulders and brown face very much. "It's made a man of you!"

"Yes—hasn't it?" Harry was always modest. "I was an awful waster when I went away. It's a fine life—out there in Manitoba—but it's a lonely life. It's getting on my nerves. I want to find a girl."

"Oh, do you?" said I without much enthusiasm. "Well, Marybeach is full of girls."

"The fact is ——" he went on. "That's what I've come home for, don't you know? There aren't any out there. There used to be lots of nice girls in England—too nice, some of them were. I'm afraid, though, that I am asking rather a lot."

"How?"

Harry went on:

"I mean—well—the girls were very pretty and sweet, but not quite what I want now."

"If you're doing so comfortably," said I prudently, "isn't it a pity to spoil things with the most risky of all experiments ——" I was surprised by the effect of my words.

"Drop that!" said he fiercely. "Let me tell you, once for all, that out there I've come to reverence and respect women with all my heart. There's nothing in the world for giving you a high, noble, spiritual adoration of the other sex like ——" He hesitated for a word.

"Like never seeing them?" I suggested gently.

"Like having time to think it all over." Harry was very firm. "You learn to see things in the true light out in the wilds. You learn to take a calm, sane, unprejudiced, unbiased view when you're alone from morning until night with the great heart of Nature and your own thoughts."

I gazed at him reflectively.

"You do, do you?" said I without confidence. "But on the other hand, old chap, mightn't a little too much of the rolling of those confounded prairies have upset a man's mental balance ——"

He smiled compassionately.

"I've got the right sort of girl in my mind's eye," said he. "I can see her now. I'll tell you. She's a fine, tall, healthy, handsome, cheerful, capable young woman of about twenty-four—ready and willing to become a man's right hand and comfort; ready to take the rough with the smooth, the bad with the good; ready to cheer and soothe a man when the blighted crops are a failure and his best horse has fallen down a ravine—a girl who doesn't scorn to bake and brew and wash and iron and sew and feed hens; a girl who takes delight in difficulties and courts danger like a lover; a girl whose highest ideal is to be a wife and mother and a man's best friend ——" Here he stopped for breath and laughed and sighed—and looked at me inquiringly.

"You think," he asked with a mournful blush, "that I'm giving rather a large order? You think I'm mad to suppose such a thing possible? I know the difficulties. I'm prepared to tackle a tough job. I was getting pretty desperate out there alone. I was regularly up against it. When I remember what the girls were when I went out ten years ago I feel pretty sick and hopeless. They were a feather-headed lot! From what I remember, they never thought about a thing but dancing and tennis and fine feathers, and would as soon have thought of playing football as doing chores."

"They do play football!" I pointed out.

Constantine rose, pulling himself up to his long length.

"Rupert," said he, "you were always a good sort of friend to me ——"

I let this pass.

"You know a whole heap of all sorts of people—especially women. I wish you'd tell me honestly whether you think I have any chance of meeting the girl I am looking for. I feel as if I was a blighted idiot to hope for such a thing. Are there any girls like that?"

I laughed lightly as I rose.

"Oh, yes," said I. "They're all like that."

Perhaps my tone was hardly convincing.

"I'm not joking," said he.

"Neither am I," I said sorrowfully. "My dear boy, you've no idea what the twentieth-century girl is like. She's beyond all words. She takes a brilliant first at college and then comes home and paralyzes her young brothers by the way she swipes their shins at hockey. She's no Amazon however. She thinks a woman should be womanly, too, and she goes in heart and soul for domestic economy, and wins prizes all over the country for cooking and clear-starching. She swims and sculls and fences until all is blue; and not only does she drive her own motor, but she understands the thing's infernally complicated machinery. Why, Hyacinth ——" I stopped suddenly. Harry's eyes brightened; but I went home and shut myself up with my new book for at least a fortnight; and, though I heard rumors of the way things were going, I kept away from it all until Harry routed me out.

"Engaged yet?" I asked scornfully. I knew the way the girls would rush at him. I wasn't going to fret about Hyacinth any more. Let her go and feed ducks and pigs in Manitoba if she liked. Harry's tone surprised me.

"No, indeed," said he distractedly. "I seem to be farther off from it than I was the day I landed. I wish you could help me."

I sniffed indignantly and regarded his six feet and brown clouded brow with a scowling eye.

"Can't you do your own courting, then?" I asked.

He flushed.

"I should jolly well think so. I'd like to see any one else offer to shove his old oar in—that's all!"

"When I Go to the Play I Always Like the Villain Best!"

"It's a Fine Life—Out There in Manitoba—But It's a Lonely Life"

"Do you find them all so hard-hearted—so difficult?"

He hesitated. Evidently he didn't wish to appear fatuous, but ——

"Oh, not hard-hearted at all," he murmured modestly. "I should hardly call any of them difficult either; in fact——" He laughed and stopped. I scowled. Hadn't I known those confounded girls would be all over him from the first moment he put in his dazzling appearance?

"Perhaps they aren't suitable?" I asked ironically. "Perhaps you can't find any one fit to receive your blighted colonial handkerchief when you choose to chuck it?"

He groaned.

"They're all suitable," he said. "That's just it. How can I propose to one without giving up the others? I can't bear to give any of them up."

"Upon my word!" said I aghast. "Well—I can assure you that you'll have to do it. You can't marry more than one—not in a Christian country."

He frowned. Evidently any levity of tone on such a subject distressed him.

"Why don't you let yourself fall in love with one of them?" I suggested brilliantly. "Then you would be blind and deaf to all the others. It's quite easy to fall in love when you once let yourself go. I could give you a few hints."

I could indeed—about the falling in. What I wanted was some one to teach me how to fall out.

"Thank you!" He stopped me coldly, and the next day something happened which threw a sudden light on the real reason of the colonial's uncomfortable state of mind.

Hyacinth took Harry and me for a run in her uncle's big green car, and the confounded thing burst up or went wrong somehow. Now I know nothing on earth about motors, and until that day I had never wanted to. I hate machinery and never could do anything with a nut or a screw or a monkey-wrench. As for carbureters and valves and magnetos—well, to put it shortly, I can only sit and swear if things go wrong in a motor. Hyacinth, however, was in her glory, of course. She was out of the car in a minute, with the engine open; and in another minute she was hunting for her tools in the box under the seat. Even in lifting off the seat I had managed to make a clumsy mess of it, and so had poor Harry. He grew very red and said something under his breath. That trying girl slipped out of her big white coat, wriggled into a holland overall and busied herself with the blighted machinery. Harry awkwardly offered to help her, but she triumphantly waved him to one side. I knew better than to do anything but efface myself. Hyacinth was equal to this or any emergency, and her slim wrists and arms were as strong as steel.

Constantine looked wretched. I laughed in my sleeve at his woebegone face. He came and stood beside me, muttering:

"Makes a chap feel such a fool! Not a woman's work! How can a man learn about motors on a Manitoba prairie? Still—to see a girl!"

"I know," said I, pretending to be full of friendly sympathy, inwardly shaking with sardonic glee.

He turned to me so sharply that I winced.

"There's no excuse for you," he said. "You live among people who eat and drink and talk and breathe motor cars all day long ——"

"Doesn't prevent me from hating them," I said shortly. "Doesn't prevent the subject from boring me to death." Here Hyacinth came round to us with glowing cheeks and a delicious smile.

"I've got it right," said she gleefully. Then she looked at Harry and the triumph faded out of her eyes.

"I'm obliged to learn a few little things," she murmured apologetically. I was amazed by her tone. "Uncle's

Digitized by Google

always teaching me," she went on. "I'm so often in the car. You see ——" She stopped, grew crimson—her eyes filled with tears. She slipped out of her wrapper and got back into the coat Harry was fiercely holding. "It seems to be all I'm fit for!" His eyes glared at me over her hat.

When the drive was over and she had once got me alone she suddenly broke out into a fierce tirade which amazed me.

"It's all wrong!" she cried. "It's all wrong! Oh, I wish I'd never learned to do anything useful. If ever I have a daughter of my own I'll take care that she's brought up to be thoroughly helpless and ornamental!"

"God knows," said I sadly, "that you're ornamental enough, Hyacinth."

Her cheeks were like an apple-blossom then, but it was a very dewy apple-blossom. Her eyes were wet too.

"Ah, but it's the helplessness that does it," said she wretchedly. "I'm so horribly capable!"

She leaned back on the garden-seat; and I realized with a pang that she had hurried me out of the drawing room after tea to make me help her. There had not been many crises in her short life which she could not deal with competently herself, but now and then a man is useful; and at these rare times it was her habit to turn to me.

I kept a gloomy silence for a long time and would not look at her. Why should I warn her? Why should I tell her that useless ornaments were no good to that infernal colonial? Why should I tell her that it was modest worth and absolute efficiency he was looking for? Why shouldn't I let her flounder on with her silly mistake? Why should I play Harry's game for him? She was foolish enough and feminine enough to fall in love with his six feet of sunburnt colonialism, and she must reap the consequences. On she went, those maddening sea-blue eyes still dewy. I wouldn't look at her. I knew too well what would happen to me if I lost myself in those blue depths.

Suddenly she abandoned all concealment.

"How can a man fall in love with a girl who always makes him feel like an incapable fool?" she cried.

"How indeed?" I agreed softly.

"A man hates to feel small."

"He does indeed," said I darkly. I was beginning to take an artistic pleasure in my part. If I was to play the villain in their silly melodrama I thought I could do it very well indeed. I roused myself to comfort her. I saw her idea and pandered to it.

"No man," I said seductively, "likes a woman to excel in the things he does himself. And as for the domestic virtues—well, no man of spirit wants to marry a pudding."

"What does a man like a woman to do?" Hyacinth asked with a piteous tremble of her lip. I hated Harry with a still darker, fiercer malevolence, and let myself go.

"A man likes a woman to be sweet and clinging and helpless and womanly," I murmured, thinking sardonically of the little log home, with the chickens and the pigs and the cows and the hens, and the washing and the ironing, and baking and brewing, and sewing and knitting and darning—and all the other trifles my young colonial had summed up so glibly. "He likes a soft, dainty creature to be waiting by his warm fireside to welcome him with her prettiest frock, and her curliest hair, and her sweetest smile. He wants a delicate creature, born to be petted and waited upon."

Hyacinth dabbed her eyes and regarded me doubtfully for a second. Had that ass gone into details, I wondered, as to the requirements of his prairie home? I hoped not.

"He wants a woman who can't lay her hand to anything useful until he has shown her the way," I went on; "a woman with perception enough to do it extremely well afterward because of the clever way he showed her how."

Hyacinth regarded me silently with a trembling lip.

"You're always very wise, Rupert," she said in a low voice. And for fear that my strength of will would refuse to hold out I got up to go. I was feeling very choky just then. The discovery of the state of Hyacinth's feelings was not a pleasant one to swallow—but I would have my revenge.

I went home and shut myself in my garden, leaving the deadly seed I had sown to germinate. My garden was always a comfort. The tulips were over now, it was true; but there was a big round bed of Spanish iris in the middle of the lower lawn which cheered me considerably—a flock of little blue-and-white-and-golden birds, poised for flight.

It was weeks before Harry came to see me again, but I noticed the change in him the minute I saw him. There was a jauntiness in his step as he crossed the lawn—an eager happiness in his eyes as he came up to me.

"I've found the Bluebird," said he ridiculously. "I've found out what life really means. I've never been happy before."

I snapped off an oriental poppy with a vicious twist of my wrist.

"Oh!" said I. "You haven't, haven't you?"

"I owe it all to you," said Harry astoundingly.

"You surprise me!" said I feebly. Any villain would feel foiled at such a moment. I did.

"You've given me back my youth," he went on cheerfully. He was about twenty-nine. "You've changed the whole world to rose-color."

"Oh, have I?" said I. It was comforting to know that I was a good fairy who had used my white magic to create a confounded pink world, full of infernal bluebirds, for Harry Constantine to be happy in.

"Hyacinth told me ——"

"Told you?" I stared; and well I might. If there was one thing Hyacinth would not and could not have told him it was the simple truth; but I needn't have worried.

"Poor little thing!" he murmured fondly. "Poor, helpless little soul!"

"What!" I cried. He smiled.

"Oh, she told me everything! She told me how she had been deceiving me. She told me how much she had wanted to make a good impression ——"

"Good Lord!" His fatuousness appalled me. He went on:

"Yes, she did. She told me she hadn't been able to keep it up. She told me how it was poisoning her whole soul—being naturally as open as the day. I knew she was open as the day, Rupert."

"Oh, yes," I murmured. "As open as the day!"

That Trying Girl Wriggled Into a Holland Overall and Busied Herself With the Blighted Machinery

"And as true as steel. It went bitterly against the grain with her to play such a double game; and she told me how she had gone to you for advice."

"She did, did she?"

"Yes—she looks upon you as a kind of elderly brother."

"I am obliged to her," said I bitterly.

"She told me how she had begged you to help her and how you had advised her to be true to herself and me."

"I remember the phrase well," said I darkly.

"To be true to herself and me—to abandon the deceit forever and tell me the whole truth."

"The whole truth!" I murmured.

Harry blushed becomingly.

"A man can't help feeling touched," he said gently, "when a pretty and charming girl ——"

"She's all that," I agreed.

"—— is so desperately anxious to please him that she throws aside her most cherished principles ——"

"Am I to congratulate you?" I cut him short, with a saturnine scowl.

His flush deepened.

"Well, I haven't exactly spoken yet. I didn't want to do anything rash. You see, there are still difficulties. I'm desperately in love with her. I wanted to take her in my arms and tell her so then and there; but—well—you remember the sort of wife I came home for ——"

"I thought you had forgotten it," said I.

"No—I wish I could; but it's always at the back of my mind even when I'm with her, and when I'm away from her it comes out and warns me. It's the deuce of a fix!"

"How?"

"You see—when she was deceiving me ——"

"You haven't told me yet exactly how she did deceive you," I reminded him.

"Well—you know, don't you, how she'd been pretending?"

"I've forgotten how she'd been pretending. I've been buried in my new book. Tell me again."

"Well, about that dinner. She said she cooked every blessed thing with her own hands. It was a jolly good dinner. A man wouldn't mind a long ride home on a dark night half as much if he had a dinner like that ahead."

I ground my teeth at the thought.

"Well?"

"She didn't do it at all. The cook did it. She can't even boil a potato. She cried when she confessed it."

"Good Heavens!" The thought of another man's having the privilege of drying those dewy eyes made me writhe.

"And that new frock—the lilac one, with pansies embroidered down the front. She said she'd made it. She didn't. It cost six guineas at a shop."

I'd seen Hyacinth making that dress. I'd even tidied the little satin case of silks for her embroidery. Yet I held my peace.

"Then those muslin curtains. She never ironed them. She doesn't even know how to make starch or iron. She burns herself with the iron and gets the starch all over her hair when she tries. She kept nothing back."

"She doesn't seem to have hidden much."

"She hates ducks. Pigs make her feel sick, and hens make her nervous—sheep too. She says that motoring destroys any natural affection for sheep or hens. She says she's afraid of cows. She says when she was out with me in the fields the other afternoon she could hardly refrain from flinging herself into my arms when we passed that black-and-white cow. I wish she hadn't—refrained, I mean—and yet——"

"A nice wife for a farmer!" I suggested malevolently.

He sighed.

"Yet it makes her adorable. I want her to cling to me when she's frightened—I couldn't fall in love with her when I thought she was so brave and clever and capable. She made me feel so small. A man hates to feel small. Timidity is charming; and yet—out there in the winter you know there are—well, even wolves sometimes. I should have to leave her alone a good deal. A woman must be able to shoot. I thought she was such a fine shot—her uncle told me she made a better bag than any of them last fall; but he lied about it. She says the mere sound of a gun makes her feel faint. It's quite a charm in its way. The women out there get so masculine that one forgets the beautiful feminine weaknesses altogether. Yet it makes it rather awkward ——"

"It must!" My heart leaped. Was he going to give up the idea? "You must look out for some one—more suitable," I began foolishly.

He nearly jumped down my throat.

"I adore her!" he said. "And, after all, love is the only thing that matters."

What was the good of telling him the utter falseness of this old-fashioned idea?

"And I never loved her until I saw her in her true light. That day with the motor—why, I nearly loathed her that day. I felt like such a fool!"

"How did she explain that?" I asked, for really I was anxious about it.

"Oh, it was the slightest thing that was wrong. It wanted only a little fuller's earth in the clutch, she said—or something trifling. She put on the overall because she knew she looked pretty in it; and she made all that fuss about tools because she wanted to impress us. She doesn't know anything more about a screw-key than you do."

"Then I'm sorry for her," said I grimly, appalled by the girl's mad plausibility. She turned out to be as competent in lying as she was in all other things. When he had gone I thought it over, but came to no conclusion. I made up my mind, however, to leave my irises and my book and go out into the world and see what was doing.

(Continued on Page 53)

THE TRAPPERS—By James O. Curwood

FORTY-FIVE MILLION dollars in dividends—that's what you've got to call it; something pretty big even when you compare it with the yearly dividends declared by the Steel Trust, the Tobacco Trust and one or two others piled on top of those. It's the dividend of the wild places, unwatered and only slightly capitalized; the one thing on earth that even Nature herself has had the power to keep out of the hands of almost but not quite omniscient man, and which she scatters, like confetti, among those who are strong enough and venturesome enough to go after it. Forty-five million dollars in raw furs! It sounds big and it is big. That was last year's production, as nearly as one can figure an industry that is carried in a very loose-mannered way in account books and ledgers. Possibly it is a million or two over or a million or two under the exact figure, for even in the matter of statistics Nature has made the fur industry a little different from all others, as she has scattered her forests and her swamps and her fur-bearing seas in so many of the out-of-the-way corners of the earth that it is impossible for man to be absolutely accurate in his accounting of things.

This one industry still declaims that romance and adventure are not yet quite dead. It insists upon remaining in a class by itself. Since two thousand years before the days of Christ the pelts of wild beasts have played their part in the lives of men. For ten centuries they have helped to make history.

Fur has played as vital and as dramatic a part as gold. It has caused wars, has led to the discovery of new lands, has helped to change the map of nations—always holding forth the lure not only of wealth but of adventure, that wild and glorious freedom which brought about the first peopling of our own unknown West. And, unlike gold, it has refused to be cornered by the selected few. The Hudson's Bay Company has tried it and failed. Paris has tried it. London has tried it. All have failed. In a smaller way a Montreal buyer essayed to "corner" the muskrat's pelt and went to smash with three hundred thousand on his hands. A Paris house held up the Russian sable, and the women turned suddenly to fox; a London buyer "cornered" beaver when a beaver coat was worth five hundred dollars, and last year beaverskins sold as low as six dollars a pelt. Next year they may go to twenty or thirty. Many believe they will.

Only a few years ago the trapper in the Canadian wilds could scarcely give a lynx pelt away and was glad to get two or three dollars for it. Then woman, fickle beauty, wanted lynx; and in a twelvemonth they climbed to twenty-five dollars a pelt. Likewise, in a season or two, this one captivating directorship of the fur industry turned from seal to fox, and that year a single fox pelt sold for as high as four thousand dollars. Then she fell in love with mink; and the royal favorite of kings and empresses—the little ermine—that was once upon a time worth more than his weight in gold, took a tumble to "thirty cents" a pelt—in truth. And so, as Lord Strathcona, head of the great Hudson's Bay Company, chivalrously says: "It isn't an industry at all. It's a romance—a romance of the Lady and the Beast."

How Prices Have Gone Kiting

IT HAS always been a romance of the Lady and the Beast, as far back as history paints its pictures for us, and it always will be. It was the little white ermine and the lady—the beautiful mistress of Grosselier—who induced the first few chivalrous gentlemen, one of them the lover of a queen, to set out with swords at their waists on their quest for fur in the New World two hundred and forty years ago; and perhaps, in setting off her lover on his romantic adventure, Grosselier's lady urged him on with the pretty sentiment of a certain lovely young woman whom I had often noticed stroking and fondling her furs as though they were alive, and of whom I asked an explanation. "They're so soft and purry, and so filled with the warmth and glisten and feel of life," she said, "that I sometimes almost forget they're dead!"

This young woman—and several million others in this country today—might well go into a panic of dismay if they realized just what the next and some say the final chapter in the romance of the Lady and the Beast is to be. The head of a great Paris house told me not so very long ago that within another ten years only women of wealth would be wearing real fur, and cold facts bear out the statement. No longer can a woman buy her twenty and twenty-five dollar mink set; she must now pay from seventy-five to a hundred and fifty dollars for a fairly good set, and on up to three hundred—and even five hundred—if she gets AA pelts from the Far North. Everything in the way of fur, with few exceptions, has gone up in the same way; and even the rabbit—the little humbug—has found his place in a score of imitations. Each year the number of fur-bearing animals decreases—each year the world's catch grows from ten to twenty per cent smaller than the preceding year; but this makes no difference in Nature's dividend, for as the supply grows smaller the price soars upward, until it more than offsets the loss. Only a few years ago the value of the world's annual catch of raw furs was about twenty-five million dollars; today it is nearly twice that, with the supply only about two-thirds as large. The Hudson's Bay Company still pays its dividends, but it hands out a sack of flour for the single skin of a lynx or a marten, and not for a pile "as high as the hunter's rifle." Within the years of my own experience lynx and fisher-cat were used for leggings; now they deck beauty and royalty at coronations. Only five years ago I met two Canadian trappers who were coming down from the North with three hundred martens, worth then about four dollars a skin. That catch would now be worth seven thousand dollars. There was a time, less than a decade ago, when from the Aleutian Islands alone there were taken one hundred and fifty thousand skins of the sea otter each year; and they were cheap. Then a sea-otter craze swept the feminine world; and the women, with the peremptory demand of their pretty lips, sent ships scouring the seven seas for them—or as many seas as they could be found in. As a result, the next to the last chapter was written in the story of the otter. Last year only four hundred skins were taken from the Aleutians, with a sacrifice of a dozen human lives; and these skins went almost entirely to the cities of Paris, Berlin, London and Vienna.

The Author on the Trail on the Edge of the Barren Lands

A few years more and the sea otter, with the black and silver fox, the marten and the lynx, will be almost as forgotten as the seal; for of what avail are warships, the treaties of nations and a score of "protective" laws against woman's demand? If she wants seal she shall have seal—until they are gone; and in spite of the treaties and warships aforesaid she wanted them, and she got them. Twenty years ago the seal herds of the Pribilofs numbered over five million head. Today it is estimated there are not more than from a hundred to a hundred and fifty thousand left. The year 1909 was a particularly hard one on the few that were left. Fabulous prices were offered. At the London and Paris auctions, not only the agents of wealth but the fashionable ladies themselves came in their carriages to bid for the pelts. It was a year of ruthless slaughter, in spite of the fact that the smoke of patrolling warships hung frequently over the sea about the Pribilofs. It is estimated that, besides the older seals, fully ten thousand baby seals died during that hunting season. Last year only half as many were killed—because there were fewer to kill. In that direction woman's adventurous poachers have done their work well.

Just now there is a great demand for the common fox, for the fox, like the skunk, is a sort of Jekyll and Hyde, which travels under many guises. "Red" is too plebeian a name, so he is dyed to a glossy black and is sold all the world over for "black fox," his brother of that color being worth anywhere from five hundred to several thousand dollars. Six years ago one million seven hundred and sixty thousand foxes were caught to supply the world's market; four years ago that number had fallen to one million two hundred thousand. Then the black-fox craze swept through the cities, and the fox was trapped, poisoned and run down by dogs, until even the white Arctic fox, that was worth only fifty cents ten years ago, was almost exterminated wherever the Eskimo and Northern hunters could get after him. As a result of this relentless pursuit of the fox, his number has been cut in two during the last five years; and last year less than eight hundred thousand could be secured for the market. From two dollars a pelt the common red fox has jumped to twelve and fifteen, the "cross" to as high as a hundred, and silver and black to prices that make a single skin worth a small fortune. In the London market ordinary pelts bring from five hundred to one thousand dollars, and from that up to four thousand dollars. This latter figure is the highest legitimate price ever brought by a black fox, though it is known that an English lady of title purchased a skin at auction for thirty-five hundred dollars and turned it over to an Austrian nobleman's wife for seven thousand dollars.

"Rats" Now in Demand

IT WAS a Parisian who first saw the real beauty of the common muskrat and the skunk. Lowdown-sounding names those—muskrat!—skunk! For years woman turned up her pretty nose at them and allowed the gentlemen to use a few of the pelts in coats and caps. Muskrats—and skunks, mind you! The poor farmer lads who caught them could get only a few cents apiece for them. Rats sold as low as three cents; skunks at twenty-five cents. Then a Frenchman rose from out a glory of skunk and proclaimed the "black sable" and the "river mink." Every lady in the land knows what happened soon after that. Skunk was no longer skunk. As "black sable" he became a fad. It was found that he could be turned into half a dozen high-priced substitutes, because his fur was really beautiful—though cheap; and as a result over a million and a half of his tribe were caught three years ago. Two years ago this number decreased to nine hundred thousand, last year to between four hundred and five hundred thousand. No longer is his catlike track a common sight in the snow of the barnyard and about the chicken house. Woman has "got" him. He is going—and going fast. The world could use five million skunks this year; it will have to be satisfied with three or four hundred thousand.

It is impossible to say how many million muskrats are now used annually; but they have gone from three cents a pelt to as high as eighty in this country, and a dollar in Paris and London. "Three years more," says a Montreal buyer, "and then the real famine will come, for the muskrat and the skunk, two of the cornerstones of the fur industry today, will be gone." Even the rabbit has been forced in to keep up the fading supply; and surely it takes a strong imagination to picture bunny as "white and blue fox!"

However, the romance of the Lady and the Beast does not begin with the raw pelts in their bales or the finished product in the furrier's warerooms; and woman, as she toys with her silky treasure, probably dreams but little of the real heart and soul of the romance that has come down through the centuries. And yet between them there is that touch of affinity which gives the story of fur its prettiest touch; for she may love her diamonds and her silks and satins and rare laces, but it is seldom with the warmth and sentiment that goes with her love for her furs. In more ways than one her whims and feminine fancies have helped to make the history of the world, but never more picturesquely than her demand for fur. It was the beaver that lured men from the St. Lawrence to the Mississippi, and thence to the Rockies—opening up a continent. It was the sable that drew the tribesmen of Asiatic Russia across to far Kamchatka; and the sea otter that led the Spanish and the English all round the world in crazy craft, giving us our first knowledge of the Pacific

Digitized by Google

Coast from Alaska to California. And it was the little ermine that opened up the Far North of the New World.

That Far North is today the world's last great trapping ground. From the shore of Lake Superior to the Arctic Sea, from Labrador to the country of the Athabasca, centuries of men have lived and died in the pursuit of fur—the heroes of this romance of the Lady and the Beast; and it doesn't take a strong imagination to see it in that light. It is a country of splendid wildness and of grand defiance to man; a country fully one-third as large as the whole of Europe, into which railroads and civilization will never go. Reaching from the coast of Labrador south of Ungava, the southernmost line of this wilderness—which will remain a wilderness for all time—runs just north of the Height of Land, below James Bay, and swings north and westward through Mackenzie Land to the polar seas. It is in many ways the most desolate country in the world as well as the most picturesque and romantic. Great areas of ridge-mountains, torn and twisted upheavals of past ages, filled with cavernous streams and thousands of rock-bottomed lakes, cover unexplored thousands of square miles. Country penetrable only by dogsledge and snow-shoes in winter and by canoe in summer reaches out to vast wind-swept plains, tenanted by only the most venturesome trappers, who brave the wild Arctic blizzards in pursuit of the northern fox; and these barrens, in turn, give place to great swamps, thick forests of small timber and to other great areas of caribou-haunted muskeg. Basking in warmth and sunshine in summer, this breeding-world of the rarest furs freezes into the death-chill of sixty and seventy degrees below zero in winter, keeping human life down to that terrible point just halfway between existence and annihilation. Since the beginning of known time, man and Nature have been at war in this *terra incognita* of the fur-seeker.

In the whole region of Ungava, a country eight times as large as Ohio, there is a population of less than two thousand, half Eskimo and half Montagnais, Nascaupics and Crees. In a country a hundred and fifty miles wide, and running entirely round the eastern, southern and western shores of Hudson's Bay, forming a territory of three hundred thousand square miles, there is only one human being to every hundred square miles; and most of this life is centered about the hundred and odd posts of the Hudson's Bay Company and the Revillon Brothers Company.

Two of the Author's Companions and Guides—Indian Trappers

When the North Begins to Thaw

WERE it not for these posts, life would soon cease to be in this Northland. It is vastly more untenable and hazardous than Alaska or the Yukon, for man has been able to bring towns and industries to those regions of gold, and steamships carry the fortune-hunters to their shores; but once in the unbroken wilderness of the North man's life hangs upon two things—the pack on his back and the posts. Perhaps if woman could see the story of fur as it actually begins, and the wild and half-savage force that is working out its life for her, she would find still more of that feel of life in the furry things she wears!

It is spring. The slush snows are growing soft under foot. From the south there come the soft breaths of air that set the poplar buds swelling; the wilderness awakens into new life; the air is filled with the song of rushing waters—and to a company's post, where each spring for two hundred years may have witnessed this same scene, the forest people come trailing in with their second catch of the season. The first catch was brought in just before the holidays, but then the hunters remained only long enough to barter their furs for supplies and credit, and hurried back to their traplines again. With spring it is different. Now begin the holiday months of the wilderness people. Indian and half-breed trappers bring with them their wives and children, their dogs and summer tepees. The few white trappers move in with their families. For hundreds of square miles about the wilderness is emptied of all human life and the post becomes a metropolis. For a few days there is great business activity. The furs are sorted, classed, purchased and credited to account, and the company's supply store is a scene of wildest excitement and jubilation. The Indian trapper is the greatest spendthrift on earth and as free from care as the fish in the streams. If he has made a good catch he is rich. He decks his wife in the gaudiest raiment he can find and throws his money round like a millionaire as long as it lasts, in spite of the company's constant warning for him to be more careful; but he knows the company cannot get along without him and that it will care for him when he is a beggar, as it has done for two and a half centuries. So he has his fun, and his wife and his children help him. He is a great sport as long as he has a dollar of credit or a package of tobacco in sight. He will wager with the other bucks on anything—from a dograce, a footrace or the flight of a stone to the ability of his squaw to beat some other squaw in a feat of marksmanship. There is no fighting, no quarreling, no whisky. I have seen a buck lose his dog team with a good-natured grunt. It is a mighty good Indian who is not "broke" by midsummer; but that doesn't worry him. He expects to be broke about that time, and from then on he is taken on credit by the company—but only for absolute necessities, food and tobacco. He begins to get worn and ragged. His wife's gay raiment drops away and by August his children are half naked. He might work at odd jobs for the company, but he won't; for during these summer months he is a gentleman of leisure and it is almost an insult to ask him to be anything else.

Then comes the change—the first chill breaths of autumn, the first turning of the wind from south to north. He wakes up some morning quite sober. From a hundred cities the arbiters of fashion are calling upon him to get busy and there is that in the air which makes him respond to the call. From the pleasures of the summer his mind turns to his forest cabin and his waiting trap houses—twenty, fifty or a hundred miles away. Follow other days of business now with the company. He is outfitted, without possessing a dollar of his own. The company makes him a loan of anywhere from fifty to four hundred dollars' worth of supplies, according to the trapper's needs and his previous reputation; and late in August or early in September, if he is far north, he sets his face into the deep solitudes of the wilderness, with his wife and his children.

Perhaps in the heart of a deep swamp, or under the shelter of a ridge-mountain, or in the depths of a great forest, fifty or a hundred miles from the post, are his cabin, his traps and the beginning of his line. Not until early in October does the forest hunter begin to set his traps, for he knows that the longer he waits the better the quality of the fur will be. He has no fear of some other trapper catching it, for it is an unwritten law of the North that one trapper must not encroach upon the grounds of another. So it happens that the grounds of a father may be inherited by the son and by the children of that son. At one time, when the Hudson's Bay Company itself held the power of life and death, an encroachment upon another's trapping ground was as good as a death-warrant; but this has ceased to be—except in occasional instances. Yet the unwritten law is respected by all, from the trapper to the savage.

Covering the Trap Line

A LINE is twenty, thirty or even fifty miles in length, and is usually set with about two hundred traps, deadfalls and poison-baits for wolves and foxes. The line begins near the trapper's home and stretches through tracts of forest, great swamps and over wind-swept barrens, and is so run that when the trapper reaches the end of his line he is again near home. It takes him about two days to cover a forty-mile line, and he travels it twice a week, skinning his game wherever it is caught and using the carcasses for bait. When he arrives at his cabin, laden with his pelts and perhaps a haunch of caribou or moose, he has nothing to do for forty-eight hours except smoke, if he has a family. The wife and children scrape all fat from the green pelts, stretch them and do all the work about, while the trapper takes turns at smoking, eating and sleeping, and waits for the beginning of the next long jaunt over the trapline.

At New Year's all trails again lead to the posts, for this is the midwinter "big-time season," when for a week or ten days the forest people come in with their furs to square accounts and participate in the feasts and games to which the company treats them.

By the middle of January the trappers are again on their lines, where they remain until the first slush snow of spring, when they come in with the second and usually the largest catch of the season. And this time the most of them remain, for summer is close at hand. A thousand miles away the season of social triumphs and pleasures is at an end. The trapper of the North is just beginning to rush his bales of fur by canoe and dogsled to the big cities.

A Trapper's Typical Home in the Thunder Bay Country

An Old Woman and a New One in the Old World

By Corra Harris

ILLUSTRATED BY HENRY RALEIGH

"I—I'm Afraid I've Made a Dreadful Mistake!"

I HAVE already said that the men are the sole manufacturers of the women in every country and responsible for what they are or fail to be. It is necessary to contradict this statement before any explanation can be given of the singular conditions—economic, social and moral—which surround the women of France. In this nation alone the women create the men. And if any one wishes to see what a man is who has been evolved and limited by his womankind, let him consider the Frenchman. This does not mean that he is not a brave soldier, but that as a soldier he is peevish and wears red breeches. It does not imply that he is not among the foremost scientists in the world, but that he can devote his life to making the most brilliant discoveries and at the same time be the slave of a *demimondaine*. He is also the most astute of the modern psychologists, and can write with the mournful grandeur of Isaiah about the evils of society; but frequently he is not formed or disciplined personally in his own nature to be reliable morally in his relations to society.

And the women have become the chief victims of their own creation, as often happens with creators. To begin with, man is the cause of the widespread enmity so noticeable among French women. This profoundly affects economic conditions among them. Thus there are no trades unions for women in France, where there is probably a larger per cent of them employed than in any other country. Wherever you see women getting together in unions and movements to further their own interests, it is a sign that they are placing upon themselves a higher value morally and industrially. They are uniting in an effort to raise the standard of their self-respect and to command more respect and better wages from the men who employ them. It indicates a certain evolution of the sex to be able to make this choice and risk the ancient, merely masculine disfavor of men. The shopgirl of France has not reached it. She is still contending for the favor of one man. Her hopes are centered in winning him from the other girls. She lives all day in the most luxurious surroundings, in stores where the most beautiful things in the whole world are displayed for sale, where she comes constantly in contact with richly dressed women who come to buy. Her wages are insufficient. She hates the sordid little home from which she comes with its penurious economies. But she does not join a union and suffer a new contempt and the old privations for a lifetime in order that the working women who come after her may enjoy better conditions and receive more respect and higher wages.

Courting Under Difficulties

MADAME PÉGARD is one of the French women who have done something to alleviate the lives of working women in France. Through her influence a law was passed two years ago which entitles a married woman to her own wages. Until then the husband took them and spent them according to his fancy. For this service Madame Pégard received the Legion of Honor. There is no one like your Frenchman to accent it with a decoration and a flourish when he really does a good deed. It is a way he has of "showing off."

Nearly all the professions in France are open to women, and the women have not been slow to avail themselves of these opportunities. They are to be found among the scientists, doctors, lawyers, teachers and aviators, and it is even possible to get a female coachman or chauffeur. It is the custom for the French parents to take these advantages into consideration when they have small means and are able to provide a dot for only one, say, of their two daughters. They see that the girl with the best mind receives an education for one of the professions—an easy and comparatively inexpensive means of disposing of her with the wonderful educational advantages to be had, especially in Paris. They put a price on the head of the other and marry her to the man who will take her for that—the dot.

So much has been written about the female endowment marriage custom in France that it is scarcely necessary to discuss it; but I am reminded in this connection to mention the newest foreign missionary, one who is probably doing more real service than many of those in any heathen land. This is the English girl in French society. The American girl is in bad repute with the better class of French mothers, owing to her disposition to walk down the Champs Elysées, for example, talking in her raucous young voice, which is an octave higher than any French woman would dare speak. And they particularly object to the scandalous way she has of looking everybody straight in the face. In my day it was accounted the sign of a good conscience and a clear mind to be able to hold one's head up and look the next person squarely in the eye; but in a country like France, where the human eye is the most beautiful and has the worst reputation in the world, it is best for women to go with their lids at half mast. The English girl always does this, and carries her shoulders the same way, for that matter. Consequently she is supposed, by the French, to be better bred. Also, since the late friendliness between France and England it is the fashion to admire her. For this reason she has done much to loosen the bondage of young French girls, who are undoubtedly the most to be pitied of all young things in the civilized world. They are now allowed to play golf and tennis, and so forth, like their English cousins. They are still guarded, of course, but quite recently two of them may go out together for a walk or for shopping without being accompanied by a governess. They may even go to parties in the evenings escorted by their brothers. This is a great innovation. On the whole now they get more outdoor life and enjoy better health of mind and body. They remain, however, in the marriage market. A French mother will say to her neighbor:

"I cannot find a husband for my daughter. She has a dot, but still we do not get a husband for her. Will you help me?"

The neighbor is obliging. She speaks to some young man of her acquaintance. She names the girl's dowry. The youth considers. If it is enough he says he will take her. Negotiations begin at once. They are engaged and they are married. Then for the first time he sees her alone. But even this custom has been affected by the English girl's courtship, so that it is now possible for the French girl to see her affianced lover in the garden at sufficient distance from the ever-watchful mother for them to do a little lovemaking without being overheard.

One cannot say whether this is the best method to pursue in mating people. There are fewer divorces in France than in America. But then a very large number of American women who have married Frenchmen have sued for divorce. Anyhow it is not worth discussing, so far as our country is concerned. If all of Peggy's relations should combine in the effort they could not affiance her to a man who had not made love to her desperately, and gone down upon his knees, figuratively speaking, imploring the gift of her heart and hand.

Husbands in America

WHATEVER may be said of other countries in the past, America is today the land of the most beautiful courtships. Courting-time is the period to which every maiden looks forward and upon which every old wife looks back with infinite pleasure—the one place in life upon which the sun always seems to shine, about which the roses bloom. And for this we are deeply indebted to our men. I do not say they make the best husbands in the world, although I believe it. That depends upon the individual husband. Some men in America, as elsewhere, are like certain effervescent delicious waters, good as long as they remain corked up, but left open they become stale—that is to say, when they marry. There is a lot of fizz in their lovemaking, and nothing but flat insipidity about them as husbands. This is what many a woman fails to consider when she takes a husband, and so she chooses a lover instead. And he does not last. But there is a particular reason why the American man surpasses every other lover at least. He deeply honors and reveres the woman to whom he is making love. He does not anticipate, as the Frenchman must do, that as a wife she may be using marriage as a cloak for that liberty which she never had as a girl. It is only when a man feels this enduring confidence in a woman that he can exalt himself into the perfect lover without misgivings as to the future.

It is Now Possible for the French Girl to See Her Affianced Lover in the Garden

But to come back to the French women. A certain circumstance in France has given to the idle rich women during the last five or six years a singularly becoming occupation. Since the separation in this country of the church and state these women have rallied to the support of the former. Their piety has not increased, but their charities have grown immensely. This has been necessary. The state confiscated much of the property belonging to the church, such as lands and convents. Thousands of the religious orders became homeless. The rich Catholic women have been venturing by their efforts

Digitized by Google

to support and provide suitable shelter for these nuns and for other missions. Also, many of them during the last three years have joined the Lyceum Club in Paris—a branch of the same club in London—which was founded by English women. It is the only one in the city that has a name of its own and that is conducted like any man's club. They have not been slow to become the most influential part of it and in adapting it more or less to French ideals, in spite of its English origin and the fact that the membership is composed largely of English and American women.

There are one hundred and ten thousand women enrolled as members of the Woman's Suffrage Union of France. The movement has met with singular opposition on the one hand, and on the other with the most remarkable favor from an unexpected source. The men, so far from opposing it, are friendly to it. Not only the governing class, but those of the Academy, the scholarly and scientific men, and even the bourgeois regard it with distinct satisfaction. But the great body of French women are more actively opposed to it than are the women in other countries. The Catholics have recently formed a league to combat it, and the working women, from whom the suffragists have gained so many recruits in England and America, are indifferent.

As a matter of fact, the movement has not yet escaped from the cranks who invariably attach themselves to a new idea. While we were in France Mademoiselle Josephine Gondon, of Toulouse, challenged the editor of a local paper there to a duel on account of an article he published in reply to one she had written in which she declared that marriage was degrading to women. It was a good opportunity for a Frenchman to have been properly matched in one of those frisky, fancy little duels of which we hear so much. But the editor declined the challenge, to the increased indignation of Mademoiselle Gondon.

In addition to this sort of absurdity, the movement has been further damaged and put in ill repute by the fact that a number of women of questionable character have attached themselves to it and have exploited the cause to attract attention to themselves. This is especially unfortunate, because it has eliminated from the movement the women of the *petite bourgeoisie*, without whom it cannot possibly succeed.

The National Backbone

ONE day an old friend who had lived several years in Paris called. As usual, conversation turned upon the much-discussed French women.

"Ah!" she laughed; "so you have been listening to the old scandals about these women, the class of which we never speak at home. It is queer that this is the only nation that has a sort of hysteria for exposing its vices. But come for a walk with me; I will show you the good women of France. They are the real backbone of the Republic, not the men."

We came out on the Avenue Victor Hugo. Mrs. D. passed before a little shop, with its counter on the street outside as usual heaped high with sabots and dishes and dusters. In the doorway were an old man and an old woman. They were the same size apparently and had the same figures—very round and short. They had been married so long, had done the same things together, had had the same thoughts, that they looked enough alike to be twins.

"There is one," said our guide, nodding her head to the old lady as we passed. "And here is another," she went on as we came opposite a stationer's shop and saw the wife sitting before the ledger at the desk. "There are two more," she pointed to a woman in a wineshop and one in a little place no larger than a cabinet, where jewels were for sale.

"These are the women who hold France together. In England it is those of the richer and noble class who have the greatest influence; in Germany it is only one woman in a thousand with charm, who may never do anything herself. But in France it is the wives of the *petite bourgeoisie*. They marry and go into these little shops with their husbands. They work night and day. They bring up their children. They are thrifty and above reproach. You may see hundreds of them in every street in Paris, in every town and hamlet of France, always taking the more responsible positions in their little businesses, always filling them better than the men would.

"You observe that madame's face is not beautiful, that her expression is a trifle severe," she commented as we passed a grocer's stall where a woman was weighing carrots on the counter. "That is because she deals with a close-fisted public. Tomorrow you will find her here, attending strictly to business, and next year also, until she has accumulated enough to insure an income of three francs a day each for herself and her husband. Then she will go into the country to live. But there will be another woman to take her place in this shop the next time you come, another wife and mother, younger, but made of the same stuff. France produces these flinty, durable women who never go wrong, who never really advance at all in the scale of things, but who stand and have stood for hundreds of years for a certain thrift and narrow, feminine righteousness."

These are the women who will determine when France shall give the franchise to women. At present they are opposed to it, not only for the reason I have already mentioned—of not being willing to join a movement that is too much exploited by cranks and women of questionable reputation—but because they have a conviction that it is sacrilegious and unbecoming for women to concern themselves with political affairs.

They Looked Enough Alike to be Twins

One morning, to her great joy, Peggy found among her letters on the breakfast tray an invitation from Mademoiselle Monot to call upon her that day. Mademoiselle Monot is the president of the French Woman's Suffrage Union, but we could not tell how advanced her notions might be in regard to young girls gadding about the streets of Paris alone; so it was decided that I should go along to give the proper air of respectability to Peggy.

Mademoiselle Monot received us in her salon—a little, round old lady, wearing a black lace cap upon her head, with a bleared expression as if the years had faded her very wrinkles. We understood at once that both she and her salon had seen better days. She looked at Peggy as if she saw her through a mist. She had the air of an ancient, patient mother making excuses for her children, still hoping the best for them, as she talked of the Union and its tremendous difficulties.

"No," she answered in reply to a question, "the idea of suffrage is not yet popular among the mass of French women. The *petite bourgeoisie* are opposed to it."

"No," she replied again, "the men would not object if the women favored it. Frenchmen are always ready to make a new experiment—to have a new sensation."

"No," to Peggy's next inquiry; "no, they will not purify political life if they get the franchise. They will add their peculiar faults and confusion to public life."

I began to think it would be a depressingly negative interview. "But they will get the ballot in France at last?" persisted Peggy.

"Oh, yes, long before the last. It will come soon everywhere—suffrage for women. We have conceived it out of our great need. Whatever is conceived must soon exist. This is only the period of gestation necessary before any birth is possible."

She drifted away into that sibyl trance I have noticed before in the older women of other countries who are absorbed in this question. Her head drooped; she stared dreamily into the roaring life of the street outside. We went out feeling that we had been in the presence of one whose hopes triumphed over time and conditions.

I come now at last to Peggy again. It has been like pinning on the tail of the kite to end the study of the women of each country we visited with a little interpretation of Peggy, as her moods changed according to the climate and conditions that surrounded us. In spite of her seriousness, Peggy has always sustained a fluttering kite-tail relation to my own soberer mind. But now, at the end of our journey in France, she was like a sad little ribbon of femininity that refused to rise and wave in the wind. She underwent in France a change so strange and pathetic that I record it with a sorrow that is mixed with humor and sympathy. I do not know whether the metamorphosis she went through should be called an evolution or a submission to the inevitable fall of woman. But this is certain, she has remained a different person from that day.

Acrobatic Conversation

IN ENGLAND she had indulged in a dashing, arrogant and typically unscrupulous flirtation with an Englishman. She flattered the English that much, you understand. In Germany she assumed a sort of spitting-kitten antagonism to the German officer who showed too much confidence in his sentimental advances. There is something terrifyingly immediate about a German man when he fixes his eye in love upon a woman. And I attributed Peggy's temper, not to the fact that she was offended but to the fact that she simply retired into that scratching fierceness common to maidenhood, which often in time is tamed by love. I am led to believe that at last, if the officer had canceled some of his too masculine egotism and had kept in his brilliant uniform long enough, he might have advanced in my niece's regard perilously near to the fortifications of her excellent young heart. This, as you will see, is designed as a compliment to the German brand of manhood. An American woman could do much toward civilizing a snorty Teutonic husband. But we had not been long in France before I discovered that Peggy considered Frenchmen of a distinct and lower species, from which an American woman could not countenance a romantic proposition without doing violence to her peculiar feminine sanctity. I do not say that she was correct in this conclusion. On the contrary, she was only American. She ceased to refer to her Huguenot ancestry. She charged me not to mention it, as if it had been the skeleton in her closet. Also she curbed her capillary circulation, which she had so friskly boasted was French in so far as it had anything to do with her manner of speech. Until we lived that month in Paris she had always used her hands as much as she did her tongue when she talked.

"Peggy, my dear," I inquired one day after a peculiarly trying expedition she had made downtown, "are you ill?"

"No, Aunt Peg—why?"

"Well, you seem to have lost so much of your animation. You only speak now with your mouth."

"It's all I ever mean to use again," she retorted.

"Why?"

"Because it is a sign of lightness, littleness, moral and spiritual insignificance to talk with one's all-fours, as these people do. Today I saw a woman weighing two hundred pounds crossing the street and gesticulating like the flaps of a biplane as she conversed with her companion. And the men—ough! It is disgusting to see a human being whom we have always regarded as of graver, stronger

Bulwarks of Business Policy

The Right Age—By James H. Collins

DECORATION BY CHARLES D. MITCHELL

OLD John Bagot was a merchant of the last generation and thoroughly looked the part. His tall, spare Yankee frame was always clad in a black frock coat. His black derby was of the flat-topped variety. All through the hot New York summer he stuck to his stiff white shirt and starched white tie. His lean, nervous face was set off by dignified muttonchop whiskers of the type still sacred to the stage banker, and his heavy-framed gold eyeglasses, attached to a black silk cord, were taken off at intervals when he talked and used in gesture.

It would be necessary to go back still another generation to reach the beginnings of Oldbuck & Bagot, the importing house of which the old gentleman was now sole proprietor. Trade had centered at the lower end of Manhattan Island when young Bagot came from New England and got a job at Oldbuck's. Ships that brought the goods from England almost stuck their bowsprits in the office windows. The Yankee lad was active, shrewd and thrifty. He moved round the sedate mercantile community of that day, made friends in many lines, got new customers in their own and saved his money. When Oldbuck was ready to slack up a bit Bagot bought an interest in the business and became junior partner. When the founder retired he bought the rest. Oldbuck had been out of it more than thirty years.

The office was still in the same locality—southeast of Wall Street—and the business carried on in pretty much the same way. In spite of the movement of trade uptown, Bagot stuck there. It was a matter of pride that he held his old customers and through them served indirectly those first families of New York who had been so important when he came to the city. True, almost every month in later years saw some customer, a merchant of long standing, shut up shop forever under the auspices of either the sheriff or the sexton, and hardly any new connections replaced them; but the old gentleman was fairly well off. Profits in that line had been rather more than wide in times past. He had money put away, lived comfortably and looked to the business to furnish him an occupation as long as he needed one, even if Willie did not like importing.

Up to the day that Willie came into the office, following his graduation from Yale, Oldbuck & Bagot had never sent out a typewritten letter. If the old gentleman did not write them in longhand they were dictated to Foster, the veteran bookkeeper, who had been connected with the concern longer than himself.

Willie was John Bagot's grandson, the only child of his only daughter. Since his parents' death, when he was a little boy, he had lived with his grandparents and been their chief interest. They sent him to school and college in first-class style, and looked forward to launching him in life with every reasonable advantage. Willie was a good boy, and a bright one, and appreciative. It was understood that he should have a trial at importing; and if that were not to his taste then he might choose whatever business seemed congenial. His grandfather was not sure but importing had played out. Old Man Foster, the bookkeeper, was convinced that it had.

Willie came into the office and began learning the business. His grandfather and the bookkeeper lived in another commercial generation. John Bagot understood that ways of doing business had changed radically, yet did not know just how or why. At one time there had been plenty of trade in certain quarters where now there were only the slenderest pickings. It had disappeared and he hadn't followed it. Old Man Foster understood this, too, but had a comprehensive reason of his own that covered everything and kept him placid. He would show Willie a petty order from some elderly merchant in a side street uptown and recall the days when that man had skimmed the cream off the trade of New York's leading families.

"Only a few odd lots," said the veteran. "We used to sell him by the hundred gross. He's behind in his bills, but I can remember when his credit was good for anything we could sell him. In those days, my boy, the trade was not hogged by foreigners. That's the curse of business today—the foreigners take everything."

Old Man Foster had his own conception of a foreigner. To his way of thinking, every trader born across the ocean got goods for nothing, sold them below cost, lived on black bread and garlic, and saved his unholy profits intact. That explained everything. It was the "pauper labor" doctrine of the high protectionist in capsule form. Whenever Old Man Foster felt gloomy about the business he took this little pill.

Young Blood in the Old House

SOON the quiet of the old office was broken by the rattle of a typewriter. Willie hired a stenographer and began quietly looking round to see where trade had gone. There was trade—undoubtedly. Imports of their goods were larger than ever and backed by an enormous domestic output the past fifteen years. Who did the business?

Old Man Foster was right about the foreigners, so far as their decaying trade was concerned. On the average, it took about five years for the industrious immigrant to graduate into that branch of the business. They had it all—and on terms that made it foolish to compete.

However, the whole basis of the trade had changed. In Granddaddy Bagot's youth business had been direct and personal. Men went to the tailor for clothes and the cobbler for shoes. Women took a big basket and went to market for meats and vegetables. Production and distribution were still done on a parish scale. Gossip of all the trades centered in a few counting rooms. Everybody knew the standing of everybody else. Merchants told their wives when they went home to noonday dinner in the village which was then New York.

Now, however, production and distribution had become national. You called on a factory superintendent or purchasing agent and sold a year's supply of goods if quality and price were right. In the old days small quantities sold to a personal clientèle carried profit enough to grow rich on. Today margins were so small that handling vast quantities was the only salvation.

Willie soon had the run of things. College acquaintances helped him and he made friends among men connected with the big manufacturing houses. At the very outset it became clear that their goods were not right. The old connections in England had run to seed, too, and their product was not in keeping with present-day American demand. New connections were necessary. There was a fine chance to supplement the business by adding domestic goods and to widen the line generally by carrying related commodities.

One morning, three months after entering the office, Willie got down and found his grandfather fidgeting.

"Where is that young lady?" he asked, glancing over his glasses at the stenographer's desk. It was closed.

"Oh, yes," said his grandson; "she's taking a vacation."

"Well, I find that I cannot answer my letters without her. I've become accustomed to dictating to her. Can't we hire somebody to take her place for the time being?"

As the business was brought into Willie's generation the old gentleman watched and learned. He was an excellent learner. When Willie said it was time to move uptown, leaving the dust of fifty years behind, he had some regrets, but in a month was enthusiastic about the light, space, cleanliness and convenience of a modern loft building. He got used to new standards for goods, and to looking for business in new directions, and to lunching with men who had been babies in arms when he bought Oldbuck out and yet were purchasers of more goods than the country's total imports in his most prosperous days.

"Willie is right," he assured Old Man Foster. "In our time it was profit that counted; but now the idea is volume—you see, Willie knows where to look for volume."

Business runs in periods. One of the pressing problems of the man who lays down policy is to keep the organization in touch with today. Times, methods, goods and demand change—and ways of getting business and keeping it, and looking at things; but the men with the business do not change unless the policymaker is actively on the job. Organization develops a hard crust. It grows retrospective and tries to live on its mighty past. It looks for business in the places where it used to be and overlooks the places from which it is coming now.

Roughly speaking, business conditions change radically about every ten years.

In the fifties American business was a matter of importing and trading, with methods modeled on English lines. The sixties drew most of our business ability into the army. In the seventies energy developed by the war overran the West and built the transcontinental railroads.

The eighties brought development of manufacturing and raw resources. Those were bonanza days. Hard-drinking, hard-swearing barons got rich in lumber, beef, mining and other basic wealth. Railroads were wrecked and stolen by stock manipulation. The savings of the East were sunk in Western boom towns.

In the nineties bonanza days were over. Manufacturing had to be studied on its merits, processes improved, material comfort extended and output increased to meet shrinking profits. It was a period of rebating and unscrupulous competition. Yet at the same time order began to appear and finally expressed itself in the forming of large business combinations.

V

ARNOLD arrived at the office the next morning punctually at five minutes to nine, and was already at work when Mr. Jarvis appeared in the counting-room ten minutes later.

"Gayety's not upset you then, eh?" the latter remarked, divesting himself of his hat and overcoat.

"Not at all, thanks," Arnold answered shortly.

"Nice house, the governor's, isn't it?"

"Very nice indeed," Arnold assented.

"Good dinners he gives too," Mr. Jarvis continued. "Slap-up wines and the right sort of company. Must have been an eye-opener for you."

Arnold nodded. He was not in the least anxious to discuss last night with Mr. Jarvis. The latter, however, came a little nearer to him. He took off his gold-rimmed spectacles and wiped them carefully.

"Now I should like to know," he said, "exactly how Mrs. Weatherley struck you?"

"She appeared to me to be a singularly charming and very beautiful lady," Arnold replied, writing quickly.

Mr. Jarvis was disappointed.

"She's good-looking enough," he admitted. "I can't say that I've seen much of her, mind you, but she gave me the impression of a woman who wasn't above using the powder-puff. She drove down here with the governor one day, and to look at her you'd have thought she was a princess come among the slums."

"She was born abroad," Arnold remarked. "I dare say this atmosphere would seem a little strange to her."

"Sort of half a foreigner, I've understood," Mr. Jarvis continued. "Speaks English all right though. I can't help thinking," he went on, "that the governor would have done better to have married into one of our old city families. Nothing like them, you know. Some fine women too. There's Godson, the ex-lord-mayor. He had four daughters, and the governor might have had his pick."

"Here he comes," Arnold remarked quietly.

Mr. Jarvis took the hint and went off to his work. A moment or two later Mr. Weatherley arrived. He passed through the office and bestowed upon every one his customary salutation. At Arnold's desk he paused for a moment.

"Feeling all right this morning, young man?" he inquired, striving after a note of patronage that somehow or other eluded him.

"Quite well, thank you, sir," Arnold answered.

"You found the evening pleasant, I hope? Didn't lose any money at bridge, by-the-by, eh?"

"Mrs. Weatherley was good enough to take on the stakes, sir," Arnold replied. "As a matter of fact I believe that we won. I enjoyed the evening very much, thank you."

Mr. Weatherley passed on to his office. Jarvis waited until his door was closed.

"So you played bridge with Mrs. Weatherley, eh?" he remarked.

"I did," Arnold admitted. "Have you noticed the shrinkage of weight in these last invoices, Mr. Jarvis?"

Mr. Jarvis accepted the papers that his junior passed him and departed into the warehouse. Arnold was left untroubled with any more questions. At half past twelve, however, he was sent for into Mr. Weatherley's private office. Mr. Weatherley was leaning back in his chair and he had the air of a man who has come to a resolution.

"Shut the door, Chetwode," he ordered.

Arnold did as he was bidden.

"Come up to the desk here," he was further instructed. "Now listen to me," Mr. Weatherley continued after a moment's pause. "You are a young man of discretion, I am sure. My wife, I may say, Chetwode, thought quite highly of you last night."

Arnold looked his employer in the face and felt a sudden pang of sympathy. Mr. Weatherley was certainly not looking so hale and prosperous as he did a few months before. His cheeks were flabby, and there was a worried look about him that the head of the firm of Samuel Weatherley & Co. should certainly not have worn.

"Mrs. Weatherley is very kind, sir," he remarked. "As to my discretion, I may say that I believe I am to be trusted. I should try, of course, to justify any confidence you might place in me."

"I believe so too, Chetwode," Mr. Weatherley declared. "I am going to trust you now with a somewhat peculiar commission. You may have noticed that I have been asked to speak privately upon the telephone several times this morning."

"Certainly, sir," Arnold replied. "It was I who connected through."

"I am not even sure," Mr. Weatherley continued, "who it was speaking, but I received some communications of which I think I ought to take notice. I want you accordingly to go to a certain restaurant in the West End, the name and address of which I will give you, order your lunch there—you can have whatever you like—and wait until you see Mr. Rosario. I dare say you remember meeting Mr. Rosario last night, eh?"

"Certainly, sir. I remember him quite well," Arnold replied.

"He will not be expecting you, so you will have to sit near the door and watch for him. Directly you see him you must go to him and say that this message is from a friend. Tell him that whatever engagement he may have formed for luncheon, he is to go at once to the Prince's grillroom and remain there until two o'clock. He is not to lunch at the Milan—that is the name of the place where you will be. Do you understand?"

"I understand perfectly," Arnold assented. "But supposing he only laughs at me?"

"You will have done your duty," Mr. Weatherley said. "There need be no mystery about the affair. You can say at once that you are there as the result of certain telephone messages addressed to me this morning, and that I should have come myself if it had been possible. If he chooses to disregard them it is his affair entirely—not mine. At the same time I think that he will go."

"It seems an odd sort of a thing to tell a perfect stranger, sir," Arnold remarked.

Mr. Weatherley produced a five-pound note.

"You can't go into that sort of place without money in your pocket," he continued. "You can account to me for the change later, but don't spare yourself. Have as good a lunch as you can eat. The restaurant is the Milan grillroom on the Strand—the café, mind, not the main restaurant. You know where it is?"

"Quite well, sir, thank you."

Mr. Weatherley looked at his employee curiously.

"Have you ever been there then?" he inquired.

"Once or twice, sir," Arnold admitted.

"Not on the twenty-eight shillings a week you get from me!"

"Quite true, sir," Arnold assented. "My circumstances were slightly different at the time."

Mr. Weatherley hesitated. This young man's manner did not invite confidence. On the other hand he was genuinely curious about him.

"What made you come into the city, Chetwode?" he asked. "You don't seem altogether cut out for it—not that you don't do your work and all that sort of thing," he went on hastily.

"I haven't a word of complaint to make, mind. All the same you certainly seem as though you might have done a little better for yourself."

"It is the fault of circumstances, sir," Arnold replied. "I am hoping that before long you will find that I do my work well enough to give me a better position."

"You are ambitious then?"

The face of the young man was suddenly grim.

"I mean to get on," he declared. "There were several years of my life when I used to imagine things. I have quite finished with that. I realize that there is only one way by means of which a man can count."

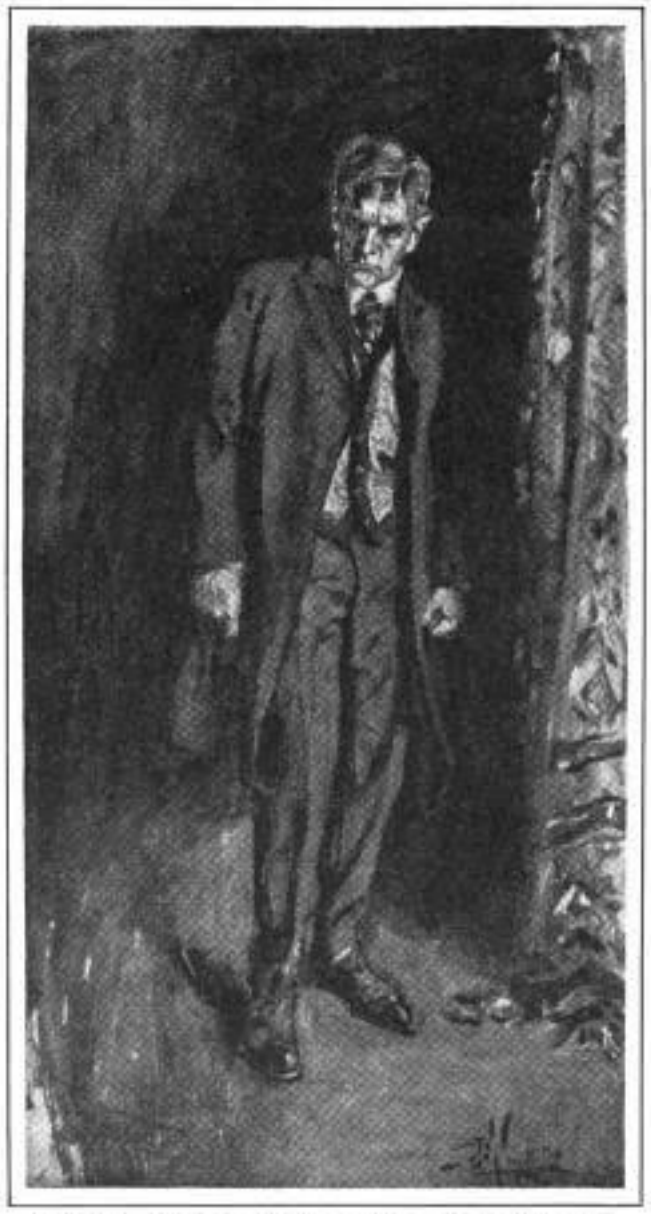
Mr. Weatherley nodded ponderously.

"Well," he said, "let me see that your work is well done and you may find that promotion is almost as quick in the city as anywhere else. You had better be off now."

"I trust," Arnold ventured to observe as he turned toward the door, "that Mrs. Weatherley is quite well this morning?"

"So far as I know she is," Mr. Weatherley replied. "My wife isn't usually visible before luncheon-time. Continental habits, you know. I shall expect you back by three o'clock. You must come and report to me then."

Arnold brushed his hat and coat with extra care as he took them down from the peg.



"Going to lunch early, aren't you?" Mr. Jarvis remarked, looking at the clock. "Not sure that we can spare you yet. Smithers isn't back."

"I am going out for the governor," Arnold replied.

"What, to the bank?" Mr. Jarvis asked.

Arnold affected not to hear. He walked out into the street, lit a cigarette, and had his boots carefully polished at London Bridge Station. Then, as he had plenty of time, he took the train to Charing Cross and walked blithely down the Strand. Freed from the routine of his office work he found his mind once more full of the events of last night. There was so much that he could not understand, yet there was so much that seemed to be leading him on toward the land of adventures. He found himself watching the faces in the Strand with a new interest, and he laughed to himself as he realized what it was.

He was looking all the time for the man whose face he had seen pressed to the window-pane!

"I Tell You That Rosario Was a Robber of Mankind. He Was One of Those Who Feed Upon the Bones of the Poor"

VI

AT THE Milan Arnold found himself early for luncheon. He chose a table quite close to the entrance, ordered his luncheon with some care and commenced his watch. A thin stream of people was all the time arriving, but for the first half-hour there was no one whom he could associate in any way with his commission. It was not until he had actually commenced his lunch that anything happened. Then through the half-open door he heard what he recognized instantly as a familiar voice. The manager of the restaurant hurried toward the entrance and he heard the question repeated.

"Is Mr. Rosario here?"

"We have a table for him, madame, but he has not yet arrived," the *maître d'hôtel* replied. "If madame will allow me to show her the way!"

Arnold rose to his feet with a little start. Notwithstanding her fashionable outdoor clothes and thick veil, he recognized Mrs. Weatherley at once as she swept into the room, following the *maître d'hôtel*. She came up to him with slightly upraised eyebrows. It was clear that his presence there was a surprise to her.

"I scarcely expected to see you again so soon," she remarked, giving him her fingers. "Are you lunching alone?"

"Quite alone," Arnold answered.

Digitized by Google

She glanced half carelessly around as though to see whether she recognized any acquaintances. Arnold, however, was convinced that she was simply anxious not to be overheard.

"Tell me," she inquired, "has my husband sent you here?"

Arnold admitted the fact.

"I have a message," he replied.

"For Mr. Rosario?"

"For Mr. Rosario."

"You have not seen anything of him yet, then?" she asked quickly.

"He has not been here," Arnold assured her. "I have kept my eyes glued upon the door."

"Tell me the message quickly," she begged.

Arnold did not hesitate. Mr. Weatherley was his employer, but this woman was the latter's wife. If there were secrets between them it was not his concern. It seemed natural enough that she should ask. It was certainly not his place to refuse to answer her question.

"I was to tell him that on no account was he to lunch here today," Arnold said. "He was to go instead to the grillroom at Prince's, in Piccadilly, and remain there until two o'clock."

Mrs. Weatherley made no remark. Her face was emotionless. Closely though he was watching her, Arnold could not himself have declared at that moment whether indeed this message had any import to her or not.

"I find my husband's behavior exceedingly mysterious," she said thoughtfully. "I cannot imagine how he became concerned in the matter at all."

"I believe," Arnold told her, "that some one telephoned Mr. Weatherley this morning. He was asked for privately several times and he seemed very much disturbed by some message he received."

"Some one telephoned him?" she repeated, frowning. "Now I wonder who that person could be."

She sat quite still for a moment or two, looking through the glass-paneled door. Then she shrugged her shoulders.

"In any case," she declared, "I am here to lunch and I am hungry. I will not wait for Mr. Rosario. May I sit here?"

He called a waiter and the extra place was very soon prepared.

"If Mr. Rosario comes," she said, "we can see him from here. You can then give him your message and he can please himself. I should like some *omelette aux champignons*, please, and some red wine—nothing more. Perhaps I will take some fruit later. And now, please, Mr. Arnold Chetwode, will you listen to me?"

She undid her ermine cloak and laid aside her muff. The collection of costly trifles that she had been carrying she threw carelessly upon the table.

"Last night," she continued softly, "we agreed, did we not, to be friends? It is possible you may find that our friendship may be one of deeds, not words alone."

"There is nothing I ask for more sincerely," he declared.

"To begin with, then," she went on, "I wish that you would not call me Mrs. Weatherley. The name annoys me. It reminds me of things that at times it is a joy to me to forget. You shall call me Fenella and I shall call you Arnold."

"Fenella," he repeated half to himself.

She nodded.

"Well, then, that is arranged. Now for the first thing I have to ask of you. If Mr. Rosario comes I do not wish that message from my husband to be delivered."

Arnold frowned slightly.

"Isn't that a little difficult?" he protested. "Mr. Weatherley has sent me up here for no other reason. He has given me an exact commission, has told me even the words I am to use. What excuse can I possibly make?"

She smiled.

"You shall be relieved of all responsibility," she declared. "If I tell my husband that I do not wish you to obey his bidding that will be sufficient. It is a matter of which my husband understands little. There are people whose interest it is to protect Rosario. It is without a doubt they who have spoken this morning through the telephone, but my husband does not understand. Rosario must take care of himself. He runs his own risks. He is a man and he knows very well what he is doing."

Arnold looked at her thoughtfully.

"Do you seriously suppose, then," he asked, "that the object of my message is to bid Mr. Rosario keep away from here because of some actual danger?"

"Why not?" she asked. "Mr. Rosario has chosen to interfere in a very difficult and dangerous matter. He runs his own risks and he asks for a big reward. It is not our place to protect him."

She raised her veil and he looked at her closely. She was still as beautiful as he had thought her last night, but her complexion was pallid almost to fragility and there were faint violet lines under her eyes.

"You have not slept," he said. "It was the fear of last night."

"I slept badly," she admitted, "but that passes. This afternoon I shall rest."

"I cannot help thinking," he went on, "about those men who watched the house last night. They could have been after no good. I wish you would let me go to the police station. Or would you like me to come and watch, tonight or tomorrow night, to see if they come again?"

She shook her head firmly.

"No!" she decided, "it wouldn't do any good. Just now, at any rate, it is Rosario they want."

Their conversation was interrupted for several moments while she exchanged greetings with friends who passed in and out of the restaurant. Then she turned again to her companion.

"Tell me," she asked a little abruptly, "why are you a clerk in the city? You do not come of that order of people."

"Necessity," he assured her promptly. "I hadn't a sovereign in the world when your husband engaged me."

"You were not brought up for such a life?"

"Not altogether," he admitted. "It suits me very well though."

"Poor boy!" she murmured. "You, too, have had the evil fortune. Perhaps the black hand has shadowed us both."

"A man makes his own life," he answered impulsively, "but you—you were made for happiness. It is your right."

She glanced for a moment at the rings upon her fingers. Then she looked into his eyes.

"I married Mr. Weatherley," she reminded him. "Do you think that if I had been happy I should have done that? Do you think that, having done it, I deserve to know or could know what happiness really means?"

It was very hard to answer her. Arnold found himself divided between his loyalty toward the man who, in his way, had been kind to him, and the woman who seemed to be stepping with such fascinating ease into the empty places of his life.

"Mr. Weatherley is very devoted to you," he remarked.

A shadow of derision parted her lips.

"Mr. Weatherley is a very worthy man," she said, "but it would have been better for him as well as for me if he had kept away from the island of Sabatini. Tell me, what did Lady Blennington say about us last night?"

His eyes twinkled.

"She told me that Mr. Weatherley was wrecked upon the island of Sabatini and that your brother kept him in a dungeon till he promised to marry you."

She laughed.

"And you? What did you think of that?"

"I thought," he replied, "that if adventures of that sort were to be found in those seas I should like to beg or borrow the money to sail there myself and steer for the rocks."

"For a boy," she declared, "you say very charming things. Tell me, how old are you?"

"Twenty-four."

She nodded.

"You would not look so old if it were not for that line," she said. "You know, I read characters and fortunes. All the women of my race have done so. I can tell you that you had a youth of ease and happiness and one year of terrible life. Then you started again. It is true, is it not?"

"Very nearly," he admitted.

"I wonder ——"

She never finished her sentence. From their table, which was nearest to the door, they were suddenly aware of a commotion of some sort going on just outside. Through the glass door Rosario was plainly visible, his sleekness ruffled, his white face distorted with terror. The hand of some unseen person was gripping him by the throat, bearing him backward. There was a shout, and Arnold and his companion both saw the cloakroom attendant spring over his counter. Something glittered in the dim light—a flash of blue polished steel. There was a gleam in the air, a cry, and Rosario collapsed upon the floor. Arnold, who was already on his feet and halfway to the door, caught one glimpse of the upstretched hand, and all his senses were thrilled with what he saw. Upon the little finger was a signet ring with a scarlet stone!

The whole affair was a matter of seconds, yet Arnold dashed through the door to find Rosario a crumpled heap, the cloakroom attendant bending over him, and no one else in the vestibule. Then the people began to stream in—the hall porter, the lift man, some loiterers from the outer hall. The cloakroom attendant sprang to his feet. He seemed dazed.

"Stop him!" he shouted. "Stop him!"

The little group in the doorway looked at one another.

"He went that way!" the cloakroom attendant cried out again. "He passed through that door!"

Some of them rushed into the street. One man hurried to the telephone, the others pressed forward to where Rosario lay on his back, with a thin stream of blood finding its way through his waistcoat. Arnold was suddenly conscious of a woman's arm upon his and a hoarse whisper in his ear:

"Come back! Take me away somewhere quickly. This is no affair of ours. I want to think. Take me away, please. I can't look at him!"

"Did you see the man's hand?" Arnold gasped.

"What of it?"

"It was the hand I saw upon your window-sill last night. It was the same ring—a scarlet signet ring. I could swear to it."

She gave a little moan and her whole weight lay upon his arm. In the rush of people and the clamor of voices around they were almost unobserved. He passed his arm around her, led her back through the restaurant and into one of the smaller rooms of the hotel. He found her an easy-chair and stood over her.

"You won't leave me?" she begged.

He held her hand tightly.

"Not until you send me away!"

VII

FENELLA never became absolutely unconscious. She was for some time apparently in a state of intense nervous collapse. Her breath was coming quickly, her eyes and her fingers seemed to be clinging to his as though for support.

"You think that he is dead?" she faltered once.

"Of course not," he replied reassuringly. "I saw no weapon at all. It was just a quarrel."

She half closed her eyes.

"There was blood upon his waistcoat," she declared, "and I saw something flash through the window."

"I will go and see, if you like," Arnold suggested.

Her fingers gripped his.

"Not yet! Don't leave me yet! Why did you say that you recognized the hand—that it was the same hand you saw upon the window-sill last night?"

"Because of the signet ring," Arnold answered promptly. "It was a crude-looking affair, but the stone was bright scarlet. It was impossible to mistake it."

"It was only the ring then?"

"Only the ring, of course," he admitted. "I did not see the hand close enough. It was foolish of me, perhaps, to say anything about it, and yet—and yet the man last night—he was looking for Rosario. Why should it not be the same?"

He heard the breath come through her teeth in a little sob.

"Don't say anything at present to any one else. Indeed, there are others who might have worn such a ring."

Arnold hesitated, but only for a second. He chanced to look into her face, and her whisper became his command.

"Very well," he promised.

She sat up a few moments later. She was evidently becoming stronger.

"Now go," she begged, "and see—how he is. Find out exactly what has happened and come back. I shall wait for you here."

He stood up eagerly.

"You are sure that you will be all right?"

"Of course," she replied. "Indeed, I shall be better when I know what really has happened. You must go quickly, please, and come back quickly. . . . Stop!"

Arnold, who had already started, turned back again. They were in a ladies' small reception room at the head of the stairs leading down into the restaurant, quite alone, for every one had streamed across the courtyard to see what the disturbance was. The side of the room adjoining the stairs and the broad passage leading to the restaurant was entirely of glass. A man on his way up the stairs had paused and was looking intently at them.

"Tell me, who is that?" Fenella demanded.

Arnold recognized him at once.

"It is your friend Starling—the man from South America," he told her.

"Starling!" she murmured.

"I think that he is coming in," Arnold continued. "He has seen you. Do you mind?"

She shook her head.

"No. He will stay with me while you are away. Perhaps he knows something."

Arnold hurried off and met Starling upon the threshold of the room.

"Isn't that Mrs. Weatherley with you?" the latter inquired.

"Yes," Arnold told him. "She was lunching with me in the grillroom—I believe that she was really waiting for Rosario—when the affair happened."

"What affair?"

Arnold stared at him. It seemed impossible that there was any one who did not know of the tragedy.

"Haven't you heard?" Arnold exclaimed. "Rosario was stabbed outside the grillroom a few moments ago."

Starling's pallid complexion seemed suddenly to become ghastly.

"Rosario—Rosario stabbed?" he faltered.

"I thought that every one in the place must have heard of it," Arnold continued. "He was stabbed just as he was entering the café not more than ten minutes ago."

"By whom?"

Starling's words came with the swift crispness of a pistol-shot. Arnold shook his head.

"I didn't see. I am just going to ask for particulars. Will you stay with Mrs. Weatherley?"

Starling looked searchingly along the vestibule. The news seemed to have affected him strangely. His head was

Digitized by Google

thrown a little back, his nostrils distended. He reminded Arnold for a moment of a watch-dog listening. "Of course," he muttered, "of course. Come back as soon as you can and let us know what has happened."

Arnold made his way through the reception hall and across the courtyard. Already the crowd of people was melting away. A policeman stood on guard at the opposite door and two more at the entrance of the café. The whole of the vestibule where the affair had happened was closed, and the only information that it was possible to collect Arnold gathered from the excited conversations of the little knots of people standing around. In a few minutes he returned to the small reception room. Fenella and Starling looked eagerly up at his entrance. They both showed signs of an intense emotion. Even Starling was gripping the back of a chair as he spoke.

"What of Rosario?" he demanded.

Arnold hesitated, but only for a moment. The truth, perhaps, was best.

"Rosario is dead," he replied gravely. "He was stabbed to the heart and died within a few seconds."

There was a queer silence. Arnold felt inclined to rub his eyes. Gone was at least some part of the horror from their white faces. Fenella sank back in her chair with a little sob that might almost have been of relief. Starling, as though suddenly mindful of the conventions, assumed a grimly dolorous aspect.

"Poor fellow!" he muttered. "And the murderer?"

"He's got clean off for the present at any rate," Arnold told them. "They seem to think that he reached the Strand and had a motor car waiting for him."

Again there was silence. Then Mrs. Weatherley rose to her feet, glanced for a moment in the looking-glass and, turning round, held out both her hands to Arnold.

"You have been so kind to me," she said softly. "I shall not forget it—indeed I shall not. Mr. Starling is going to take me home in his car. Goodby!"

Arnold held her hands steadfastly and looked into her eyes. They were more beautiful than ever now, with their mist of risen tears. But there were other things in her face, things less easy to understand. He turned away regretfully.

"I am sorry that you should have had such a shock," he said. "Is there any message for Mr. Weatherley?"

She exchanged a quick glance with her companion. Then for the first time Arnold realized the significance of the errand on which he had come.

"Some one must have warned Mr. Weatherley of what was likely to happen!" he exclaimed. "It was for that reason I was sent here!"

Again no one spoke for several seconds.

"It was not your fault," she said gently. "You were told to wait inside the restaurant. You could not have done more."

Arnold turned away with a little shiver. His mission had been to save a man's life, and he had failed!

VIII

IT WAS twenty minutes to four before Arnold reached the office. Mr. Jarvis looked at him curiously as he took off his hat and hung it up.

"I don't know what you've been up to, young man," he remarked, "but you'll find the governor in a queer state of mind. For the last hour he's been ringing his bell every five minutes, asking for you."

"I was detained," Arnold answered shortly. "Is he alone now?"

Mr. Jarvis nodded.

"I think that you had better go in at once," he advised. "There he is, stamping about inside. I hope you've got some good excuse, or there'll be the dickens to pay."

The door of the inner office was suddenly opened. Mr. Weatherley appeared upon the threshold. He recognized Arnold with an expression partly of anger, partly of relief.

"So here you are at last, young man!" he exclaimed. "Where the dickens have you been all this while? Come in—come in at once! Do you see the time?"

"I am very sorry indeed, sir," Arnold replied. "I can assure you that I have not wasted a moment that I know of."

"Then what in the name of goodness did you find to keep you occupied all this time?" Mr. Weatherley demanded, pushing him through into the office and closing the door behind them. "Did you see Mr. Rosario? Did you give him the message?"

"I had no opportunity, sir," Arnold answered gravely.

"No opportunity? What do you mean? Didn't he come to the Milan? Didn't you see him at all?"

"He came, sir," Arnold admitted, "but I was not able to see him in time. I thought, perhaps," he added, "that you might have heard what happened."

Mr. Weatherley had reached the limits of his patience. He struck the table with his clenched fist. For a moment anger triumphed over his state of nervous excitability.

"Heard?" he cried. "Heard what? What the devil should I hear down here? If you've anything to tell why don't you tell it to me? Why do you stand there looking like a ——"

Mr. Weatherley was suddenly frightened. He understood from Arnold's expression that something serious had happened.

"Mrs. Weatherley—my—wife ——" he gasped.

"Mrs. Weatherley is quite well," Arnold assured him quickly. "It is Mr. Rosario."

"What of him? What about Rosario?"

"Take Me Away Somewhere Quickly. I Want to Think"

"He is dead," Arnold announced. "You will read all about it in the evening papers. He was murdered—just as he was on the point of entering the Milan grillroom."

Mr. Weatherley began to shake. He looked like a man on the verge of a collapse. He was still, however, able to ask a question: "By whom?"

"The murderer was not caught," Arnold told him. "No one seems to have seen him clearly, it all took place so quickly. He stole out of some corner where he must have been hiding, and he was gone before any one had time to realize what was happening."

Mr. Weatherley had been standing up all this time, clutching nervously at his desk. He suddenly collapsed into his easy-chair. His face was gray, his mouth twitched as though he were about to have a stroke.

"Good Lord!" he murmured. "Rosario dead! They had him after all! They—killed him!"

"It was a great shock to every one," Arnold went on. "Mrs. Weatherley arrived about a quarter of an hour before it occurred. I understood that she was expecting to lunch with him, but when I told her why I was there she came and sat at my table. She was sitting there when it happened. She was very much upset indeed. I was detained looking after her."

Mr. Weatherley looked at him narrowly.

"I am sorry that she was there," he said. "She is not strong; she ought not to be subjected to such shocks."

"I left her with Mr. Starling," Arnold continued. "He was going to take her home."

"Was Starling lunching there?" Mr. Weatherley asked.

"We saw him afterward coming up from the restaurant," Arnold replied. "He did not seem to have been in the grillroom at all."

Mr. Weatherley sat back in his chair and for several minutes he remained silent. His eyes were fixed upon vacancy, his lips moved once or twice, but he said nothing. He seemed, indeed, to have lost the power of speech.

"It is extraordinary how the affair could have happened almost unnoticed in such a crowded place," Arnold went on, feeling somehow that it was best for him to talk. "There is nearly always a little stream of people coming in, or a telephone boy, or some one passing; but it happened that Mr. Rosario came in alone. The man who killed him slipped out from somewhere and caught him by the throat, and it was all over in a few seconds. The murderer seems to have kept his face entirely hidden. They do not seem to have found a single person who could identify him. I had a table quite close to the door, as you told me, and I really saw the blow struck. We rushed outside, but though I don't believe we were more than a few seconds there wasn't a soul in sight."

"The police will find out something," Mr. Weatherley muttered. "They are sure to find out something."

"Some people think," Arnold continued, "that the man never left the hotel or, if he did, that he was taken away in a motor car. The whole hotel was being searched very carefully when I left."

There was a knock at the door. Mr. Jarvis, who had been unable to restrain his curiosity any longer, brought some letters in for signature.

"If you can spare a moment, sir," he began apologetically, "there is this little matter of Bland & Company's order. I have brought the reports with me."

Mr. Weatherley felt his feet upon the ground again. He turned to the papers that his clerk laid before him and gave them his close attention. When Arnold would have left the room, however, he signed to him impatiently to remain. As soon as he had given his instructions and Mr. Jarvis had left the room he turned once more to Arnold.

"Chetwode," he said, looking at him critically, "you appear to me to be a young man of athletic build."

Arnold was quite speechless.

"I mean that you could hold your own in a tussle, eh? You look strong enough to knock any one down who attempted to take liberties with you."

Arnold smiled.

"I dare say I might manage that, sir," he admitted.

"Very well—very well then," Mr. Weatherley repeated. "Have your desk moved in here at once, Chetwode. You can have it placed just where you like. You'll get the light from that window if you have the easy-chair moved and put in the corner there against the wall. Understand that from henceforth you are my private secretary, and you do not leave this room, whoever may come in to see me, except by my special instructions. You understand that, eh?"

"Perfectly, sir."

"Your business is to protect me in case of anything happening—of any disagreeable visitors or anything of that sort," Mr. Weatherley declared. "This affair of Mr. Rosario has made me nervous. There is a very dangerous gang of people about who try to get money from rich men and, if they don't succeed, they usually use violence. I have already come into contact with something of the sort myself. Your salary—what do you get at present?"

"Twenty-eight shillings a week, sir."

PHILADELPHIA, JANUARY 13, 1912

Postal-Savings Bonds

AT THE date of the Postmaster-General's annual report, postal-savings banks had been in operation eleven months. At first the system was applied tentatively to only a few post-offices, being gradually extended; but at the end of eleven months the total deposits amounted to eleven million dollars. Evidently the system is proving its usefulness.

The law provides that a depositor may convert his savings into United States bonds bearing two and a half per cent interest. This is nearly one-half of one per cent below the rate at which the Government is able to borrow from general investors. The Panama three per cents were originally placed and now sell in the open market at a rate yielding the investors over two and nine-tenths per cent interest.

Naturally, then, when a postal depositor wished to realize on his two and a half per cent Government bond, ninety-two and a half cents on the dollar was the best bid he could get. To protect depositors from this loss the trustees of the postal-savings system have undertaken to purchase at par whatever bonds depositors may wish to dispose of—which, says Secretary MacVeagh in his annual report to Congress, has "easily and permanently cured" the difficulty.

We hardly think so, however. A depositor who converts his savings into a bond and retains the bond is evidently getting nearly one-half of one per cent less interest than his money is actually worth. We think conditions imposed upon postal savings are unnecessarily rigid; and that, all round, the Government could well afford to treat the system a little more liberally.

Schedule K Again

THE Tariff Board finds that, after allowing for what the flock yields in mutton, it costs nine and a half cents a pound to produce wool in the United States, ranging downward from nineteen cents for fine wools in the Ohio region; that in South America it costs four to five cents a pound; in New Zealand and on certain favorably situated runs in Australia, practically nothing—the mutton yield there meeting the total flock expense. Thus, in any event, the present duty is more than the total average cost of production.

It finds that imported wools do not shrink two-thirds, as Schedule K pretends they do. On the contrary, shrinkage of fine Australian and South American wools is less than half; and of Australian and South American crossbred wools, only one-third.

It finds the present duties are prohibitive on noils, tops, nearly all yarns, and light-weight and medium goods for men's wear; that the duty on certain cheap fabrics, if they were imported at all, would be as high as a hundred and fifty per cent—in some cases over two hundred per cent.

It finds, also, that the cost of manufacturing woolen cloth is much higher here than abroad, running—as to a great variety of fabrics—one hundred and even one hundred and fifty per cent above the English cost; but, as usual, the cost differs widely in American mills, and it seems that present duties are high enough to protect the less efficient ones.

Any open-minded person would call the report a conservative document; but it furnishes abundant ground for revision of Schedule K.

Immigration to America

THOUGH final figures are not yet available, it is evident that the increase of our population by immigration in 1911 was decidedly smaller than in any recent year except 1908, when industrial depression following the panic of the autumn before caused an actual reversal of the tide. No doubt the Italian War has both checked the movement from that country and recalled many emigrants; but to explain the total movement of last year a more general cause must be sought.

Arrivals of aliens to the date covered by the last report averaged less than eighty thousand a month, while the departures of emigrant aliens reached more than half that figure. At this rate we would have gained not much over four hundred thousand on the year against over eight hundred thousand in 1910.

In contrast with these figures Canada shows, for the seven months ending October thirty-first, the largest immigration in her history. Two hundred and sixty-five thousand aliens entered the Dominion in that period, and ninety-three thousand of them crossed the border from the United States. If we deduct that ninety-three thousand from our net gain from immigration in approximately the same period it would appear that Canada's increase of population from immigration was much larger than our own; but there is a considerable return flow of Canadian immigrants to the United States of which these figures take no account.

For some time Canada has pursued a consistent and intelligent immigration policy, while we have had no policy at all.

The Dominion seeks to attract immigrants of the sort she has most need of and to distribute them to the best advantage to themselves and to her. We are only beginning to take thought of what the alien should do and how he should be treated after he gets here. It would not be surprising if Canada, with a more intelligent policy and the great resources to be developed, presently supplanted us as the chief goal of North American immigration.

The Trouble With the House

THE House seems content to deal merely with the raw materials of legislation, relegating the production of the finished article to the Senate. For example, the Sherwood "dollar-a-day" pension bill provided that "no one shall be entitled to a pension under this act who is in receipt of an annual income of one thousand dollars or more." The House hastened to strike out this provision, ostensibly on the ground that it would "penalize thrift" and that you couldn't tell what a man's income was anyway, and then passed the bill by a vote of two hundred and twenty-nine to ninety-two.

About sixty set speeches upon it appear in the Record—mostly buncombe obviously designed for circulation among old-soldier constituents.

We wonder how many of the members who voted for the bill and put eloquent tributes to the veteran into the Record really expected that the Senate would amend and prune the act—thereby enabling them to gain campaign credit with the old soldiers and at the same time relieving them from the embarrassment of so great an immediate increase in national expenditures. The House unfortunately is often doing that sort of thing—which is the chief reason for the regrettable preponderance of the upper branch.

We favor liberal service pensions to survivors of the Civil War who are in any need of them, and a check to the flood of private pension bills; but due deliberation upon the subject is certainly more likely to be had in the Senate than in the House.

Liberty and Immigration

IN 1832, when the present treaty with Russia was signed, the United States held that no man could throw off his allegiance to the government under which he was born without that government's consent; if he was born a subject of the Czar or of the King of England he must remain a subject until death, unless their royal majesties should consent to a change of citizenship.

This doctrine is clearly laid down in a decision by our Supreme Court in the year 1830, and is recognized in this Russian treaty.

Eleven years later, however, came a great famine in Ireland, followed by the emigration to this country of hundreds of thousands of Irishmen. Shortly after that, political conditions in Germany started another great stream of emigration our way. So in 1848, Buchanan, as Secretary of State, declared man's right to change his citizenship at will, throwing off allegiance to his native land and assuming allegiance to another country. With a steady tide of immigration the United States more and more decisively adopted that view, gradually enforcing it upon other countries, until at present Russia—alone, we believe, among civilized states—claims inalienable allegiance from those born on her soil.

That the doctrine of inalienable allegiance is repressive, on the whole, to human liberty can hardly be doubted; but there is no probability we would have taken an enlightened stand as to that doctrine when we did if we had not been rapidly gaining in population and wealth through immigration.

Uncle Sam Against the World

WE SEEM at length really to be girding up our loins in this matter of trust-busting. There is pending at Washington at this writing a joint resolution for a congressional investigation into what is alleged to be a world-wide Shipping Trust. More than ninety per cent of our overseas commerce is carried in foreign ships; and virtually all these ships, it appears, belong to various cartels, pools, traffic agreements, conferences and combinations, the acknowledged object of which is to maintain rates and prevent competition.

There are British, German, Dutch, French, Italian, Portuguese and Japanese shipping combinations in restraint of trade, hemming our shores, so to speak, from Maine to Florida, from San Diego to Seattle, and devouring us on every hand. Moreover, it is undeniable that some foreign governments themselves are—at least tacitly—parties to these pools and combines whose object is to suppress competition in overseas carrying.

Needless to say we hope that the joint resolution will be adopted and that a universal subpœna will be issued summoning the world to appear at Washington and stand trial under the Sherman law.

Possibly the Supreme Court would find the world guilty and decree that, hereafter, the two ends of all ships must sail in opposite directions in order to insure competition.

The President's Diagnosis

PROBABLY the following press dispatch was written with no satirical intention whatever:

"President Taft left New York at midnight after thirty busy hours in the city. He declared in the last addresses he made one of the chief faults of this age is that people are living too fast. . . . In his visit here the President spoke at five dinners, laid the cornerstone of a home for the blind, did Christmas shopping and received calls from many political leaders."

We ourselves are quite breathlessly of opinion that people are living too fast. We maintain it vehemently while sprinting for the eight-forty-five express, reading five newspapers on the way in and leaping for a cab at the station.

It is hardly absent from our minds during the day, except as from time to time we are distracted because the telephone operator takes sixteen seconds to answer our call or the office boy is two and a half minutes late in fetching up the mail.

Everybody thinks people live too fast nowadays; and if it were not for the intolerable afflictions of being compelled to wait three minutes for a street car, or having a train a quarter of an hour late, or finding dinner not ready at the minute—something might be done about it.

Rigors of the Law

A RECENT press dispatch under a New York date-line says: "As punishment for carrying on a stock swindle by mail, alleged to have extended over a period of two years and to have netted millions, four promoters of the firm of Burr Brothers were each sentenced today to serve a year's imprisonment on Blackwell's Island." The headlines say: "Jail for Swindlers—Perpetrated Long Series of Frauds—Promoted Oil, Mining and Railroad Projects Over a Series of Years—Sold Aggregate of Fifty Million Dollars of Stock—Their Profits Fifteen Millions!"

The sentence imposed was about the same that is commonly inflicted for slapping a policeman. We do not say it was inadequate; but we seem to recall a case that occurred about a year ago, where a youth who was intrusted with a special-delivery letter and stole five dollars from it was sentenced to something like five years!

We do not think any one can say exactly what the punishment for a given crime should be; but it seems clear that if this punishment was adequate then the ordinary sneakthief or pickpocket, instead of being sentenced at all, should be apologized to and presented with a new suit of clothes.

Perhaps, to speak by the card, there is not in this country one law for the rich and another for the poor; but, generally speaking, there is a vast difference in the rigors of the law as between the crimes of the poor and the crimes of the rich. Under this head see recent convictions in smuggling cases in New York.

WHO'S WHO—AND WHY

PHOTO. BY C. M. HAYES & CO., DETROIT, MICH.

An Auctioneer Who is Mayor—and Who Knows What the People Want

Serious and Frivolous Facts About the Great and the Near Great

Going! Going! Gone!

AN INDIGNANT citizen pressed his way into the office of the mayor of Indianapolis. "Say, Lew," he shouted, "are you going to let this potato outrage go on—or ain't you?"

"What potato outrage?" asked the mayor—for it was none other than Lew Shank—disentangling himself from his chair and sniffing the outrage from afar.

"These thievin' commission men have telegraphed to the farmers not to ship potatoes in here and they've jumped the price up to a dollar-forty a bushel, retail."

It was enough. Lew went into action then and there. He talked to a friend in the commission business and learned that potatoes could be bought at sixty-nine cents the bushel, F. O. B. at Indianapolis. He bought a carload.

The mayor called in the reporters.

"Boys," he said, "you print it in the papers that I have bought a carload of potatoes and will sell them to all comers at enough of a shade over the price to pay handling charges. Say they will be about half what they are now and that they will be sold to all comers. I'll sell 'em myself, by jinks!"

It was a week before the potatoes arrived and the papers had stories of the mayor's enterprise every day. Also, the price of potatoes in the local markets dropped to seventy cents a bushel, wholesale, and a dollar, retail.

The potatoes came. The mayor announced he would sell them at seventy-five cents a bushel, no buyer to have more than five bushels and small buyers to be given the preference. The people came from all parts of the city. Lew climbed into the car, helped shovel the potatoes into sacks, made change and supervised the sale. Before he quit he sold sixteen carloads of potatoes—or about eight thousand bushels; and the price of potatoes in Indianapolis has remained lower than elsewhere since that time. All that is necessary when a retailer gets gay with potatoes is to whisper:

"I'll tell Lew Shank on you!"—and there is no hoisting of prices.

They tried to put something over in the way of raising the price on turkeys and chickens just before Thanksgiving in Lew's town, but Lew was loaded for them. He brought in hundreds of turkeys and thousands of pounds of chickens and beat down the retail price several cents a pound. Now he wants a municipal market purchasing agent appointed who shall keep in touch with outside prices, and, when the local dealers try to screw up the prices arbitrarily or by restricting the supply, shall buy and sell, for the city and to the people, whatever articles are too high, at cost plus the expense of handling.

The Man He Picked for Mayor

YOU see, Lew is a hustler. His idea of being mayor is to do things for the folks who live in the town. He was running an auction and storage business when he broke into politics, and he was the auctioneer himself. An auctioneer is in close touch with what is going on in the community, and Lew figured the people would much prefer to have the price of potatoes hammered down than to have him fussing round with theoretical city problems. He doesn't claim to be a statesman, or a civic leader, or a reformer. He's an auctioneer who is mayor—and who knows what the people want.

He began by clerking in a furniture store. Then he developed into auctioneering, which is a distinct profession; and from that he built up his storage and auction business. He knew everybody in Indianapolis, and heard a good deal of politics talked—and saw a good deal of it practiced. He worked along with his party for a time and then decided he'd like an office himself.

"Boys," said Lew to the leaders, "I guess I'll run for county auditor."

"Guess again," replied the leaders. "We've got a man picked for that place."

"All right," said Lew; "then I'll run for sheriff."

"Not on your life!" shouted the leaders. "We've promised that place too."

Lew jammed his hat down on his head.

"By heck!" he said, "I'm going to run for something—and you can't stop me. I'll take recorder; and I don't give a hoot whether you've picked anybody for that or not."

Lew and Booth Tarkington, who was running for the legislature, campaigned together. They canvassed the city and drove night and day over the county. Lew, being thrifty, handed out cigars he bought by the pound; and Tarkington never asked a prospective supporter to smoke one that cost less than a quarter for two. Both were elected; but Lew knew his folks on the cigar question. He had a good many more votes than Tarkington.

In 1909 Lew called on the leaders again and the following dialogue took place.

"Boys, I'm going to run for mayor!"

"For Heaven's sake, Lew," pleaded the leaders, "be calm! You can't run for mayor. It ain't in the cards. We've got another man picked."

"Well," replied Lew, "I've got a man picked too. His name is Lew Shank, Esquire. He's going to run like a house afire too!"

And he did. When the returns came in Lew had carried every precinct in Indianapolis for the nomination except one.

Lew was a busy little campaigner. He promised a business administration by a business man; and he sent ice-cream and watermelons to the colored voters, of whom there are many in that city—and was elected.

The saloon problem faced him.

"Now look here," said Lew, "I don't care personally if the saloons are open every day and every night; but there's a liquor law here, and so long as it is here I'm going to enforce it."

Lew had his troubles. He and the liquor interests fought back and forth, and finally he did land on one saloonkeeper.

"Say," said Lew to this man, "I'm going to suspend your license—and I'm going to keep it suspended, too, until you bring me a certificate from a minister that you have attended at least one service on Sunday."

On the following Monday morning that saloonkeeper was the first man at the City Hall. He had his certificate and Lew allowed him to open his saloon again.

Just about this time Lew went into a moving-picture show and found that boys and girls went to moving-picture shows too—some to see the pictures and some because the rooms were dark and there was a good chance to spoon. Lew was astounded. He hurried out and issued his celebrated ukase against darkness in moving-picture theaters.

"But," protested the managers, "we have to have the places dark to show the pictures!"

"Not in this city!" announced Lew. "Keep enough lights burning so everybody among those present can be seen all the time." And they do—in Indianapolis.

Another enterprise was a municipal marriage bureau. Lew announced he had several applications from men who wanted wives and women who wanted husbands; and he opened an office where those seeking mates might get on the track. Three couples were married through Lew's efforts. Then he had to close down because people from all parts of the country began writing in and asking for soul-mates—and Lew didn't have clerks enough to answer the letters and provide the raw materials.

Mahogany Murals

LEW'S full name is Samuel Lewis Shank, but everybody in Indiana calls him Lew. He is thirty-nine years old and was born in Wayne County, moving to Indianapolis when he was a small boy. He is a big, broad-shouldered man, with a lot of chin, a continuous smile and not much hair. His education was received in the public schools.

Lew never lets the complexity of a municipal problem feaze him. He tackles them all as they come along and goes gayly to the mat with them. Not long ago he led a fight against mercantile insurance rates and forced concessions that will make a saving of one hundred thousand dollars a year in local mercantile risks.

A few hours before it was time to assume the office of mayor, Lew strolled up to the City Hall to have a chat with Mayor Brookwalter, who was retiring.

"Lew," said Brookwalter, "you don't need any advice from me about things; but whatever else you do I hope you will finish up the new City Hall properly. We have put in good material and it would be a shame to cheapen the finishing. I am especially anxious that you look out for the murals."

"Brook," replied Lew earnestly, "you needn't worry about that. Nothing but mahogany is to be used in finishing, and those murals aren't going to be any exception."

Home Truths

AN EDITOR in a Kansas town was showing a former resident, who had returned for a visit, round the place.

"Huh," said the former resident, "time was when I could have bought this hull blamed townsite for two hundred dollars, but I didn't think it was worth it."

"It wouldn't have been if you had bought it," replied the editor.

By Hook or by Crook

DICK WINTERSMITH was a crony of John G. Carlisle in Washington and, when President Cleveland made Carlisle Secretary of the Treasury, Dick promptly asked his friend for a job, supplementing the request with letters from all his friends. Dick wanted to go to Alaska.

Carlisle said he would look into the matter, and a day or two later sent Dick a present of a fine cane. It was a pretty cane and valuable, but it had no crook on it.

A few days later Wintersmith called on Secretary Carlisle again. "John," he said, "that is a fine cane you sent me, but I'll lose it sure. I can't hook it over the railing of a bar and I'll sure forget it some day."

"That's so," Carlisle replied, "and the way to keep that cane is to stop drinking."

Wintersmith went away, but in a few days he returned again and said to Carlisle: "John, I have changed my mind. I want to be a consul in Panama."

"Why do you want to go down there?"

"Well," said Wintersmith, "I've found out that down there you sit at a table when you take a drink, and I can put that cane on the table where I can see it all the time and I won't lose it. Alaska is different."

Carlisle got him the job.

Love by Lantern Light

A KANSAS farmer, returning home late at night, saw a light moving about the farmyard. When he investigated he found a neighbor's farmhand carrying a lantern.

"What are you doing here?" demanded the farmer.

"Courtin', sir."

"Courtin'? Courtin' with a lantern? Huh, you fool, I never used a lantern when I went courtin'!"

"No, sir," replied the farmhand as he moved off, "we can all see you didn't."

EXTRAORDINARY CASES

The Gashed Finger—By Melville Davisson Post

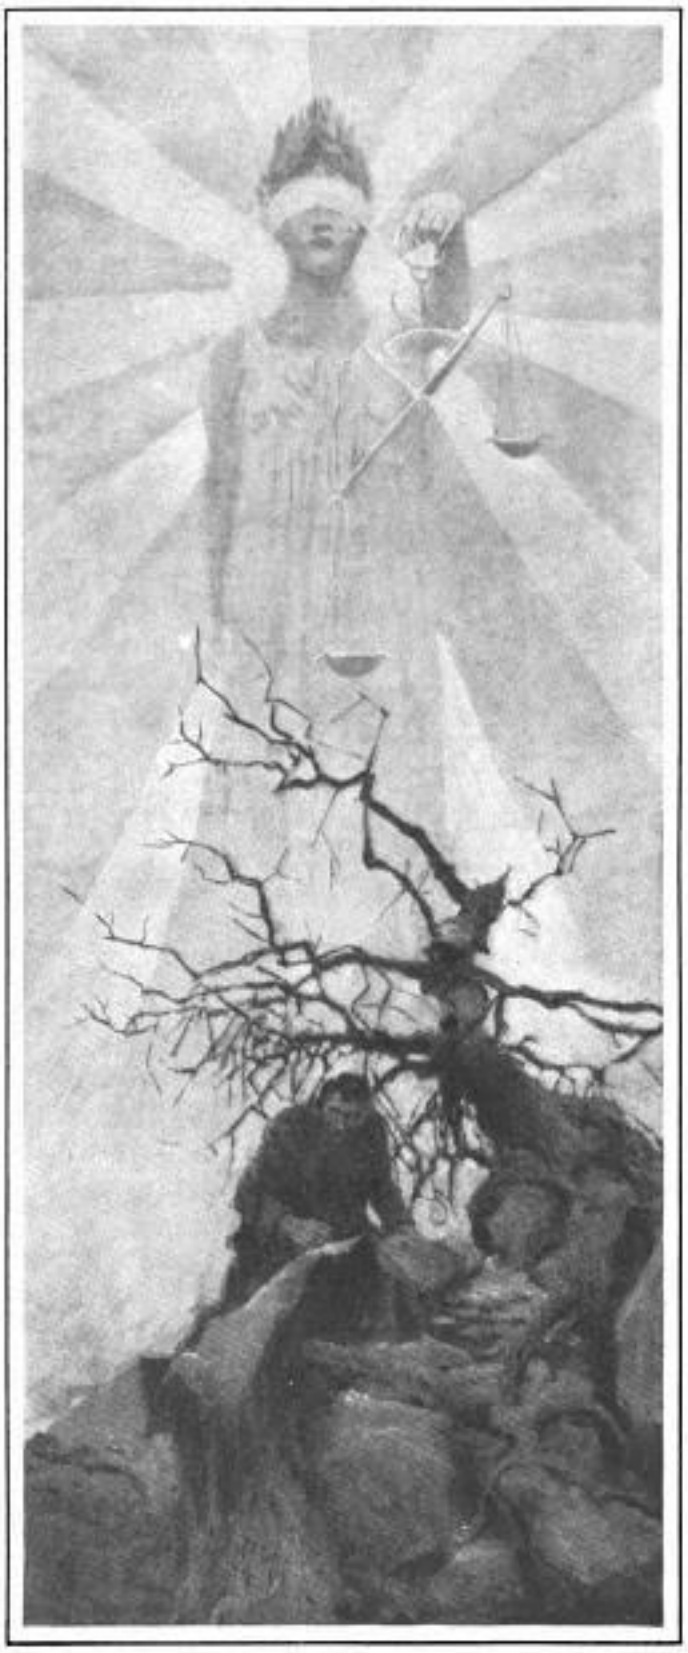
DECORATION BY H. T. DUNN

The air is full of sounds; the sky of tokens; the ground is all memoranda and signatures; and every object covered over with hints which speak to the intelligent.—EMERSON.

IT OUGHT to be admitted that the debt of the law to the modern scientist is great. Where certain of its mysteries have reached a point at which they appeared to defy solution he has come forward and easily cleared them up. He it was who scourged the witches out of the law courts; and he it is who, when the eye and ear fail, by mechanical appliances has been able to carry the investigation forward to a truthful solution. He has immeasurably increased the jeopardy of the criminal agent. In the one matter of the identification of the criminal he has swept all disguises into the rubbish heap. The wig and the paintpot have become the properties only of melodrama.

The Bertillon system, established in 1883 in Paris, has been so efficient as to render it possible to identify in a few minutes any old offender who has previously served a term in a French prison; and so accurate is it that in 1890 five hundred and sixty-two prisoners who endeavored to conceal their identity under false names and the like were easily identified.

But perhaps the greatest aid to the solution of the mystery of identities and perhaps the most efficient weapon that modern scientific methods have placed in the hands of the courts is the identification by fingerprints. This discovery ought perhaps to be attributed to Galton, whose treatise appeared in London in 1892, although it is said to have been suggested by Purkinje and Fauld. Tabor, a San Francisco photographer, is also said to have proposed this method for the registration of Chinese, and Sir William Herschel, as early as 1877, had been experimenting with fingerprints as a means of identifying the Indian coolies. But it was Galton who first reduced the thing to proper classification and made it a practical and efficient method of identification. He determined by a great many experiments that the minute anatomy of the skin of the fingertips, where the fine lines and ridges are highly developed, is of a very permanent structure. "Galton divides the patterns into nine classes, which, however, are not exhaustive. These divisions are based upon variation in the curved lines and whorls which usually occupy the center of the thumb, and of transverse and oblique lines which inclose this central whorl. . . . From the observations collected by Galton it appears to be demonstrated that almost absolute confidence may be placed in the permanency of these designs, a conclusion that seems justified from the anatomic basis on which the designs depend. Of seven hundred cases compared at different periods but a single instance was noted in which any variation was discovered, that being the union, in the course of years, of a ridge that had been cleft in early life." (Textbook of Legal Medicine, Vol. 1, page 91.)



The Infallibility of Fingerprints

GALTON, in summing up his conclusions as to the value of these fingerprints, said:

"The fact remains that a complete or nearly complete accordance between two prints of a single finger, and vastly more so between the prints of two or more fingers, affords evidence, requiring no corroboration, that the persons from whom they were made are the same."

Now this method of identification at one stroke robbed the criminal of the benefit of all disguises; and in addition to this it has furnished what has proved to be one of the most efficient methods in the detection of crime. There usually remains about the theater of all forcible injuries some mark of the criminal agent's hands, and in innumerable cases, with his moist, greasy, bloody or otherwise soiled fingers, the criminal has left his signature behind him—a signature that cannot be forged and that cannot be denied.

In one case where a package of money was being transferred by an express company from New York to New Orleans it had been opened in transit and a portion of the money removed. Two of the seals had been broken and one of them had been resealed by thumb pressure. An expert took the impression of the thumbs of all the employees of the express company through whose hands the packet was known to have passed. He photographed and enlarged these impressions and very readily detected the robber.

The cases are simply innumerable. Only recently in New York a safe in the office of an importer was discovered to have been opened and robbed. The combination had been battered to give the idea that force had been used, but the police, upon a careful examination, were of the opinion that the combination had been thus battered with a hammer after the safe had been opened, and that the robbery had in fact been accomplished by some employee. The importer refused to believe that the robbery was what is called "an inside job" until the police pointed out that none of the doors or windows had been broken and that the undamaged condition of the safe showed that the force had not been sufficient to open it. Fortunately, in a careful examination the police found the impression of a thumb and forefinger; they appeared to be only faint smudges against the inner side of one of the steel doors, but the police considered them to be the signature of the criminal. They were photographed and after that, in spite of the protest of the importer, the police compelled every employee on the ten floors of the building to submit his fingerprints. There were some two hundred of these employees. The police carried away these signatures and were presently able to come back and put their hands on the criminal. The importer was amazed; he said that the prisoner was an old and trusted employee and that the police must be mistaken. But when the print of the thumb and forefinger of this man was compared with the print on the inside of the steel door even the importer was forced to admit that they were identical.

The efficiency of the fingerprint test was shown in the trial of Cæsar Cella, alias Charles Crispi, in the Court of General Sessions of New York, on May 12, 1911. Crispi was charged with accomplishing a robbery by removing a section of plate-glass from a door. When this glass was examined a number of fingerprints were found on it. The police removed the glass, photographed the fingerprints and declared that an old criminal named Crispi had done the robbery. Crispi was indicted. He set up an alibi. The case was on trial for several days, but the evidence of the fingerprints was so conclusive that on the third day the prisoner's counsel pleaded guilty to the indictment. In this case a police expert was put to the following severe test. The print of some dozen persons' fingers was taken from an inked pad on white paper. One of the persons was then directed to handle the glass in the way the prisoner was supposed to have handled it. The expert, who had been absent from the court room, was then brought in and the fingerprints and the glass placed before him. He examined the impressions on the white sheets of paper with a magnifying glass and pointed out who it was that had touched the glass.

The Gloves of Gonzalez

ONE would say that to avoid this jeopardy the criminal would need only to wear gloves when he went about his work. But it was the very fact that one of the assassins wore gloves that led to the detection of the criminal agents in one of the most extraordinary cases reported in New York. (People vs. Gonzalez, 35 N. Y. 49.) A Spaniard named Otero, on his way from Havana to New York, fell in with a countryman named Gonzalez. Otero was a young, frank, good-natured fellow, and as Gonzalez seemed to be an unfortunate person of his own country he took him up and evinced a friendly interest in him. When they arrived in New York Gonzalez went with Otero to the Barcelona Hotel in Great Jones Street, which was known as the Spanish house. The proprietors of this hotel were not pleased with the appearance of Gonzalez and, as he came without baggage, they refused him a room. However, upon the intercession of Otero he was finally permitted to enter. Otero said that Gonzalez was a poor fellow whom he was going to help, who had come to New York for employment. Otero seemed to be a very prosperous person; he exhibited considerable sums of gold that he carried about him. The clerk at the hotel advised him to deposit his money in the hotel safe, but he declined to take this precaution. It was afterward remembered that Gonzalez watched the movements of Otero with the keenest interest and constantly attended him. It was also remembered that within an hour after their arrival at the Barcelona, Gonzalez went to the Hotel de Cuba in Bleecker Street, a little more than a block from Great Jones Street, and there met with another Spaniard named Pellicier, who had been a former waiter at the Barcelona Hotel. Soon after his arrival Otero left for Philadelphia and did not return to New York until the following Tuesday. About half-past nine o'clock on Wednesday night it happened that William C. Mills, of Brooklyn, left his shop in Fulton Street to go to his residence in Cannon Place, and in the center of the park he discovered the body of Otero. The police were notified and came immediately. They concluded that as the body was still warm the assassins had been interrupted by the approach of Mills and had not completed their work of robbing the body. One of the pockets of Otero was turned inside out, but another was left undisturbed, although it contained over two hundred dollars in gold and the receipt for his bill at the Barcelona Hotel, by which he was at once identified. In the haste of their flight the murderers had dropped their implements and the police found a bent dagger and the detached blade of a razor. These weapons could not be identified and did not indicate

Digitized by Google

the criminals, but fortunately on the ground near by the police picked up a pair of bloody gloves. When they came to examine these gloves they found that the left one had been cut. As the gloves did not fit Otero the police were of the opinion that they had been worn by one of the assassins, and they constructed the following theory: As Otero was an athletic and vigorous man he had evidently been surprised and overpowered, and as there were two implements found it was reasonable to conclude that there had been two assassins. As the most deadly wounds were stabs in the back the police concluded that the assassin who had worn the gloves had clutched Otero with his left hand while he applied his dagger from behind, and that the bolder assassin while gashing Otero in front with his razor inadvertently cut the gloved hand of his confederate. The police had now a clew to the assassins. They had only to find a man with a gashed left hand. As the victim was a Spaniard they began at once to visit those hotels and boarding houses to which Spaniards were accustomed to resort in New York, and they immediately picked up Pellicier and Gonzalez. When Pellicier was taken to the station house the glove was put on his hand and the cuts in it were found to correspond with the cuts in the fingers of his left hand. The judge said in his opinion:

"In the light of this evidence, undisputed and unexplained, the crime they committed in darkness is as clearly open to view as if they had perpetrated it in the blaze of the noonday. . . . The case furnishes a single illustration of the searching nature and the irresistible force of circumstantial evidence in the detection and exposure of secret guilt. So far as human sagacity could foresee the perpetrators of the crime were secure of absolute immunity. They had no thought when they were compassing Otero's death that they were lifting their hands against their own lives; but, step by step, as they were dogging him, retribution was following unseen close upon the heels of the criminals."

The careful and painstaking experiments of men in the medical profession have been of inestimable value to the courts in solving the enigmas of criminal defenses. They have pointed out the difference between wounds that were self-inflicted and homicidal ones; they have shown the peculiarities of wounds caused by certain varieties of implements; they have been able to say how far away from the victim was the weapon from which bullets were fired; they have shown how the nature of the wounds indicated that the assassin must have been in a certain position. They have studied the "brand" made by the firing of a weapon and the tattooing made by the powder, and by means of these studies have been able to confirm or to refute the testimony of persons charged with homicide.

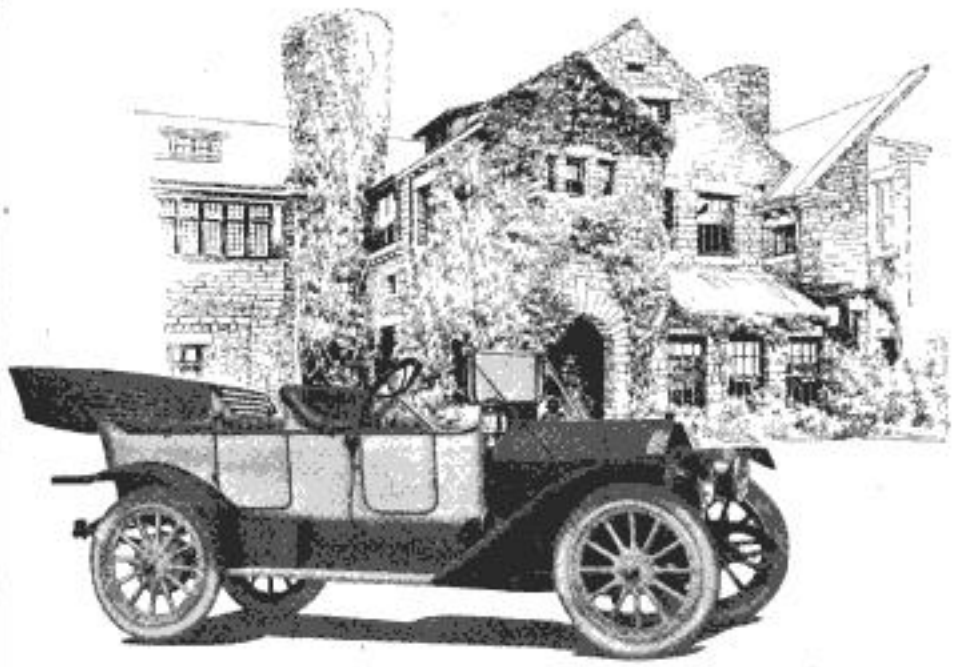
Accomplished Impostors

Doctor Hall observed that the "brand" is always found above the line of sight of the weapon—that is to say, if the weapon be fired in an ordinary manner the brand will be above the bullet hole, but if the weapon be turned upside down the brand will be below. And, in the case of People vs. McLaughlin (Colo. 1890) this fact observed by Hall demonstrated the innocence of a prisoner against whom the indications of guilt were so strong that he was about to be lynched. The prisoner had stated that he had been in the act of striking the deceased and not of shooting at him intentionally, and as the brand was below the bullet hole in the dead man's face this fact proved that the prisoner's statement was correct.

By the manner and distribution of shot, men like Wetherill have been able to verify or to disprove stories of accidental shooting and the like.

The enigmas that the law courts are called upon to solve are not all confined to violent crimes accomplished in secret. The impostors who institute suits at law claiming damages for alleged injuries and those who seek to defraud the accident insurance companies often present the courts with problems quite as difficult of solution.

These problems lack the dramatic interest of robbery and murder, but they are hardly less important on account of their greater frequency. The time was when a skillful impostor could very well impose upon the administration of justice by claiming obscure injuries, the actual existence of which the ordinary person could not detect. If one boldly asserted and maintained that he had been rendered deaf in one ear or blind in one of his eyes or paralyzed in a limb by the shock of an accident, how could the courts say that this was not true? Such injuries are known to happen from such causes. There is often no visible indication of these injuries and the impostor would seem to be secure by merely holding to certain obvious symptoms. It is in this field that the modern scientist has rendered invaluable service. Today an intelligent physician, by the aid of modern devices, can easily solve any one of these enigmas.



Fanny Freeman, who made it a business to simulate paralysis, was detected by the fact that when her leg was lifted up she forgot to let it fall, proving thereby that a certain muscular power remained in the limb; and the "dummy chucker" Clegg was finally shown to be an impostor by a like slight omission of a symptom. This man, by a careful study, had learned to imitate fits so realistically that many physicians were deceived by him. He gave no manifestation of pain when needles were thrust under his nails. He assumed all the characteristic facial expressions. He had scars on his head and back from falling. Being aware of the fact that impostors rarely fall in such a manner as to do themselves injury he once fell thirty feet in a prison, breaking some of his bones. But it happened that although this was Clegg's business and he thought he had carefully observed all the symptoms, nevertheless there was one symptom always present in the sort of fit that he simulated of which he was not aware. He had failed to note that when the hands are clenched by one in an actual fit the fingers are always closed over the thumb, and if the fingers are opened by force they remain open; and it was the failure of this accomplished impostor to present this symptom that led to his ruin.

Doctors as Detectives

In another case a supposed cataleptic was shown to be a simulator by the following test frequently resorted to: A weight was hung to the limb, this weight drew the limb down slowly and gradually, then when the tape was cut the weight fell and the limb flew up, showing that the catalepsy was feigned. Charcot has demonstrated by means of a certain registering apparatus exactly how a true cataleptic limb falls, and an examining physician could not now be deceived by an impostor. Severe pressure with the thumb on the supra-orbital nerve during a general spasm in a true subject never causes a responsive movement; there is only a slight corrugation of the skin on the forehead. But so much pain may thus be caused an impostor that he cannot resist making some responsive movement directed toward relieving himself of this torture. It is said that there is no record of feigning in which this test has completely failed.

The modern scientist does not believe with James VI, of Scotland, in his learned dissertation on demonology, that persons may carry upon them a certain spot insensible to pain, which James called the "seal of the devil," and solemnly advised the physicians to explore for with the prick of a long needle. On the contrary, when persons claim an area of anesthesia the experts are accustomed to blindfold him and mark out the spot that he claims to be insensible with a camel's-hair pencil, and then to apply an electric brush and see if he can tell where it is that the feigned cutaneous anesthesia ends. And even where the impostor is able successfully to resist giving evidence of pain or tenderness, the physicians will be able to determine whether or not the pain is actually felt by devices or means by which they are able to ascertain the increase in the rapidity of heart action.

Deaf-mutism, which used sometimes to be resorted to by criminals, can no longer avail them. The Abbé Secard long ago devised a plan for the unmasking of these pretenders. He observed that under the old system when the deaf and dumb were taught to write they were taught with the eye, and that the letters of a word were known to them only by their form and value; he observed that the errors in spelling of an impostor would always have reference to sound, thereby indicating that his knowledge had been obtained through the ear and not through the eye. A criminal who had defied all other means of detection wrote down several sentences in which the errors were produced by the sound of the words. The Abbé pronounced the man to be an impostor, without even taking the

Model K—Five-passenger Touring Car—$1800, including equipment of top, glass front, demountable rims, gas tank, enameled lamps, etc.
Model L—Four-passenger Torpedo—$1800 **Model M**—Two-passenger Roadster—$1800
Model R—Seven-passenger Touring Car, same as above except 4½ x 5 inch engine—$2250
Disco self-starter on any model—$50 extra.

Westcott power has a special meaning for you

Full 40 H. P. in a superbly built car at $1800, only partially tells the story of this remarkable car.

You have yet to realize that 40 H. P. in a Westcott means more to its owner than the same power could possibly mean in a car which lacks its perfect proportions.

The Westcott is from 600 to 800 pounds lighter than others having the same power rating, yet it is a triumph of staunchness and reliability.

The Westcott has the Timken full floating rear axle, whose frictionless bearings offer practically no impediment to the easy flow of power from motor to driving surface.

The Westcott's wheel base is 120 in.—10 full feet—giving this car a marked advantage in traction and easy riding.

Now recall its powerful motor—its 4½ by 5 inch cylinders—and realize how completely every ounce of this tremendous power is utilized.

In a car of greater weight, less flexibility, a shorter wheel base length, or tires smaller than the Westcott's 36 x 4 inch size, even the Westcott's full 40 H. P. would be seriously handicapped.

But in the Westcott, with its absolutely exact balance of parts, the power plant is in perfect keeping. The car is not only wonderfully speedy, but is marvelously light on its feet and easily controlled.

To these purely mechanical refinements, add mentally a degree of luxury and nicety of appointments for whose equal you must go to cars of much higher price.

The Westcott catalog, illustrating and describing completely this line of truly exceptional cars, is a book worth while writing for.

Westcott Motor Car Company, 506 N. 12th Street, Richmond, Indiana

All Westcott models exhibited at Grand Central Palace, New York, January 10-17.
Also at Chicago, January 27-February 10; and Boston, March 2-9

Is the hidden source
Of all my strength and daring."

trouble to go and see him, and the subsequent confession of the criminal proved that the Abbé was right.

In a case in which a man pretended to be deaf in one of his ears Erhardt held a repeater at a certain distance in front of him and asked him if he could hear it; the man said that he could. Erhardt then asked him to close the good ear with his finger, leaving the pretended deaf ear open, moved the repeater closer to him and asked the man if he could hear it. He said that he could not. Erhardt then showed that the man must be an impostor, because by a series of experiments he had demonstrated that the repeater could be plainly heard at the last distance with the sound ear, although the latter be closed with the finger.

In suits for damages it used to be a favorite device of the impostor to pretend that he had suffered the loss of sight in one of his eyes, and it was considered extremely difficult to determine whether or not this was a fact. But there is no longer the slightest difficulty in ascertaining whether or not such a litigant is pretending.

Jackson (Textbook of Legal Medicine, Vol. 1, 497) has assembled the tests that may be applied to determine whether or not the blindness of one eye is feigned.

"It may be detected by placing a strong prism, say of five or six degrees, before the good eye, where, if both eyes see, it produces double vision. This will usually be complained of on the supposition that it depends entirely on the eye before which the prism is placed, while in reality it depends on the fact that the other eye also sees. A better test is to hold a prism of the strength mentioned above before one eye, and then suddenly to remove it. If the prism be held before an eye really blind no movement of either eye will occur, and none will occur on its removal. If the prism be placed before a seeing eye, the other eye being really blind, both eyes will move equally toward the apex of the prism, and they will move equally in the opposite direction on its removal. If placed before one eye when both see the eye before which it is placed moves toward the apex of the prism, and on its removal in the opposite direction. But the other eye remains fixed or shows a brief tremor. Another test is to place lenses before both eyes, the one before the feigned blind eye being of such strength as to give it its best vision, and the one before the admittedly good eye so strong as to prevent letters being read by it. The patient being asked to read with both eyes, and doing so, it is known that he does it with the eye alleged to be blind. Or the glasses may be of such strength as to allow him to read with either eye; but only with the eye alleged to be blind beyond a certain distance. The reading being started at that distance the page is gradually withdrawn until too far to be seen, except by the alleged blind eye.

"With the stereoscope certain words of a sentence or certain parts of a figure may be presented to one eye, and the other parts of the sentence or figure to the other. The impression made is as though the whole were visible to both eyes, and this can be escaped only by closing one eye. If the person tested keeps both eyes open he will, by his description of what he sees, reveal if both eyes see."

Day by day the advance of human knowledge increases the jeopardy to the criminal agent. The time has passed when the criminal and the impostor was able to construct a false consistency of circumstances, a theory, a story or a pretense that could be successfully maintained as the truth against a patient, persistent, intelligent inquiry.

Nature alone is able to retain her mysteries.

Editor's Note—This is the fifth in a new series of papers by Mr. Post. The sixth will be printed in an early issue.

How's Business and Why

PRESIDENT F. A. VANDERLIP, of the National City Bank of New York, has set tongues to working in denial of his assertion that a most serious condition confronts the business interests of the United States. The assertion appeared in a popular magazine—and people somehow have an idea that magazine print is more eloquent than ordinary print and therefore more entitled to respect, and more to be counteracted by contrary assertion if what is printed jars on the nerves of those whose interests are affected by what is said. There is no mistaking the importance of what Mr. Vanderlip says, whether he speaks through a daily newspaper or a monthly publication. What he says is accorded added weight because he is close to the most distinguished business men and the wealthiest men in the country. The bank over which he presides is the bank of largest deposits in the land. It deals in terms of millions. It wields a mighty influence upon money matters in this country and as much, probably, as any other bank of this country upon financial affairs in Europe.

Perhaps first place in this particular should be accorded to the National City Bank. Mr. Vanderlip declares it as "pretty generally agreed that business has ahead the most serious situation that has existed since you or I have been observers of business conditions, with the possible exception of those days when the integrity of the standard of value itself was in doubt." The gentleman found other and minor reasons for the conservative attitude of capital, including the prospect of tariff legislation; but declares that "the substantial cause of the hesitant and disturbed state of mind now universal among business men and capitalists is due to the chaotic situation resulting from the attempt to adjust business to a law." The particular law the gentleman had in mind is manifestly the Sherman Antitrust Law, so called—a law whose enforcement against the capitalists and business men affiliated with the National City Bank has caused them great inconvenience and loss. They who wish to excuse and weaken the presentiment of Mr. Vanderlip plead this fact in excuse for his extremely pessimistic view of the business outlook.

It cannot for a moment be assumed that Standard Oil people would enjoy the prosecution their concern has experienced or the notoriety attained by the individuals connected with the concern. Furthermore, the enforcement of the law by the Federal authorities has been distasteful to many less conspicuous offenders, and there has been great fear of extended application of the statute to other large corporations besides those named, and others who have thus far been immune; and the earnestness of purpose on the part of the prosecuting officers of the Government suggests that the fear is probably well grounded. No doubt the alleged offenders dread enforcement of the law. It has long been that way. Laws that are not enforced do no harm—and business men had come to think that certain laws in this country were made for political use and not to be enforced. The Sherman Law was one such; but there was behind the law, in course of time, a sentiment which insisted that it be enforced, and it is this sentiment which is disturbing men who think as apparently Mr. Vanderlip thinks, albeit Mr. Vanderlip may think that execution of the law is still a matter of politics rather than of serious sentiment.

If there is politics in the execution it is politics which responds to an existing and powerful sentiment—sentiment born of a moral uplift among the people; and if this diagnosis be correct it is unfortunate for the business interests of the land—whether they consist in Standard Oil, American Tobacco, United States Steel, or some of the minor monopolies—that they find it irksome to comply with the will of the people as expressed through legislation and the courts. It is for the people of a republic to determine what is right and what is wrong—and it is for business to abide by the decision. All corporate business in this country is done through legal permit; and the authority that grants the license is empowered to regulate it—and will regulate it if the conduct of business becomes abusive of common rights, which it had in cases of Standard Oil and some other gigantic concerns. Concede that the people are firmly determined to enforce the law in question, or similar ones, and it follows that business interests will have to accept the situation as a fact and not as a theory.

It is somehow fancied that, if there were no other obstacle to business expansion than enforcement of the law in mind, business would not be particularly interrupted by agitation under this law; that the true obstacles to business activity are economic

THE housewives of Westfield, Mass., were determined to have only pure foods. Prof. L. B. Allyn, who made the exhaustive laboratory tests essential to this purpose, set the seal of approval upon the *Quality Products* of the American Sugar Refining Company, including

CRYSTAL Domino SUGAR

The reasons are obvious, for purity has always been the single purpose in every step of the making of Crystal Domino Sugar and the other *Quality Products* of this Company. Special electric light tests gauge its glistening whiteness. Keen-eyed experts judge the size and texture of the crystals. Scalding, live steam constantly purifies the polished-steel utensils. And Crystal Domino Sugar comes to you in sealed packages as pure and wholesome in quality as it is dainty and attractive in form.

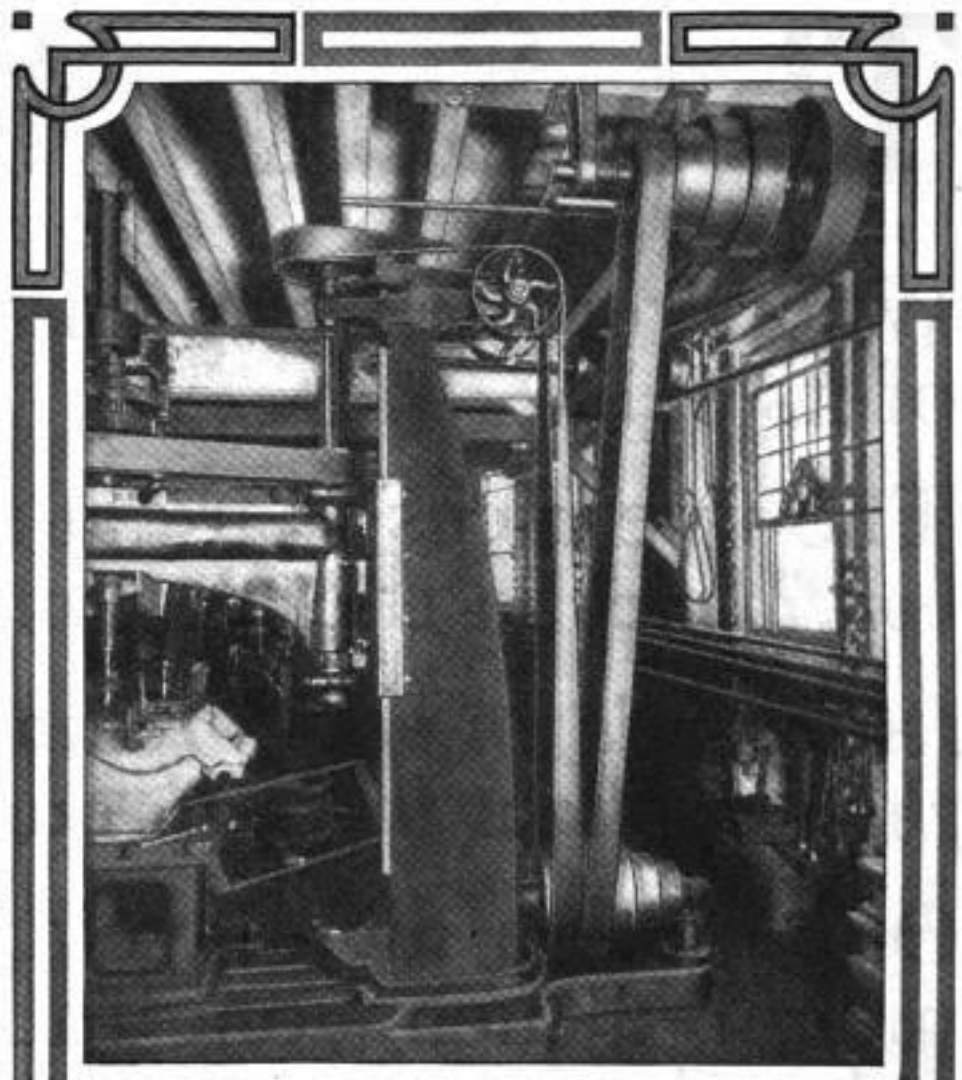
and will be essentially removed before very long. One such obstacle appears to have been the policy of one of the great corporations that has been sued by the Government for alleged violation of the Sherman Law—the Steel Corporation. For a very long while this corporation insisted upon the maintenance of prices of its products when consumers could no longer afford to pay them. In order to maintain even a semblance of list prices it became necessary to hold relations with competitors which practically amounted to an offense in restraint of trade. There were other acts more obviously offensive, like the relation to the ore lands. Steps were taken to abandon the ore lands by cancelation of the lease at the earliest lawful date, unless the courts should hasten the day; and the true remedy for dull steel business was found in cutting rates.

It is now allowed that the steel business is improving temporarily. Of this fact there is proof without anybody's confessing it. There has been an advance of a dollar a ton in certain products of the Steel Corporation, with further advances hinted at. This ought to be a signal for better times if orders have so far increased as to sustain the new prices, which it may be inferred they have, unless the advance is backed by an improbable ulterior motive. As to the increase in unfilled tonnage, the evidence is conclusive from the 4,141,955 tons on the order books at the close of November, an amount not exceeded since June 30, 1910, when the record showed 4,257,794 tons on hand. This amount is not so large as on many past dates—notably upon the last day of December, 1906, when the high record of 8,489,719 tons was made. It may be remarked that the orders at the close of November, 1911—4,141,955 tons—were almost the same as the 4,136,961 tons on May 31, 1904. The low record was at the end of December, 1910—2,674,757 tons. How great the advance has been since then is apparent without the saying; and the contrast is to be cited in answer to the query at the head of this article—How's Business and Why? There may or may not be ahead difficulties of the character mentioned by Mr. Vanderlip, but there is no question as to growing activity in the steel and iron industry. It is said that the Steel Corporation is operating seventy to seventy-five per cent of capacity, which is not bad considering the large increase in the capacity of the works since the dull times set in. Orders to operate the works six months are said to be on hand, and steel and wire mills are operating in full.

The Copper Market

After steel, copper commands attention; and the story there is of a pleasing character, the trade says. The output for November and December, including imports, was the smallest for any months of 1911, for reasons not in sight. Let it be assumed that the reasons were legitimate and not in any way connected with an effort to start a movement in copper-mining shares in the security market. The November, 1911, output fell 6,378,841 pounds below that for October, 1911, and 7,476,662 pounds below that for November, 1910. It was, therefore, abnormally small. Domestic deliveries at the same time ran nearly 4,000,000 pounds ahead of those in October, 1911, and 615,460 pounds ahead of those for November, 1910. Exports showed even larger improvement over October—almost 7,000,000 pounds; and almost 6,250,000 pounds over those for the 1910 month. What with a reduced output and increased deliveries, the effect on the surplus was distinct. Stocks of copper were reduced by the November deliveries to 111,785,188 pounds, which is considerably less than the total deliveries of 135,089,055 pounds for the month.

In other words, the visible domestic supply at the close of November was less than deliveries for such a month as November. There have been few if any months of so large deliveries as that month. The average for the year 1911 was less than 103,000,000 pounds a month. The stock on hand at the close of October—111,785,188 pounds—compares with 130,389,069 pounds at the close of the month a year earlier and 165,995,932 pounds at the close of May last. Barring September and October, the decrease in American supplies of copper have been rather steady since the end of May, which likewise bears witness to improved demand for the metal—in some part likely speculative demand, but demand nevertheless; and the people who bought on speculation may have had an idea that consumption was going to improve. Sentiment in stock exchanges is mercurial and not to be relied on at all times; but the sentiment there regarding copper shares has been sanguine for a considerable time.



Reverting a moment to iron, the output of the United States in November was the largest in eleven months, barring March, April and October, 1911—larger than in November, 1910, 1908 and 1907. The rate of production a day in November, 1911—66,648 tons—was exceeded only by that in March and April, 1911, and contrasts with 63,659 tons in November, 1910, and by 84,917 tons in November, 1909. Daily capacity of the active furnaces on December 1, 1911, was 66,609 tons compared with 66,818 tons, November 1, 1911; 59,690 tons, August 1, 1911; 61,079 tons, December 1, 1910, and 85,460 tons on December 1, 1909. There ought truly to be little complaint with statistics like these. Comparison with near past conditions is favorable, though not with the booming conditions in the farther past. One of the best indices of business affairs is bank clearings. True, these are affected by conditions which militate against entire reliability, but they should be carefully observed in studying the general situation. November, 1911, clearings were $13,858,624,745 for the whole country—an increase of 4.1 per cent over those for October—and were the best for any month in 1911 except January, an exceptional month because of big financial payments. Still, the fall clearings always increase; and when compared with last year the result is not so hopeful.

Bank Clearings

Barring January, November clearings were the largest since April, 1910. The increase over November of 1910 was three per cent, but the decrease from the month in 1909 was five per cent. The gain for the country as a whole in November, compared with October, came entirely from New York—clearings elsewhere showing a nominal decrease. In New York there was, perhaps, more than customary speculation in stocks to swell the clearings. For eleven months ending with November the clearings of the country amounted to $143,762,048,371, a decrease of 2.9 per cent compared with 1910. In this instance all of the decrease came from New York, the amount being 5.5 per cent; while in the rest of the country there was an increase of .9 of one per cent. The sections of the country showing an increase of clearings were New England, .3 of one per cent; Western states, 1.4 per cent; Southwestern, 1.3 per cent; Southern, 9.7 per cent; Far Western, 2.4 per cent. The decreases were—in the Middle states, 5 per cent; Northwestern, 1.4 per cent.

Incidentally, it may be remarked that the bank clearings of Canada made a new high record in November of $771,772,898, showing an increase from last year of 24.7 per cent, while the increase for eleven months of 1911 was 16.2 per cent. The fruits of development of a new country plainly appear in Canadian clearings. It was the same in this country not very many years ago. How far Canada has to go even to approach this country in the matter of business may be judged by the comparison of clearings for the countries for the eleven months' period—$6,459,294,880 there and $143,762,048,371 here. Clearings here for November—$13,858,624,745—were more than twice those of Canada for eleven months.

Editor's Note—This article will be concluded next week.

Belting efficiency reaches the 100% mark when every pulley in the plant is turned by the right piece of

CROWN BELTING

Each piece of Crown Belting is made with special reference to some particular use.

No matter whether you want a heavy-drive belt, a belt for high speed, small pulleys, or to run in wet, damp places, there is a Crown Belt that gives the maximum of service under such conditions. We guarantee all belting bearing the "Crown" Trade Mark to run true on pulleys, properly adjusted, with a minimum of stretch and creep and to give satisfaction in every respect.

A Valuable Book, "Crown Belting,"
dealing with transmission problems and containing many useful rules and calculating formulas will be sent free to any manufacturer or superintendent who asks for it.

Also free is the advice of our experts on peculiar and difficult problems of power transmission. Have you one?

"Wife, is this coffee or Postum?"

It frequently happens that when Postum is made right, its fine color, delightful aroma and rich flavour lead one to believe that it is mild, high-grade Java.

Then one knows real good Postum.

It is easy to make it right—simply boil it 15 to 20 minutes after boiling begins.

When you have well-made

POSTUM

the change is easy and pleasant—

And Postum is a palatable, nourishing food-drink—absolutely free from *caffeine* or any other drug.

"There's a Reason"

Postum Cereal Company, Limited, Battle Creek, Mich., U. S. A.

Canadian Postum Cereal Co., Limited, Windsor, Ontario, Canada.

The Senator's Secretary

MY IDEA of the human prototype of a rabbit is a Republican national committeeman. The members of the committee came to Washington recently and gave lifelike imitations of Molly Cottontails, all except Bill Ward, of Westchester County, New York.

Bill is no rabbit. He is a politician with a grouch—as all the rest of them were; but Bill didn't hide his when anybody from the White House was round. Not Bill! He has a large, two-fisted manner of speaking—and he spoke in a large, two-fisted manner. He was sore and he told all comers where it hurt. When they asked Bill up to dinner at the White House, along with the other national committeemen, to break bread with the President and assure him his renomination is a cinch, and his reëlection likewise, Bill stuck a cigar between his teeth, put his thumbs in the armholes of his vest, and said he'd be gum-swizzled if he'd go! And he didn't.

Franklin Murphy, of New Jersey, entertaining the same ideas as Bill, but being exceedingly diplomatic—oh, very, very diplomatic—told the reporters that the reason Bill, who weighs two hundred and has shoulders like Jeffries, couldn't go to the White House function was because Bill is delicate and can't stand the night air. That was a good joke; but the real reason Bill didn't go was not because he can't stand the night air, but the hot air! Bill was and is sore about the way Mr. Taft threw down his friend, Vice-President Sherman, in that little fracas in the state of New York two years ago, when they had slated the vice-president to a convention chairmanship at Saratoga; and he is sore also because his warm and personal friend, Charles F. Brooker, Republican national committeeman from Connecticut, was casually indicted one morning by Mr. Taft's Department of Justice for being a combination in restraint of the brass trade—maybe it was electrical goods or wire. Anyhow, it was a combination in restraint of something—and that's another reason Bill wouldn't go to the White House. Of course it cannot be that Bill is any sorer about this than Charles F. Brooker is, but Bill shows it more; for Brooker went to the dinner at the White House with the committeemen and broke bread, and so on.

A Busy Day for the Glooms

No reporters were present at that dinner, and it is just as well—for if there had been reporters present they would have been some of the same reporters who were present in the lobby of the Willard Hotel the day before and up to the hour of departure for the dinner; and those reporters, being veracious young men, would have been impelled to write pieces for their papers showing the remarkable change in conversation that occurs when a national committeeman goes to dinner at the White House from the conversation of that same national committee man in a hotel lobby.

All of which brings me back to the statement that your professional politician is a rabbit when it comes to courage. They began getting into Washington two or three days before the meeting of the committee was held; and the minute they landed they took positions in the lobby of the hotel and started to wail. As the new arrivals got in, the wailing increased—until, along about six o'clock on the evening before the dinner, transients at the hotel were deafened by the caterwauling.

To begin with, it was unanimously and tearfully agreed that the Republican party is gone—absolutely and irretrievably gone—stuck on the rocks—stranded on the beach—lost in the fog! Then, too, it was unanimously agreed that there isn't a chance on earth to elect Mr. Taft in November next year. It was the grandest collection of pessimists ever gathered together under one roof! Not a person present could discern a ray of light ahead. "Elect Taft! Why, what's the use of talking? There ain't a chance, my boy—not a chance! He'll be beaten worse than Parker was. It's all over. We can't carry Pennsylvania with him. Of course we've got to nominate him—got to!—and we'll do it; but we can't elect him."

There was woe sixteen feet deep all over the marble floor. Not a man could see anything but disaster ahead. Some of them talked privately, but a good many of them talked publicly. It was a Grand Lodge of Sorrow and a Hammerfest combined. Elect Taft? Not in a million years!

Then they went up to the White House to dinner—all but Bill Ward. He stayed down at the hotel—out of the night air—and continued his original line of conversation; but did that bunch of committeemen have the nerve to tell Mr. Taft what they honestly thought of the situation and how they held his chances for reëlection? Not one—not a single one! Instead, they went up there and kotowed and saluted, and told him how well he was looking, and pledged undying support and everlasting fealty; and said his nomination would be a walkover and that the Progressives wouldn't have a look-in; and that, once nominated, he would be safely elected—and they spread the salve round so thick it was positively sticky. Then they came away and went at hammer-throwing again.

What They Really Want

Not one of these patriots had the courage of his previous conversation. Not one of them told the President what the actual conditions are. To be sure, there may be an excuse for this reticence; for the President does not like to hear unpleasant things, nor does he believe anything of an unpleasant nature that may trickle to him. He wants to hear nice things, and nice things are told him. Still, it is odd that there wasn't one man in the outfit with nerve enough, and with sense enough, and with party loyalty enough, to take a chance at telling the President what the situation really is, and what the national committeemen had been saying and what they think. Not one did. They all smirked and smiled and ate, and toasted the President, and said nice things to him, and predicted he surely would be renominated and reëlected. Then they went back to the hotel and began giving up the ship again. Rabbit, did I say? Rabbit goes—*lepus timidus*, with the accent on the *timidus*.

And, in the middle of it all, a man strolled into the lobby and said: "I hear Roosevelt is a candidate!" Well, that settled it. The national committeemen fell over themselves to grab at that. In ten minutes—by the clock—a dozen national committeemen were telling confidentially that they had it straight from Teddy himself that he is a candidate, and that he is going to beat Taft out of it and take that nomination himself. In twenty minutes more there were half a dozen personal representatives of T. R.—they said—on the floor, all proclaiming they knew whereof they spake and all saying they had the documents to show that Roosevelt is in the field—that he intends to grab the nomination; and it wasn't long before the word was passed that, much as some of them despised Roosevelt, he is the only man to save the situation and lead the Grand Old Party to victory.

They buzzed like a lot of children at a candy-pulling. A great wave of Rooseveltism swept over that gang of *ingénues* and they chattered their heads off about the startling circumstance that had been called to their attention. A state chairman from Ohio and a state chairman from Indiana projected themselves into the middle of the yammering mass and declared stertorously that Roosevelt is the only salvation for this extremely delicate situation. The papers were full of it. Wow!—wow!—'rah!—tiddle-diddle!—'raw—'raw!—Teddy! Great sensation!

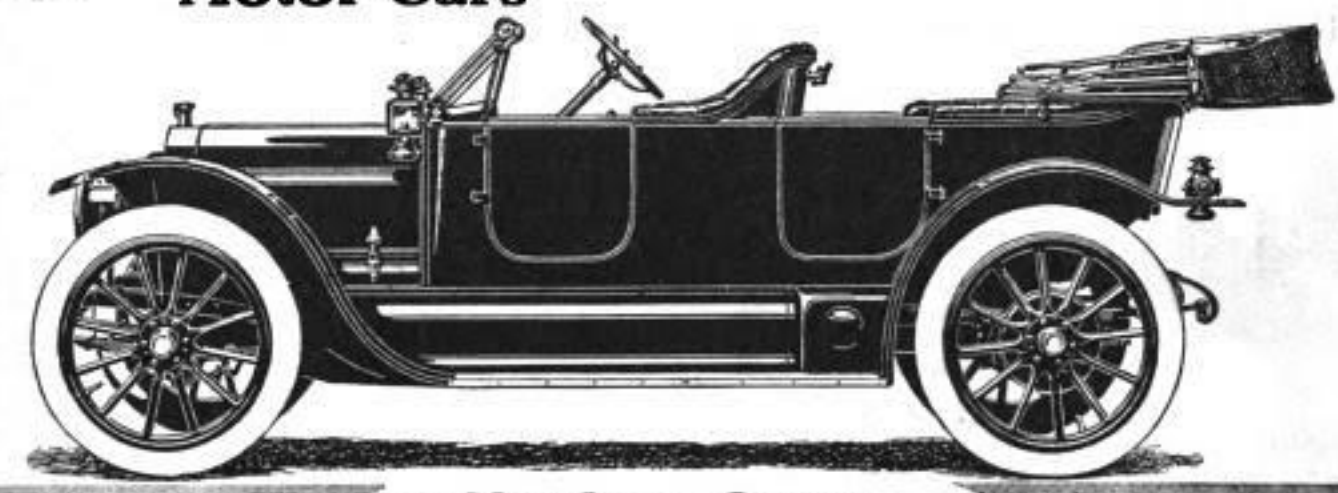
Then the national committee met and did exactly what Taft wanted the national committee to do, including the turning down of the proposition to provide presidential preference primaries, and did it in shorter time than any national committee ever worked out the preliminaries before, with doors open and in full view of the audience—did every last, living thing Taft demanded; carried out his program without a dissenting voice and beat it back home to get instructed delegates for the President, whereby he shall be renominated at Chicago next June. Likewise the vociferous state chairmen disappeared in the high grass, those who know what Mr. Roosevelt has in mind laughed a few times—and all was peace and quiet in our fair city.

There is no doubt the majority of those Republican national committeemen think as a large number of Republicans throughout the country think—that Mr. Taft cannot be elected if the Democrats use anything like reasonable restraint in naming their candidate. That feeling is so general in the Republican party as to be universal; but there are very few of the committeemen or of the section of the party they represent who think Mr. Taft will not be renominated. And he will be—unless he withdraws from the race. It is entirely up to the President. If he continues in his demand for renomination he will be renominated. His election is a different matter.

The tussle his supporters will have will be to get instructed delegations. The hope of the men who are pushing Roosevelt and the hope of the men who are desiring to defeat Taft with any man—no matter whom, but preferably La Follette—is that the delegations to the convention shall not be instructed. Of course the La Follette men want all the instructed La Follette delegates they can get, but they are anxious to have as many others not primarily for La Follette sent without pledge, so they shall be in a position to jump if a jumping-time comes. Taft's task is to get his delegates instructed; and he will get enough of them, too, to make his nomination a certainty. All he needs is one more than half of ten hundred and seventy-two. The Taft men have already started work. Presently reports of conventions that instructed for Taft will begin coming in.

There are as many variants of the Roosevelt business as there are men to voice them. Each politician has his particular line on the inside of the situation, and each particular line discloses a different angle of procedure contemplated by the Colonel. It is stated with great positiveness that Roosevelt is an active candidate; that he is not a candidate at all; that he will fight Taft openly; that he will conduct a secret campaign; that he will come out for the nomination; that he won't say a word; that he has given his friends permission to go ahead; that he deprecates anything in this line; that he will be sprung on the convention as the only man who can save the party from certain defeat; that the plan is to go ahead and let an organization for him grow up, like Topsy, until the crucial moment comes—and other flubdub that is unimportant and unauthentic.

T. R. the Man of Mystery



The only real fact in the whole situation is that when the time comes Mr. Roosevelt will do what he wants to do. The Taft people are happy in thinking they smoked him out at this meeting of the committee; but they didn't. They smoked out, instead, a lot of men who do not want Taft renominated and who have fallen back on Roosevelt as a means to prevent it, not because they love Roosevelt more, but because they love Taft less. Those are the only persons who have been smoked out; and as they emerge from the smudge it is at once apparent that they are not particularly important or impressive.

There is no doubt that a large number of Republicans think Mr. Taft cannot be reëlected. This opinion extends from coast to coast. Still, the mere throwing of Roosevelt into the situation will not defeat him for renomination unless Mr. Roosevelt throws himself in too—and it might not then. If Mr. Taft continues as a candidate for the renomination the Republican party will hesitate a long time, in convention assembled, before it repudiates him and selects Roosevelt or any other person to lead it; for such a selection will mean only one thing, and that is repudiation of all that is regular Republicanism in the present acceptation of the term.

Mr. Taft is serenely unconscious of the real situation. He thinks he will be renominated and reëlected because he won't let any one tell him anything that disagrees with these views; nor will he believe anything to that effect if some visitor should happen to make him hear it. The truth of it is that Mr. Taft has no close adviser who will tell him the real truth and take the consequences. Indeed, he has very few advisers of any kind. If he does win at the election the real reason will be his monumental political helplessness.

Rambler
Motor Cars

The Rambler Cross Country—$1650

The Most Comfortable Car In America Selling Below $2500

It's a 38 h. p. five passenger touring car with 120 inch wheel base, 36x4 inch tires and demountable wheels—a rare combination of power, comfort and appearance.

It's long—it's low—it's roomy. Low with drop frame and new spring suspension. Long with front axle set forward and straight line torpedo body. Roomy with tonneau seat four feet wide—31 inches of leg room—enough for the tallest man—27 inches from front seat to dash and wide elbow room at the wheel. The most comfortable car in America selling below $2500.

Ride 200 Miles Without Fatigue

Step into this car and you are dominated by a feeling of spacious ease and gratifying comfort. In a ten minute ride you grin in spite of yourself through rare delight. You may tour all day with pleasure and return without fatigue.

The upholstering is of such pleasing softness that even the invalid may ride without discomfort—cushions 8 inches deep made from finest selected long hair. Rear cushion has 45 double action steel spring coils.

Front springs 39 inches long—rear 52 inches long—axle of I-beam type set forward under radiator—road clearance 10 inches—front edge of tonneau seat 9 inches ahead of rear axle—front seat 45 inches wide—120 inch wheel base and 36 inch wheels.

Now, do you wonder that it's the easiest riding—easiest to drive and easiest to turn around—no other make at $2,500 can touch it.

Delight to Drivers

You must experience the feel of that Cross Country wheel. It's a delight. Think of the unconscious ease with which you guide a bicycle. It's just that. Your arms don't tire. Your legs don't cramp. Both levers are inside and the sound of the motor—just the sweetest hum that turns instantly in a snappy roar when the cut-out is open.

Silent, long and lean, with swift moving lines, the Cross Country has grace, suggestion of speed and beauty of contour.

Snap! Ginger! Power!

To drive this car is exhilarating. It runs like a spirited horse. You touch the throttle and it's away. In the traffic of Fifth Avenue it will creep along at 4 miles per hour—on the open road it tops it off at fifty. It took Abbey Hill, New York, on high gear with five people, starting at 22 miles per hour and going 30 miles at top.

It took Viaduct Hill on high, starting at 25, dropping to 12 at the crest and going at 18 at the top, passing two high priced cars going up in the gears.

It took City Line Hill, Philadelphia, on high, Rondout Hill at Kingston, N. Y., with 6 passengers and climbed State Street Hill, Albany, from river to Capitol on high with six passengers.

It starts quickly and stops quickly—a motor car virtue that has saved many an accident. The braking surface is 400 square inches.

Looks Like $2500

A big car of exceeding beauty; few people have guessed its price on sight at below $2500. Finished in English Purple Lake—a rare shade of deep maroon—trimmed in nickel, with bonnet, fenders and fillers in black enamel, with 9¼-inch lamps in black enamel and nickel. You'll find the same equipment on cars selling at $2500.

Fenders of sweeping grace, radiator of new and distinctive design—doors 20 inches wide and open fully with no outside latches.

Rakish, low and balanced perfectly, you can put it around a corner in a jiffy and the rear end will hug the road.

Why the $1650 Price?

"Why such a car at this price?"

Here's the reason: For years we have built high priced cars, educated our mechanics to greater skill, developed our factory until we now are able to produce the Cross Country.

The Rambler was first to offer a *real* bicycle for less than $100. The Rambler is now ready to offer a *real* car below $2,000. The public is ready. The Cross Country is here—it's the flag bearer for 1912—sure to be a Rambler year. To see this car is to want it—write for the name of the nearest dealer—ask for the Rambler Magazine.

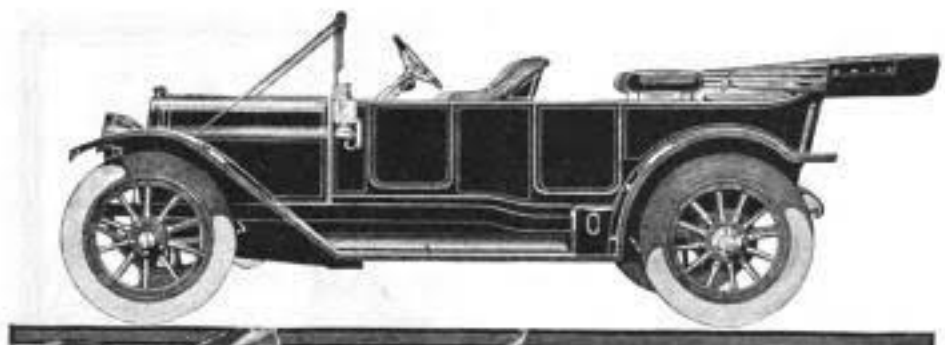
Spare Tire on demountable wheel carried in rear, eliminates worry about tire trouble. This demountable wheel can be changed in five minutes.

Ten Other Styles, Including Open and Closed Cars of 38 and 50 Horse Power

Equipment —Bosch duplex ignition. Fine large, black and nickel headlights with gas tank. Black and nickel side and tail oil lamps; large tool box; tool roll with complete tool outfit. Roomy, folding robe rail; foot rest, jack, pump and tire kit. Top, with envelope, $30—wind shield, $35. Demountable Wheel, less tire, with brackets and tools, $50. Self Starter $175.

The Thomas B. Jeffery Company

Main Office and Factory, Kenosha, Wisconsin



Branches: Boston, Chicago, Cleveland, Milwaukee, New York, Philadelphia, San Francisco

See this car in the Grand Central Palace Automobile Show, Jan. 10-17; at Section H, first floor.

New radiator of popular and distinctive type—12,000 square inches of cooling surface—9¼ inch headlights, in black and nickel—radiator cap of exclusive design.

Digitized by Google

Some motor cars like some people possess a personality and individual charm which everyone notices and admires

This is True of the

Abbott-Detroit

Eminently satisfying both to the business man of the city and the country gentleman, Abbott-Detroit cars are rapidly gaining an enviable place in the esteem of those owners who not only demand service but want a car in which they can have the utmost pride and confidence. In skeletal structure, as well as in beauty of outward design, these cars are the equal of many which sell for twice as much.

An exhaustive examination of the materials used, the character of the workmanship and the finished product will prove the truth of this assertion.

A Wonderful Record in Vanderbilt and Grand Prix Races

First $1800 car ever entered in Vanderbilt or Grand Prix. Same two cars competed in both races. Run on high gear at all times. Grand average 61.25 miles per hour for total mileage of 652 miles, and made 91 miles per hour on straightaway. Abbott-Detroit cars still running when race was called off—sixth and seventh place in Grand Prix and seventh and eighth in Vanderbilt. No inspection of mechanism during any performance—no tire trouble. Abbott-Detroit only team running intact at the end of Grand Prix races.

Ten-Pinnett—A Money-Making "Ten-Strike"

Do you want a business? Here's one for you—Ten-Pinnett, the sensation of the times—an automatic bowling game with ten full-sized ten-pins and unlimited combination plays. A healthy, uplifting bowling game—a fun-producing exercise that old and young, rich and poor, go wild over when there's a chance to play. Many owners of Ten-Pinnett alleys are making $150.00 to $300.00 a month on an original investment of $700.00, and no operating expenses other than rent. It's the game that pays for itself in a jiffy. You have

Nothing to Do but Pocket the Money!

You have sighed hundreds of times to be in business for yourself. Grasp the opportunity—one without the responsibilities of the everyday business man. Our pay as it earns plan is the most above-board, original and liberal ever devised. If you want that **eager money** in your locality send for our plan tonight—before some one beats you to it. (49)

Ten-Pinnett Company
601 Draper St. Indianapolis, Ind.

There's money in merchandise

And there are big opportunities right now for good men in the retail field. Why not start a profit making retail store of your own? It's my business to find places where new stores are needed. I know about towns, industries, rooms, rents, etc., in every part of the U. S. On my list are many places where a new store can start with small capital and pay a profit from the beginning. No charge for information. And a two hundred page book telling how to run a store goes free. Edward B. Moon, 416 W. Randolph St., Chicago

DYSPEPSY

(Continued from Page 11)

second commonest is lack of rest. Very few people overeat, but a great many people—particularly business men, indoor workers, and women of the well-to-do classes—underexercise. It is not too much fuel in the firebox that makes clinkers, but poor coal and the lack of proper draft. From four to eight miles of walking or its equivalent each day in the open air will cure ninety per cent of all cases of dyspepsia in men; and from two to five miles or its equivalent will do the same for women.

Tonics, appetizers and pepsins of all sorts are undesirable, for at best they simply trick you into swallowing, with an illusion of appetite and relish, food that your muscles are not prepared to burn up properly, for the real ultimate digestion of the food takes place in the muscles of the body. Muscle, not brain, is king of the body, and sends its orders to the stomach in the form of appetite; to the lungs, for deeper breathing; to the heart, for more rapid and more powerful beating; and to the brain, to devise means for meeting these demands, which results in what we are pleased to term thought. The only way that we can, through our own voluntary acts, affect our stomachs, our livers, our hearts and our nervous systems, is through our voluntary muscles in the form of exercise.

Make Your Own Pepsin

Pepsins and digestants of all sorts are peculiarly irrational and foolish. The stomach can make its own pepsin in abundance, if it is properly fed and the whole body properly exercised—in other words, hunger is the best digestant. Also, careful analyses of the gastric juice in all forms of dyspepsia have shown that, whatever else may be lacking, pepsin is always present in abundance. Acid is the thing needed. Furthermore, two-thirds of our so-called dyspepsias and chronic difficulties with digestion have their seat not in the stomach but in the intestine, where pepsin is about as effective and useful as snow in Timbuktoo.

The best temporary relief for dyspepsia is usually to be obtained by mild intestinal antiseptics, though it takes an expert to select the one best fitted to each individual case.

The next great remedy for dyspepsia is rest, first after meals, second between meals and third at night. The thirteen-minute counter lunch and the twenty-two-minute railroad-eating-station dinner, supposed to be typical of the American business man, are bad enough; but in view of the fact that their menus are usually appetizing, abundant and highly nutritious a healthy stomach would be perfectly able to take care of them if it were not for the equally hurried rush back to the desk or counter. The stomach is given no opportunity to call away from the brain and the muscles and the skin the supply of blood that it needs for starting its load on the way toward digestion and for the manufacture of its gastric juice.

In one sense exercise in the open air comes under this same head, inasmuch as it means giving the most overworked and incessantly occupied part of the body—the brain and nervous system—a comparative rest. But nine hours of good sound sleep at night with the windows wide open will be a wonderful help to most cases of dyspepsia; and a fifteen to thirty minute nap after lunch with a break about the middle of the afternoon for four-o'clock tea will also be found exceedingly helpful for both men and women. As for children, particularly of the restless, nervous and irrepressibly mischievous type, who have no appetite and would rather play than eat, we simply put them to bed and keep them there as many hours of the twenty-four as we can, until their appetite comes back and they begin to lay on fat. Another potent cause of dyspepsia and lack of appetite is overwork, especially in busy housewives, servants, clerks and day laborers.

If neither abundance of good food nor exercise nor rest will relieve your dyspepsia, then the probability is that you have to deal with some special disturbance or defect, either farther down the alimentary canal or entirely outside the digestive system.

One of the commonest causes of chronic dyspepsia is eye-strain, and persistent lack of appetite, or discomfort after eating, or gas on the stomach, or so-called gastralgia, will often be completely relieved by the use of glasses.

Another common cause of chronic digestive disturbances is so-called catarrh, by which is meant some chronic infective or suppurative process going on in the nose or throat. Closely allied to this cause—and even more common and potent—are bad teeth, which both make proper chewing and mastication of the food impossible and, as in the case of catarrh, pour down the throat into the unfortunate stomach one incessant stream of mucus and pus and the germs of suppuration and putrefaction.

It is not too much to say that probably one-half of all cases of chronic dyspepsia are due to these three causes combined—eye strain, bad teeth and catarrhal conditions in the nose and throat. Go to a competent expert and have these conditions relieved, and your dyspepsia will often disappear as if by magic.

Of late years we are discovering another set of conditions that are surprisingly common causes of chronic dyspepsia, particularly in the most utterly unmanageable and painful varieties. These are inflammatory or diseased conditions of other parts of the alimentary canal. One of the commonest of these is our centuries-old friend which we have so recently discovered—appendicitis. So frequent a factor is it, that when we are confronted with a case of severe, persistent and unmanageable dyspepsia, which has resisted treatment and for which we can discover none of the more obvious causes, we proceed to investigate most thoroughly the condition of the appendix. Even where there has been no marked open attack of appendicitis, a thickened, inflamed, adherent condition of the appendix, with or without the presence of a "stone" or other fecal concretion, will often be found, and when this has been relieved the dyspepsia comes to an end.

Next in frequency comes disturbance in another rudimentary sideshow of the food tube—the gall bladder. Many a chronic dyspeptic, especially if he has been subject to attacks of jaundice, will be promptly relieved by the opening and draining of an inflamed gall gladder, or by the removal of a couple of dozen gallstones.

Weak Hearts and Upset Stomachs

Still another cause of the more painful forms of dyspepsia, especially those attended by much vomiting or the passage of blood, is an ulcer either in the stomach or almost equally frequently in the duodenum or other parts of the intestine.

Last, but not least, those painful and common disturbances that affect the lowest and final segment of the alimentary canal are frequent causes of distress referred to the stomach and supposed to be a disturbance of the digestion. The method of action of these irritations lower down in the canal in producing dyspepsia may be roughly described as of the block-signal order. Each of the segments of the alimentary canal below the stomach, in order to protect itself, has the power of sending to the stomach an order to hold up the food. These block orders result in prolonged delay of the food in the stomach, quickly followed by putrefaction and the formation of gas, heartburn and all the rest of the familiar cycle of disturbances.

It must not be forgotten that the ability of the best intentioned and healthiest stomach to produce a proper supply of gastric juice will depend very largely upon the quality and quantity of blood supplied to it by the heart. Therefore, one of the first and commonest symptoms of a failing heart or some other disease of the circulation will be a chronic indigestion or dyspepsia. In fact, there is a fairly definite type of gastric distress that should at once arouse suspicion of a dilated heart and call for a careful examination of that organ. Many cases of troublesome indigestion—especially in the middle-aged or elderly—that have defied dieting and digestives of all sorts, will be promptly relieved by a few doses of some common heart tonic, as a physician may prescribe.

It is well to remember that one of the commonest points at which the body begins to show distress in a number of chronic diseases, such as heart trouble, Bright's

Digitized by Google

disease, diabetes, gout and arterio-sclerosis, is the digestion, and the development of successive attacks of discomfort after eating in a middle-aged or elderly person who has never before been subject to them, ought to call for a thorough examination of all excretions.

Several chronic diseases of the nervous system, notably locomotor ataxia and epilepsy, are marked by furious attacks of apparent indigestion, known as gastric crises. These have nothing whatever to do with food or dietetic habits, and probably occur when the poisons accumulating in the body have reached a point that calls, so to speak, for some explosion.

Much of the popular impression that it is peculiarly dangerous to overeat or overload the stomach in later middle life or old age is due to these "explosions" from internal causes; and the poor old octogenarians have no cause to reproach themselves with their greediness or gluttony.

It is hardly necessary to mention—and yet it is a condition often misunderstood by the laity—that many attacks of acute infections or fevers, particularly the more serious ones such as pneumonia, typhoid, severe scarlet fever, diphtheria and appendicitis, are ushered in by a furious attack of nausea and vomiting, which may also be followed by pain in the bowels and diarrhea. Not infrequently these so-called attacks of indigestion are allowed to obscure the other symptoms of the situation, and the unfortunate sufferer is treated with hot water and toddies and laxatives, which simply aggravate the situation and allow the infection to get further headway, unrecognized and unchecked. It is also not uncommon to have a cold, as the vernacular expresses it, "settle" in the stomach and bowels, and produce a sharp attack of biliousness or dyspepsia. The moral of all which is to be quite sure what you are doing and what you are dealing with before you proceed either to blame, or wash out, or deluge or otherwise maltreat your unfortunate stomach, or even blame your own supposed greediness for an attack of acute indigestion. The luckless and much enduring stomach is a harp of many strings, each of which vibrates to a touch of some other organ or region of the body. It always has to pay the piper, without even the privilege of calling the tune.

ON MAIN STREET

(Concluded from Page 9)

intents and purposes, is a lost soul from that hour henceforward. Suffering intensely all the time, he perseveres in his course. He gets other invitations to speak at other dinners and he accepts them. His feet are upon the downward path and for him there is no turning back. He finds that his jokes go better each time that he tells them; the listeners get to know them and know the points and where to laugh, and welcome them as old friends. For that was ever the way with a good, durable after-dinner joke. Our hero gains in self-confidence. His vital organs no longer rise when he does. He learns to wait for his laughs and to nurse his applause. He acquires the typical after-dinner speaking face and voice and manner.

His doom is sealed then—sealed, stamped and delivered by the postman; and the handwriting is on the wall and the envelope. He has become one of New York's favorite indoor amusements—a professional after-dinner speaker. He can be reasonably sure of a chance to go somewhere every night and eat dinner and then earn it by talking; some nights there will be two or three dinners and two or three talks, provided his digestion, his voice and his stock of marble-top shirts stand the great strain. Once let the newspapers begin to mention any comparatively unknown man in their accounts of dinners, and that man will be deluged with invitations from people he never heard of to come to the dinners of societies he never knew of and respond to toasts on subjects he never dreamed of. It is wearing on the gastric juices and sometimes on the vocal cords, but it is less expensive in the long run than you might think. The confirmed after-dinner speaker only needs two outfits really—a suit of pajamas and a dress suit; he can sleep all day at small cost and eat all night at no cost at all.

Certain men in New York who enjoy—or suffer from—deserved reputations as clever after-dinner speakers literally have to fight off the invitations that descend upon them in paper showers. Augustus Thomas, the playwright, who combines real eloquence with a lively and biting wit, and Rennold Wolf, the dramatic writer, who combines satire with humor, could work every night in the week as toastmasters if they wanted to, because really able toastmasters are not made—they are born; and, unlike another class of the population, they are not born every second either, and they are never twins. Really humorous speakers—men like Job Hedges, the lawyer, who can be serious, and Simeon Ford, the hotel man, who can't, are in constant demand for big dinner functions. They decline a large number of these invitations because they are both busy men and men of affairs, but they accept a good many of them too. It is estimated that in the last fifteen years Mr. Job Hedges has delivered nine million four hundred thousand running yards of after-dinner speeches; and yet on the first of January Mr. Ford was only about a mile and half behind him and coming strong.

A large dinner in New York can hardly be said to be complete unless Mr. Hedges or Mr. Ford is at the guest table. The same may be said of William Travers Jerome; William H. McAdoo, the tunnel builder; Colonel George Harvey; General Stewart L. Woodford; Melville E. Stone, head of the Associated Press; Don C. Seitz, of the New York World; St. Clair McKelway, editor of the Brooklyn Eagle; Judge Morgan O'Brien; Judge Alton B. Parker; Dr. Lyman Abbott; Andrew Carnegie; F. Hopkinson Smith; Rabbi Wise; P. Francis Murphy; and perhaps twenty others almost as well known.

Some of the organizations whose dinners are notable events in the New York calendar, or eating year, depend upon their own members for after-dinner talent. The Dutch Treat Club, made up almost altogether of writers, artists, editors and publishers of newspapers and magazines, rarely goes outside of its own ranks to find its entertainers; but then Dutch Treat dinners are avowedly held for laughing purposes only, without intent or desire of hearkening to wisdom-weighted words of from four to nine syllables. The Friars Club, which is semi-theatrical in its makeup, gives more big dinners than any big club in town—half a dozen during a single winter sometimes—but can always furnish forth a complete assortment of after-dinner speakers, grave and gay, from its own membership rolls. The managers of the Amen Corner Dinner, which is probably the biggest dinner in point of attendance and enthusiasm that takes place during the winter, prepare in advance and carefully rehearse a program of skits and high jinks modeled on the pattern of the dinners of the Washington Gridiron Club, and, like the Gridiron Club, paying particular attention to the politics of the hour. Then there are several clubs of a more or less Bohemian aspect that have dinners every week or two, without any list of speakers at all, the toastmaster being presumed to pick out suitable talent from the table as he goes along. These are the exceptions, however. The committee in charge of the average dinner just go about on a general scouting expedition, seeking for speakers here, there and everywhere; and when they find one of any reputation who is willing to oblige and to perform, they fall upon his neck with a loud, glad cry. That is why the last city directory of New York contained the names of twenty-two thousand after-dinner speakers, with more coming in all the time.

All along, writing this piece, I've been wondering what it was in connection with the New York dinners I had forgotten. It has just come to me—the thing I forgot was the snapshot photograph that is invariably taken of the festive scene just before the eating starts. There couldn't be a dinner without some nervous young photographer climbing up on a ladder in the corner, adjusting a huge camera, asking everybody to look dead ahead, and then touching off a bomb in a bag—the result being that, in the finished photograph, all hands are shown staring and wild-eyed and delirious-looking, like a collection of typhoid-fever patients who've all just seen the same ghost.

Photographers come and take these photographs at every dinner. And once—so it is reported—they sold one to a man!

Quaker Oats

The Reasons for Its Wondrous Flavor

Do you know that we get from a bushel of choice oats only *10 pounds of Quaker Oats?*

They are just the rich, plump grains, picked out *by 62 siftings.*

These selected grains, prepared by our process, form this delicious oatmeal—the finest oat food in existence.

Does it pay?

Every dish of Quaker Oats tells you that it pays. Note how the children delight in it.

And the cost, despite its goodness, is but *one-half cent per dish.*

That's why Quaker Oats has become the world's breakfast.

Millions and millions, every morning, enjoy this ideal dish.

Quaker Oats outsells all other brands combined. It outsells in dollars any other package food.

Please remember this.

On some foods grade doesn't matter much.

But a great deal depends, in every home, on the young folks' love of oatmeal. And that depends on the richness and flavor.

In this food of all foods it is highly important to serve just the cream of oatmeal.

And that means Quaker Oats.

Regular size package, 10c

Family size package, for smaller cities and country trade, 25c.

The prices noted do not apply in the extreme West or South.

Look for the Quaker trademark on every package

The Baldwin Piano

"AFTER THE SYMPHONY CONCERT"

a prolonging of musical pleasure by home-firelight awaits the owner of a "Baldwin."

The strongest impressions of the concert season are linked with Baldwin-tone, exquisitely exploited by pianists eminent in their art: Pugno, Scharwenka, Bachaus—*De Pachmann!* More than chance attracts the finely-gifted amateur to this keyboard.

Among people who love good music, who have a cultivated knowledge of it, and who seek the best medium for producing it the Baldwin is chief. In such an atmosphere it is as happily "at home" as are the Preludes of Chopin, the Liszt Rhapsodies upon a virtuoso's programme.

THE BOOK OF THE BALDWIN sent free upon request.

Different sleeve lengths in Emery

Guaranteed Shirts

$1.50 up

The long arm man, the short arm man, and betwixt, can get his own sleeve length in *Emery* Guaranteed Shirts, no matter what size collar he wears.

Emery neckbands are Pre-shrunk—no further shrinkage possible. *Emery* colors will not fade in the wash. *Emery* materials are dependable; the fit accurate; the workmanship equal to custom-made.

In short, a man gets in *Emery* shirts—

GUARANTEED fit, color and wear.

Guaranteed by the makers with 30 years' reputation; guaranteed by the *Emery* dealer.

Look for Emery when you buy shirts: If any shirt so labeled fails, the *Emery* dealer will replace it with a new shirt.

☞ *Write for The EMERY Book, illustrating and describing the latest styles. Let us fill your order through your dealer.*

WHIPSAWED

(Continued from Page 7)

enjoyed a little laugh Mr. Mobley glanced up at the clock. It now marked 9:45, and feeling that all was well he momentarily twirled his mustache, then sauntered over to Adolf's on the corner.

If the morning had proved lucky, though, and if Mr. Mobley's star—as he felt—was indeed rising it had yet to rise even farther. "Say, 'Dolf," said Mr. Mobley through an orifice among the steaming towels, "seen anything lately of that guy, Osgood?"

It is to be said here, in passing, that Mr. Mobley, having given many I. O. U.'s in his own time, of course felt no delusions concerning them. Still, being at the moment shot full of luck, he told himself that he felt idly disposed to push his luck even to this extreme. That crook, Osgood, might be in funds, and if he were ——

"Mr. Osgood, eh?" A pained expression stole into Adolf's face. No, he had not seen the gentleman. "That so?" idly murmured Mr. Mobley, and was about to ask the barber how much he'd been "stuck" when Adolf spoke again. "Mr. Osgood is not in Wall Street now. He gives it up to go into a business."

In business—not in Wall Street? Gad! this was news, promising news besides! "What!" exclaimed Mr. Mobley breathlessly.

Having removed the towels Adolf attached the vibrator to the lamp bracket and turned on the current. "Yes," he said as he aimed the throbbing rubber at Mr. Mobley's inferior maxillary region. "Mr. Osgood he is agent for a champagne wine in William Street."

Instantly Mr. Mobley sat bolt upright. "No; cut out the face treatment!" he growled, and struggling to his feet, though Adolf sought vainly to compose him, he demanded hurriedly: "What number did you say in William Street?"

Of course the fact that Mr. Osgood had gone into the wine trade was nothing unusual. It is a line that Wall Street men often take up, especially after a prolonged inactive market. Mr. Mobley himself had, in fact, often thought of trying it. The real cause of his emotion was that if Mr. Osgood had an office of his own he must have also money, else he could not have put up for the rent. About five minutes later, consequently, Mr. Osgood was alarmed by a sudden commotion in the anteroom to his office. Looking out he was astonished to see a well-dressed gentleman engaged in a struggle with his office boy. The office boy, to be frank, was trying to bar the gate which the gentleman was as strongly trying to force. "Here! here!" exclaimed Mr. Osgood, who was a large, fleshy man, "what's the row?" As the room was piled to the windows with cases of Purple Top, Mr. Osgood's new brand, the light was too dim to let him recognize his caller.

The boy explained. "This gink here says I ain't to take in his name first. He says he knows you all right, all right, and he'll take in his own name, you bet!"

Mr. Mobley brushed the boy aside. "I want to see you, Charley," he announced bluntly, and with this Mr. Osgood recognized him. "Oh, it's you, is it?" he observed, and added hospitably: "What's eating you anyhow?"

Before replying Mr. Mobley edged into the private office, where with an air of some determination he helped himself to a chair. Then he spoke. "Looks like you're doing business, eh?" he remarked, to which Mr. Osgood replied that in some ways it indeed had that look. "All right, bo!" Mr. Mobley returned abruptly; "you've got a little piece of money now and I've got your I. O. U. I'd hate to say, too," he added morosely, "how long it's been growing whiskers."

Mr. Osgood treated his visitor to a brief, benevolent smile. "You've got nothing on me," he remarked pleasantly. "Some of yours, Mac, ain't so young they couldn't vote."

Mr. Mobley scowled fitfully. "Cut out the comebacks, Charley," he announced; "I'm paying off all of mine and that's why you've got to cough." After this happy periphrase he demanded stiffly: "Now are you going to come across?"

Mr. Osgood didn't know. At the moment, as he said, money was tight in the wine trade and he'd have to have time to think. Hearing this Mr. Mobley decisively pushed back his chair. "Nussir!" he retorted grimly; "I know how long it takes you to think. You'll pay it today or I'll—I'll ——"

"Well, what'll you do?" inquired Mr. Osgood.

Mr. Mobley hadn't thought, but at this instant a strong inspiration burst upon him with the glamour of a gem. "I'll report you at the club—to the governors—there!" he ejaculated, and tilting back in his chair he waited expectantly.

For a moment Mr. Osgood gaped, then gasped. He appeared, in fact, to be aghast, though had one looked closely he would have seen presently that Mr. Osgood's scrubby mustache concealed a sly, furtive smile. "Good Lord, Mac! You wouldn't do that?" he expostulated. "Aw, say now!" he protested, "you'll give me a little time, won't you? I'll tell you what," he proposed earnestly, "you wait till this evening—say seven o'clock—and I'll see you at the club. How's that now?" he asked anxiously.

Mr. Mobley wouldn't hear of it. Though he didn't say so, circumstances might prevent him that evening from going to the club. "Aw, come now!" pleaded Mr. Osgood. "I want only till seven to settle." His manner now was really perturbed.

Mr. Mobley pondered a moment. "Well, I won't be hard on you," he answered finally. "The amount's $61.80, and if by seven you send the money—not a check, mind, but the cash—to my apartments, I'll let the matter drop. Now understand!" he warned—"seven o'clock sharp!"

Mr. Osgood promised faithfully, and having written down the address he ushered his visitor to the door. Afterward, however, or when he found himself alone, the gentleman's air of humility suddenly deserted him. Anger took its place. "Holy smoke!" gasped the wine agent; "get me fired at the club?—that tout!" A cackle of ironic laughter burst suddenly from his lips.

. . . . . .

The Hocking panic is one that long will be remembered in brokerage circles. Coming, as it did, at a moment when the public was not in on the market the affair was doubly disastrous, for besides scaring off the public still farther it was on the brokers themselves that the stock was largely unloaded. However, there was at least one outsider we know about that had a block of the security—viz., Mr. Hoag, the hat clerk.

At eleven or thereabouts the young man was measuring a customer—one of his regular trade—for a light pearl six and seven-eighths. "Right natty!" he vowed, as he grasped its brim delicately with a thumb and forefinger and adjusted it to the gentleman's head. Then he added: "All our best dressers this season are wearing 'em. They are a great favorite in Wall Street." Naturally at so substantial a guarantee his patron took the hat, and stepping over to the cash register the young salesman was just making change when he heard his name called. "Party on the 'phone, Horace," said Miss Ziegler, the hatshop's bookkeeper, who had just come in from an errand.

Hoag smiled benignly. Miss Ziegler, though not exactly pretty, still looked almost fetching at times. In his hall bedroom up at Mrs. Mangin's the hat clerk often thought of the young woman, though up to the present he'd felt it best not to say anything directly to the lady herself. In time, however, he reflected, he might save enough to buy an interest in the hatshop, but time seems always long in such a case. It was for this reason, therefore, that Hoag had invested his money, hoping, in brief, that the investment might double or even treble it. Presently, as he felt certain, he would be enabled to speak frankly to Miss Ziegler, who unquestionably had been very patient. Now, with another fond look in her direction he put the receiver to his ear. "Hello!—yaas?" he called.

The voice that answered, though unknown to him, was suave and conciliatory. "Mr. Hoag? Ah, yes! This is Rooker, Burke & Co., Wall Street."

"My brokers—oh, yes! What is it?" he inquired. Frankly it thrilled him quite a lot to have the other clerks hear him talking to his "bankers." "Begging pardon," said the voice, now more suave, even more conciliatory; "if you don't mind we'd like a little more margin."

"Margin?" Hoag for a moment scarcely understood. "Margin!" he repeated.

Digitized by Google

"Why, less than two hours ago I gave you a thousand dollars! My check for a thousand!" he added sharply.

The answer was immediate. "Yes, we have your check, Mr. Hoag; but you see it's not ——"

He instantly interrupted. "Say!" he cried, his tone brave, though the sweat was starting on his brow. "You don't mean anything's wrong with the bank, do you?" By now he'd utterly forgotten the other clerks who stood by listening.

There was nothing wrong with the bank. Explicitly this was made clear to him. Afterward, in the same explicit way—so plainly, in fact, that a little child would have understood it—Mr. Hoag was made to grasp exactly what had happened. All dabblers in the market look for action, and Mr. Hoag had got his. He turned to Miss Ziegler, whose face reflected his own clammy pallor. A brief smile for an instant struggled to assert itself. Then his lips inexorably parted with the words he couldn't hold back. "Oh, my God! my God!" whispered Mr. Hoag, and when she, too, had echoed his exclamation Mr. Hoag snatched up his hat and rushed blindly from the shop. Meanwhile over in Fred's place Mr. Mobley had just sat himself down to his well-earned simple breakfast.

Idly unaware of what went on so near at hand he struck a match, touched it to the Egyptian, then leisurely stirred his coffee. Decidedly things were looking up. Either Hoag or Pingree sooner or later must pay him a handsome bonus, on top of which he'd achieved the marvelous by forcing Osgood to come across. All this spelled Easy Street, for with Osgood's money he could take up the Bannerman check, while Mrs. Mangin, no doubt, could easily be stood off till Hoag or Pingree, as the case might be, made good. "Fine!" he murmured. Possibly he might not even have to consider Mrs. Mangin. The clothes up in his room were almost out of style anyway, and the old dame could hang on to them if she liked. Certainly with all the cash he now had in sight a new wardrobe was not only possible but desirable. Why wouldn't it be nice, too, when he had his new clothes, to run down to Atlantic City for a few days to show them off—somewhere anyway? However, as this would require a little more than he'd calculated he must see that Hoag or Pingree—whichever it was—must not be allowed to close out until the account showed a good profit—say, a couple of hundred for himself. Maybe, too, he might even song-and-dance Bannerman into taking a thirty-day note. Or if not that he might be able to get him into another bridge game, then trim him. He'd see about it anyway.

It was at this stage in his pleasant reflections that Mr. Mobley heard his name called. Looking up he saw the barman beckoning him to the telephone. "Call from your office, Mac," said the man.

"The office?" echoed Mr. Mobley. That was queer. Very rarely had there been occasion to call him up before. A little chill of apprehension touched him, a shiver of premonition. "Yes—well?" he said into the transmitter. "What you want?"

It was the quotation clerk who answered. "Say, Mac," he announced hurriedly, "there's one of your short sports over here throwing a cat fit. Got cleaned out on Hocking, I guess, so you'd better come over before he scatters any more hysterics." Then before Mr. Mobley could speak the youth added: "He says his name's Hogg or Hodge, only he's crying into his beer so's you can't tell."

Mr. Mobley breathed with relief. Moreover he had cause for jubilation. Hocking must be doing something or Hoag wouldn't be raising a fuss at the office. "Say! what's up?" he laughed interestedly. "Hocking must be shooting off fireworks."

"Holy Cassidy!" cried the clerk excitedly. "Haven't you heard? Why!" he exploded with a brief but illuminating bit of profanity. "After the opening the bear crowd gave that cat and dog a kick under the knee and now, oh me, oh my! Say, Hocking's landsliding like a house afire!"

The metaphor, though slightly mixed, was still graphic enough to fill Mr. Mobley with jubilation. "Phew!" he exultantly whistled. Of course, personally he'd have preferred Hoag to win, since Hoag would have settled up without haggling. Then again, with Hoag a loser it might be uncomfortable to have him at Mrs. Mangin's should he—that is, Mr. Mobley himself—decide for any reason to return there. In the midst of this reflection a second shiver struck him. What if Hoag kicked up rumpus enough to attract Pingree's attention? One could never tell about such dubs as Hoag. Sometimes they beefed pretty loudly when they got cleaned out, and there might be complications should Pingree overhear. "Look here, Spike!" said Mr. Mobley after wetting his lips; "is Pingree in the office?"

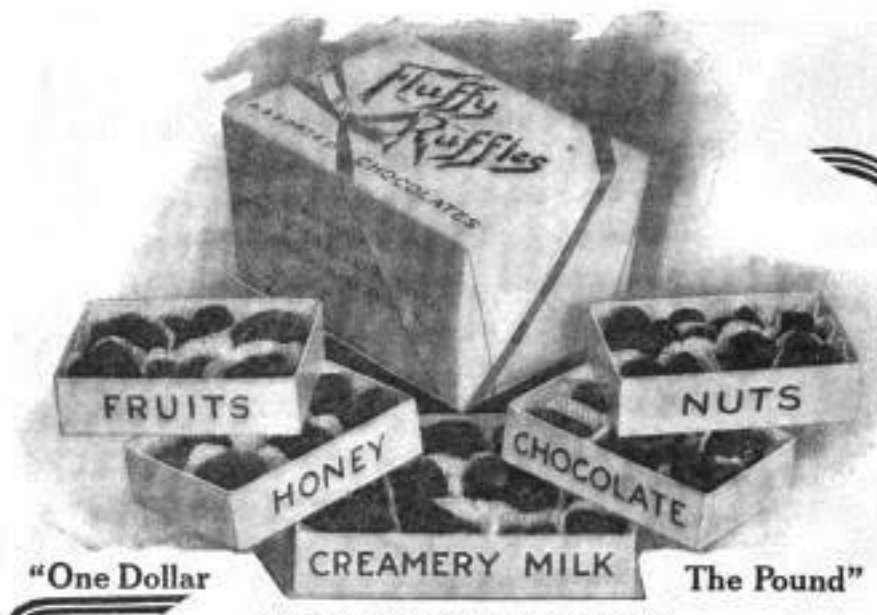
"Pingree?" echoed the other. As he waited for the answer Mr. Mobley felt his brow grow damp. "Pingree? Oh, why, no!" answered Spike. Pingree, it appeared, half an hour before had gone uptown. Since then, however, he'd run the private operator half to death calling up every three minutes or so. "Tell me," said Mr. Mobley, again thankful; "he hasn't closed out his Hocking deal, has he?"

No, Mr. Pingree still held on. Then utterly to his astonishment Mr. Mobley heard how Hocking had fallen and that a near-panic was raging upon the floor of the Exchange. "Fallen twenty points!" he roared. It was so and it would fall farther. Why, that meant he was already four hundred to the good; and executing a little buck-and-wing step by the telephone Mr. Mobley was about to hang up the receiver when Spike hurriedly restrained him. "Say!" he protested; "you ain't told me yet what I'm to do with what's his name—Hogg, ain't it?—the piker who's kicking up a fuss."

"Oh, him?" Mr. Mobley now was in a hurry to get back to his coffee. "If he starts anything," he laughed, "why, throw him out." He was about to hang up then when again Spike cut in. "Here, hold on, Mac!" he remonstrated. "Can't you wait till I'm finished?" A little grumpy at being detained—it was certain his coffee would be cold and if there was one thing he hated it was that—anyway Mr. Mobley asked crossly what he wanted.

The answer was a retort equally tart. "Now don't you get gay, son," the quotation clerk flung back at him, "'cause if you do you c'n come over here and hoe your own potatoes." Having delivered himself of this happy expression he advised Mr. Mobley that a second gentleman had been inquiring for him. It was, in short, Mr. Bannerman.

"Bannerman . . . what's he want?" echoed Mr. Mobley, though with a gasp he jumped instantly at the right conclusion.



"Well," drawled Spike, "I kind of guess he's got a check of yours and wants to collect. Anyway he showed me one with your name on it and it was marked 'N. G.'"

Jove! This was a complication! The idea that Bannerman might take the check to the bank in person had never occurred to him. Ordinarily he might have tried to bluff off the fellow, but now he dared not. A scene at the office would be too painful—especially painful inasmuch as several of the customers from whom he'd borrowed lunch money might be present. Anyway a scene would be likely to start something, he couldn't say what. On the other hand he had to nab Pingree when he returned. Four hundred is a lot of money and he didn't just trust Mr. Pingree. What if he cashed in his winnings, closed out the account and departed elsewhere? For a moment Mr. Mobley turned quite pale.

"Listen!" he said as he wiped his brow; "you get rid of that fellow Bannerman. I had to stop that check on him because he tried to run in a marked deck on me. Yes, that's what!" he explained hurriedly. "He's only a short-card artist, and but that I didn't want any fuss at the office I'd come over and run him out myself. See? Well, you get rid of him, Spike," directed Mr. Mobley easily. "Say I'm off for the day—out of town—something like that. Then you call me over here at Fred's. . . . Get that now?" he inquired.

"Yeh, I'm wise. . . . Anyway," drawled Spike, "I cotton that you don't much want to see him."

Mr. Mobley's coffee was quite cold when he got back to it. After a sip he shoved it away and disgustedly ordered another cup. Gad! it was rotten, he told himself, that with all the money coming to him there should be any hitch about it. Anxiously he sat and waited, but at noon no call had come from Spike, and though Fred's place now began to fill with the usual midday cocktail throng Mr. Mobley sat apart, plunged in moody silence. Not only did he decline several warm invitations from the bar but an out-and-out bid to luncheon as well. Every time the telephone jingled he started consciously, and at one P. M., when

"One Dollar The Pound"

"THE SWEETMEAT UNIQUE"
In the Swinging Compartment Box

Fluffy Ruffles

An innovation in confection and package—a distinct sensation—something to charm the eye and delight the taste of discriminating lovers of chocolate sweetmeats.

A full assortment of the rarest, most select *Fruit and Nut-Meat* delicacies of the world.

Dipped in Ceylon Creamery Chocolate

Maraschino Glacé Cherries
Hawaiian Crystallized Pineapple

You know all these people

They are but a few of the great stars of opera, drama, concert and vaudeville who are at your command—not merely once in a while, but *whenever you wish,* when you own the

Edison Phonograph

The talent behind the Edison Phonograph comprises the *very best* in every branch of entertainment. The perfect reproduction of the Edison *itself* brings these stars to your home absolutely true to life. The Edison repertoire provides everyone's *kind* of entertainment—

Sousa and his band, Herbert and his orchestra; the coon shouts of Stella Mayhew and Sophie Tucker, the Grand Opera arias of Slezak, Melis, Martin, the monologues of Nat Wills, Marshall P. Wilder and Digby Bell—and Marguerita Sylva in her own songs from the new operetta success, "Gypsy Love."

Hear the Edison at your dealer's or write us for complete information today.

Any Edison dealer will give you a free concert. There is an Edison Phonograph at a price to suit everybody's means, from **$15.00** to **$200.00**; sold at the same prices everywhere in the United States. Edison Standard Records, **35c.**; Edison Amberol Records (play twice as long), **50c.**; Edison Grand Opera Records, **75c.** to **$2.00.**

Thomas A. Edison

11 Lakeside Ave., Orange, N. J.

he could stand it no longer, he sought the near-by privacy of a telephone booth and rang up Rooker, Burke & Co. Meanwhile, as he knew from fragmentary talk overheard at the bar, Hocking kept on tumbling. Rich though it made him—that is, rich comparatively speaking—he felt a deep sense of grievous personal injury in that he could not get his hands instantly on the money.

After some delay he got the quotation clerk. "That fellow Bannerman still there?" he sulkily demanded.

"He sure is," was the answer. Moreover, Mr. Bannerman, having announced he didn't believe Mobley was out of town unless he'd walked, had taken a chair and was prepared to wait indefinitely. "Sure, that's right," said Spike, and he added: "I shouldn't wonder if he sent out for a mattress and pillow and shook down a bed for the night." Hoag, however, had been shown the door, while Pingree still clung to the end of a distant wire. "Between you and me," advised Spike eloquently, "Pink's celebrating. From his remarks I take it he's collected quite a little sosh."

Mr. Mobley felt deplorable. "Wouldn't that beat you? Say!" he grumbled, "if Pink comes in or Bannerman quits you let me know, won't you, Spike? I'll still be over here at Fred's place." Spike promised, but at two P. M., when no message had yet arrived, Mr. Mobley with a grim visage walked to the telephone again. He'd decided now on a plan. If Osgood meant to make good at seven he could do it as well at the moment. With that money Mr. Mobley could go back to the office and square matters with Bannerman.

The plan proved as fruitless as Mr. Mobley's other efforts. Mr. Osgood, he was told, had left for the day. Moreover, the statement was the truth, for after an altercation over the wire Mr. Mobley had proved it to his satisfaction by going to Mr. Osgood's office and forcing his way inside. Returning to Fred's place he again called up Rooker, Burke & Co. This time hope dawned anew.

"I got hold of Pink," said the quotation clerk. "And say!" he added voluminously, "he's lit up like Coney on the Fourth!"

"Soused?" cried Mr. Mobley in the vernacular.

"Yes, up to the eyelids!" the quotation clerk replied. However, it was not so bad as it might be. Mr. Pingree had loudly expressed his gratitude to Mr. Mobley for giving him the tip and insisted on his benefactor joining him at once. Mr. Mobley cried out in relief. "Where did he say he was?" he demanded eagerly, and grinding the telephone to his ear he anxiously waited the answer. It was disappointing or, that is to say, rather more distracting. In brief, Mr. Pingree had now reached the cab stage of his celebration and was indefinitely somewhere between Fourteenth and Fifty-ninth Streets. The clew, however, was close enough for Mr. Mobley. "Listen, Spike," he cried animatedly: "if Pingree calls again tell him to wait exactly where he is. There's a ten-spot in it for you, Spike, if you hold him. Say it's a matter of life or death. No, wait! Tell him I know of another melon that's to be cut. Hand it out thick, Spike! Say it's got Hocking beaten a mile. Understand, don't you?" he cried appealingly.

Spike understood, and hanging up the receiver Mr. Mobley dashed out to the curb. Hailing a passing taxi he gave a frantic direction to the driver. "Fourteenth Street and Broadway!" he ordered, adding excitedly: "When you get there stop at every barroom going north where there's a taxi in front of the door!"

Leaping aboard Mr. Mobley settled back for what he knew indefinably was to be a wild-goose chase that would consume hours and would end—where?

. . . . . .

Seven o'clock had just struck when Miss Ziegler came up from the kitchen below bearing in her hands the dainty tray for the sick room. Thin slices of evenly buttered bread and a choice banana from the Italian's on the corner flanked a steaming bowl of rich oatmeal gruel. It was just such a repast, in fact, as would appeal most to one whose appetite as well as hope seemed forever to have departed.

"Oh, Mrs. Mangin!" cried the young girl, averting her head so that a stray tear should not besprinkle the oatmeal; "I don't know how I can ever repay your kindness in letting me stay to 'tend him!"

"Sssh!" said Mrs. Mangin bruskly. Withdrawing her ear from the keyhole

Regulated home heating

Make your home a place of balanced warmth day and night, up-stairs, down-stairs—on the floors, at the windows—by the precise regulation of the room temperatures through use of an

IDEAL SYLPHON **Regitherm**

The Regitherm is placed on the wall of a room, and you set the hand at the temperature you desire throughout the entire house (anywhere between 60° and 80°). The Regitherm communicates by a steel wire to the draft and check dampers of Boiler or Furnace; thus the fire is kept at an even condition—no over heating, no under-heating, no coal waste, no running up and down the cellar stairs.

The Regitherm is entirely self-acting and self-contained—no electricity, no springs, no parts to clog, run down or wear out. It is a heating monitor which is faithful day and night—takes all the regulating into its own reliable hand, and never fails.

The Regitherm pays its own cost out of the fuel economies. Let us send you our "New Heating Aids" Book, telling all about the Regitherm and our labor- and money-saving Norwall Air Valves and Sylphon Packless Radiator Valves. They will bring you much added comfort and help to cut down those excess" living costs."

of the parlor door she tiptoed back toward Miss Ziegler. "Now wouldn't it grab you!" she whispered mysteriously. "There's three of them in there now and the last one's plastered to his cowlick."

The remark, though somewhat cryptic, apparently was fraught with meaning to Miss Ziegler. "Oh, my heavenly stars!" she murmured tragically. "Then my poor Horace is not the only one the villain got into?"

Visibly annoyed, Mrs. Mangin slowly turned. "How can I make out," she demanded fretfully, "when you're making such a row? Can't you hush?"

A man's voice raised itself. "Yaas—and oh!" it said brokenly, "I says to him, so I did—'Yaas, it's only the Rubes that buy.'" After this came another sob, at which Miss Ziegler instantly dabbed her eyes in sympathy.

A second voice was heard. "Sho!" it said. "I couldn't never have—hic! believed it—hic! Why, the blooming—hic! told me to sell!"

Following this came still a third voice: "Yes, that tout always was out after an open and shut sure thing!" it said, whereat a fourth person spoke: "That's right now! Why, there's hardly a man in the club he hasn't stuck. Look at last night now!"

Miss Ziegler glided swiftly toward Mrs. Mangin's crouching form. "Ain't it offle?" she whispered, and added piteously: "Don't you think I'd oughter run out and get a cop?"

In answer Mrs. Mangin made a frantic grimace at the girl. "Sssh!" she hissed warningly. "Listen!"

The voices in the other room had suddenly hushed themselves, though now and again a strangled "hic!" could be heard. All at once a sharp grating noise broke in, the noise of a latchkey stealthily inserted in its lock. Then a hinge creaked upon itself, and with a swift movement Mrs. Mangin arose and sped toward the hallway, down which she crept on tiptoe. "Well, gents, here he is!" she cried abruptly, and leaping between Mr. Mobley and the street door she stood there triumphantly.

It was quite a little symposium that greeted Mr. Mobley. Like characters in a play the figures grouped themselves about him in a pretty tableau. Attired in a red-and-blue striped blanket from Mrs. Mangin's boudoir Hoag confronted Mr. Mobley like an image of avenging fate.

It was Mrs. Mangin who was first to dispel the stage illusion. "You needn't bother yourself to skip upstairs, Mr. Mobley," she remarked as he sought to reach the stairway. "Your door's locked and the key's right here in my pocket."

Hoag was next. "Oh, Mr. Mobley! Mr. Mobley!" he iterated. "I couldn't of believed it! No, I couldn't of!" he repeated.

He was still murmuring it when Mr. Bannerman spoke out. "Say, you!" he growled roughly. "Are you ready to square this check of yours or shall I go out and whistle for a peeler?"

Mr. Pingree now took his turn. What he had to say he confined briefly to a laconic word or two. "Hello, hic!—I mean Mac!" he said, hastily correcting himself. Mr. Osgood, however, said nothing. He merely smiled enjoyingly.

It may be said, though, that by now Mr. Mobley was in no mood to bandy words with any one. Having hunted Pingree high and low without avail, he might have continued the pursuit but for the taxi driver's rising objections. The meter already marked some twelve dollars or so, and alarmed by Mr. Mobley's growing agitation the man had demanded that Mr. Mobley either pay him at once or show him that ultimately he could pay. Not being in a position to do either, Mr. Mobley had directed him to drive to Mrs. Mangin's. Osgood would be waiting, and with Osgood's money he would be able to settle the cab bill and get rid of the taxi, after which he would again be at leisure to pursue Mr. Pingree.

But here now was Pingree himself. Lured on by the suggestion that Mr. Mobley had still another melon to cut, Mr. Pingree had himself set out to pursue Mr. Mobley. The result was obvious. It was at the same time bordering on the tragic. What if Pingree had learned that Mr. Mobley, so far from being a benefactor, had merely—as the Wall Street term so simply has it—been playing him "both ends against the middle!"

But nothing venture nothing do. Wetting his lips Mr. Mobley flashed a look of scorn at the others. "Come along, Pink!" he said genially; "I've got a taxi outside."

At the words the group abruptly disarranged itself. When it came together again it stood en masse between Mr. Mobley and the door.

"Go with you?" exclaimed Mr. Pingree. "Why, say!" he added; "I've got money on me, and d'you—hic! suppose I'd go riding round with a regular, bunco-steering, Wall Street—hic? Nix!" said Mr. Pingree.

Mr. Mobley laid a hand appealingly on Mr. Pingree's arm.

"Pink, old boy! good old Pink!" he appealed. "You're not going to throw me down, are you? You're not going to renege on me like this?"

Mr. Pingree looked at him in bewildered surprise.

"Ain't I?" he inquired; then added: "No, of course I'm not, of course I'm not, of course I'm not, of course I'm—hic!—not ——" Mr. Pingree having said this much might still be saying it, but that Mr. Mobley interrupted. "You two-spot! you four-flusher!" he remarked, and turned belligerently to the heretofore silent Mr. Osgood. "Well, how about it, Charley?" he demanded. "Are you one of these cheap skates too?"

Mr. Osgood grinned. "Now don't get huffy, Mac," he remonstrated kindly, "because if you do you might start something. . . . No, I'm not reneging any," he added, and to show that he wasn't Mr. Osgood produced an envelope from his pocket.

A throb of relief sprang in Mr. Mobley's breast. The envelope was fat, thick and soft. He knew what it held.

"Money?" exclaimed Mrs. Mangin inquiringly. "I've got a little bill, you know—nine weeks' room rent at five a week."

"Yes, and I've got a check too," put in Mr. Bannerman.

"Money?—oh, Mr. Mobley!" appealed Mr. Hoag.

Mr. Mobley thought swiftly. The cash in the envelope was but a drop in the bucket. If he paid Bannerman he could not pay Mrs. Mangin. If he paid either he could not square the cabman outside. That meant a ride to the nearest police station. Gad! it was growing pretty serious.

"Well, gentlemen," said Mr. Mobley gravely, "I guess I'm up against it." Turning to Mr. Bannerman he asked him for the check. "And you, Mrs. Mangin," he observed, "I'll thank you for your bill." Tapping the envelope Mr. Osgood had handed him, he glanced about him slyly. Hoag, Bannerman and Mrs. Mangin together had left the door.

"I ain't got any bill," said Mrs. Mangin. "It's nine weeks at five a week, which ——"

Then she screamed. Making a bolt for the door Mr. Mobley flung it open, slammed it to again, then turned the key in the lock. Behind him, as he rattled down the front steps, he heard a complexity of muffled cries—Mrs. Mangin's shrill pipe of baffled anger, Hoag's high-pitched lamentation, a tipsy shout from Pingree, and from Bannerman an elephantine bellow. Over all this arose another sound. It was the loud and hearty voice of Mr. Osgood, guffawing with an intensity of enjoyment. "Let him go!" cried Mr. Osgood exuberantly, and somehow his voice struck a chill in Mr. Mobley's heart. But now it was no time to temporize, and throwing open the cab door Mr. Mobley leaped aboard.

"Where to?" asked the driver wonderingly.

"Anywhere!" cried Mr. Mobley, then added: "And drive like the devil too!"

In his hand he still clutched Mr. Osgood's fat, bulging envelope. Sixty dollars in cash! It was something, anyway, and after he'd had dinner he'd decide what he must do. Leaning from the cab window he called a direction to the driver. "To the Waldorf!" he said. After food and a good cigar he'd feel much better anyhow. So sitting back among the cushions Mr. Mobley tore open the envelope Mr. Osgood had given him.

The instant he broke the paper a hoarse cry escaped him. Now he knew why Mr. Osgood had guffawed so loudly. In the envelope were half a dozen visiting cards, each folded in half—only these and nothing else. Each was an I. O. U. What is more, to make it worse the I. O. U.'s were Mr. Mobley's own.

"Whipsawed!" groaned Mr. Mobley. "Whipsawed!"

The Guarantee of Excellence on Goods Electrical

The Monogram Trademark of the General Electric Co.

Now electricity rivals sunshine in warmth as well as light. You can enjoy the cozy warmth of electric sunshine that is as comfortable as real sunshine.

The heater bulbs of this new luminous radiator glow ruddy with radiant heat that warms as sunshine warms.

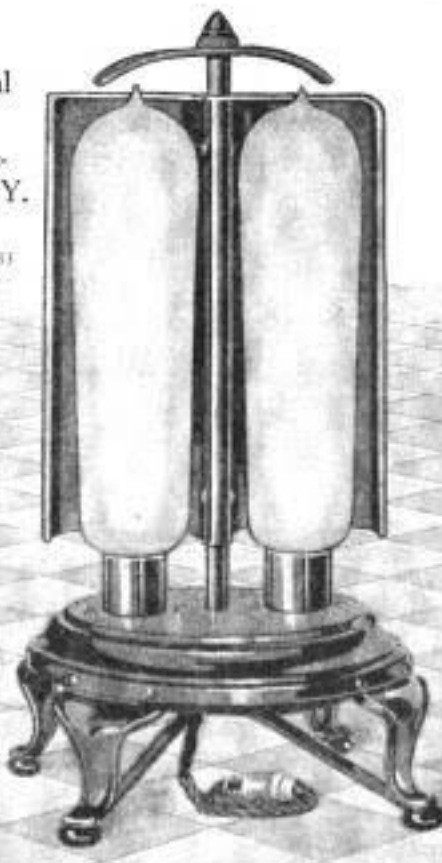
Twin Glower Electric Radiator

Like a ray of warm sunshine the radiant warmth from the twin glowers will keep you comfortable. It does not warm the air as ordinary portable heaters do; it warms the *person* sitting in its glow just as the radiant heat from a fireplace warms the person in front of it.

Anywhere, anytime, this electric radiator at once glows with radiant heat. Simply attach the plug to any convenient electric light socket—and turn the switch.

For any room, for sick room, office or garage, it will be found an ever-ready comfort. It is absolutely safe and clean—and it cannot rob the air of its oxygen as do other types of portable heaters.

Complete with cord and attaching plug, the Twin Glower Radiator sells for $6, the lowest list price of any luminous electric radiator.



It is made by the largest electrical manufacturer in the world and sold by lighting companies and electrical supply dealers everywhere. If you cannot get one readily, write us.

The World's Best Cars now

The demand for Stearns Cars doubled by the adoption of this new engine

Seven months ago—in July—we announced to the public that we had adopted the "Silent Knight" type motor. We said that our two years of tests and experiments had conclusively proved that the sleeve valve engine was infinitely superior to the poppet type. We said that the new motor would unquestionably lead American motor car practice as it has European.

We felt that our old motor—and every other great motor—had to give place to the Knight. We told of the adoption of this motor by Daimler, Panhard, Mercedes and Minerva—the leaders of Europe. We were the first to adopt the Knight engine in America, and are the only ones using it exclusively.

We told of the advantages of the Stearns-Knight. How the new motor eliminates noise; does away with timing gears, cams, valve stems and the attendant complications, trouble, and loss of power. Then we told how it insures smooth steady action with a decided *increase* of power; why it is always alert—quick and willing. How it instantly answers the throttle and leaps eagerly away, or brings the car down on high gear to a speed no greater than a man may walk.

An Increase of 100%

Since our adoption of the sleeve valve motor, our orders have doubled and doubled again. Our output this year will be 100% greater than that of a year ago, when we were building nothing but poppet valve engines.

This demand is not forced. It is a steady flow of orders from men who are abreast of conditions—men who have been waiting for the advent of an American-built Knight-motored car.

The success with which the new Stearns-Knight has met is something unparalleled in American automobile history. Today we have more orders than our total output of last year. Our shipments have never been as heavy in the sixteen years' history of our business. And we are building nothing but Knight-motored cars.

An Additional Factory

So great has been the demand from every quarter that we have been forced to secure another factory in addition to our own plant. In November—a "dull" month—when manufacturers generally are easing up—we leased a large part of the factory of the Royal Tourist Car Company, ten minutes run from our own shops. It is now operated as our plant No. 3. And in addition to this, we are now erecting new factory buildings of our own.

The Reason

Experienced motorists—men who have owned car after car—realize that there is a new master in motordom. They know that the Knight sleeve valve principle is mechanically correct—that it eliminates troubles.

They know of the wonderful success of this motor abroad—of its adoption by the greatest car builders of Europe. They realize that the car of the future will be of the sleeve valve type. They know of the trials given the Knight motor in Europe and of the wonderful R. A. C. test in England.

When questions concerning the Knight principle are raised,

Specifications of the Stearns-Knight

Models: Touring, Toy Tonneau Runabout, Roadster, Limousine and Landaulet. Prices $3500 to $4900.

Motor: Four Cylinder, 4¼" x 5½". Transmission: 3 speed selective. Rear axle: Solid one-piece forging drilled for floating drive shafts. Wheelbase: 121-inch. (Toy Tonneau Runabout and Roadster 116-inch.)

Tires: 36" x 4½" all around.

have the Knight Type Motor

Men the world over who demand the best, now demand the Knight Type

A Few European Owners of Knight-Motored Cars

THE KING OF ENGLAND
THE EMPEROR OF GERMANY
THE CZAR OF RUSSIA
THE KING OF SPAIN
THE KING OF BELGIUM
THE CROWN PRINCESS OF SWEDEN
THE CROWN PRINCE OF SERVIA
PRINCE OBLENSKY OF RUSSIA
THE GRAND DUCHESS VLADIMIR OF RUSSIA
PRINCE ARTHUR OF CONNAUGHT
THE DUCHESS OF BEDFORD
THE DUKE OF PORTLAND
THE RIGHT HONORABLE EARL ROBERTS
THE DUKE OF SPARTA
THE RAJAH OF DHAR
BARON VAN PALLANDT OF HOLLAND
THE EARL OF MAR AND KELLIE
THE MARQUISE VILLALOBAR OF SPAIN

these men think of the experiences of such world-famous concerns as Daimler, Panhard, Mercedes and Minerva. They know that nothing in motoring history has had the approbation accorded the Knight motor in every country where it is known, by engineers, manufacturers, designers and owners.

Our Own Experiences

It must be remembered that for the two years when we were experimenting with this motor, we were in the position of *buyers* —not *sellers*. The old Stearns power plant had for years been admitted among the best in the world. We had little to gain and much to lose by the adoption of something new. All the expert knowledge of our organization was pitted *against* the Knight motor. We gave the engine unfair tests—we tried it as we *could not* try a poppet valve engine. The whole future of our business was at stake on the issue.

The Knight proved itself. Our own experiments but confirmed the results secured by the greatest designers in Europe. The Knight came through every test—every trial—triumphant. Try as we would, the Knight principle forced us to the acknowledgment of its superiority. In our own factory with every man's hand against it—it won its own battle. On the road, with factory drivers under instructions to "drive it to death"—it answered every demand, fulfilled every claim made for it. Then, satisfied that we had the world's best, we abandoned the old type, and announced the new model.

The Verdict

We told the public months ago of the Stearns-Knight, and what it had in store for those fortunate enough to possess it. And now the great American public—the final court—is telling *us* of the Stearns-Knight. Telling us of the wonderful success of this car in the hands of users—telling us of the acid test of service. And these voluntary tributes are from all parts of America. From Coast to Coast, and the Great Lakes to the Gulf. They are from experienced motorists—men whose judgment is final.

We have reproduced these letters in booklet form—letters telling what the Stearns-Knight means to men who drive it. How it has opened a new era to them.

Let Us Send the Facts

We will send this booklet of letters to you if you wish. And, we will send, too, "The Story of the Stearns-Knight Motor"—a booklet telling of the trial of two Knight motors by the Royal Automobile Club of Great Britain. How three years ago, laughed at by designers, and belittled by competitors, the invention of an American went triumphantly through tests that experts deemed impossible, and leaped to the proud position of master of the automobile world! We have told how, after weeks of exhaustive tests, these wonderful engines developed *more* power at the finish than at the beginning, *and showed no sign of wear!*

All this information should be in the hands of every well-posted man. The Knight motor is fast adding new pages to automobile history—mail us the coupon, and we will place the facts in your possession.

Napoleon's Visual Telegraph

The First Long Distance System

Indians sent messages by means of signal fires, but Napoleon established the first permanent system for rapid communication.

In place of the slow and unreliable service of couriers, he built lines of towers extending to the French frontiers and sent messages from tower to tower by means of the visual telegraph.

This device was invented in 1793 by Claude Chappe. It was a semaphore. The letters and words were indicated by the position of the wooden arms; and the messages were received and relayed at the next tower, perhaps a dozen miles away.

Compared to the Bell Telephone system of to-day the visual telegraph system of Napoleon's time seems a crude makeshift. It could not be used at night nor in thick weather. It was expensive in construction and operation, considering that it was maintained solely for military purposes.

Yet it was a great step ahead, because it made possible the transmission of messages to distant points without the use of the human messenger.

It blazed the way for the Universal Telephone service of the Bell system which provides personal intercommunication for 90,000,000 people and is indispensable for the industrial, commercial and social progress of the Nation.

BULWARKS OF BUSINESS POLICY

(Continued from Page 18)

The first decade of this century brought still more expansion and order. Distribution was put on a national basis. The loud-talking drummer of other days was replaced by the temperate, soft-spoken salesman, backed by the new force of advertising. "Big business" expanded and at the same time a public conscience developed—and new business ideals, bringing us into the present decade, which will undoubtedly be one in which watered values must disappear, speculative methods cease, a better legal basis for business arrived at, and the machinery of production and distribution improved, simplified and based on real public service.

Business changes, but men seldom do. The promoter who was thoroughly at home in the bonanza eighties found it difficult to follow the ideas of the nineties; and if he survived into the present century he thought he had lived to see business turned into a mere Sunday-school. The broker who tipped a waiter a dollar in the nineties, when fortunes were made in Wall Street flotations, now matches nickels for carfare and will probably be overboard by 1915. This applies not only to promoters and brokers but to the president of the company, the sales force, the factory force and the office boy. Only the exceptional man grows from one period into another, by keeping his intellect working.

The best way of keeping a business organization in touch with today is to get men of today into it. That is the general policy of corporations. Their activities are so wide that many new men must be taken in each year, and they canvass the colleges and schools for good material. With smaller concerns, however, young blood may be introduced only when the sons or grandsons come out of college; and then the weight of outworn methods, backed by men who think in terms of an outworn period, may make readjustment difficult.

Applying the Soft Pedal

A young man went into a business founded by his grandfather. Many of his granddad's old clerks were still round the offices and a lot of his notions. New ways of handling routine work were introduced and young fellows brought in. As fast as the grandson built up, however, the old boys tore down. Seeing a newcomer tackling work on its merits and with energy, they took him aside, told how much money they had earned there at his age and how slightly salaries had grown since then. What if he did work hard? It would all come to the same thing in the end. Better take life easy. No headway could be made until most of these old clerks were weeded out.

Precisely the same spirit is often found in management, however.

One of the large corporations, during the past five years, has put a good deal of effort into getting capable young men away from other concerns. Some chap attracts attention in the trade for his knack at running a sales force or developing new territory. A contract is made at a large salary and he is brought to this company's general offices to repeat his success; but he never does, because he never gets a chance. For the management of that corporation includes no men of today. The officers were at their best fifteen years ago, when business was secured by crushing a competitor or a difficult price situation met with a railroad rebate. Nowadays, the true line upon which to build business is in the stopping of waste, the perfection of distribution so that an enormous volume of goods will flow almost automatically, turning slender profits, and so forth. The management is grandmotherly. Each official is surrounded by sycophants. When a young man proposes action these followers put the soft pedal on his scheme. "Let us take time and think this matter over," they advise. "Better let well enough alone—wise counsel ought to prevail." So nothing is ever done.

Some years ago a large English company got into difficulties and was placed in the hands of a receiver. More than a million pounds of capital were involved. The company had a trade name known for two generations. Whether to wind up its affairs, sell it as a going concern, or try to reconstruct it was a serious problem. The creditors most deeply concerned were holders

Children with sound bodies

make strong men and women later. You mothers can make your children well and strong by proper feeding. Whole wheat provides nature's most nourishing, body-building food, and

Ralston Wheat Food

is the most economical and the best. Just the finest whole wheat, ground, with all its nourishment and delicious flavor left in. A solid substantial food. Great for growing children.

Ralston is not factory cooked—but fresh cooked, every morning, in your own kitchen, and brought to your table, tempting and delicious. A cup full, when cooked makes six dishes—a box makes fifty breakfasts.

What is good for your children is good for you. Serve Ralston to the whole family. Buy a box today, for your children's sake—you will like it too.

Purina Whole Wheat Flour
makes delicious, nourishing bread, muffins, rolls, etc. Try it, too.

CompoBoard

Just Nail It On

You can line your walls and ceilings in one-tenth the time it takes to plaster and without the muss and dirt. Compo-Board can be nailed over the old plaster or direct to the studding of new buildings.

Compo-Board walls and ceilings have a smooth surface—can be papered, decorated in oil or water color or paneled in effective designs as you wish.

Compo-Board is air tight and warp proof. Cold, heat, or moisture can't get through it. Will last as long as the house. Will stand the knocks and bangs of furniture without serious damage.

Send for Sample and Booklet—

See what Compo-Board is like, and learn in how many different ways it can be used about the house, as well as for lining of walls and ceilings.

Compo-Board is sold in strips 4 ft. wide and 1 to 18 ft. long, by dealers in nearly every town. Write at once for sample.

Northwestern Compo-Board Co.
4303 Lyndale Avenue N., Minneapolis, Minn.

An Established 6% Investment

We are offering, to net 6%, a small block of a First Mortgage bond issue marketed by us some time ago. **The bonds are issued under our plan of serial payments and the first installment of the principal has already matured and was paid promptly.** The security for these bonds is conservatively valued at more than five times the amount of the issue. The bonds are guaranteed and this guarantee places behind them additional assets of nearly twice the amount of the issue. We recommend these bonds as a conservative investment.

Address Sunnyvale Chamber of Commerce, 36 Crossman Bldg., Sunnyvale, California.

of a large issue of its bonds. A meeting of bondholders was called and decided to make the receiver general manager for a year, let him continue the business, and see what came of it.

The receiver was not a manufacturer and had no technical knowledge of the business, being simply an expert accountant, with a lot of courage and common sense. When the bondholders met a year later he was able to show profits amounting to nearly ten per cent of the total capitalization, and the bondholders were delighted to authorize him to go on.

What ailed that business was a general slackening due to old age. Years of trading had put thousands of accounts on the books, but they had not been weeded out. Old customers owed the company nearly a million dollars. The stock of goods on hand when the concern went into the receivership inventoried a couple of hundred thousand dollars. Yet latterly the business had come to such emergencies that railroads were seizing goods in transit for freight charges, and even the company's supplies of gas and water were in danger of being cut off for non-payment of bills.

The receiver simply brought in youth. He lifted the business out of the last generation and put it into this. First, sufficient capital was borrowed to meet running expenses. The product was improved. Then young salesmen were sent out to get young accounts—live accounts. Collection men were put on to the old book debts. Customers who had some life left in them were brought to time and those who had none decently buried. The business had held rigidly to the methods that had been good in a former period, and had ossified for lack of periodical infusions of young blood and new ideas.

Experience Versus Ignorance

Keeping business at the right age for maximum efficiency is not always a matter of bringing youngsters in and throwing the old boys out, however; for there are instances where youth and energy are rather too abounding and the sobering influence of experience is needed.

An excellent example of this is the automobile industry.

The automobile burst into the world with almost dramatic suddenness. One year it was rumored as a possibility and the next year it was an accomplished fact. It made an appeal to popular interest unlike anything that had ever gone before. The industry emerged from nothing in a period measured by months, and as a manufacturing and commercial proposition seemed to attract all that was youthful and adventurous in business life. Racing, sensational publicity and reckless finance marked the first years. The public looked for excitement in connection with the new wonder and the auto men met expectations, building every sort of racing machine. That attracted the most attention. Besides, it was easier to build racing cars and run them in sensational contests than it was to plod patiently at the development of the stock car for everyday service. Speculation entered into the management of even some of the more conservative concerns, for this exciting new business was peculiar in that the bulk of the sales was made during a very short period each year. At that season the auto manufacturer got his hands on some real money, though the rest of the year he ran his manufacturing, experimental and selling organizations as he could, and wondered what the next spring would bring forth.

This industry was finally given ballast by the disappearance of the more reckless concerns and the coming into it of solid men—fellows with the humdrum financial experience of the banker or the mill treasurer, for the most part, with not much romance about them, but a canny faculty of looking backward and forward at the same time. They saw the real issues, financed them, and put the business on a business basis.

The right age, really, is a matter of balance. Any business organization, whether it is large or small, is chiefly a way of thinking. Demand changes, business standards broaden and the competition keeps pace with the possibilities. The policymaker who keeps the organization in close and constant touch with conditions is the man who brings in new men from year to year and keeps the organization alert for the new viewpoints that come with them.

Editor's Note—This is the fourth of a series of articles by James H. Collins. The fifth will appear in an early issue.

Diamond Tires

We could build them cheaper
But We Won't

We would build them better
But We Can't

THE dealer who sells you DIAMOND TIRES is thinking of *your* profit as well as his own—he is "tire-wise"—and believes in trading up—rather than trading down.

¶ He can buy cheaper tires than DIAMOND TIRES, and make a larger one-time profit, but he cannot sell you *better* tires.

¶ The dealer who sells you DIAMOND TIRES can be depended upon when he sells you other things—he believes in service—in integrity. He's reliable.

In addition to dependable dealers everywhere, there are FIFTY-FOUR Diamond Service Stations. Diamond Service means more than merely selling tires—it means taking care of Diamond Tire buyers.

1912 Will Be Quality Year. The to the Warner Auto-Meter

The Motor Car Manufacturer's slogan for 1912-13 is "How much value can I give for a Dollar and still get out even?"

The Auto Show this year breathes *QUALITY*. You note it everywhere. It indicates the progress of the automobile into the field of good, sound, legitimate business. Success now depends on *Stable Values* and not on the ability to make immediate delivery of a car.

For this reason the Auto Buyer will find it harder than ever to pick the BEST for the money this year.

Many of the choicest cars in the shows—big 1912 successes—are Warner-equipped

The wisest manufacturers in the auto field are those far-sighted ones who forecast complete equipment with the BEST as inevitable. These have equipped with the Warner Auto-Meter for 1912 instead of waiting until 1913, as many have decided to do. Up to date of writing this ad eighteen makers of these *Quality Cars* have announced the Warner as regular equipment for 1912. Before the New York Show is over we expect at least *ten more* will have reached the same far-sighted conclusion.

The Warner on the dash of a car serves as a "guidepost" to the mechanically untrained buyer.

—Not only because of the great intrinsic value of the Warner itself, but because

The Quality Warner at three to four times the cost of other speed indicators visibly indicates the *Quality Policy* of these makers

We do not wish to even insinuate that these cars offer so much extra value simply because these makers have paid from $20,000 to $50,000 *extra money* on their season's output to give you a Warner Auto-Meter. Quite the contrary. It simply indicates that with these makers *Quality is of Paramount Importance in every item*, and that the BEST throughout is considered none too good for their trade.

WARNER AUTO-METER

"The Aristocrat of Speed Indicators"

Don't misjudge the maker who is equipping for 1912 with a low-grade speed indicator—or none at all

The maker of a car selling at $900 or less could not reasonably be expected to equip with a High Quality, therefore a High-Priced Indicator like the Warner. Buyers of such cars do not expect it. They are given full value without it.

The class of makers who are equipping with no speed indicator at all, consider it unwise to cast reflections on their otherwise high-quality cars, even for a single season, by using a Speed Indicator which they cannot recommend with the same sincerity as their car itself.

In the meantime they are frankly urging buyers who can afford the extra price without hardship, to select the Warner Auto-Meter, as in their judgment, BEST, most accurate, dependable and reliable.

No buyer of any automobile, except the very lowest priced, should be content with anything but a Warner Auto-Meter on a 1913 car

The automobile-using public is so thoroughly aware of the meaning of *Supreme Quality* and Lifetime Service without loss of accuracy in a Speed Indicator—and so generally acknowledges the Warner to perfectly meet these requirements—that inferior indicators will receive scant consideration after the present season. In fact, much impatience is being expressed by many buyers even now.

Makers committed to an inferior indicator for 1912 are now tacitly apologizing to their trade

Note carefully at the Shows that the man in the Booth "points with pride" to the Warner on the dash. *Warner*

Big Landslide Steadily Growing

Equipment is used as a *selling argument*—and it is a worthy one. Then take notice how some makers in advertising and solicitation announce their cars as equipped with "A Speed Indicator." Why? No man ever need apologize for a Warner, no matter how high in quality his car may be, or how much he paid for it.

The man with $1,000 or more to invest in an automobile has a right to expect and demand *Supreme Quality* in every part of his car

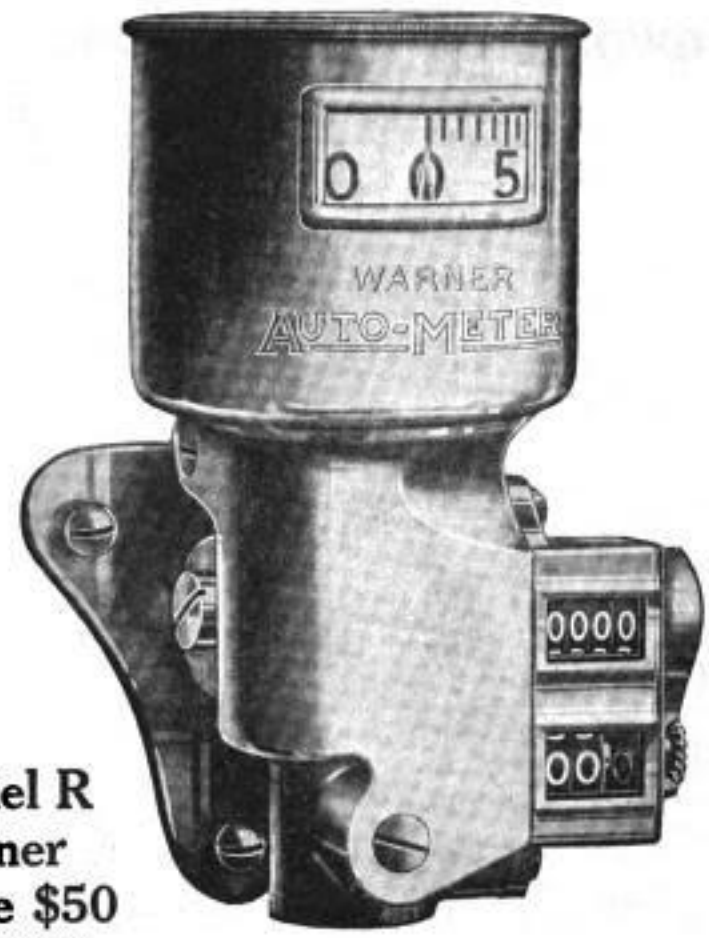
The Warner Auto-Meter is justly termed "The Aristocrat of Speed Indicators." It is unvaryingly exact in indicating speed and distance. *Every Warner indicates exactly the same as every other Warner ever made.* For these reasons the Warner has been used for surveying the various Official Road Maps and Guides, which must be authoritative or they are valueless.

It is next to impossible to tour comfortably by route book without a Warner Auto-Meter

It has been found worse than useless to attempt to Tour with indicators even a *little* fast or slow—and inferior indicators are almost always one or the other. Because, if the indicator is inaccurate, when the route book says: "29.3 miles, church at right," there will be no church, and when it says: "35.8 miles—turn to the left," maybe it's a blind lane or a road through a swamp instead of the road you want. So without a Warner with its unvarying true-to-the-hair accuracy and reliability you are *tied to home* and must travel the old, uninteresting *known roads* over and over again. Or on the other hand, must suffer untold annoyances by being directed over impassable roads by those who seem to like to fool an automobile owner.

You need a Warner on the car you have or are about to buy

If the car you select is not regularly equipped with the Warner—*buy* one for it. It will double your pleasure in the car.



If the car you decide on has an inferior Speed Indicator on it—throw it away and *buy* a dependable Warner. It isn't worth the wear and tear on nerves and patience to bother with an inferior Speed Indicator.

If your dealer offers to throw in an unreliable indicator to get your order, don't take it. Pay the difference and get the BEST—the Warner—and *KNOW* instead of having to guess.

You'll get more pleasure out of the Warner than almost any of the conveniences and comforts on your car. Your dealer will gladly get you the exact style and model you like best.

BELOIT, WISCONSIN

The Warner can be secured through reputable Automobile Dealers in any city or town in the United States. Warner branches are maintained in all the principal cities for the convenience of these dealers and their customers. Inquiry to Beloit or at our branches is invited for Warner literature.

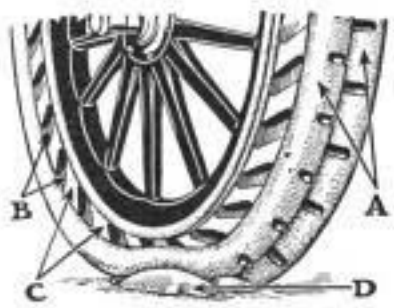
These Tires End Punctures and Blowouts on Electric Cars

You and your friends can now go ***any place*** in your pleasure electric car without the slightest fear of tire trouble.



For a wonderful automobile tire has been invented.

—wonderful, because it will not skid, puncture, blow-out or rim-cut.

—***more*** wonderful, because it makes your electric just as comfortable and easy-riding as if equipped with properly inflated pneumatic tires.

Thousands of women now, having tried Motz Cushion Tires, would almost as lief give up motoring altogether as to have to go back to pneumatic tires or solid tires.

And leading makers of pleasure electrics acknowledge the added comfort and convenience of Motz Cushion Tires.

Pneumatic resiliency is accomplished by means of *double, notched treads, undercut sides, slantwise bridges* and *secret processed rubber.*

A—in the picture shows double, notched treads.
B—shows undercut sides.
C—shows slantwise bridges.
D—shows how perfectly the tire absorbs shocks when car passes over an obstacle (from actual photographs.)

They cheerfully pay more for Motz Cushion Tires than for pneumatics or solid tires, in order to please their customers.

Nor should one overlook tire ***economy.*** On Motz Cushion Tires, up-keep expense is nil. And these tires outwear ***five*** sets of pneumatics. Motz Cushion Tires are guaranteed for 10,000 miles—two years; pneumatics average but a fraction as many miles service.

When you buy your next electric, inform the manufacturer that you want Motz Cushion Tires and you'll get them. When you pay two to five thousand dollars for a pleasure car, you are certainly entitled to as much pleasure and comfort as money can buy.

It will be very easy to equip the electric you now own with Motz Cushion Tires. Motz Cushion Tires fit any standard clincher, universal quick-detachable or demountable rim.

We publish a handsome little book on tires for the benefit of electric pleasure car owners. It contains many letters from owners of electrics who are using Motz Cushion Tires. May we send this to you? Please ask for booklet 96. Please mention make and model of your car.

We also manufacture demountable solid and cushion tires for commercial cars.

An Old Woman and a New One In the Old World

(Continued from Page 17)

stuff than women, using his hands like a chattering monkey when he talks."

Young people are apt to be extreme, but really there was something in Peggy's point of view. I attribute it in part, however, to the French language, which must have been invented by infants before they could talk plainly. But you will observe this, that when even the most stolid English woman begins to speak in the French tongue, that moment she undergoes a kind of insane change. She shrugs her shoulders, she rears back and plants her forefeet, so to speak, upon the empty air, and carries on in a way that is simply scandalous, all because she is conveying to you a little old-dried-fruit idea in French words! I called Peggy's attention to this phenomenon. I explained to her that the French are not to be blamed—at least not these living French people—for their language, and for the necessity of enforcing it with both hands when they use it. I reminded her that in former times this was the speech of courts and kings all over the world—that it has been ever praised for its grace and beauty.

"It is the language of emotions and nothing else!" she retorted. "Give me from this time on the plain American tongue. It may not be so elegant, but it is durable and strong; and you can say in it what you want to say without pawing! And they are so insufferable," returning to the French. "Today I saw in a shop this outrageous sign: 'English spoken here and American understood'!"

The Tears of a Suffragette

One evening I was thinking in a desultory fashion over the tide of the day when my revery was suddenly broken by a succession of faint, pathetic sounds from Peggy's chamber. Could I believe my ears? Was Peggy, the brave Peggy, the eaglet-clawed advanced woman, weeping? I arose, crept to the door, bent down and listened. Distinctly my niece was weeping, and in no half-hearted fashion. She was putting her whole female nature into a tune of rhythmic sobs. I opened the door and entered softly. She was lying face downward upon the bed, undulating convulsively like a little white craft upon a windy sea. I have never seen a man weep, but in case one ever did, I have wondered how he would go about it, standing or sitting. A woman is never really in earnest with her tears until she casts herself face downward.

"Peggy," I exclaimed, "what is the matter?"

She made no response. I did not expect that she would. A woman in this state becomes noisily dumb. You must wait for her to make up her mind whether she will distress you most by remaining silent or by confiding in you. I sat on the edge of the bed and waited.

"Are you homesick, my dear?" I ventured, after a suitably complimentary period had elapsed.

She would not admit homesickness.

"Does your tooth ache?" The only other time I had ever seen her so abandoned to tears was years ago when she had a bad tooth.

She waggled her head negatively in the red coverlid and snickered, to my astonishment. Then, to make up for the snicker she went off in a more dramatic gale of sobs. Presently, when I was about to despair, she murmured in a weak, smothered voice caught up with sobs:

"I—I'm afraid I've made a dre-a-dful mista-ke!"

"Is that all?" I answered cheerfully. "So do we all, to make life sufficiently interesting, my child, to be worth living. If we did not make any mistakes it would lie so straight, so dully, undeviatingly straight before us that we should lose interest in it. We could not bear to finish it. But we have an instinct for erring, for rendering it puzzling and brave by turning the wrong corners when we are young. Then we must use all our wits and courage to find our way back to the right course, or to go on and make the wrong one right."

"But you did not make a mistake about Uncle Tom—you married him," she wailed.

Ah, at last I had got to the root of the matter! If ever a woman weeps, actually

PANAMA HAT CO., Dept. A, 830 Broadway, New York City

weeps over a "mistake," it always has something to do with a lover. If she is rarely intelligent she may admit coolly, and as if you had injured her for life, that she is mistaken in her opinions or upon some point of facts; but if she is taken down alone in her bedroom at night with a mistake, having no one there to convict her of it but her own heart, you may know that she is regretting some man. Peggy's remorse had to do with her sweetheart at home, that excellent young man, Philip Ring, whose romantic obituary I have already recorded in these pages.

I sat silently stroking her head now, not answering. I had not thought that far back in the years for many a day, but now that she mentioned it I recalled another young man, not her Uncle Tom, so different. I will not say he was so good or that he would have made half so good a husband to me as Thomas did. But I say he was beautifully different. I hope it is not wronging Thomas' memory to say this much. My mind passed through the darkness of the night, back forty years, into the sunshine of happy days. I saw him standing before me—not Thomas, but the other, the lover I refused, standing before me—so tall (Thomas was barely medium height), so young (Thomas was past thirty before I ever saw him). He had a countenance in which angels and old war gods contended, it was so fierce, so lifted, so tenderly grave as he bade me farewell. (Thomas was a sedate man who would never have proposed to a woman until he was sure of her acceptance.) I never saw him again, never heard if he lived or died in the far West where he went, leaving me without another word or chance to repent. Then Thomas came and I married him. We lived together peacefully, surrounded with every comfort. I never had a care that he could keep from me. But after all, peace, just peace and comfort and nothing else, may become dull things. Now with my hand upon young Peggy's head I wondered how it would have been if I had taken the man I refused. What woman that has two to choose from knows if she made a mistake?

Peggy moved restlessly, despairingly.

"Tell me about it, dear," I said patiently.

She whirled over, displaying a sober, reddened, bedewed little face.

"It doesn't make any difference now," she began sadly, "but I never appreciated our men at home. I never understood how much more they respect us, how much more they give us when they care for us than these dreadful creatures do over here. If I'd understood I'd have answered Philip differently last spring. Ever since we have been in France I've felt the need of—an—an American man to respect me. I've missed Philip more than anything!" she wound up with a sob.

The Return of the Native

A woman never tells all of her truth. She will tell all of yours or anybody else's, but not all of her own. As a matter of fact, Peggy had battened and fattened her little feminism for years upon the love of men she had refused. It was as much a part of her fortune as her real estate. As long as she knew she had it she could refuse it. But the shock of seeing how Frenchmen do not value women had startled her into a knowledge of what she might lose. It is all very well to be a suffragette when you are young and have no need of strings to your bow; but it is a different matter later on to be nothing but a suffragette with no bow and no strings. Peggy did not admit this to herself, but it was one source of her grief. She had been deprived for some months of her income from lovers, and she was feeling impoverished in more ways than one. But I was careful not to let her know what she would scarcely admit even to herself.

"You might write to Philip and tell him that you have come to your senses," I suggested, smiling.

"I could send him something—a little token—just to show that I have not forgotten him. That would be perfectly proper, wouldn't it?"

"Oh, yes, and perfectly, sneakingly feminine also—saving yourself, leaving him still in suspense as to how much and what you mean."

"I could make it nearly clear, I think," she murmured absently, like an author preoccupied with an engaging composition.

Editor's Note—This is the fifth of a series of articles by Corra Harris. The sixth will appear in an early issue.

Why not stop losing money?

People lose money by producing too much light and smothering it with the wrong shade or globe. That is easily fixed; the right shape and kind of glass, giving the same illumination with less current, stop that loss right away. Read "*Scientific Illumination*".

Or they lose money by not having enough light. Employes are constantly under strain. It injures their health; reduces their efficiency; causes poor output and breakage; and may lead to accidents. Customers don't like such stores. *Scientific Illumination* will remedy this—probably without adding to your lighting cost, perhaps reducing it.

Or they lose money by having too much light—an obvious waste. Also (not so obvious) too much light is almost as bad as too little: you can't see right or work right. Everybody is under strain. This is easily corrected, at reduced cost, by *Scientific Illumination*.

How about your lighting?

Is it right? If so, you are one in a thousand. Are you wasting the strength and value of your employes—which is money? Are you throwing away valuable electric current—which is money? Are you driving away trade—which is money?

At home—is your family enjoying satisfactory and restful lighting, or suffering under the strain of the average badly lighted home?

Scientific Illumination is the only economical illumination. It uses just the right amount of current. It gives you the kind of light you need and where you need it. It makes money by saving money and increasing efficiency.

Send for "*Scientific Illumination*"—an absolutely fair book—and let our Illuminating Engineering Department help you with your lighting problem. We do this because glass is one of the most important factors in illumination. When you realize the importance of good lighting, you will use one of the many kinds of glass we make, of which, by the way, *Alba* is, in more than nine cases out of ten, the globe or shade which gives the greatest amount of agreeable, usable, money-making light.

This New Kind of Business Book

"Where Have My Profits Gone?" is a new kind of business book, of direct interest to every business man, whether he is a small retailer or a large retailer, East, West, North or South, in a big city, a medium sized town or small village, whether he is a jobber, manufacturer, travelling salesman, agent, grocer, butcher, furrier, confectioner, shoe-dealer, jeweller, launderer, milliner, clothier, haberdasher, bottler, auto dealer, banker, restaurant proprietor, railroad official, corporation officer, public service director, manager, superintendent, publisher, importer, or any other business man. This 256 page, cloth-bound book contains Sixteen chapters of valuable facts regarding the handling of modern business. (Send Coupon for Your Copy.)

Eight Rules For Preventing Losses

Chapter One is a survey of business in general, a running fire comment on the sources of losses of different trades. This chapter contains Six general rules for determining what profits ought to be. These rules are applicable to any business. It also contains Eight general rules for detecting and preventing losses of profits.

Thirty-Three Kinds of Retail Losses

Chapter Two is a description of Thirty-Three kinds of losses in different stores. This is such an eye-opener to even the most successful retailer, that the whole retail trade in every line will welcome the publishing of this book as a valuable aid to the improvement of retail methods.

Complete Description of Big Store Methods

Chapter Three is a complete description of Big Store Methods. It explains all about how the business of a big store is handled; the buying of goods for selling, the buying of supplies for its own use, the receiving and distribution of such goods and supplies to its various departments, the actual selling of the goods, including the store decoration and advertising, the delivery of goods to its customers, the collection and handling of moneys, the management of employees, and the detection and correction of the causes of losses. This chapter will be read with the greatest avidity and benefit not only by merchants, but by business men in every line.

The Fourth Chapter is a very striking presentation of the difference between the Planner and the Plugger.

Cash or Credit, Which?

Chapter Five, entitled "Cash or Credit, Which?" is such an unusual presentation of all the arguments for and against a cash business, and all of the arguments for and against a credit business, that every business man should read its "Six General Reasons" and "Nine General Arguments."

All Kinds of Retail Advertising

The Great Sixth Chapter, "Retail Advertising for Any Store," is a wonderfully instructive explanation of the fundamentals of successful advertising. It also contains a description of all of the best kinds of retail advertising and how to use them successfully for any kind or size of store.

Five Chapters on Better Business

"The Fight For More Business," "The New Principle in Business," "How Every Business is Built Up," "The Weakest Link," and "A Factor in Commercial Progress" are five chapters which will sink deep in the heart of every business man, and will be remembered as a new inspiration towards better business and bigger success.

Losses in Hotels, Cafés, and Restaurants

The Chapter devoted to losses in hotels, cafés, restaurants, quick lunch places and soda fountains will be of practical and immediate value to the owners and managers of such business interests.

Light, Water, Ice and Coal Corporations

Chapter Nine, entitled "Creating Public Confidence," deals with the relations of the public to the service corporations. It is a new note. It points out to the corporations dealing in gas, electricity, water, coal, charcoal, coke, ice and other commodities, a way to increase better relations between all parties concerned.

How Crooks Are Detected

"The Business Detective" is a study of some of the ways by which dishonest employees and dishonest customers defraud retail stores and other business houses. This chapter also describes the ways by which such losses are detected and such losses prevented.

The Store of Tomorrow

The last chapter is a little epic. It has a wider significance than its title would indicate. It is a call to the small man, the young man, the employee, and every other man who is ambitious, to lift up his head and look with confidence and hope into the future.

"Where Have My Profits Gone?" has a special message for:

Sent Free on Receipt of Coupon

The book "Where Have My Profits Gone?" is published by the American Sales Book Company, Limited. This company employs over Two Hundred expert business investigators, who travel through every section and locality of the United States. These experts report their findings to the Home Office daily, where System Originators work out the most economical, accurate and successful methods for each case.

For twenty-eight years the American Sales Book Company, Limited, has thus been gathering facts regarding losses in business. It became so impressed with the wide-spread prevalence of such losses that it decided to publish this book, in order to present the facts in its possession to the whole business world, believing that in so doing, it was rendering a valuable service to its patrons and to all business houses.

That these facts might be presented in the most interesting and practical way, it made arrangements with one of the best qualified experts in the United States—Mr. M. P. Gould—to prepare the book "Where Have My Profits Gone?" He has shown, as every business man will admit as soon as he sees the book, great skill in getting at the vital facts, and presenting them so that the book reads like a modern history of better business.

First Edition, 25,000 Copies. Requests Filled in the Order of Their Arrival.

This remarkable book will be forwarded free to any man in business who will sign the coupon, attach it to his firm's letter head, state whether he is proprietor, manager, superintendent, representative, or whatever position he holds with the firm, and send to us.

Sending this coupon does not place the sender under any obligations of any kind. Save Your Tires With These Protectors—

Stop Trouble—End Expense

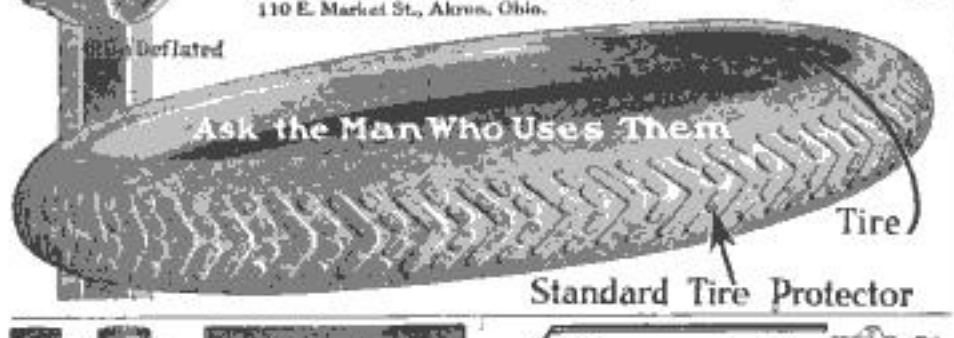
DON'T blame your tires. Give them the protection they require—and you'll never have another tire trouble. Discount your tire expenses—both first cost and repair costs—about 30 per cent, and put a fourth of your saving into tire protection. The other three-fourths of the saving is clear profit to you. And that is only the actual money-saving. Add to it your gains on the score of full pleasure, freedom from worry, no delays or exasperating experiences. For tire protection pays profits you can not measure in money alone.

Standard Tire Protectors

Standard Tire Protectors are made this year of a new rubber, the toughest rubber ever produced, and of the highest grade Sea Island Cotton, woven into hardest fabric which will stop nails, glass and all other dangers to your tires. Rubber and fabric are the only practical materials for tire protection. All substitutes have been proved deficient in the qualities essential to satisfactory service.

This new toughest rubber in Standard Tire Protectors makes them worth even more from the standpoint of long wearing service than ever before, yet prices for 1912 have been reduced on all sizes—fully 20 per cent. less than last year on the popular sizes. Now the cost of Standard Tire Protectors is so reasonable that you can not hesitate for any reason to let them prove their value to you.

A Free Book on Tire Protection



will be sent you on request. It proves the five-dollar-per-one, and often higher, value to you of Standard Tire Protectors. It illustrates how easily they are applied to your tires anywhere in just a few minutes; how tight they are held by inflation pressure—no mechanical attachments; explains the double protection—skidding protection and tire protection—they give you at one economical cost; answers every question you would ask. Write for this free book—and ask for a sample of our new toughest rubber. Write today—and save 30 per cent of your motor car upkeep costs for 1912.

DEALERS:—More Business and Bigger Discounts on Standard Tire Protectors. The Old "Bugaboo" of "Price too High," Killed.

New manufacturing facilities have cut out our producing cost. Lower prices to consumers and consistent advertising to reach all motor car users—mean vastly greater sales on Standard Tire Protectors this year. And our scale of discounts to you for 1912 makes Standard Tire Protectors one of your best paying automobile accessory lines. If your order is not in, write us at once for particulars of our 1912 sales-co-operation to dealers and new price list.

Standard Tire Protector Co.,
110 E. Market St., Akron, Ohio.

Reduce Light Bills End Drudgery!

By using Pyro (denatured alcohol) a light three times as bright as an ordinary electric bulb is placed in your home. Then all work and worry ends. No smoky chimneys, no foul odors; just glorious light. There's a lamp for every use and to suit every purse.

THE LIGHTED WAY

(Continued from Page 31)

"Double it," Mr. Weatherley ordered promptly. "Three pounds a week I will make it. For three pounds a week I may rely upon your constant and zealous service?"

"You may rely absolutely on that," Arnold replied, not quite sure whether he was on his head or his feet.

"Very well, then, go and tell some of the porters to bring in your desk. Have it brought in this very moment. Understand, if you please, that it is my wish not to be left alone under any circumstances—that is quite clear, isn't it?—not under any circumstances! I have heard some most disquieting stories about blackmailers and that sort of person."

"I don't think you need fear anything of the sort here," Arnold assured him.

"I trust not," Mr. Weatherley asserted, "but I prefer to be on the right side. As regards firearms," he continued, "I have never carried them, nor am I accustomed to handling them. At the same time——"

"I wouldn't bother about firearms if I were you, sir," Arnold interrupted. "I can promise you that while I am in this office no one will touch you or harm you in any way. I would rather rely upon my fists any day."

Mr. Weatherley nodded.

"I am glad to hear you say so. A strong young man like you need have no fear, of course. You understand, Chetwode, not a word in the outer office."

"Certainly not, sir," Arnold promised. "You can rely entirely upon my discretion. You will, perhaps, tell Mr. Jarvis that I am to do my work in here. Fortunately I know a little shorthand, so if you like I can take the letters down. It will make my presence seem more reasonable."

Mr. Weatherley leaned back in his chair and lit a cigar. He was recovering slowly.

"A very good idea, Chetwode," he said. "I will certainly inform Mr. Jarvis. Poor Rosario!" he went on thoughtfully. "And to think that he might have been warned. If only I had told you to wait outside the restaurant!"

"Do you know who it was who telephoned to you, sir?" Arnold asked.

"No idea—no idea at all," Mr. Weatherley declared. "Some one rang up and told me that Mr. Rosario was engaged to lunch in the grillroom with my wife. I don't know who it was—didn't recognize the voice from Adam's—but the person went on to say that it would be a very great service indeed to Mr. Rosario if some one could stop him from lunching there today. Can't think why they telephoned to me."

"If Mr. Rosario were lunching with your wife," Arnold pointed out, "it would be perfectly easy for her to get him to go somewhere else if she knew of the message, whereas he might have refused an ordinary warning."

"You haven't heard the motive even hinted at, I suppose?" Mr. Weatherley asked.

"Not at present," Arnold replied. "That may all come out at the inquest."

"To be sure," Mr. Weatherley admitted. "At the inquest—yes, yes! Poor Rosario!"

He watched the smoke from his cigar curl up to the ceiling. Then he turned to some papers on his table.

"Get your desk in, Chetwode," he ordered, "and then take down some letters. The American mail goes early this afternoon."

IX

ARNOLD swung round the corner of the terrace that evening with footsteps still eager, notwithstanding his long walk. The splendid egoism of youth had already triumphed; the tragedy of the day had become a dim thing. He himself was moving forward and onward. He glanced up at the familiar window, feeling a slight impulse of disappointment when he received no welcoming wave of the hand. It was the first time for weeks that Ruth had not been there. He climbed the five flights of stone stairs, still buoyant and light-hearted. He glanced into his own room and found it empty. He crossed at once the passageway and knocked at her door. She was lying back in her chair with her back toward the window.

"Why, Ruth," he exclaimed, "how dare you desert your post!"

He felt at once that there was something strange in her reception of him. She stopped him as he came across the room, holding out both her hands. Her wan face was strained and something of the beautiful softness of her features had passed for the moment. She was so anxious, so terrified lest she should misread what was written in his face.

"Arnold!" she murmured. "Oh, Arnold!"

He was a little startled. It was as though tragedy had been let loose in the room.

"Why do you look at me like that, dear?" he cried. "Is there anything terrible to tell me? What have I done?"

She was leaning out from her chair. It was true, indeed, that at that moment some sort of fear had drained all the beauty from her face, though her eyes shone still like fierce stars.

"Don't come any nearer for a moment," she implored as he came toward her. "Stay there where I can see your face. Now tell me—tell me everything."

He laughed, not altogether easily, yet with some note half of resentment, half of protest.

"Dear Ruth," he pleaded, "what have I done to deserve this? Nothing has happened to me that I will not tell you about. And I have news—great news! Wait till you hear it."

"Go on," she said simply. "Tell me everything. Begin at last night."

He drew a little breath. It was, after all, a hard task, this that was before him. In his mind last night lay far enough back now, a tangled web of disconnected episodes linked together by a strangely sweet emotional thread of sentiment. And the girl was watching his face with every sense strained to catch his words and the meaning of them. Vaguely he felt his danger even from the first.

"Well, I got there in plenty of time," he began. "It was a beautiful house, beautifully furnished and arranged. The people were queer—not at all the sort I expected. Most of them seemed half foreign. They were all very hard to place in a respectable household."

"They were not really, then, Mr. Weatherley's friends?" she asked quietly.

"As a matter of fact they were not," he admitted. "That may have had something to do with it. Mrs. Weatherley is a foreigner. She comes from a little island somewhere in the Mediterranean and is half Portuguese. Most of the people were there apparently by her invitation. After dinner—such a dinner, Ruth—we played bridge. More people came then. I think there were eight tables altogether. After I left most of them stayed on to play baccarat."

Her eyes still held his. Her expression was unchanged.

"Tell me about Mrs. Weatherley," she murmured.

"She is the most beautiful woman I have ever seen in my life," Arnold said. "She is pale and she has strange brown eyes—not really brown, but lighter. I couldn't tell you the color, for I've never seen anything else like it. And she has real red-brown hair, and she is slim, and she walks like one of these women one reads about. They say that she is a countess in her own right, but she never uses the title."

"And was she kind?" Ruth asked.

"She was very kind indeed," Arnold replied. "She talked to me quite a good deal and I played bridge at her table. It seems the most amazing thing in the world," he went on, "that she should ever have married a man like Samuel Weatherley."

"Now tell me the rest," she persisted. "Something else has happened—I am sure of it."

He dropped his voice a little. The terror was coming into the room.

"There was a man there named Rosario," he said. "He was a Portuguese Jew and a very wealthy financier. One reads about him always in the papers. I have heard of him many times. He negotiates loans for foreign governments and has a bank of his own. I left him there last night, playing baccarat. This morning Mr. Weatherley called me into his office and sent me up to the Milan restaurant with a strange message. I was to find Mr. Rosario and to see that he did not lunch there—to send him away somewhere else, in fact. I didn't understand it, but of course I went."

"And what happened?" she demanded.

He held his breath for a moment.

"I was to take a table just inside the restaurant," he explained, "and to tell him

29 Broadway, New York

directly he entered. I did exactly as I was told, but it was too late. Rosario was stabbed as he was on the point of entering the restaurant, within a few yards of where I was sitting."

She shivered a little, although her general expression was still unchanged.

"You mean that he was murdered?"

"He was killed upon the spot," Arnold declared.

"By whom?"

He shook his head.

"No one knows. The man got away. I bought an evening paper as I came along and I see they haven't arrested any one yet."

"Was there a quarrel?" she asked.

"Nothing of the sort," he replied. "The other man seemed simply to have run out from somewhere and stabbed him with one thrust. I saw it all, but I was powerless to interfere."

"You saw the man who did it?" she asked.

"Only his arm," Arnold answered. "He kept his body twisted around somehow. It was a blackguardly thing to do."

"It was horrible!" she murmured.

There was an interruption. The piece of tattered curtain that concealed the portion of the room given over to Isaac and that led beyond to his sleeping chamber was flung on one side. Isaac himself stood there, his black eyes alight with anger.

"Liar!" he exclaimed. "Liars, both of you!"

They looked at him without speech, his interruption was so sudden, so unexpected. The girl had forgotten his presence in the room; Arnold had never been conscious of it.

"I tell you that Rosario was a robber of mankind," Isaac cried. "He was one of those who feed upon the bones of the poor."

"You go too far, Isaac," Arnold protested. "I never heard any particular harm of the man except that he was immensely wealthy."

Isaac stretched out his thin hand. His bony forefinger pointed menacingly toward Arnold.

"You lie!" Isaac shrieked. "Rosario earned his wealth by the monkey tricks of a dishonest brain. Never an honest day's work did he perform in his life, never a day did he stand in the market-place where the weaker were falling day by day."

"The man is dead," Arnold muttered.

"Yes, dead!" Isaac cried fiercely.

He caught up his cloth cap and without another word left the room. Arnold looked after him curiously, more than a little impressed by the man's passionate earnestness. Ruth, on the other hand, was unmoved.

"Isaac is Isaac," she murmured. "He sees life like that. He would wear the flesh off his bones preaching against wealth. It is as though there were some fire inside that consumed him all the time. When he comes back he will be calmer."

But Arnold remained uneasy. Isaac's words and his attitude of pent-up fury had made a singular impression upon him.

"If Isaac goes about the world like that trouble will come of it," he said thoughtfully. "Have you ever heard him speak of Rosario before?"

"Never," she answered. "I have heard him talk like that, though, often. To me it sounds like the waves beating upon the shores. They may rage as furiously or ripple as softly as the tides can bring them—it makes no difference. I want you to go on, please. I want you to finish telling me—your news."

Arnold looked away from the closed door. He looked back again into the girl's face. There was still that appearance of strained attention about her mouth and eyes.

"You are right," he admitted. "These things, after all, are terrible enough; but they are like the edge of a storm from which one has found shelter. Isaac ought to realize it."

"Tell me what it is that has happened to you?" she begged.

He shook himself free from that cloud of memories. He gave himself up, instead, to the joy of telling her his good news.

"Listen, then," he said. "Mr. Weatherley, in consideration not altogether, I am afraid, of my clerklike abilities, but of my shoulders and muscle, has appointed me his private secretary, with a seat in his office and a salary of three pounds a week. Think of it, Ruth! Three pounds a week!"

A smile lightened her face for a moment as she squeezed his fingers.

"But why?" she asked. "What do you mean about your shoulders and your muscle?"

All "Our Folks" Feel The Same Way About It

Here is what a few of about four million readers have to say regarding their favorite paper.

You are publishing a wonderful paper. Mr. Sears, of Sears, Roebuck & Co., who is a neighbor of mine, often drops in at my studio in the evening and takes great pleasure in looking over the agricultural papers here and always has a good word to say for the Farm Journal.
Eugene J. Hall, Oak Park, Ill.

The one thing I admire most about your paper is the principle of clean advertisements, and especially the barring of medical advertisements, of which our daily papers are full, and disgusting on account of it. Since I began studying your paper, and working in my garden, I have not needed any medicine.
James Fix,
Grand Rapids, Mich.

In it we get everything of an educational interest and permanent value, and its advertisements are so well presented that they are no doubt an economical medium of reaching our rural population as well. I have personally profited by answering the "ads" on more than one occasion and have always been well satisfied with their guarantee of "Bona fides." So here's to the Farm Journal of Philadelphia and its lofty ideals and good taste on our behalf.
Wm. H. Robinson,
Chatham, Ont.

I have also found out that all of the advertisers which I find in your paper are as you represent them to be, as I have done business with several of them. I think the pieces you have in your paper about Peter Tumbledown are just the thing, for when I read them over it makes me look around to see if any of my things were going like Peter Tumbledown's.
John Kelly, Wentzville, Mo.

I want to tell you why I have taken the Journal for so long. First reason is because it has not a cheap or trashy advertisement. Second, because it has only the best reading matter, and third, because it is so inspiring and always helpful to its large family of readers. The Journal is the finest farm paper that is published. You can always count on me as a lifelong reader. I like the paper very much, and what is more, I will always remain one of your folks.
Wilson B. Kelly,
Santa Clara, Cal.

The hundreds of other letters of the same tenor which are in our files show the high esteem in which Farm Journal is held by its readers.

Think what a powerful selling medium this Little Paper is—reaching, as it does, over three quarters of a million farm families—people of universal needs and tastes who work and own rich lands where "golden Plenty laughs all o'er the ground."

Little wonder that Farm Journal has never found it necessary to employ advertising solicitors—that many times advertisements come in so thick that some have to be omitted—that the most successful advertisers of the country are almost constantly represented in its columns!

If you knew all about Farm Journal and the rich field it taps, we believe you would be obliged to go into it, preconceived ideas to the contrary notwithstanding.

We have a Book that tells you all about Farm Journal—and much more. It gives the most interesting and helpful data about the wealth of the farmer—about agricultural conditions in general. Goes into detail about the things that are wanted by the farmer and his family—and contains a mine of other valuable information. We call this Book "Tests and Testimony." It's yours for a written request on your business letterhead.

TRIUMPH OF THE UNDERFEED

Cheapest Heat *in* China *as well as in* America

Write for FREE Underfeed Catalog

CLEAN, EVEN heat at LEAST cost is insured *everywhere* by the Underfeed System. With all heating systems of the world in competition, the Underfeed was selected by President Seymour to heat four buildings of the Presbyterian Mission College at Teng Chou Fu, North China. Knowing the matchless economy of Underfeed maintenance, *after a trial of two years* in a Mission School in Korea, Dr. Seymour delegated L. H. Severance, of Cleveland, O., to place the big order for North China. Here, cost of high grade coal is almost prohibitive, while poor grades, which *burn just as perfectly* in the Underfeed and *yield as much heat* as high grade coal, are *cheaply* obtained. Because of its ability to perfectly consume cheapest grades of coal, the Underfeed *soon pays for itself. No matter where you live*, you can cut your coal bills one-half to two-thirds by installing

The Peck-Williamson Underfeed HEATING SYSTEMS WARM AIR STEAM-HOT WATER FURNACES-BOILERS

Adapted for *all* buildings—large or small, residences, stores, apartments, churches, schools or halls—the Underfeed will add to the renting or selling value of any building.

H. T. Hammond, Mingo Junction, O., writes:—"The wind hits my house all around. My slack bill to heat six rooms, two good sized halls and bath last winter was $14.60. Had no black smoke or dirt. Anyone can save fuel, time, labor and money by buying the Underfeed."

In the Underfeed, coal is fed from below. All fire is on top. Smoke and gases, wasted in other heaters, must, in the Underfeed, *pass through the fire*, are consumed and make more heat. Cheapest slack, pea and buckwheat sizes of hard and soft coal, which would *smother* fire in other heaters, yield in the Underfeed as much clean, even heat as highest priced coal. The few ashes are removed by shaking the grate bar as in ordinary furnaces and boilers.

Let us send you Underfeed Furnace Booklet and list of reliable testimonials or our Special Catalog of Steam and Water Boilers—both FREE. Heating plans of our Engineering Corps are FREE. Write TODAY—using Coupon—giving name of local dealer with whom you prefer to deal.

"It is all very mysterious," he declared, "but do you know I believe Mr. Weatherley is afraid. He shook like a leaf when I told him of the murder of Rosario. I believe he thinks that there was some sort of plot and he is afraid that something of the sort might happen to him. My instructions are never to leave his office, especially if he is visited by any strangers."

"It sounds absurd," she remarked. "I should have thought that of all the commonplace, unimaginative people you have ever described to me Mr. Weatherley was supreme."

"And I," Arnold agreed. "And so in a way he is. It is his marriage that seems to have transformed him—I feel sure of that. He is mixing now with people whose manners and ways of thinking are entirely strange to him. He has had the world he knew of kicked from beneath his feet, and is hanging on instead to the fringe of another of which he knows very little."

Ruth was silent. All the time Arnold was conscious that she was watching him. He turned his head. Her mouth was once more set and strained, a delicate streak of scarlet upon the pallor of her face, but from the fierce questioning of her eyes there was no escape.

"What is it you want to know that I have not told you, Ruth?" he asked.

"Tell me what happened to you last night!"

He laughed boisterously, but with a flagrant note of insincerity.

"Haven't I been telling you all the time?"

"You've kept something back," she cried—"the greatest thing! Don't you remember your promise before you went—you would tell me everything—everything! Well?"

Her words pierced the armor of his own self-deceit. The bare room seemed suddenly full of glowing images of Fenella.

"I haven't told you very much about Mrs. Weatherley," he said simply. "She is very wonderful and very beautiful. She was very kind to me too."

Ruth leaned forward in her chair; her eyes read what she strove yet hated to see. She threw herself suddenly back, covering her face with her hands. The strain was over. She began to weep.

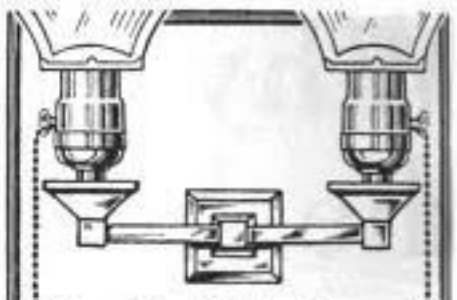
The Easiest Way

IF YOU, the Grocer, readjust your scales
To give full sixteen ounces to the pound;
And you, the Lawyer, scorn the fairy tales
You tell to win the case you know unsound;
If you, the Doctor, frown on quackeries
And strive your best to practice as you frown—
Then we shall need few far-sought remedies
To better the conditions here in town.



If you, the Statesman, quit your noisy rant
And be one-half the man you claim to be;
If you, the Preacher, cast away this cant
And empty creed, and heed Christ's "Follow me!"
If you, the Loafer, will go back to work
And be a bee and not a useless drone;
And you, the Laborer, will strive, not shirk—
I think we'll solve our troubles all alone.

If you, the Orator, will give us deeds
To thicken up the gruel of your speech;
And you, the Gardener, will pull the weeds
And cleanse your field so far as you can reach;
If you, the Milkman, give us honest milk
And leave the added water in the well;
And you, the Agitator, and your ilk,
Will toil, not talk—we'll have few woes to tell.

If you, the Voter, will be just as clean
As you think every Government should be;
And you, the Officeholder, make the scene
Of your activities a joy to see;
If you, the Citizen, by every act
Will prove your loyalty to civic good—
Our ills will be in dreams much more than fact,
And Country will be nearly what it should.

If you, the Man, will strive to reach the plane
You claim you want the Nation rested on;
And you, the Dreamer, wake up now and gain
A place in the procession ere it's gone;
If you—just you, remember—cast the beam
From out your eye—I pledge it, signed and sealed,
This life of ours would be one blessed dream,
And all the ills we suffer would be healed!

Paint Without Oil

Remarkable Discovery That Cuts Down the Cost of Paint Seventy-Five Per Cent.

A Free Trial Package is Mailed to Everyone Who Writes.

A. L. Rice, a prominent manufacturer of Adams, N.Y., has discovered a process of making a new kind of paint without the use of oil. He calls it Powdrpaint. It comes in the form of a dry powder and all that is required is cold water to make a paint weather-proof, fire-proof and as durable as oil paint. It adheres to any surface, wood, stone or brick, spreads and looks like oil paint and costs about one-fourth as much.

Write to Mr. A. L. Rice, Manuf'r, 79 North St., Adams, N. Y., and he will send you a free trial package, also color card and full information showing you how you can save a good many dollars. Write to-day.

If You're a Live Boy

Why It Is Vital for You to Study the Axle Construction of Your Car

We will be content if we can get you to assimilate three thoughts out of this announcement:

The first thought is that the front and rear axle, even if every other requisite is provided—can still make or mar the efficiency of your car.

The second thought is that axle-service and axle-safety (durability, silence, efficiency) are definitely determined by the correctness of the design; and by the experience and equipment engaged in its execution.

The third—and, to us, the most vital thought—is that axle-specialization in this country had its inception, as it has since had its highest expression, in the plant of the American Ball Bearing Company at Cleveland.

"American Axle features are patented features."

urability, efficiency, silence—how are these three necessary qualifications inducted into any axle?

'e have space in detail to consider durability alone—the others in an indirect way.

great majority of all motor car accidents are due to axle deficiencies.

other words, the axles were not durable.

id the lack of durability come from poor material?

may have, in some cases.

ut the accident might have happened even if the material were good.

he *first* safeguard against axle accidents is the scientific correctness of the design.

's an engineering problem to begin with—and a manufacturing problem in the second place.

hat's what we meant when we spoke above of experience and equipment.

hat's why we emphasized the fact that the American Ball Bearing Company were the first, as they have since become the foremost, axle specialists in America.

esign, experience, equipment—the resultant effect of these three qualifications carried to perfection is durability, efficiency, silence.

design everything? No, it's only first in importance.

ranted the ability to conceive and create the design; you are still at a loss, unless you are a past-master in the use of metals.

nce more—experience and equipment become absolutely indispensable elements.

And in each and all of these requirements—if you will pardon us the repetition—the American Ball-Bearing Company excels, because it was the first, and is now the foremost in its field.

"But," you say, "couldn't the design of the *American* Axle be successfully copied?"

Copied, yes. Successfully, no.

Design in a manufactured product is like character in a man. It is inherent, progressive, developmental.

Thus, suppose the *American* Axle to have been copied as to design—even in its characterizing features which are patented.

The copyist does not know; and cannot learn, the precise American formula for the use of metals.

He is lost. He has copied to no purpose. As like as not, he has not achieved durability at all—or achieved it with too much axle weight; and, therefore, too much tire wear.

Durability without excess weight; transmission of power with a minimum of loss by the proper co-relation of the constituent parts; the proper setting of gears; the provision for adjustment independent of the axle shafts; the location of the anti-friction bearings in relation to the steering spindles to facilitate ease of steering—these are only a few of the fruits of engineering inventiveness, experience and knowledge embodied in the *American* Axles.

That is why it is vital for you to study the axle construction of your car.

The American Axle is Furnished to the Manufacturer Equipped with Annular or Cup and Cone Ball Bearings or with Straight or Taper Roller Bearings, as may be specified.

THE AMERICAN BALL-BEARING CO., CLEVELAND, OHIO

How a Great Business Was Built Up

ON a bright September morning in the year 1839—or, to be more specific, on the twenty-first day of that month—there came into Frederick City, Maryland, a fellow who was an entire stranger—nobody had ever seen him before. He was a poor lad, and, as a matter of fact, did not have a suit of clothes to his back. However, he was quite welcome, and they did not throw him out, because he weighed only nine pounds. In due course of time—or, again to be precise, in 1846—he heard the call from the West—"Go West, young man"—and following it, he went to St. Louis. In those days it was a great trip—there were no railroads over the mountains—that part of the journey was made in a stage coach, to Parkersburg, Va., and from there by stern wheel steamboat to Louisville, and after waiting in that city a week or more a boat was advertised as going to the City of St. Louis. He proceeded in that boat, and landed in St. Louis on the 26th day of February, 1846. As time passed on he grew to be quite a good-sized lad—had a few years of grammar school and then a touch of high (school) life, but pressing financial necessity, and the shortness of the almighty dollar in his family compelled him to go to work.

Having been a great lover of pocket knives, and having bored most every man whom he met, to show him his pocket knife, that he might look it over and examine it carefully, he thought he would like to follow a business in which that useful article was a prominent factor. He therefore went to the largest (wholesale) Hardware Store in St. Louis—Child, Pratt & Co.—inquired for one of the proprietors, and was shown to Mr. Pratt, and he told him his errand. Mr. Pratt said, "What can you do, my boy?" This boy replied, "As much as any other boy of my age. Where shall I hang my coat?" That was the commencement of a career which afterwards culminated in the building up of the largest and best Hardware business in the world.

The first duty that this young chap performed was taking all the goods out of the shelves—dusting them off—dusting off the shelves, and putting the goods back again. It might be remarked in passing, that when he had finished this job, which took several weeks, he received the comment of "Well done" from his employer. Shortly after that he was promoted, and was allowed to run errands and work in stock a little. Again later he enjoyed the great privilege of carrying the store key, and opening the store. This gave him a great advantage—it taught him the habit of *early rising*, which he has ever regarded as one of the most valuable assets in a business career. It also enabled him, by being the first one in the store, oftentimes to meet and converse with country merchants who had come to the city to buy their goods, and not being accustomed to the noise of the metropolis, would get up early and wander around to pass the time before breakfast. In this way this young man was permitted to commence selling goods long before his employer thought him qualified for that work, and he became a salesman—almost unconsciously to them—and just by reason of these circumstances. In those days all the business was done by water transportation—there were no railroads—so that in the Winter when the rivers were frozen over, there was absolutely no business. Such things as traveling salesmen were totally unknown at that time. When the ice passed out and navigation was resumed, business came with a rush, and it was not an unusual thing for the employés of such stores to work sixteen hours a day for three months at a time, excepting on Saturdays, and then they always made it a point to quit at twelve o'clock at night. Passing through an education like this, which is akin to going to the university of adversity, is perhaps the best experience that any man can possibly have. Before many years had elapsed this boy imbibed the idea of having the best hardware store in the world, and became very ambitious to accomplish this purpose. Not the largest—*always the best*—and to that end he has worked ever since, and although for the past fifteen years he has been out of the active management of the business, he still remains connected with it—in a sense—ready to put his foot on the brake whenever he thought necessity required. He is the first man who gave to the world a full line of strictly first-class hardware goods—the best that brain and brawn can produce—all under one name or trade mark. That idea—speaking in a general way—has been copied very widely, and has been the means of contributing greatly to the success of other houses. Adopting the Trade Mark of **KEEN KUTTER** more than forty-five years ago, it has forged steadily ahead in the minds and confidence of the public, until to-day it is recognized as the synonym for the very best, and the goods are called for by name and brand every day and every hour in different parts of the United States—the demand extending from the Atlantic to the Pacific and from the Gulf of Mexico to and including Canada. That Trade Mark is now considered by many of the most intelligent men the most valuable one in the world. To illustrate—it is put upon more than one million pocket knives per annum—pocket knives that are made in our own factory—made by workmen who learned their business or profession in the factory of Wostenholm (I-X-L), Sheffield, England.

In the year 1873 this business man thought it wise to incorporate, in order that his associates, who were helping him to build up this great business, might share with him its prosperity and financial results, and finding that the laws of the State of Missouri provided for the incorporation of a mercantile concern practically in the same way that it did manufacturing concerns, the institution was incorporated—so that on January 1st, 1874, it became a corporation—the first mercantile corporation in the United States—with a cash capital of Two Hundred Thousand Dollars—all of which had been earned under this same administration.

From this beginning the business has grown so that since January 1st, 1874, the capital has been increased out of the earnings a number of times, until to-day it is Four and a Half Millions of Dollars. Besides that, during all these thirty-seven years there has been paid out in cash dividends about Six Millions of Dollars. From this statement you will see that this corporation has earned during these thirty-seven years over Ten Millions of Dollars, and that it has been a profit-sharing institution. During all this period it has remained entirely and absolutely independent—never having an agreement or understanding with any other house as to prices—division of territory, method of business or anything else.

In the year 1880, it gave to the Hardware world the first large and complete illustrated catalog—in which prices were put—that was ever printed—a catalog that became immediately the model for all future ones. It is interesting to note here that this catalog increased the business the next year, 1881, more than One Million Dollars, which was an enormous increase—in percentage—over the business of the previous year.

Some estimate of the value of the **KEEN KUTTER** Trade Mark can be shown by the following incident, which occurred in the month of September, 1911:

A salesman from our Minneapolis house, visiting Paynesville, Minn., was told by our good friends and customers—the Paynesville Hardware Company—that they were just establishing a Domestic Science School for girls, and this house wanted to capture the order for Scissors—calling upon our salesman to assist them to get it. Together they visited the Superintendent of Schools, and he said he was going to make it a competitive matter; he thought the quality of this class of goods was all the same anyway. Our salesman inquired who was going to pay for the Scissors—whether the school or the girls—and the reply was that each girl would pay for her own. Our able representative then suggested that as they were going to pay for them themselves, they should be permitted to have a voice in the selection, and that each girl be given a slip of paper to take home to her parents, and let them designate their choice by entering upon this piece of paper the name or make of Scissors they preferred. They all brought back their slips the next morning, and there were sixty-four pupils—therefore, sixty-four slips—and when the matter was summed up it read as follows: **KEEN KUTTER**, 54; Q, 9; C, 1; others of all makes, 10. Therefore, the Paynesville Hardware Co. got the order. It is hardly necessary to comment on this—it tells its own story.

Among the most important things made by this house is the **KEEN KUTTER** Safety Razor—a razor that is undoubtedly the best safety razor in the world. K-1, which sells at $3.50, is far and away better than any other razor ever put out, and has now been on the market about five years, but the K-10—which is called the **KEEN KUTTER** Junior—is a very close second, and retails at One Dollar—and is undoubtedly the best selling razor ever offered to the American public—which fact is testified to by hundreds of letters that we have received in the past sixty days, from merchants who handle them, saying they are wonderful in their results—pleasing to everyone who buys them—and the best sellers they have ever had in their stores. One man, who lives in a small place in the State of Missouri, voluntarily stated to us that he had sold 43 of them in thirty days. No live Hardware Dealer in the United States can afford to be without **KEEN KUTTER** Safety Razors, if he wants to keep up with the procession, and have the best seller of that kind that was ever offered to man. SIMMONS HARDWARE COMPANY.

P. S.—All Retail Hardware Merchants are cordially invited to come to St. Louis and pay us a visit. Let us take you to the factory and show you how **KEEN KUTTER** Tools are made and let you see, in the process of their manufacture, why they are the Best Tools in the World.—SIMMONS HARDWARE CO.

THE VILLAIN OF THE PIECE

(Continued from Page 13)

I was appalled by what I saw, but I was obliged to admit that the little minx was playing her part well. Her uncle watched, grimly amused, and understanding, I could see, more than he would allow. Her style of dress impressed me most. All her pretty, useful frocks of linen and serge had been put away. Now she wore chiffon and airy muslin of the most useless and unserviceable kind, with skirts tied so narrowly round her pretty ankles that she had the greatest difficulty in getting upstairs and had almost to be lifted in and out of the motor; shoes with such absurdly high Louis heels that I trembled for her ankles; and fluffy, perishable parasols like great pink-and-blue flowers to shield her complexion. To me, one of Hyacinth's great charms had been the clear, peachy brown of her sunburnt skin in the summertime—but Harry, it seemed, liked lilies and roses best.

The little wretch reveled in her part. If she bicycled we had to walk all the hills and wheel her machine—an attention she had scorned before; if we danced—no kitchen lancers for her; if we picnicked, rugs and cushions had to be carried and arranged for her—Hyacinth, who had always loved to lie on the grass at the edge of the cliffs!

It may have been an amusing game to her uncle, but it was a heart-breaking one to me, for I could see that Harry was getting keener and keener. And the zest and enjoyment which the girl showed when she accepted his slavish attentions showed plainly what her own feelings were. As for Harry's scruples, they seemed to be dead. What a fool I had been! What a poor, shortsighted attempt at a Machiavelli! I had, indeed, been hoist with my own petard. I refuse to admit that I had let Hyacinth play her mad game because I had foreseen its success and wished her to be happy. I refuse to admit that I saw at once it was the right game to play. I hadn't seen it. I'm not an astute person. Harry had said that he wanted a capable, useful wife! Of course I thought he meant it. I didn't foresee such disastrous folly as this.

The days went by. I wrote the first volume of my gloomy epic of Agamemnon and Clytemnestra, and reveled in the tragedy of it. I couldn't eat, and slept very little. Even Hyacinth saw that I was thinner and perhaps guessed why I was so wretched. God knows I had never tried to conceal my feelings from her. Sometimes I caught her looking at me so compassionately that my heart was pierced. Her voice grew very gentle. She let me wait on her when Harry was not there—but he was generally there.

At last the end came. I went into her garden a month before Harry was to sail—and stepped suddenly into the middle of a most embarrassing scene. Harry, in fact, was in the rose arbor on his knees. Hyacinth was sitting in her old place by the little unglazed window, with a nodding yellow rose swaying against her pretty ear, almost entangled in her pretty hair. I tried to go back unseen.

"Come back, Rupert!" said Hyacinth. "Mr. Constantine is just explaining why he can't propose to me. He is explaining how lacerated his heart is—to go away and leave me mourning like Ariadne on the seashore. He is telling me why it is best for him and best for me that we should never see each other's face again."

Here she laughed. Harry's face was pitiful—amazed—wretched! I glanced from one to the other in silence. It was difficult to think of a suitable remark.

"Weren't you?" she asked coldly.

Harry's scarlet face grew purple. "You are too bad!" he said. "I think, Rupert, you might have the decency to go."

"No—don't go, Rupert."

"You are cruel to me!" went on poor Harry. "I told you that I loved you and that it went to my heart to leave you. I told you about my hard, rough life. I told you that my wife would have to be able to share it. I told you how difficult it was to get servants and how often we are left entirely to our own resources. I told you ——" His voice broke and he stopped.

"Yes—you told me quite a lot of things," said Hyacinth softly. I gazed at her in amazement. Her eyes were shining with anger. Was it anger? What did she mean? Why didn't she put an end to this absurd farce? I felt ashamed of my pity for poor Harry. A really consistent villain is incapable of pity. Yet I did pity him.

"I told you everything," he said quietly. "I thought it was right to tell you everything before I asked you to marry me. I did say that it would be better for you if you never saw me again; but it won't be better for me, because I love you so much. If you will risk it and put up with the rough ways we have out there I will try to make it easy for you. You were meant to be waited on, with your pretty, useless ways. I am afraid you will grow to hate me in that lonely life."

She was silent—suddenly softened. He must have been putting his case very clumsily before, I thought. She meant to marry him. Why didn't she say so and let me go, that she might put the poor wretch out of his misery? Oh, these women!

She sat there, silent for some moments; then:

"Aren't you very rash? Think of the way I should burn up your mutton chops! Think of the heavy flapjacks—what are flapjacks, Rupert?—and the unswept hearth and the hungry chickens and the buttonless clothes! Poor Harry—aren't you very rash? How should I get my Paquin frocks and my Maison Rose hats out in Manitoba?"

I couldn't stand it any longer. Harry was really suffering—the girl was playing a most infernal game! There are times when a man is obliged to range himself on the side of his own sex. I gave up playing the villain and spoke to her sternly for the first time in my life.

"Hyacinth," I said, "I've had enough of this! It's not a pretty game. If you don't tell the truth I shall."

She laughed.

"I was waiting for that!" said she surprisedly. "I saw you melting before my very eyes."

I was really angry then.

"It's all nonsense, Harry," I said gently. "Hyacinth is amusing herself in peculiar ways at present. I'm afraid I am partly to blame for it. She wanted to please you and she's been playing a game."

"I know," said he forlornly. "She told me. She pretended to be able to do things ——"

"No," said I gravely; "that wasn't the game. That was the real thing. She can do things."

Hyacinth laughed softly.

"What?" Poor Harry looked confused.

"She can do things," said I again. "She can do anything! She can do too much. The pretense came in when she showed you that she couldn't."

"But ——" he began.

"Do go on," said Hyacinth calmly. "I like to hear you confessing for me, Rupert." I glanced at her indignantly. She was as pink as a rose. Her eyes were shining wickedly.

"She can cook and make her own frocks. She can wash and iron them, for I've seen her at it. She can bring up poultry and shoot as straight as any backwoodsman. She can ride anything on earth and she's not afraid of anything in the world. She'd glory in a wolf hunt and she'd meet a grizzly bear at the door with a smile. She ——"

"She does seem a nice girl!" said Hyacinth softly.

"She isn't a nice girl!" I said sternly. "She's an infernal little liar!—that's what she is!"

"Rupert!" She started.

"I shall not apologize!" I said. "She's merely amusing herself by trying to make you uncomfortable. She's been as successful in that as she is in most things; but at the bottom of all this she loves you and means to marry you. And now, if you will excuse me, I shall leave her to tell you so."

Harry—his eyes glowing, his face utterly changed—was beside her now, but the extraordinary girl waved him off and imperiously motioned to me to stay where I was.

"Don't go, Rupert!" she said once more. "I'm a detestable little pig! I've been a detestable little pig to you both—and I'm sorry. No, Harry; don't take my hand—it's not yours."

We both stared at her then.

"When you first came home," she said calmly, "I saw how all the other girls threw themselves at you and I couldn't help competing. I don't like to be beaten at any game. When you took no more notice of me than of the others it made me angry. I saw what you wanted and pretended to be

Jackson

No hill too steep
No sand too deep

YOU can see the superb value in Jackson cars.

You see it in their size—their power—the ease with which they ride.

In the instant and willing response of their powerful motors—in their ability to cope with a difficult situation.

Fifty horsepower—which usually means $3000 or more—is yours in the Jackson "52" for $1800, supplemented by the long wheelbase (124 inches) and the big wheels and tires (36x4 inches) so necessary to comfort in a high-powered car.

Instead of the 30 horsepower that a price of $1500 has always implied—40 horsepower in the Jackson "42" at that price; with wheelbase of 118 inches; 34x4 inch tires; and complete equipment of top, windshield, gas tank, lamps, etc.

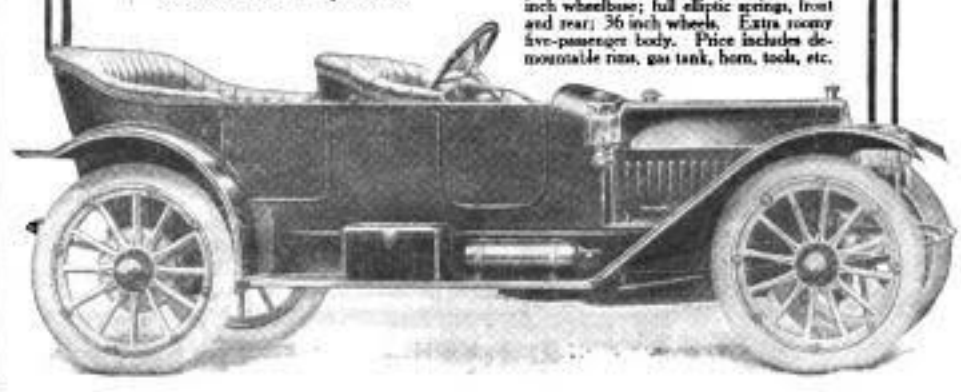
And in the Jackson "32"—our $1100 car—30 horsepower, 32 inch wheels, 110 inch wheelbase. Of the same high quality, in every detail, as the larger Jacksons.

Full elliptic springs, instead of the usual half or three quarter elliptic, on every Jackson car—simply another proof of the value already apparent.

A generosity of power and size and riding ease that, as a rule, is the especial attribute of the costliest cars.

And back of it all a progressive experience of more than ten years in the manufacture of good automobiles.

All we ask you to do is to go to the Jackson dealer and confirm what we have told you.



Let us send you our complete catalog, illustrated in two colors.

JACKSON AUTOMOBILE COMPANY
1020 E. Main St. Jackson, Mich.

Jackson cars exhibited in space No. 111, on the elevated platform—Madison Square Garden Show, New York, January 6-13.

Model 52—$1800

Fifty horsepower, 4 cylinder motor; 124 inch wheelbase; full elliptic springs, front and rear; 36 inch wheels. Extra roomy five-passenger body. Price includes demountable rims, gas tank, horn, tools, etc.

EVERYTHING for the GARDEN

is the title of our 1912 catalogue—the most beautiful and complete horticultural publication of the day—really a book of 204 pages, 5 colored plates and over 800 photo engravings, showing actual results without exaggeration. It is a mine of information of everything in Gardening either for pleasure or profit and embodies the results of over sixty-two years of practical experience.

To give this catalogue the largest possible distribution we make the following liberal offer:

Every Empty Envelope Counts As Cash

To every one who will state where this advertisement was seen and who encloses Ten Cents we will mail the catalogue

And also Send Free of Charge

Our Famous 50 Cent "HENDERSON" COLLECTION OF SEEDS

containing one packet each of Ponderosa Tomato, Big Boston Lettuce, Scarlet Globe Radish, Henderson's Invincible Asters, Mammoth Butterfly Pansies and Giant Spencer Sweet Peas, in a coupon envelope which, when emptied and returned, will be accepted as a 25-cent cash payment on any order amounting to $1.00 and upward.

In addition all ordering from this advertisement will receive a copy of our new Garden Guide and Record. This is a hand book of general garden information, planting tables, cooking receipts, cultural directions, etc., etc., and in all is one of the most necessary and valuable of our many publications.

PETER HENDERSON & Co. 35 & 37 CORTLANDT ST. NEW YORK CITY

a helpless, ornamental, Laura Matilda kind of creature."

"But," Harry eagerly began, "you can do things—you ——"

"I can," said she composedly; "but I don't want to."

If a thunderbolt had fallen it could not have shattered us more! She laughed at our consternation, minx that she was.

"You're a very nice boy, Harry," she said softly; "but I wouldn't go out to Manitoba and make your pumpkin pies and sew your buttons on if you were Prince Charming himself! I like you very much, but I don't love you; and one wants a lot of love—oh, oceans of love—to wash down such a life as yours!"

Poor Harry!

"I like to feel competent," said she. "I like learning to do things. I even like to feel that I can do them. I like conquering difficulties. But there it stops. When I've mastered a thing I've no more use for it. I'd rather die than go on doing the same thing hour after hour, day after day, year after year. Oh, Harry—I can find you half a dozen nice girls who'll love to make your flapjacks for you every morning for a thousand years! I'm a butterfly. I never realized it until I'd pretended it; but now I know. I like to be petted and waited on. 'Be helpless,' I told myself, 'and you'll be helped.' It was quite true, and I like it. I like being helped. I like wearing unserviceable frocks. I look much prettier in them. Don't I, Rupert?"

"I'm ashamed of you," said I; but I had met her eyes and my heart was beating furiously. There was something behind all this—something which Harry would never find.

"I'm ashamed of myself," said she slowly. "And I owe it to you, Harry, that I've seen myself in my true light. It wasn't until I began to play this game—this very ——" She hesitated.

"Reprehensible," I suggested.

"——reprehensible game that I found out the reality of things. I found out what things were real to me—what I wanted. I want a home here in England, with a garden and pretty dresses and expensive hats and lots of friends. I want to read new books and to hear good music and see good plays. I want the life I've been brought up to. I don't want to do chores. The song of the skylarks isn't enough for me. Wolf-hunting won't make up for dances and dinner parties and pretty speeches about my bright eyes ——"

"I could make the pretty speeches about your bright eyes," poor Harry said; but he rose to go for all that. He knew now. All the pretense was over. There was no doubting the sincerity of her tone. She caught his hand—pressed it for an instant against her soft cheek.

"Goodby, Harry. Ah, do forgive me!—I'm only an interlude. You've got a month still to find your Bluebird. You know you were half in love with a dozen of us before I began to pretend—Molly, Kitty, Hortense. Forgive me, Harry. They're all real! I'm the only sham one of us all."

Harry was gone however. We sat there in silence for a long time. At last I crossed over to her side. She smiled appealingly at me.

"I am ashamed!" she said. "I am ashamed!" But I couldn't scold her now.

"What else did you want?" I said. "I can provide most of your real things. I can provide the garden and the pretty dresses and the life you want to lead. What other real things do you want, Hyacinth?"

She couldn't speak—but she did not resist when I took her in my arms.

"Oh," she said at last, "those weren't the real things, Rupert. I didn't know until I began to play at love with Harry—I didn't know what real things were. I think I know now!"

"Well?" I asked.

"You were always real!" she said. "It has always been you; but I didn't understand. And you didn't speak!—you were so sure I didn't like you—weren't you? If you hadn't been so modest—if you hadn't been so considerate—if you'd once scolded me and then—perhaps—kissed me—against my will ——" She stopped and her voice broke. I laughed.

"I've been a villain," I said. "I let you run your head into a sack. I did it with the worst motives. It wasn't my fault that your mistake wasn't fatal. I gloried in my part. I was the villain of the piece."

Then she laughed too.

"When I go to the play," said she, "I always like the villain best!"

A little goes a long way

Used as a flavoring like lemon and vanilla

MAPLEINE

(The flavor de luxe)

goes a long way.

In Cake Filling, one-half a teaspoonful is enough for every cup of sugar.
For Cake Frosting, a teaspoonful is enough for every cup of sugar.
For Jelly, a teaspoonful is enough for half a box of gelatine.
For Ice Cream, a teaspoonful is enough for every quart of cream.
For Mapleine Syrup, half a teaspoonful is enough to flavor one quart of white sugar syrup.

Grocers sell Mapleine, 35c for Two Ounce Bottle. (In Canada 50c).

There are substitutes for Mapleine—Try them. If your Grocer does not sell Mapleine, write Dept. E-I.

This splendid car, with the following complete equipment, for $690, f. o. b. Detroit

4 Cylinders, 5 Passengers
Extension Top. Speedometer
Automatic Brass Windshield
Two 6-inch Gas Lamps. Generator
Three Oil Lamps
Horn and Tools
Ford Magneto built into the motor

Here's a Ford Model T Touring Car

$690

Handsome—Foredoors—roomy—up-to-the-minute in desired details, strong, simple and backed with a record of five years' satisfaction—giving results in all parts of the world to more than 100,000 users. This beautiful motor car completely equipped for only $690 f. o. b. Detroit.

FACTS from FORD

¶ There are no "glittering generalities" in **FORD** advertising.—It gives you the established **Facts**—we appeal to your judgment through **Facts**, not with claims—and you know it's more profitable to live with a **Fact** than to nurse a family of "claims."

¶ There's this about **FORD** advertising that makes it particularly distinctive and that is its positive harmony with **Facts**. It is just like **FORD Model T**—reliable, positive.

¶ We tell you **FORD Model T** is the highest priced quality car and immediately follow with the **Facts**.

¶ Entire mechanical construction of Vanadium Steel, scientifically heat-treated—the very best as well as the most expensive steel made.

¶ The only motor car with the Magneto built into the flywheel as a part of the motor; the only motor car in which there are neither dry cells nor batteries. This is also a **FORD** Magneto—built entirely in our own shops.

¶ The lightest weight 4-Cylinder motor car in the world, size, power and capacity considered—60 pounds to the horsepower.

¶ The cheapest 4-Cylinder motor car in maintenance, 20 to 25 miles on one gallon of gasoline and 5,000 to 8,000 miles on one set of tires.

¶ The simplest motor car in design, anybody of ordinary intelligence quickly understands its every mechanical detail.

¶ A durable car is best evidenced by there being in active operation today more than 100,000 **Model T FORD** cars; the most widely-known motor car, as it is seen in every part of the civilized world, it is the Universal Car.

¶ The **FORD Model T** has the lowest purchase price and running cost per mile per passenger of any motor car in the world.

FACTS from FORD

¶ The high quality and the low price of **Model T FORDS** are possible because of:

¶ 1st: The extreme simplicity and accurately scientific design—the creation of the marvelous inventive genius of Henry Ford.

¶ 2d: The scientifically heat-treated Vanadium Steel material. We emphasize this because it is vitally important that you should know the sort of materials used in the construction of the motor car you buy.

¶ 3d: The most efficient automobile factory in the world, where the workmen are employed during the entire year building only this ONE WONDERFUL CAR.

¶ 4th: The large production—75,000 **FORD Model T** cars in one year.

¶ 5th: The Ford Motor Company devotes all its energy to the production of only one car; it finances the entire business itself, and this is a mighty force in manufacture; no borrowed money, no interest-bearing bond issues, no mortgages, but everything bought and paid for with spot cash, and sold the same way.

¶ There is intense significance in the fact that every fifth car sold in America last year was a **FORD Model T**. This significance increases when you know that every third car made in America this year will be a **FORD Model T**.

¶ **FORD Model T** cars would not be made in such quantities if established merit had not produced the demand. If the **Model T** had not satisfied its thousands and thousands of users.

¶ **FORD Model T** car is in largest demand because of its all-round general utility; it meets the motor want of everybody, from the man of leisure to the busy worker, from the doctor and professional man to the banker and farmer.

¶ Remember all **FORD** cars are sold fully equipped—we specify the equipment article by article. When you buy a **FORD Model T** you buy a complete car.

¶ In addition to **FORD Model T** Touring Car we have for immediate delivery:

Ford Model T Torpedo, fully equipped, f. o. b. Detroit	**$590**
Ford Model T Commercial Roadster, fully equipped, f. o. b. Detroit	**$590**
Ford Model T Town Car, fully equipped, f. o. b. Detroit	**$900**
Ford Model T Delivery Car, fully equipped, f. o. b. Detroit	**$700**

¶ We have a series of valuable booklets covering important information for the owners of motor cars. These books will be mailed promptly on request. Branches and Large Distributors in all Principal Cities. No Ford Cars Sold Unequipped.

"Tied-up Tight!"

It's tough, when the balls are well scattered, to have the cue-ball roll into a hopeless position. But it's all in the game—one of those elements of uncertainty that are part of the fascination of Billiards and Pool. These are fine games—they require skill, judgment and nerve—they are great games anywhere, but infinitely more enjoyable at home than in a public poolroom. They enliven the home atmosphere; all the family enjoy them. You can own a

BURROWES
Billiard and Pool Table

and play while you are paying for it. No special room is needed. The Burrowes Table can be set on your dining-room or library table or mounted on its own legs or compactly folding stand. Only a moment is required to set it up or to take it down and set it out of the way. Sizes range up to 4½ x 9 feet (standard). Complete Playing equipment of balls, cues, etc., free with each Table.

Burrowes Tables are used for home practice by some of the foremost professionals. Every Table of whatever size is scientifically accurate in proportion to the smallest detail and adapted to the most expert play. The most delicate shots, calling for skill of the highest type, can be executed with the utmost precision.

$1.00 DOWN

Geo. Bender, 82-84 Centre St., New York

THE POWER OF THE PLACE

(Concluded from Page 4)

white or black, as the case may be, in the following numbers: Alabama, 24; Arkansas, 18; Florida, 12; Georgia, 28; Louisiana, 20; Mississippi, 20; North Carolina, 24; South Carolina, 18; Tennessee, 24; Texas, 40; Virginia, 24. Of course there are Republicans in some of these states. Georgia and Tennessee and North Carolina, for example, and Kentucky with 26 delegates, Maryland with 16, Missouri with 36 and Oklahoma with 20, have plenty of active Republicans and for that reason are not included in the classification above. However, notwithstanding whatever Republicanism there may be in some of the states, the delegates from the states in the list above are usually counted as the delegates secured by patronage, and usually are so secured. Anyhow, if a Republican president wanted them for the purposes of renomination, he might secure them that way. It has been done.

The delegates from these states provide a neat little nucleus of 252 votes out of a required 537. With these tucked away, it is much easier to secure the remaining 285 than otherwise. Indeed, it is fair enough to say that a good, active, ambitious president can add to these 252 the 26 from Kentucky, the 16 from Maryland and 36 from Missouri and the 20 from Oklahoma, thus increasing his string to 350. That has been done also, and may be done again.

How Delegates are Secured

Then, by making a deal with Pennsylvania with 76 delegates and a deal with New York with its 90, and adding on a few of the smaller states where the bosses always come when called, it is all over but the shouting. Even assuming New York and Pennsylvania would not deal and some aspiring contender could garner some delegates here and there, the states that have presidential primaries will not furnish enough delegates—in 1912, for example—to spoil the general and desired result, and there are still enough organizations intact in the North and ready to keep step with the White House to furnish sufficient delegates to pad the 252 out to the required 537.

In practically every Republican National Convention since 1892 there has been a howl about this Southern representation business. There have been persons present with schemes to base the Southern representation on the Republican vote cast. Quay and Platt used this to force Hanna to nominate Roosevelt for vice-president at Philadelphia in 1900, and it has cropped up ever since. In the last Republican convention Jimmie Burke talked his fair young head almost off, showing the iniquities of the practice; but no matter what the future may hold, the next convention will see the same old bunch of Southern delegates there in the numbers set forth above.

They were eager to come to Hanna when he made his campaign for McKinley in 1895. There had been positively no nourishment in being a Republican in the South during the presidency of Grover Cleveland. Hanna took them up on the mountain and showed them what was in store for good, amenable McKinley delegates, and provided a little expense money. McKinley made every Hanna promise good. Next time they were all for McKinley. It was easy for Roosevelt in 1904, for he had been president three years after McKinley was shot. Likewise, when president, Mr. Roosevelt determined to nominate Mr. Taft, and Frank Hitchcock went scurrying South, and the result was a solid Southern delegation for Taft at the Chicago convention in 1908.

Hanna got them with the promise of patronage. Roosevelt got them for himself and for Taft by patronage. Out of the 9846 appointments that the president of the United States has, first off, there are just as many postmasters, internal revenue collectors, United States attorneys, collectors of customs, United States marshals, and so forth, in the South as elsewhere, in proportion to population. Likewise, places in the service outside of the South can be found if necessity requires. Inasmuch as the only Republicans in the South are in most instances practical politicians, the practicality of it is apparent. There was a virtuous statement or movement fostered by Cecil Lyon, of Texas, at the recent meeting of the Republican National Committee, to keep Federal officeholders in the South off the delegations to the national convention. That was virtuous, for a fact. Also it was a bluff. For if the Federal officeholders are not on the delegations the Federal officeholders will pick the delegates, and they will know exactly what these delegates will do and for whom they will vote. A supervising genius or two from Washington could attend to that, you understand. Not saying one will, but that one could.

It must not be thought that Southern delegates are more susceptible to patronage than Northern delegates. To be sure, a president who has been three years in office and desires a renomination has given out a lot of the jobs; but if he has had it in mind to get a renomination he has probably given out the jobs with that end in view. It is sad to say that the power of a great office would be used in this way, and I do not say it. I do not have to say it. Mr. Norton said it in his justly famous letter to his correspondent in Iowa, put out from Beverly, Massachusetts, some time ago.

The fact is, a president is in the most powerful position to put the screws on the men in the various states who control the organizations and who fix up the delegations. Even if the men in these various states are opposed to any president who seeks a renomination, it must not be forgotten that the president who wants a renomination does not cease to be president as soon as the nominating convention is held, but that he is president until the succeeding fourth of March, at noon—or for almost ten months. What an active and revengeful president can do to state leaders who turned him down for delegates, in a period of ten months, is sufficient to cause those state leaders to consider carefully his demands for the delegations from their states. For he makes demands only on men of his own party, and the men on whom he makes his demands want to continue in that party, or have to, and do not desire to have a president working against them as a president can work against them if he is so minded. Ten months is a long time, and a man who is president and aspires to be renominated loses none of his functions as president merely because he is not renominated. He remains as president until March fourth in the following year—March fourth at noon—and the terms of a good many appointed officials expire in that period, appointed officials who are needed by state leaders in their business. Also there is a session of Congress after the convention and before this president goes out. Thus it will be seen there is a certain leverage that can be employed to secure Northern delegates by a president who thinks his services entitle him to another term of four years in the White House.

Popgun Conventions

Far be it from me to say that any such method of reprisal would be used by a president vexed because he was refused a renomination. I merely point out that it is possible for a peevish president to do a lot of annoying things to his party fellows in a period of ten months, if he feels like doing them. Also I am here to observe that no persons on earth know this better, no persons have a keener appreciation of this condition, than the said state leaders and the men who represent these states in the Congress. Which is another reason why it is reasonably easy for a president determined on being renominated to count on delegates from sections of the country other than the South.

Public sentiment is a most interesting commodity, usually artificial and manufactured according to set formulæ. A president can make it by the ton if he so desires. Suppose he wants to be renominated and there is opposition. He can send a scout into any territory he chooses, round up the chaps with the offices, and they, in turn, can round up the chaps they control. The result will be a nice, enthusiastic convention where a set of resolutions indorsing the administration of the president and recommending him for renomination can be adopted with a whoop and sent out for public consumption to help make public sentiment. Conventions of this kind are known as popgun conventions, and there are a plenty of them in a campaign. Also bodies of editors of party papers and other similar gatherings can be induced to adopt resolutions laudatory of the G. O. P., of the titular leader of the G. O. P., and demanding in burning words that he shall be the gallant standard-bearer in the coming battle.

With this sort of thing goes the regular press-agenting that is in these days conducted skillfully and persistently, the flooding of the newspapers with articles showing why the president is entitled to a renomination, and all that. It is easier for a president who is campaigning for a renomination to get press-agent matter into the newspapers than for a candidate who is not president at the time, for anything that comes from the White House is news.

A Stroke of Genius

Once an enterprising private secretary of a president hit on a happy idea for getting puffs for his chief. He sent out a letter on White House paper to various and numerous prominent citizens, all Republicans, and asked for an expression of their opinion as to the accomplishments of the particular president he was serving, said particular president being a candidate for renomination. He stated in his letter that he desired to use some of the replies for publication in reputable newspapers and other mediums of publicity. Then came the stroke of genius. "I inclose," he said substantially, "a letter I wrote to Mr. Blank Blank Blank a short time ago, giving my ideas of the accomplishments of the president. It may interest you."

The inclosure was a long, mimeographed letter stating in detail the achievements of this particular president, as viewed by this secretary. Clever, wasn't it? You see, the secretary asked for letters about his chief, and sent along with the request a form letter that the man who was asked for the expression of opinion could use as a basis of his reply—a sort of a guide to easy president indorsing, so to speak.

However, the publicity end of it is well enough understood. Any president who is at all on to his job can maintain, at no expense to himself, a corps of fair-haired correspondent boys who will send out to their papers whatever he wishes, and be glad to get it; for, as I have said, anything from the White House is news. And this gives him a great bulge on aspirants who have no such advantage as a White House date-line in their press matter.

Added to these various lines of endeavor is what the president can promise. He has that ten months, whether he is renominated or not, and whether or not he is reelected. And he has four years more if he is reëlected. Again it is my painful duty to say that all the politics of this country is predicated on the foundation: What is there in it for us? There may be a heap in it if a president wants the job again very badly, not only for the politicians but for those who need varied legislative and executive aid in various enterprises of their own, or need to be let alone, which is a pressing need at all times in certain lines of endeavor. Politics is controlled largely, and politicians are controlled entirely, by outside influences. Gentlemen who represent powerful outside influences sometimes hold conferences at the White House when a campaign for renomination is on.

The office of president of the United States is the most powerful office, per se, in the world. The president of the United States is the most powerful individual in the world. If he wants to be renominated, all he must do is to play the game. He has the power to get the results—by results I mean a renomination. A reëlection is an entirely different matter.

Hostages to Fortune

UNCLE DALLAS WILLIAMS, while on his way to get on an excursion train to Richmond, Virginia, met one of his white friends, Mr. W, and asked for the loan of five dollars, which he got. A few days later he went into Mr. W's store and returned the five dollars. Mr. W asked him why he borrowed the money if he did not need it. Dallas replied:

"Well, I'll tell you, boss. I hadn't never been to Richmond before, and I thought I might git in some trouble, and I knowed if I did you'd take an interest in me so long as I owed you that money."

Tire Cost—Where It Goes

23% is Due to Rim-Cutting—
25% is Due to Overloading

We sent out men to look at thousands of ruined clincher tires.

And 23 per cent of all those tires were rim-cut.

Sometimes this ruin is the driver's fault. He runs the tire partly deflated.

It is usually due to a puncture.

A clincher tire which goes flat may be wrecked in a moment—ruined beyond repair.

On the other side, note this:

No-Rim-Cut tires are more widely used than any other make of tire.

Men know they can't rim-cut, so they get more abuse—more under-inflation—than any other tire that's made.

But, despite all this neglect, we have never had an instance of rim-cutting in all the hundreds of thousands used.

Most tires are overloaded.

Not through any fault of the motor car maker. He equips for expected load.

But you add heavy extras.

And some of your passengers sometimes overweigh the expected 150 pounds.

The result is a blow-out.

That's why we make No-Rim-Cut tires 10 per cent over the rated size. The manner of fitting permits that.

That means 10 per cent more air—

Ten per cent more carrying capacity.

And that, with the average car, adds 25 per cent to the tire mileage.

Yet these tires which can't rim-cut—these oversize tires—now cost no more than other standard tires. That's why they outsell others.

Average Saving, $20 Per Tire

These two features together—No-Rim-Cut and oversize—under average conditions double the life of a tire. This judgment is based on 13 years of experience, with 800,000 Goodyear tires.

If that is so, this single invention is saving an average of $20 per tire. On our output this year that will mean $10,000,000.

Those figures, of course, are only approximate. One can't be exact on the cost of tire upkeep.

Proper care and inflation, roads, speed, loads, etc., all affect tire mileage.

But the figures are fair.

Certain it is that No-Rim-Cut tires save all the ruin of rim-cutting.

Certain it is that their 10 per cent oversize adds an average of 25 per cent to the tire mileage.

No Extra Cost

These patented tires, when first brought out, cost one-fifth more than other standard tires.

Now they cost an equal price. Our multiplied output has cut the cost of production.

Note what that means.

No-Rim-Cut tires, 10 per cent oversize, cost just the same as old-type clincher tires. The saving is entirely clear.

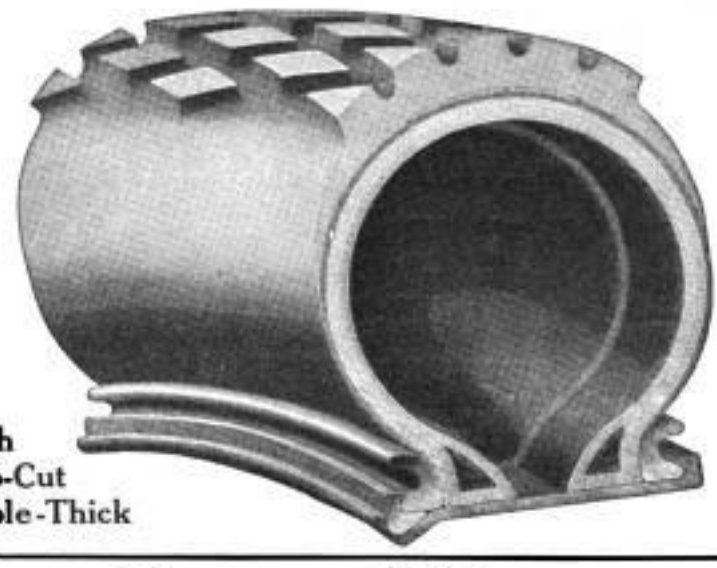
You get all their advantages by simply insisting on Goodyear No-Rim-Cut tires.

By Far the Leading Tire

Now note the judgment of users.

The demand for these tires has doubled over and over. It now exceeds the demand for any other type of tire.

Last year's sales on No-Rim-Cut tires exceeded the previous 12 years put together.



This year, 108 leading motor car makers have contracted for Goodyear tires.

That's the result of experience.

These tires have been tested by not less than 100,000 users. And that is the result of the testing.

Isn't that evidence enough?

THE NEW GOODYEAR NON-SKID TREAD

Tough
Deep-Cut
Double-Thick

GOODYEAR

No-Rim-Cut Tires

With or Without Non-Skid Treads

Non-Skid Treads, if Wanted

Now these tires, if you want it, come equipped with an ideal Non-Skid tread.

Not any short-lived protection. Not a mere corrugation in a regular tread.

This is an extra tread, vulcanized onto the regular, so it gives you a double-thick tread.

This extra tread is of very tough rubber. And its thickness permits these deep-cut, enduring blocks.

The road surface is grasped by countless edges and angles—grasped with a bulldog grip.

Each block widens out at the base, so the strain is distributed the same as on smooth-tread tires.

One moment's comparison reveals a dozen advantages over any other non-skid invention. We have worked for three years to perfect it.

The Final Tire

The tire of the future, beyond any question, will be this No-Rim-Cut type.

The old-type clincher—the hooked-base tire—is being displaced on thousands of cars each month.

After 13 years of tire making we consider this tire the best that we ever can make.

It is so close to perfection that our liberal warranty now costs us but a trifle per tire.

Rubber never can be made more impervious to wear. Fabric can never be made more enduring.

This type and this tire, in our estimation, represent finality in tires.

Our new Tire Book is ready. It is filled with facts, based on 13 years of tire making, which every tire user should know. Ask us to mail it to you.

New—The Holder Top Shaving Stick

The illustration shows the convenience and suggests the economy of the new Holder Top—the Shaving Stick de Luxe

Williams' PATENTED Holder Top Shaving Stick

The "Holder Top" Shaving Stick is firmly fastened in a neat metal cap that also serves as top of box. When in use the fingers grasp the metal holder and do not touch the soap. When not in use the stick stands firmly on the holder top or can instantly be slipped back into its handsome nickeled container Williams' Holder Top Shaving Stick not only combines all the other good qualities that have made Williams' Soaps famous, but makes a strong appeal on account of its convenient, economical and sanitary form

The Familiar Hinged Cover Box

The new Holder Top Stick and Container

Williams' Shaving Stick Hinged Cover, Nickeled Box
Williams' Holder Top Shaving Stick
Williams' Quick & Easy Shaving Powder

SPECIAL OFFER A miniature sample package of either Williams' Shaving Stick (regular, not the Holder Top), Shaving Powder, Jersey Cream Toilet Soap, Dentalactic [illegible] or Talc Powder mailed for 4 cents in stamps. All five articles in neat [illegible] 18 cents in stamps.

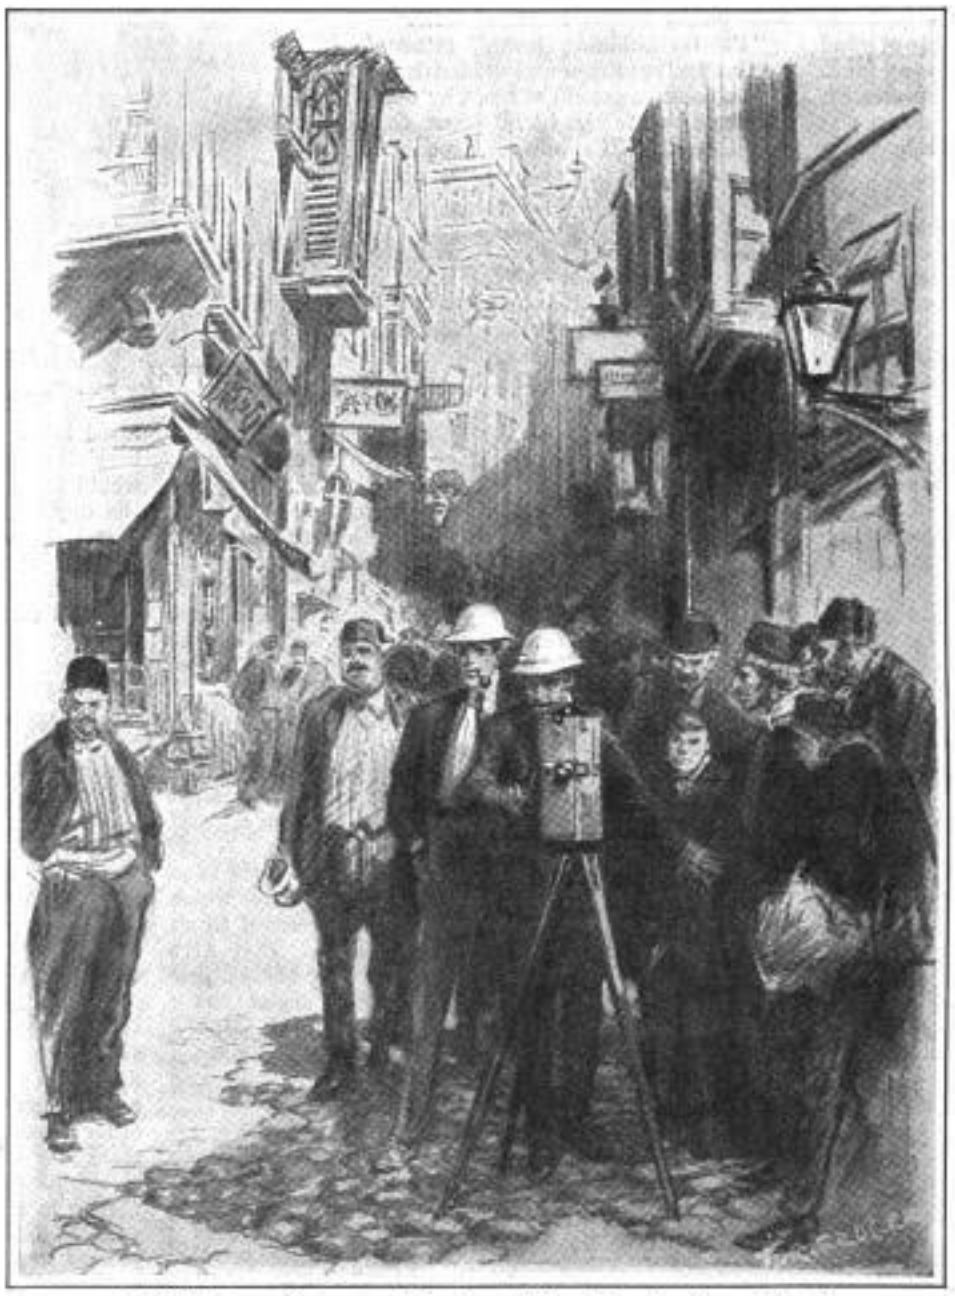
The Grand Cross of the Crescent



By Richard Harding Davis

ILLUSTRATED BY F. R. GRUGER

OF SOME college students it has been said that, in order to pass their examinations, they will stoop to deceive and cheat their professors. This may or may not be true. One only can shudder and pass hurriedly on. But whatever others may have done, when young Peter Hallowell in his senior year came up for those final examinations which, should he pass them even by a nose, would gain him his degree, he did not cheat. He may have been too honest, too confident, too lazy, but Peter did not cheat. It was the professors who cheated.

At Stillwater College, on each subject on which you are examined you can score a possible hundred. That means perfection, and in the brief history of Stillwater, which is a very new college, only one man has attained it. After graduating he "accepted a position" in an asylum for the insane, from which he was promoted later to the poorhouse, where he died. Many Stillwater undergraduates studied his career and, lest they also should attain perfection, were afraid to study anything else. Among these Peter was by far the most afraid.

The marking system at Stillwater is as follows: If in all the subjects in which you have been examined your marks added together give you an average of ninety, you are passed "with honors"; if of seventy-five, you pass "with distinction"; if of fifty, you just "pass." It is not unlike the grocer's nice adjustment of fresh eggs, good eggs, and eggs. The whole college knew that if Peter got in among the eggs he would be lucky, but the professors and instructors of Stillwater were determined that, no matter what young Hallowell might do to prevent it, they would see that he passed his examinations. And they constituted the jury of awards. Their interest in Peter was not because they loved him so much, but because each loved his own vine-covered cottage, his salary and his dignified title the more. And each knew that that one of the faculty who dared to flunk the son of old man Hallowell, who had endowed Stillwater, who supported Stillwater, and who might be expected to go on supporting Stillwater indefinitely, might also at the same time hand in his official resignation.

He Had Been a Newspaper Reporter, a Press Agent, and an Actor in Vaudeville and in a Moving-Picture Company

Chancellor Black, the head of Stillwater, was an up-to-date college president. If he did not actually run after money he went where money was, and it was not his habit to be downright rude to those who possessed it. And if any three-thousand-dollar-a-year professor, through a too strict respect for Stillwater's standards of learning, should lose to that institution a half-million-dollar observatory, swimming-pool or gymnasium, he was the sort of college president who would see to it that the college lost also the services of that too conscientious instructor.

He did not put this in writing or in words, but just before the June examinations, when on the campus he met one of the faculty, he would inquire with kindly interest as to the standing of young Hallowell.

"That is too bad!" he would exclaim, but more in sorrow than in anger. "Still, I hope the boy can pull through. He is his dear father's pride, and his father's heart is set upon his son's obtaining his degree. Let us hope he will pull through."

For four years every professor had been pulling Peter through, and the conscience of each had become calloused. They had only once more to shove him through and they would be free of him forever. And so, although they did not conspire together, each knew that of the firing squad that was to aim its rifles at Peter, *his* rifle would hold the blank cartridge.

The only one of them who did not know this was Dr. Henry Gilman. Doctor Gilman was the professor of ancient and modern history at Stillwater, and greatly respected and loved. He also was the author of those well-known textbooks The Founders of Islam and The Rise and Fall of the Turkish Empire. This latter work, in five volumes, had been not unfavorably compared to Gibbon's Decline and Fall of the Roman Empire. The original newspaper comment, dated some thirty years back, the doctor had preserved, and would produce it, now somewhat frayed and worn, and read it to visitors. He knew it by heart, but to him it always possessed a contemporary and news interest.

"Here is a review of the history," he would say—he always referred to it as "the" history—"that I came across in my paper."

In the eyes of Doctor Gilman thirty years was so brief a period that it was as though the clipping had been printed the previous afternoon.

The members of his class who were examined on the Rise and Fall, and who invariably came to grief over it, referred to it briefly as "the Fall," sometimes feelingly as "the —— Fall." "The" history began when Constantinople was Byzantium, skipped lightly over six centuries to Constantine, and in the last two volumes finished up the Mohammeds with the downfall of the fourth one and the coming of Suleiman. Since Suleiman, Doctor Gilman did not recognize Turkey as being on the map. When his history said the Turkish Empire had fallen, then the Turkish Empire fell. Once Chancellor Black suggested that he add a sixth volume that would cover the last three centuries.

"In a history of Turkey issued as a textbook," said the chancellor, "I think the Russian-Turkish War should be included."

Doctor Gilman, from behind his gold-rimmed spectacles, gazed at him in mild reproach.

"The war in the Crimea!" he exclaimed. "Why, I was alive at the time. I know all about it. That is not history."

Accordingly it followed that to a man who since the seventeenth century knew of no event of interest, Cyrus Hallowell, of the meat-packers' trust, was not an imposing figure. And to such a man the son of Cyrus Hallowell was but an ignorant young savage, to whom "the" history had certainly been a closed book. And so when Peter returned his examination paper in a condition almost as spotless as that in which he had received it, Doctor Gilman carefully and conscientiously, with malice toward none and with no thought of the morrow, marked it "five."

Each of the other professors and instructors had marked Peter fifty. In their fear of Chancellor Black they dared not give the boy less, but they refused to be slaves to the extent of crediting him with a single point higher than was necessary to pass him. But Doctor Gilman's five completely knocked out the required average of fifty, and young Peter was "found" and could not graduate. It was an awful business! The only son of the only Hallowell refused a degree in his father's own private college—the son of the man who had built the Hallowell Memorial, the new Laboratory, the Anna Hallowell Chapel, the Hallowell Dormitory and the Hallowell Athletic Field. When on the bulletin board of the dim hall of the Memorial to his departed grandfather Peter read of his own disgrace and downfall, the light the stained-glass window cast upon his nose was of no sicklier a green than was the nose itself. Not that Peter wanted an A. M. or an A. B., not that he desired laurels he had not won, but because the young man was afraid of his father. And he had cause to be. Father arrived at Stillwater the next morning. The interviews that followed made Stillwater famous.

"My son is not an ass!" is what Hallowell senior is said to have said to Doctor Black. "And if in four years you and your faculty cannot give him the rudiments of an

Digitized by Google

education, I will send him to a college that can. And I'll send my money where I send Peter."

In reply Chancellor Black could have said that it was the fault of the son and not of the college; he could have said that where three men had failed to graduate one hundred and eighty had not. But did he say that? Oh, no, he did not say that! He was not that sort of a college president. Instead, he remained calm and sympathetic, and like a conspirator in a comic opera glanced apprehensively round his study. He lowered his voice.

"There has been contemptible work here," he whispered—"spite and a mean spirit of reprisal. I have been making a secret investigation, and I find that this blow at your son and you, and at the good name of our college, was struck by one man, a man with a grievance—Doctor Gilman. Doctor Gilman has repeatedly desired me to raise his salary." This did not happen to be true, but in such a crisis Doctor Black could not afford to be too particular.

"I have seen no reason for raising his salary—and there you have the explanation. In revenge he has made this attack. But he has overshot his mark. In causing us temporary embarrassment he has brought about his own downfall. I have already asked for his resignation."

Every day in the week Hallowell was a fair, sane man, but on this particular day he was wounded, his spirit was hurt, his self-esteem humiliated. He was in a state of mind to believe anything rather than that his son was an idiot.

"I don't want the old man discharged," he protested, "just because Peter is lazy. But if Doctor Gilman was moved by personal considerations, if he sacrificed my Peter in order to get even ——"

"That," exclaimed Black in a horrified whisper, "is exactly what he did! Your generosity to the college is well known. You are recognized all over America as its patron. And he believed that when I refused him an increase in salary it was really you who refused it—and he struck at you through your son. Everybody thinks so. The college is on fire with indignation. And look at the mark he gave Peter! Five! That in itself shows the malice. Five is not a mark, it is an insult! No one, certainly not your brilliant son—look how brilliantly he managed the glee club and football tour—is stupid enough to deserve five. No, Doctor Gilman went too far. And he has been justly punished!"

What Hallowell senior was willing to believe of what the chancellor told him, and his opinion of the matter as expressed to Peter, differed materially.

"They tell me," he concluded, "that in the fall they will give you another examination, and if you pass then you will get your degree. No one will know you've got it. They'll slip it to you out of the sidedoor like a cold potato to a tramp. The only thing people will know is that when your classmates stood up and got their parchments—the thing they'd been working for for four years, the only reason for their going to college at all—you were not among those present. That's your fault; but if you don't get your degree next fall that will be my fault. I've supported you through college and you've failed to deliver the goods. Now you deliver them next fall, or you can support yourself."

"That will be all right," said Peter humbly; "I'll pass next fall."

"I'm going to make sure of that," said Hallowell senior. "Tomorrow you will take all those history books that you did not open, especially Gilman's Rise and Fall which it seems you have not even purchased, and you will travel for the entire summer with a private tutor ——"

Peter, who had personally conducted the football and baseball teams over half of the Middle States and daily bullied and browbeat them, protested with indignation.

"I won't travel with a private tutor!"

"If I say so," returned Hallowell senior grimly, "you'll travel with a governess and a trained nurse, and wear a straitjacket. And you'll continue to wear it until you can recite the history of Turkey backward. And in order that you may know it backward and forward you will spend this summer in Turkey—in Constantinople—until I send you permission to come home."

"Constantinople!" yelled Peter. "In August! Are you serious?"

"Do I look it?" asked Peter's father.

He did.

"In Constantinople," explained Mr. Hallowell senior, "there will be nothing to distract you from your studies, and in spite of yourself every minute you will be imbibing history and local color."

"I'll be imbibing fever," returned Peter, "and sunstroke and sudden death. If you want to get rid of me, why don't you send me to the island where they sent Dreyfus? It's quicker. You don't have to go to Turkey to study about Turkey."

"You do!" said his father.

Peter did not wait for the festivities of commencement week. All day he hid in his room, packing his belongings or giving them away to the members of his class who came to tell him what a rotten shame it was, and to bid him goodby. They loved Peter for himself alone, and at losing him were loyally enraged. They desired publicly to express their sentiments, and to that end they planned a mock trial of the Rise and Fall at which a packed jury would sentence it to cremation. They planned also to hang Doctor Gilman in effigy. The effigy with a rope round its neck was even then awaiting mob violence. It was complete to the silver-white beard and the gold spectacles. But Peter squashed both demonstrations. He did not know Doctor Gilman had been forced to resign, but he protested that the horse-play of his friends would make him appear a bad loser.

"It would look, boys," he said, "as though I wouldn't take my medicine. Looks like kicking against the umpire's decision. Old Gilman fought fair. He gave me just what was coming to me. I think a darn-sight more of him than I do of that bunch of bootlickers that had the colossal nerve to pretend I scored fifty!"

Doctor Gilman sat in his cottage that stood on the edge of the campus, gazing at a plaster bust of Socrates which he did not see. Since that morning he had ceased to sit in the chair of history at Stillwater College. They were retrenching, the chancellor had told him curtly, cutting down unnecessary expenses, for even in his anger Doctor Black was too intelligent to hint at his real motive, and the professor was far too innocent of evil, far too detached from college politics, to suspect. He would remain a professor emeritus on half pay, but he no longer would teach. The college he had served for thirty years—since it consisted of two brick buildings and a faculty of ten young men—no longer needed him. Even his ivy-covered cottage, in which his wife and he had lived for twenty years, in which their one child had died, would at the beginning of the next term be required of him. But the college would allow him those six months in which to look round. So he sat in his study, just outside the circle of light from his student lamp, and stared with unseeing eyes at the bust of Socrates. He was not considering ways and means. They must be faced later. He was considering how he could possibly break the blow to his wife. What eviction from that house would mean to her, no one but he understood. Since the day their little girl had died, nothing in the room that had been her playroom, bedroom and nursery had been altered, nothing had been touched. To his wife, somewhere in the house that wonderful, God-given child was still with them. Not as a memory but as a real and living presence. When at night the professor and his wife sat at either end of the study table, reading by the same lamp, he would see her suddenly lift her head, alert and eager, as though from the nursery floor a step had sounded, as though from the darkness a sleepy voice had called her. And when they would be forced to move to lodgings in the town, to some students' boarding house, though they could take with them their books, their furniture, their mutual love and comradeship, they must leave behind them the haunting presence of the child, the colored pictures she had cut from the Christmas numbers and plastered over the nursery walls, the rambler roses that with her own hands she had planted, and that now climbed to her window and each summer peered into her empty room.

Outside Doctor Gilman's cottage, among the trees of the campus, paper lanterns like great oranges aglow were swaying in the evening breeze. In front of Hallowell the flame of a great bonfire shot to the top of the tallest elms, and gathered in a circle round it the glee club sang, and cheer succeeded cheer—cheers for the heroes of the cinder track, for the heroes of the diamond and the gridiron, cheers for the men who had flunked—especially for one man who had flunked. But for the man who for thirty years in the classroom had served the college there were no cheers. No one remembered him, except the one student who had best reason to remember him. But in this recollection Peter had no rancor or bitterness and, still anxious lest he should be considered a bad loser, he wished Doctor Gilman and every one else to know that. So when the celebration was at its height and just before his train was due to carry him from Stillwater, he ran across the campus to the Gilman cottage to say goodby. But he did not enter the cottage. He went so far only as halfway up the garden walk. In the window of the study which opened upon the veranda he saw through a frame of honeysuckles the professor and his wife standing beside the study table. They were clinging to each other, the woman weeping silently with her cheek on his shoulder, her thin, delicate, well-bred hands clasping his arms, while the man comforted her awkwardly, unhappily, with hopeless, futile caresses.

Peter, shocked and miserable at what he had seen, backed steadily away. What disaster had befallen the old couple he could not imagine. The idea that he himself might in any way be connected with their grief never entered his mind. He was certain only that, whatever the trouble was, it was something so intimate and personal that no mere outsider might dare to offer his sympathy. So on tiptoe he retreated down the garden walk and, avoiding the celebration at the bonfire, returned to his rooms.

He Was "a Friend of a Friend of a Friend"

"If I Say So, You'll Travel With a Governess and a Trained Nurse, and Wear a Straitjacket"

The Fees, the Fat Man Added, Would Also be Higher, But, He Pointed Out, it Was Worth the Difference

An hour later the entire college escorted him to the railroad station, and with "He's a jolly good fellow" and "He's off to Philippopolis in the morn-ing" ringing in his ears, he sank back in his seat in the smoking-car and gazed at the lights of Stillwater disappearing out of his life. And he was surprised to find that what lingered in his mind was not the students, dancing like red Indians round the bonfire, or at the steps of the smoking-car fighting to shake his hand, but the man and woman alone in the cottage stricken with sudden sorrow, standing like two children lost in the streets, who cling to each other for comfort and at the same moment whisper words of courage.

Two months later, at Constantinople, Peter was suffering from remorse over neglected opportunities, from prickly heat, and from fleas. Had it not been for the moving-picture man, and the poker and baccarat at the Cercle Oriental, he would have flung himself into the Bosphorus. In the mornings with the tutor he read ancient history, which he promptly forgot; and for the rest of the hot, dreary day with the moving-picture man he stalked subjects for the camera through the bazaars and along the waterfront.

The name of the moving-picture man was Harry Stetson. He had been a newspaper reporter, a press agent and an actor in vaudeville and in a moving-picture company. Now on his own account he was preparing an illustrated lecture on the East, adapted to churches and Sunday-schools. Peter and he wrote it in collaboration, and in the evenings rehearsed it with lanternslides before an audience of the hotel clerk, the tutor, and the German soldier of fortune who was trying to sell the young Turks very old battleships. Every other foreigner had fled the city, and the entire diplomatic corps had removed itself to the summer capital at Therapia.

There Stimson, the first secretary of the embassy and, in the absence of the ambassador, *chargé d'affaires*, invited Peter to become his guest. Stimson was most anxious to be polite to Peter, for Hallowell senior was a power in the party then in office, and a word from him at Washington in favor of a rising young diplomat would do no harm. But Peter was afraid his father would consider Therapia "out of bounds."

"He sent me to Constantinople," explained Peter, "and if he thinks I'm not playing the game the Lord only knows where he might send me next—and he might cut off my allowance."

In the matter of allowance Peter's father had been most generous. This was fortunate, for poker, as the pashas and princes played it at the Cercle, was no game for cripples or children. But, owing to his letter-of-credit and his ill-spent life, Peter was able to hold his own against men three times his age and of fortunes nearly equal to that of his father. Only they disposed of their wealth differently. On many a hot evening Peter saw as much of their money scattered over the green table as his father had spent over the Hallowell Athletic Field.

In this fashion Peter spent his first month of exile—in the morning trying to fill his brain with names of great men who had been a long time dead, and in his leisure hours with local color. To a youth of his active spirit it was a dull life without joy or recompense. A letter from Charley Hines, a classmate who lived at Stillwater, which arrived after Peter had endured six weeks of Constantinople, released him from boredom and gave life a real interest. It was a letter full of gossip intended to amuse. One paragraph failed of its purpose. It read: "Old man Gilman has got the sack. The chancellor offered him up as a sacrifice to your father, and because he was unwise enough to flunk you. He is to move out in September. I ran across them last week when I was looking for rooms for a Freshman cousin. They were reserving one in the same boarding house. It's a shame, and I know you'll agree. They are a fine old couple, and I don't like to think of them herding with Freshmen in a shine boarding house. Black always was a swine."

Peter spent fully ten minutes in getting to the cable office.

"Just learned," he cabled his father, "Gilman dismissed because flunked me consider this outrageous please see he is reinstated."

The answer, which arrived the next day, did not satisfy Peter. It read: "Informed Gilman acted through spite have no authority as you know to interfere any act of Black."

Since Peter had learned of the disaster that through his laziness had befallen the Gilmans, his indignation at the injustice had been hourly increasing. Nor had his banishment to Constantinople strengthened his filial piety. On the contrary, it had rendered him independent and but little inclined to kiss the paternal rod. In consequence his next cable was not conciliatory.

"Dismissing Gilman looks more like we acted through spite makes me appear contemptible Black is a toady will do as you direct please reinstate."

To this somewhat peremptory message his father answered:

"If your position unpleasant yourself to blame not Black incident is closed."

"Is it?" said the son of his father. He called Stetson to his aid and explained. Stetson reminded him of the famous cablegram of his distinguished contemporary: "Perdicaris alive or Raisuli dead!"

Peter's paraphrase of this ran: "Gilman returns to Stillwater or I will not try for degree."

The reply was equally emphatic:

"You earn your degree or you earn your own living."

This alarmed Stetson, but caused Peter to deliver his ultimatum: "Choose to earn my own living am leaving Constantinople."

Within a few days Stetson was also leaving Constantinople by steamer via Naples. Peter, who had come to like him very much, would have accompanied him had he not preferred to return home more leisurely by way of Paris and London.

"You'll get there long before I do," said Peter, "and as soon as you arrive I want you to go to Stillwater and give Doctor Gilman some souvenir of Turkey from me. Just to show him I've no hard feelings. He wouldn't accept money, but he can't refuse a present. I want it to be something characteristic of the country, like a prayer rug, or a simitar, or an illuminated Koran, or ——"

Somewhat doubtfully, somewhat sheepishly, Stetson drew from his pocket a flat morocco case and opened it. "What's the matter with one of these?" he asked.

In the velvet-lined jewel case was a star of green enamel and silver gilt. To it was attached a ribbon of red and green.

"That's the Star of the Crescent," said Peter. "Where did you buy it?"

"Buy it!" exclaimed Stetson. "You don't buy them. The Sultan bestows them."

"I'll bet the Sultan didn't bestow that one," said Peter.

"I'll bet," returned Stetson, "I've got something in my pocket that says he did."

He unfolded an imposing document covered with slanting lines of curving Arabic letters in gold. Peter was impressed but still skeptical.

"What does that say when it says it in English?" he asked.

"It says," translated Stetson, "that his Imperial Majesty, the Sultan, bestows upon Henry Stetson, educator, author, lecturer, the Star of the Order of the Crescent, of the fifth class, for services rendered to Turkey."

Peter interrupted him indignantly.

"Never try to fool the fakers, my son," he protested; "I'm a faker myself. What services did you ever ——"

"Services rendered," continued Stetson undisturbed, "in spreading throughout the United States a greater knowledge of the customs, industries and religion of the Ottoman Empire. That," he exclaimed, "refers to my—I should say our—moving-picture lecture. I thought it would look well if, when I lectured on Turkey, I wore a Turkish decoration, so I went after this one."

Peter regarded his young friend with incredulous admiration.

"But did they believe you," he demanded, "when you told them you were an author and educator?"

Stetson closed one eye and grinned. "They believed whatever I paid them to believe."

"If you can get one of those," cried Peter, "old man Gilman ought to get a dozen. I'll tell them he's the author of the longest and dullest history of their flea-bitten empire that was ever written. And he's a real professor and a real author, and I can prove it. I'll show them the five volumes with his name in each. How much did that thing cost you?"

"Two hundred dollars in bribes," said Stetson briskly, "and two months of diplomacy."

"I haven't got two months for diplomacy," said Peter, "so I'll have to increase the bribes. I'll stay here and get the decoration for Gilman, and you work the papers at home. No one ever heard of the Order of the Crescent, but that only makes it the easier for us. They'll only know what we tell them, and we'll tell them it's the highest honor ever bestowed by a reigning sovereign upon an American scholar. If you tell the people often enough that anything is the best they believe you. That's the way father sells his hams. You've been a press agent. From now on you're going to be my press agent—I mean Doctor Gilman's press agent. I pay your salary, but your work is to advertise him and the Order of the Crescent. I'll give you a letter to Charley Hines at Stillwater. He sends out college news to a syndicate and he's the local Associated Press man. He's sore at their discharging Gilman and he's my best friend, and he'll work the papers as far as you like. Your job is to make Stillwater College and Doctor Black and my father believe that when they lost Gilman they lost the man who made Stillwater famous. And before we get through boosting Gilman, we'll make my father's million-dollar-gift laboratory look like an insult."

In the eyes of the former press agent the light of battle burned fiercely, memories of his triumphs in exploitation, of his strategies and tactics in advertising soared before him.

"It's great!" he exclaimed. "I've got your idea and you've got me. And you're darned lucky to get me. I've been press agent for politicians, actors, society leaders, breakfast foods and horseshows—and I'm the best! I was in charge of the publicity bureau for Galloway when he ran for governor. He thinks the people elected him. I know I did. Nora Nashville was getting fifty dollars a week in vaudeville when I took hold of her; now she gets a thousand. I even made people believe Mrs. Hampton-Rhodes was a society leader

He Was Considering How He Could Possibly Break the Blow to His Wife

THE FIFTH AVENUE SHOPS

By Madge C. Jenison

ILLUSTRATED BY MAY WILSON PRESTON

UPPER Fifth Avenue runs suddenly with life after the middle of September. Every one is out for clothes. The motors are packed on it in deep cohorts, taking short turns into the curb, with the long veils of their occupants whipped horizontal on the air. Cabbies sweep their whips over faces seen in profile or glancing eagerly out at the wide, multicolored windows. The green omnibuses rock on their way, with their loads of conversational ladies sitting tight and looking down into the chariots of the predatory rich. On the pavement is that composite of hundreds of faces, of hundreds of eyes crossing with one's own, which make a crowd.

Pictures and stories lie in a crowd like bits of glass. A girl with a broad hat and narrow skirt, decorative and formal in effect, like a flat flower on a high stem, touches her heart lightly with a long, curved finger as she talks. She might be a part of a wall decoration, so much a thing of lines and masses is she.

A beautiful young mother goes in front of us from door to curb and steps into a brougham—beautiful and young, yet with a cold, fixed look under that drunken little hat; and in a file behind her come two little girls, with tea-colored eyes, dressed precisely alike from hat to boots, like French children—then the boy, prince of the blood—the nursery governess last, in ill-made cheviot.

Three sisters are disgorged in somber procession from a limousine, as like as three black fowl, all dressed in the same unexceptionable and costly black, with the same kind of face and the same kind of lacquered elegance. There are nine thousand just such women in New York—nothing extreme, skirts never wide, never narrow, George Eliot and Mrs. Humphry Ward for reading, three months out of every twelve in the bathtub, temperature slightly subnormal. The first one is a planner; I can see her planning as she goes in—the door closes behind them, leaving a delicate redolence of French soap and camphor ice in their wake. Two plump little squabs sniff it as they follow in.

In the Streets of Temptation

A PALE "buttons" in a cockaded pot-hat stands languidly beside a door, his empty boy's face fantastic above the harlequin yellow-and-green inside the collar of his livery. A drab, dry youth, with clothes pressed like a razor's edge, turns into one of the best shops with a companion twirling a striped parasol—young blood of the self-made, allying itself with dubious beauty. He must cost mamma many a tear.

"Well, when did you get back?" a man says behind us; and for a moment the sea rises, bronze-green, with long white combers rolling in on it. In the windows into which we gaze is the rape of the earth; laces fine as spun sugar or heavy as thongs of leather; deep furs; silks colored like a page of George Moore; muslins airy as a rush of Pavlova's feet; brocades, velvet, tinsel; trailing coats made to throw upon a chair in compromising situations, with the lines, "Can you not see? I love you!"—hats under which one could not choose but glance down and touch a flower—all in the modulated tones which American women so strangely like, with sometimes a mass of color which lies in the mind long after one has turned away, as a thought will lie in the mind, throwing out a glow of light.

Above the heads of the crowd, the street rolls itself out, with its rise and fall, like a sigh of pleasure. A golden smoke of Indian summer is in all the air. Clothes!—the most intimate inclosure of self!—personal as pain; society's powder and shot; regalia of conquest. In these shops marriages are made, love is won or lost, long-coveted goals are brought to hand; even dealings in high finance are maneuvered before they ever come to the green table. New York is as much forged in these blocks of Fifth Avenue as on Wall Street. It is strange to think that in these shops, with their vague, elegant floors and walls, and groups of shopgirls in beautiful dresses, standing with heads bent forward discussing the last customer, Life, with all its fires and ashes, is predetermined.

In the back of my mind I am always expecting a letter which shall say: "*My dear Madame:* Your aged uncle has purposely kept himself unknown to you—large properties—South Africa—your signature—Corn Exchange Bank. Yours obsequiously." It will come in the breakfast mail; and when it does I shall jump up quickly, ring up a cab, throw myself into it with graceful haste, drive to a certain shop on the west side of Fifth Avenue, not far from Forty-fourth Street, and buy everything in that shop I want. There is a long-to-be-remembered window in Unter den Linden which can make your rash visionary forget how impersonal are magazine editors, and Father, two thousand miles away; and it is always safer to walk round the Rue des Capucines unless the money market is extremely easy. But the "most magnificent street" can overtop them all. The smart dressmaking and millinery business of Fifth Avenue counts on profits of seventy-five to one hundred per cent and does not trade at less than sixty-five. One must attach The Rich and Great for an expedition after a hat, until the South African letter comes along. Fifth Avenue shopgirls have a look that sends unarrived novelist stock down several points. "Tell them you're from Boston," suggests a practical critic of life, "and they will expect you to look like a frump." But The Rich and Great with a lorgnette does the trick better.

One does not like all these girls' faces. Some of them are cheaply cruel and hard. It is dreary to think what ungratified worldliness lies behind them. Some atmosphere extends plainly from the office through each store—in some a convention of leisure and pleasant dealing; in others close calculation of values. They are a curious product, these girls, with their graceful gestures and subdued, light-touching manners and voices. They stand right; they sit in a chair right; they have the *bel air*—drinking up the graces of the women they serve as naturally as the skin drinks cologne. It takes brains to sell hats; and people with brains are always learning something. Selling millinery takes brains because every customer is a new problem and the stock never two days the same. A girl who can sell millinery can sell anything. They have twenty or twenty-five dollars a week, a buyer tells us—the high-priced women who keep stock four times as much.

"They like it—and marry late," she says.

Then the Boy, Prince of the Blood

A good many of them come from homes that would not have had a daughter in a shop twenty years ago. We saw a girl applying for a place in B——'s one day who seemed to be just off some university campus. She was a tall, elegant girl, with wide, curling lips and a dusky skin washed on the cheeks with high carmine, like a flower of the South. She had what the French call *verre*. She stood leaning against a counter when we first saw her, eying languidly a floorman who had gone to ask if she wished to be waited upon.

"No, I am waiting to see the manager about a place as a saleswoman here," we heard her say. He began to enlighten her that such applications were to be made in the office upstairs, but his suggestion faded away. When he said the manager was on the floor she informed him that she knew it already. The Rich and Great and I inquired of each other if we had heard her errand aright.

That Old Adage of Fine Feathers

THE manager was a well-appointed gentleman, with large, fruity eyes, a brown waistcoat, and that air of American business men of being on the way to catch a train, with a few moments to spare, which are yours unreservedly.

"No; we do not need a saleswoman—at any rate not at present," he added as he took a second look at her. "What is your experience?"

"I have no experience. I am just beginning," said the girl tranquilly.

He looked incredulous and then he laughed.

"Well, really, you are amusing," he said. "You expect to begin in a shop like this without experience? You will find it quite impossible, I assure you, Miss—er—ah—Harding." And he bent her card between his thumb and finger.

"I have other assets," offered the girl, looking over his shoulder and then back at him.

"What are these other assets?" he inquired good-naturedly.

"Well, I am tolerably good-looking. I have business ability. I have personality. I have tact. I have style. I know how to talk. I am educated. I am refined. I have been brought up so that I know what the right things are." She paused and took breath. He looked at her thoughtfully, seeming to feel himself in the presence of one of those opportunities which it is quixotic to seize and ill-judged to let pass.

"You see—another thing," he said slowly: "You don't know our big customers by sight, and that is a very serious drawback."

"Now how long would it take me to learn them?" she asked.

"They don't come in every day—these people."

"Perhaps we could get them to come in every day," she was saying sweetly as we came away.

"It is a serious thing, you know, not to recognize the rich customers," a girl who waited on us farther up the Avenue told us in a burst of loquacity. "The shop people don't like it, of course, when a fifty-dollar hat is sold to a woman who would just as well have bought a ninety-five-dollar one," she explained.

The discreet accomplishment of selling clothes at prices that would buy town lots is learned with some trepidation by the beginner.

"How can I tell her it's a hundred dollars?" wails the acolyte to the manager. "Why, there's nothing on it!"

"Tell her the birds are expensive," says that resourceful person sternly. "Tell her it cost twenty-five dollars apiece just to import such birds as this; and the velvet and felt are worth something!"

When big game is in the wind it is engaging to see these girls help each other out, in spite of the jealousy among

A Murmur of Adulation Whispers its Sweet Poison: "What a Beautiful Child!—Beautiful Child!—Beautiful Child!"

Digitized by Google

them. A young member of one of the families about which New York talks most goes down the center of the store, leading an ugly fat child by the hand; and all along her progress a murmur of adulation whispers its sweet poison: "What a beautiful child!—beautiful child!—beautiful child!"—not too much, not too loud, nothing fulsome; but what a mind one would be in for hats after two hundred yards of this! When a certain beautiful and arrogant model of fashion appears on the floor it is the rule of one house that as many of the girls as possible shall keep themselves free to hover near, to form a horizon, to make an audience! Vanity Fair, and the green silk purse, and Becky's sidling glance! What grist for the cynic it is!

One summer, on the steamer crossing to Liverpool, we had in the stateroom a girl whom we could never make out. She had manners so graceful, an air so high-bred, such clothes as made the writer of the serious-minded short story turn over in the berth and groan. And yet—and yet—sometimes she made bad work of the English tongue as it is spoken. It is one of the compulsions of ocean travel to make people out; and so we bent ourselves to this question with persistence. I always knew that I had seen that girl somewhere before and one day I remembered that once she had sold me a suit. We began to interview her shamelessly. She had become a buyer. She was making her first trip over to Paris; and if she was successful she would have a salary of three thousand dollars a year. And then, after a while, as we sat on the deck in those wide, murmuring nights o'ervaulted with silver fire, she told us such stories!—which I will now repeat in confidence to the attentive reader.

Every One Is Out for Clothes

Miss Milbanks had begun in an interesting little shop in the thirties—the little girl who hooks and unhooks you, and who stands at madame's elbow handing pins. She stayed there seven years, until she became head saleswoman. Madame had the most exclusive trade—the most distinguished actresses and opera singers, and the wives of the gentlemen whose names appear in the yearly statement of assets which one's bank sends out the first of the year.

Rather extraordinary things sometimes went on in a little room partitioned off at one side of the shop. Certain merry customers, with whom madame was on a very friendly footing, sometimes shared a cocktail with her in lieu of afternoon tea, which beverage she mixed very well after a formula that she did not confide to inquirers. Sometimes there was even more than one cocktail, after which refreshment all hats became enchanting; and she who came for one went away with three or four, from which it had been found impossible to make a choice, the bill making pensive meditation for the morning after.

Sometimes a customer would buy a pattern gown with a sacred Parisian name embroidered on the waistband—"absolutely exclusive—only two were sent out from this design, and the other went to a Russian grand duchess—Marie, the hand-glass!" On such a dress it was always managed that some alterations should be necessary; and then, between the time when it was ordered at eleven o'clock and its delivery in the late afternoon, it would be copied to the stitch. The waistmaker, the skirtmaker, the collarmaker, the sleevemaker, the finisher—all would be put to work on it. Sometimes six or eight girls would be gathered about the gown at once; and at five o'clock the copy would be sent, the absolutely exclusive only model except the Russian grand duchess' remaining in stock, unimpaired except for the pricks of a few pins.

The most extraordinary exhibition of madame's gifts came in the rush season, when there was trouble with help and dresses were not finished on time. If a dress was to be ready for a dinner on Thursday, by Thursday at ten the telephone calls would begin to come at intervals of an hour. By two madame would reply that the dress was on the way. Then work would be seriously begun on it! Telephone calls followed close upon each other between three and five, culminating in the appearance of a footman at the door—without, in the carriage, a declamatory and fire-breathing patron. Then madame would rise to the height of her ability to create with only chaos before her. Her manner would be the perfect blend of business dignity and friendly concern. The dress had been sent. She herself had seen Absalom off with it—impossible to account for this delay!

Absalom's Hard Luck

SHE assures herself in patron's presence that the address is correct on the books. She goes to the workroom to inquire if any confusion could have been made in the boxes. In the workroom the object of concern, still on the form, is pulled together with hasty last stitches. It is quickly packed. Absalom is hustled out the back door, stern adjurations attending him to speak his lines trippingly on the tongue—that he be not too tame neither. Madame reappears with solicitude creased upon her brows. Yearly assets in the person of a customer who spends goodly thousands a year on clothes is of divided mind between the *insouciance* of a perfect lady and an inward yearning to kick and scream.

Upon this crisis enters Absalom by the street door, having gone round the block through the alley. Dress-box is under arm. But what has happened, Absalom? It develops that he has been hunting up and down Sixty-sixth Street all the afternoon—and there is no such name. But it is only a few doors off Fifth Avenue! Absalom's jaw falls. He thought it was West Sixty-sixth Street. Tableau! Where is one to look for any intelligence in the working class?—a glance for Absalom that would ice molasses! Exit customer in haste, mollified and "emitting rays," as the French have it—footman in the rear with box borne triumphant. Madame draws a deep breath and makes her comment to one of the girls, with a shrug, watching the procession from the window:

"Tyrants! Why must they have everything in a moment?"

There was no fixed price for anything in the shop. You used your talents, judged always by your customer and guided yourself by that intangible quality of desirability upon which values rise and fall with such alacrity. Of three copies of a dress one year, one went to a friend of madame's for eighty-five dollars—which was probably about cost price; the second was sold for one hundred and seventy-five dollars, and the third for three hundred and fifty.

By Five Minutes After Six the Street Has Become One for the Workers

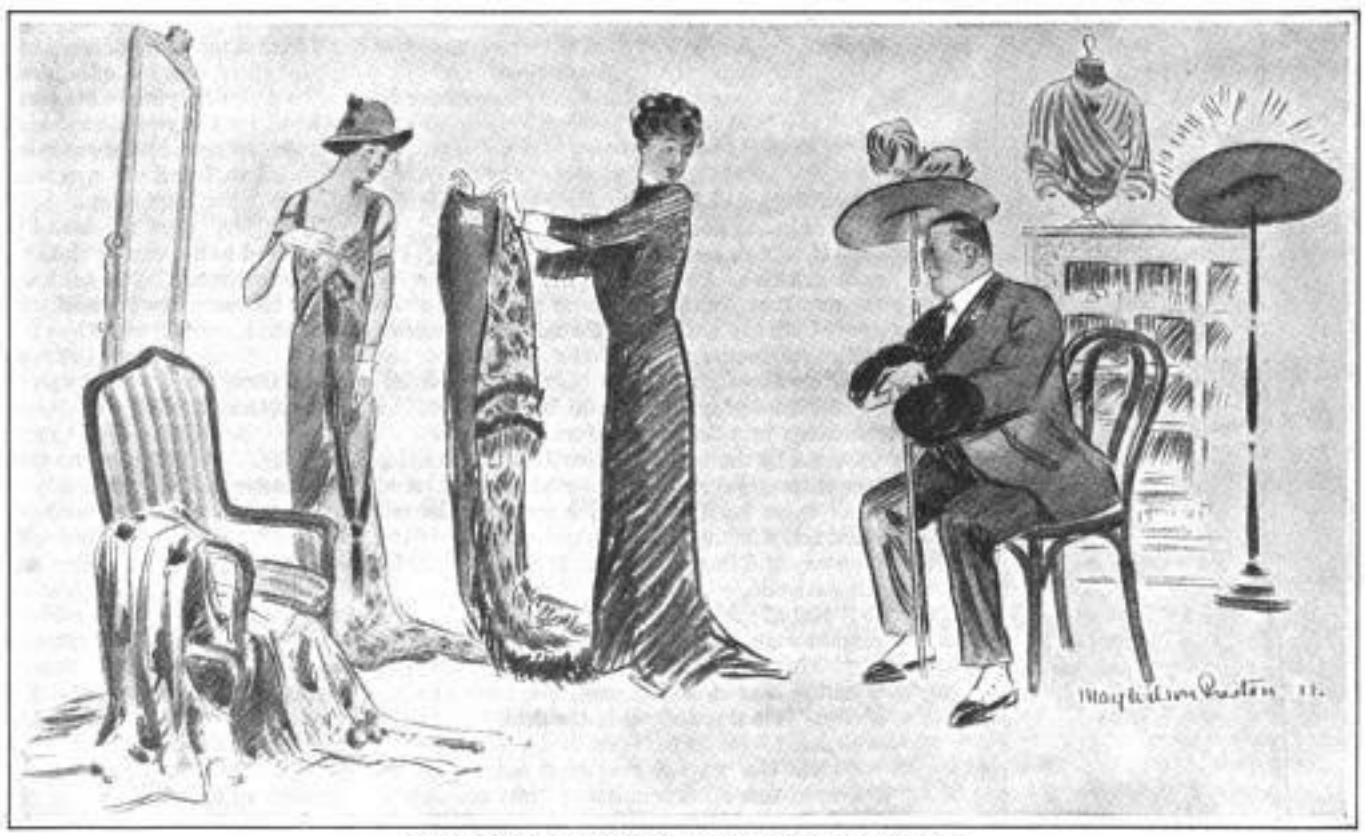
"Why, you had that blouse last year, didn't you?" says a little fashion reporter whom madame likes, at the fall opening.

"Yes, it is the third year. I shall never be rid of it. Take it very cheap, Miss Steele." No; Miss Steele has just disposed of three weeks' salary in an adorable pattern hat and is not considering lace blouses at the most seductive prices.

Before the day is over it has a bidder. "I have always admired that blouse"—price of blouse is immediately pulled several points—"but it was too expensive!" Madame became very suave. "We have marked it down to sixty dollars—that is half. You will find it quite as good this year as last, Mrs. Tynans."

She is called away and leaves the game to sniff the bait. At certain stages of a sale madame was always called away. Mrs. Tynans will have it. It is fitted to her; in the afternoon it is brought down in its lavish nest of white tissue paper for madame to look over before it is sent out.

"What a beautiful blouse!" says the patron with whom madame is at present occupied.



"Yes; but it is sold." "Thank Heaven, it is sold!" Madame is known by the initiated to be thinking. "But we could copy it for you, Mrs. Hunt. The price is higher, because we shall make only one copy—one hundred and twenty-five dollars—yes—by Saturday. Yes; the collar and the waistband. You are looking so well and growing slender. It is quite the miracle!" All in a day, after two years with it on one's hands! How is one to account for these shufflings and quicksteps of fortune?

The story I liked best of all, however, was one which had no scenery or business—just plot, like a love letter. One morning, on a little shopping foray, madame picked up at a department store a blue serge suit, with black silk braid round the edge—very simple, very chaste. It was seventy dollars—and she sold it the next day for one hundred and forty.

I have long meditated that these shops must be one place where women are making money. The last census shows that women are now in all the occupations, except nine, which take men. There are women plumbers, thousands of women ironworkers, many hundreds of women pit-brow workers. In all the ill-paid intellectual pursuits women are long since established. The last places they will get will be those where money is to be made at large profits. When one meets at week-ends women who have their boys in St. Paul's School and their daughters at Bryn Mawr, who go to Paris every summer and put up at the Lyceum Club, because "you see all the interesting people there"; and it develops that they are the owners of Fifth Avenue shops or of some of those innumerable small and very smart ones which spill over into the thirties and forties, it seems that the times are already at the full. Two-thirds at least of these shops are owned and managed by women—a great merchant says three-fourths. Some of them are women of family who have come by a turn of the wheel face to face with the question of a living, and no trained perception except taste. One is an English peeress. Many more have "come up from the table."

"I engaged one of them fifteen years ago

(Concluded on Page 51)

"This Goes Nicely With That Dress," She Would Say

Digitized by Google

HEART'S DESIRE

By John Fleming Wilson

ILLUSTRATED BY ANTON OTTO FISCHER

WHIN a gir-rl is for-rty, and unwed, she knows much about everything excipt hersilf," said Mickey O'Rourke, shoving aside a bundle of ancient photographs that he had dug out of a locker. "The age of her guarantees wisdom and niver having had a husband makes it sure that she niver lear-rned what was in her own hear-rt—which is the beginning and the end of knowledge. Look here at the face of pretty Kate Maguire, daughter of me mother's own sister. Ye would say that she was lovely—which is thrue; and if yez had seen the eyes of her, and held the sthrong fingers of her in your own, yez would swear she was a wise woman—which was false."

I stared at the somewhat faded portrait of the unknown Kate Maguire. Behind the gloss of the paper and in the strained pose insisted upon by some earnest photographer I seemed to catch something feminine and appealing—something beautiful and clean.

"She was evidently a fine woman," I said.

"She was," said the chief engineer. "I raymimber her as a child, with one skir-rt over her little limbs and an ould bodice of her mother's aslant of her thin shouldhers. Whin I wint away for the lasht time and I had looked back to see the ould woman standing in the cottage door—Saints make her har-rd bed soft above!—I hear-rd a rustle in the weeds by the pathside and little Kate stood out before me.

"'And where are yez going, Mickey O'Rourke?' says she to me.

"'To Ameriky,' says I.

"'Take me wid yez, Mickey,' says the little one, looking at me wid her blue eyes.

"'And for why would yez leave your mother, colleen?' I quistions her.

"She stepped out and took me hand, the slim, sthrong fingers of her tight about me own. 'I can't tell yez, Mickey! Maybe I might whisper it—but yez would niver undherstand,' says she. And like a puff of wind she was gone and I wint on—to Ameriky.

"'Twas ten years afterward that me sister and her husband came across and settled in Oakland. I was running on the State of California thin, and whin we lay in por-rt I would go across the bay and sit over a pipe wid Mary and Tim, her good man. And in due course I asked about Kate Maguire.

"'She is grown into a blue-eyed, black-haired woman,' says Mary; 'but she will look at no felley twice and carries a high head. She is a queer gir-rl and vows she has plinty of time to find a man. But she has tur-rned away the best in the parish and listens to the wind.'

"Tim knocked out his pipe before he spoke up. 'If I were a youngster I'd thry ——'

"'Was I so easy to win that yez think ye have the power over all gir-rls' hear-rts?' says Mary. 'I would ye had married Kate, for thin I would have kept me good looks for a betther man,' says she.

"'She listens to the wind,' says me bould Tim, kissing his wife for luck. 'I have seen her whin but a gir-rl wid her head cocked on one shouldher and the light in her eyes. 'Tis God that whispers to the childher, but whin one is ould 'tis Satan himsilf that speaks. Powers that be! I would that Kate was wed to a man like mesilf, wid strength to keep her indoors at evening.'

"And wid that we spoke no more of Kate Maguire.

"'Twas ten years later, and I was on the City of Panama, whin I came home from the coffee run on the lower coast for a month's holiday. Whin I had kissed me sister and the childher and shook Tim's hand I hear-rd a voice from the kitchen say:

"'And is it Mickey O'Rourke?'

"'It is,' I retor-rts to the voice. 'And who asks for him?'

"'Kate Maguire,' says she, appearing in the doorway, barearmed from the dishpan.

"'Each year has been a blessing to yez,' I tould her, staring at the beauty of the woman. 'And who is your man? Trot him out, for I hear-rd that ye would niver marry and I am anxious to see him.'

"'I am unwed,' says she, standing looking at me as she wiped her long fingers one by one on the towel.

"'Have yez niver been in love?' I axes in astonishment.

"'Niver but once,' says she. 'He was oulder than I and depar-rted to Ameriky, l'aving a poor gir-rl by the roadside.'

"And I raymimbered and was silent till she laughed. And whin I hear-rd the sound of it I knew she was the same Kate Maguire. 'How could I bring a gir-rl wid but one skir-rt and a poor bodice to Ameriky?' I demands. 'I have me pride.'

"The quick look of her searched me for the momint and I hild me breath for fear she would discover me secret; but she only smiled and nodded.

"'I am still hunting for the man,' says she. 'I have plinty of time, for me beauty is permanent, Mickey.'

"'Tis a fool's prettiness!' says me sister sharply. 'Yez are thir-rty-five years gone and the hollow of your shouldher is still empty.'

"And Kate Maguire smiled, dropping her white hands to her sides and cocking her head as though she were listening.

"That evening, because Tim was going to lodge and Mary was busy wid the childher, I asked Kate to walk wid me on the streets. 'I will show yez the magnificence of Ameriky,' I tould her. 'Moreover, I am an ould man and would walk beside a lovely gir-rl for the last time.'

"So we stepped out and she held up her long skir-rt and looked at the houses and the little lawns lying soft in the dusk till we came to the foot of the hills. Thin she tur-rned to me.

"'Me feet are war-rm and me shoes heavy in the evening. I will walk barefooted in the grass.'

"'Let be!' I war-rns her. 'Tis a disgrace to wear no boots in Ameriky. Only the poor do so.'

"'Thin I will be poor, Mickey,' says Kate. 'Tis only the poor that have the blessing.'

"'If wor-rk and throuble be a blessing the poor are rich,' I replies to her. 'But I see by the hands of yez that ye do no wor-rk, and the eyes of yez say nothing of throuble. So ye can walk barefoot and gain the reward of the destitute.'

"So Kate Maguire took off her shoes and her stockings in a fence corner and we walked up the grass by the side of a little sthream, the white feet of the gir-rl shining under her skir-rt. And it all came back to me—the mor-rn I looked back and saw me mother standing alone in the doorway and hear-rd the rustle in the weeds by the pathside.

"'Kate,' said I, 'was none of the young men man enough for yez?'

"'Tis not the loud voice in the room that wins the hear-rt of a woman,' she answered me softly. 'Tis the whisper in the dusk—and none whispered.'

"'Tis the way of men that are afraid—to speak in shouts,' I admitted; 'but even them that are afraid are men. And the whisper in the ear is often the sound of the wind only.'

"'I am Unwed,' Says She"

"She tur-rned on me, her fine skir-rt held between her slim fingers, her pale feet deep in the green grass.

"'I have listened to the wind,' she tould me. 'And it has promised me youth till I find my mate. Mickey, I have seen young gir-rls marry young men, and I have seen ould women marry ould men—and the end of it was a husband asleep by the fireside and a woman dozing in the corner.' The gir-rl stretched out her ar-rms. 'I will wed a man!' she tould me.

"'But the childher!' I protisted. 'What is a woman widhout childher?'

"'She is but a maid waiting for the whisper,' she answered me—'listening to the wind, Mickey!'

"'And yez listen to the wind?' I demanded.

"The laughter of her sounded out along the sthream and she slipped her bare feet through the grass.

"'Ould men ask quistions which only the young can answer,' says the wild gir-rl. 'I will answer that whin a young man asks me.'

"'I have traveled much,' I retor-rted, 'and I have seen manny an upstanding man; but I misdoubt yez will niver meet them.'

"'For why?' demands me bould lady. 'Do they not tur-rn round on the street whin they see me?'

"'And yez will pick out your choice whin he comes?' I inquires, in a rage at her ignorance.

"She laid the two sthrong hands of her on my shouldhers and looked me between the eyes.

"'Whin he comes I will take him,' says she. 'I will take him annywhere and from annybody. Have I kept me youth in vain? Mickey O'Rourke, I have the power and I am waiting for me hear-rt's desire. He was not in Ireland. Maybe he is in Ameriky. If so be I shall hear him coming—but he will niver go by me, as did a bhoy manny years ago along an ould path whin a gir-rl stood in the weeds of a mor-rning.'

"'Yez were a chit of a gir-rl—not fifteen years ould,' I retor-rted.

"And the uncomfortable laughter of the woman rang out again while I stared at her black hair above her pale cheeks.

"In that momint I seemed to catch a whisper underneath the laughter, a sound of hidden tears. It was the sound of me own youth dying in her hear-rt. 'Twas a strange thing to hear, for I raymimbered another gir-rl whose name yez will niver know, and it came over me that I was ould and the wisdom I had got was worthless. Me voice was like a croak whin I spoke.

"'Kathie,' says me bould Mickey, 'nobody has iver whispered in me ear. I shall niver have annybody slip up to me and speak softly to me. 'Tis me luck. But do not listen too much to yoursilf. Yez have looked at manny men and have said over their faults and at the end tur-rned away. All men have their confissions to make if they speak thrue; and who, do ye think, is better to hear and forgive than a wife?'

"She tossed her proud head in the twilight. 'Forgive!' says she. 'I will forgive no man! Whin I marry it will be my master, not my servant!' She laughed once more, her head on one side. 'I wondher if the man, whoiver he may be, will forgive me? For I will make his life sleepless and I will follow him all day with my whispers. Mickey O'Rourke, thank Hiven yez did not take the little gir-rl wid yez whin ye left the ould home!'

"So I took her back through the streets to me sister's house and left her there and wint back to the ship wondhering at the ways of women. The City of Panama was laid up for repairs and there was only mesilf and big Tom McCarthy to look after the engine room. I found Tom stripped and thrying to shave the back of his neck by the light of an oil lamp.

"'Tis late for such doings, Tom,' I remar-rks. 'The beauty show doesn't open till Tuesday week.'

"'For Why? Do They Not Turrn Round On the Street Whin They See Me?'"

Digitized by Google

"'I am shpoiling for a fight,' says Tom, stretching the huge ar-rms of him. 'And whin I am taken to the hospital I will be clean and proud, so that no man shall say I am not a gintleman.'

"'More power!' says me bould Mickey. 'And whin do yez star-rt on your career of crime?'

"'Tis one thing or the other,' says Tom. 'I will either get married or I will fight ten men.'

"'Yez will niver find the good woman to wed yez,' I tould him. 'Yez are homely—ugly—and your voice is like a fog-whistle. I will pick yez ten men.'

"Tom McCarthy stared at me superciliously and continued his work of desthruction. Whin he had concluded he rang the bell for the poor panthry-boy who was keeping watch in the saloon.

"'Bring me a pot of Java,' says me bould Tom. And whin it came he drank it scalding hot and tur-rned in to sleep. I sat up and thought over twinty years of wor-rk and misspent pay-checks.

"The nixt mor-rning Tom woke and dressed himsilf wid care. I inquired wherefore he was so particular and he answered me that the early wor-rm was the tidbit for the bir-rd.

"'Tis the good women are abroad in the early hours,' says he. 'I will step out and see who and what they are, for I am minded to get married while me pay for two years is unspent.'

"'Yez are a reprobate and destined for the pains of Purgat'ry,' I tould him. 'Who would marry wid yez?'

"'I have waited twinty years for the whisper of a woman,' says he.

"I thought while he was dressing. I raymimbered the har-rdness of the man, the fights he had been in, the sprees he had gone on—the ways of the man altogether. He was a har-rd customer, was Tom McCarthy, wid a hear-rt that niver broke and eyes that grew colder the more he fought. And I recalled the language of the man in times of stress, the big hands of him at wor-rk, the shouldhers of him heaving under his cinglet.

"'Me sister has a fri'nd,' I remar-rked—'a gir-rl from the ould place in Ireland. Her name is Kate Maguire and she is nigh for-rty years ould. I will take yez over and inthroduce yez.'

"'I will wed wid no ould woman!' says Tom.

"'Tis a bet I make wid mesilf,' says I calmly. 'Kate thinks no man is her equal and she vows she can bring anny man she wants to her feet.'

"'Whin I hunt a crowd 'twill be to fight and not to make love,' says me bould Tom. 'Who am I to struggle toward a woman in a throng of miserable landlubbers?'

"'No man has iver tamed her,' I wint on. 'She has listened to the wind these twinty years.'

"He cocked his head on one side.

"'Ye say?' he demanded.

"'She has listened to the wind,' I repeated. 'She is lovely and has white feet; but the hear-rt of her has niver left her bosom for anny man. And whin she has scor-rned yez ye will still have the opportunity to fight your ten men.'

"'No woman has iver scor-rned me,' he remar-rks.

"'She will freeze yez in one momint,' I tould him. 'Will yez go?'

"'I will go,' says he bouldly.

"'We will go tonight then,' I agrees.

"'This mor-rning,' says me brave Tom fir-rmly. 'I will not wait before I tame that girl with the proud hear-rt.'

"'Tis unseemly to make calls before evening,' I remonstrated.

"The felley squared his shouldhers under his big coat. 'I will go now,' says he. 'Yez have roused me curiosity and I will see this woman that listens to the wind.'

"So I surrindered; and we took ferry and car and came to me sister's house before nine in the mor-rning. Whin the door opened she was surprised. 'The childher are just gone to school,' she tells us. 'Tim is at wor-rk and the house is not swept.'

"'Let be, Mary dear,' says I. 'Tis Tom McCarthy, one of the engineers on the City of Panama. Call Kate Maguire.'

"'She has gone for a walk—I don't know where,' says me sister. 'Come in and wait.'

"'We cannot wait,' I remar-rks. 'I know where she is.'

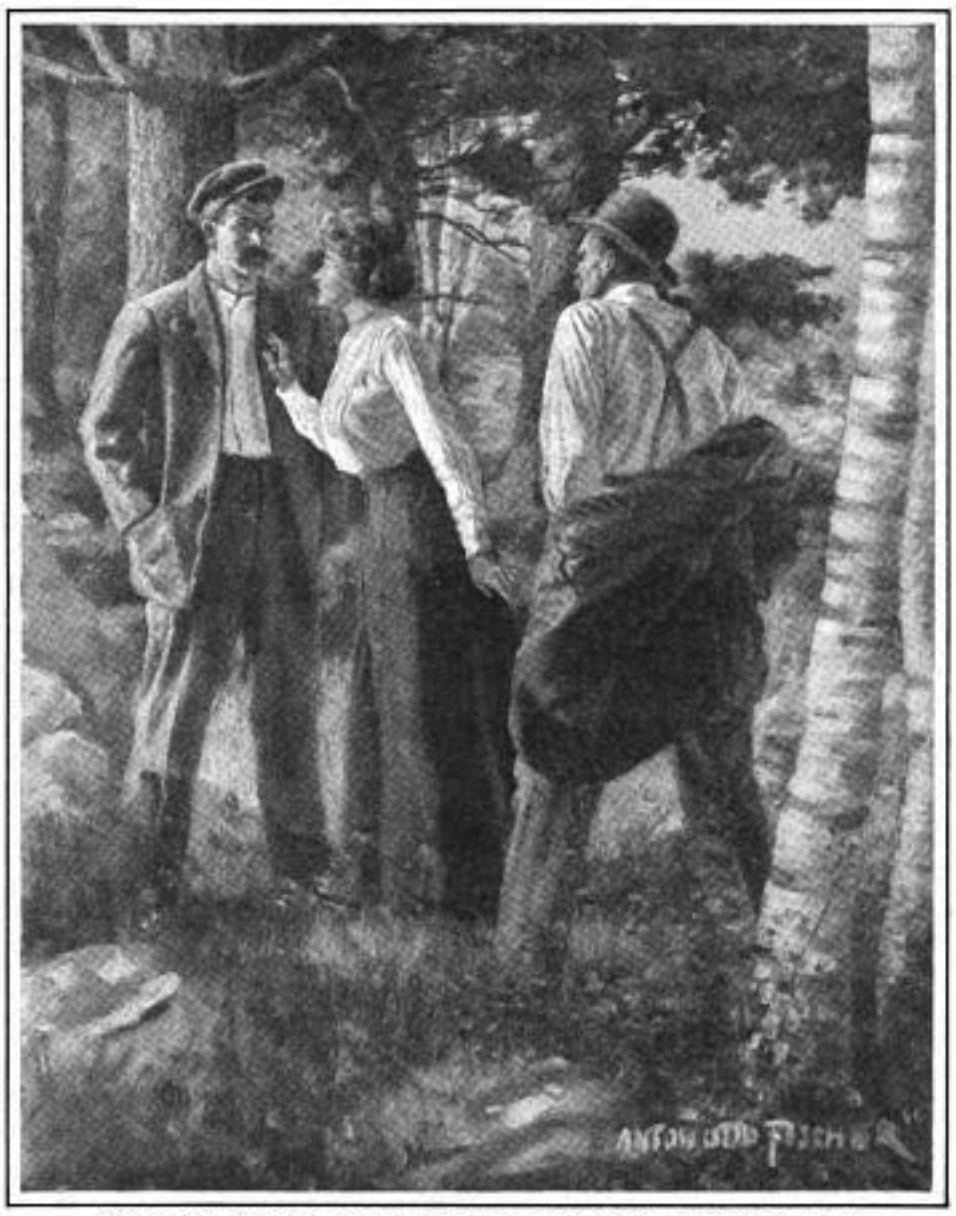
"'Thin yez know much that does yez no good,' says me brave Mary; 'for the woman is unblessed and a wanderer.'

"But I dragged McCarthy off and we took the road to the hills and into the little cañon where the sthream flows down between the green meadows. 'Twas a war-rm mor-rning and before we had got far Tom reached up and took off his collar.

"'Tis considhered poor taste to walk undressed through the streets,' I remonstrated.

"'I will choke mesilf for no man, or woman either!' answers me bould Tom, and stretched the big neck of him.

"So we came into the hills and, as I knew, Kate was walking in the soft grass undher the trees. She saw us and stopped, hiding her bare feet undher her gown.



"'Tis Misther McCarthy, Kate darlint,' I tells her. 'He is an engineer on the ship.'

"She looked at him through her blue eyes and the face of her was very pale undher the shade of the pines; but she said nothing. And I was ashamed of me bould Tom, wid his collar off and his throat swelling out of his shir-rt.

"Suddintly he said in a hoarse voice: 'I raymimber a gir-rl that walked barefoot across the fields whin I was a bhoy. Her feet were white.'

"'The childher see much that the ould folks have eyes for but niver catch a glimpse of,' retur-rns Kate, brushing her black hair from her ears.

"'She would have married me had I asked her,' wint on McCarthy. 'But what is the spor-rt of wedding a woman who needs no coaxing? I have forgot her till this day.'

"'Yez Will Not Touch Him! Whin I Was a Bit of a Gir-rl I Loved Him'"

"She tur-rned to McCarthy. 'Yez will not touch him!' she said softly. 'Whin I was a bit of a gir-rl I loved him. He wint away, but his place in me hear-rt is war-rm.'

"And thin McCarthy laughed too. 'I will not touch him,' he swore. 'I am going away now; but yez will raymimber me—Tom McCarthy. And whin the wind whispers of a dewy mor-rning yez will hear the voice of me calling.'

"'But if I call?' she says slowly.

"'I will not come,' he replies, staring at her. 'I have niver yet come whin a woman called.'

"The laughter of her sounded undher the trees like a sthream of happiness, but her eyes were dar-rk undher her brows. 'Yez will call and yez will hear only the wind,' says she. 'Now go!'

"To me wondher and amazemint we wint, McCarthy in the lead, his great shouldhers square and his fists closed be his sides. Whin we were downtown he tur-rned on me.

"'I will stay and tind the engines of no ship laid up for repairs,' he tould me. 'I am going down and ask the superintindint to change me to another steamer.'

"'But ye have been in por-rt but three days,' I protisted.

"'I am going back to the sea,' he remar-rks coldly.

"So he did. That night whin I came on board I found he had taken his clothes and exchanged with the first assistant on the Peru, which had left at noon for Ançon.

"I saw little of Kate Maguire the rest of me time ashore and it was a year later when Tom rejoined the City of Panama, the same big, obstreperous brute of an Irishman as ever before.

"He said nothing whin he thrust his stuff into my room, but merely nodded. And whin we were at sea he had still nothing to say for the two months it took us to run down to the Isthmus and back. Once more at Pier Forty-two, he came in and said:

"'I'm going to see Kate Maguire. Is she still with your sister?'

"'She is,' I answered. 'I expict she is married by this time.'

"'She is not married,' says he.

"'How do yez know that?' I demanded.

"'Because she is to marry me,' he announced fir-rmly.

"'Whin did yez ask her?' I inquired, astonished.

"'I have not asked her,' says me bould Tom. 'She knows that I will wed her.'

"'More power!' I remar-rks. ''Tis a fine woman yez are having to wife.'

"So he wint across the bay and I stayed by the ship till the nixt day, whin I wint over to see me sister and me brother-in-law Tim. They were full of the happenings of the day before.

"'That big mutt McCarthy was over here,' says Mary, 'and Kate tur-rned him down. The gall of the man!'

"'He tould me they were to be wed,' I remar-rked.

"'I could weep over the foolishness of men,' says me sister. 'To think that that felley should presume to marry Kate widout asking her!'

"'I will stay here tonight,' I remar-rked; 'for if Tom McCarthy has not his hear-rt's desire he will lick ten men before mor-rning, and I am too ould to be one of manny.'

"'He is a coward!' says a voice from the doorway—and I looked up to see Kate, lovelier than iver.

"'No man has iver said that,' I remonstrated; 'but 'tis a woman's right to speak what she need not prove.'

"'I have proved it,' she said, smiling at me.

"'How?' I demanded.

"'Yez are all alike—ye men,' she answered me. 'Shall I wait this long and thin marry a man to refor-rm him?'

"'Speak plainly, Kate darlint,' I insists. 'Hivin help the person that thries to refor-rm Tom McCarthy!'

"'I will listen to no more nonsinse,' says me sister, getting up. 'Tim and I will go to the theater and leave yez to chatter.' So she left us by oursilves. And once more I asked Kate what the matther was.

"'He came to me like a master and left me like a whipped dog,' she tould me. 'He could not speak for thinking of his sins, and he demanded of me that I help him overcome his faults. He made me his confissor!'

"''Tis the way of men who are in love,' I protisted.

"'And I wed wid no man who is not big enough to have his faults and still be my master,' says she.

"'Whisht!' I retur-rns. 'Is it no sign of love that a man would be clean before marrying?'

"'The fields are still green, but none walk them with white feet for yez anny more,' she answered.

"McCarthy bowed his head thoughtfully. 'Sometimes I think I see the grass bending undher her feet,' he said softly.

"''Tis the wind,' she replied.

"'I have listened to the wind manny times,' he responded; 'but I hear no wor-rds.' He lifted his big head swiftly, the man of him flaming in his eyes. 'I have hear-rd no wor-rds for twinty years!'

"She stood there, her feet undher her skir-rt, her hair drifting across her brows, and she studied him for the while. Then she laughed.

"'Mickey O'Rourke,' she cried, 'go away, and I will put on me shoes and speak wid this man for a momint.'

"I don't know why I spoke out, but before I knew it me tongue was wagging. 'I've known this waster for ten years,' I tould her. 'He is a brute of a creature—always fighting; always swaggering about the streets and cur-rsing his betthers. I have stood for his nonsinse for all this time; but I can lick him and I'll do it now, for that he has looked on you wid wide eyes and widout the rayspict due a gir-rl.' And I took off me coat.

"'No man has iver said that,' I remonstrated; 'but 'tis a woman's right to speak what she need not prove.'

"'I have proved it,' she said, smiling at me.

"'How?' I demanded.

"'Yez are all alike—ye men,' she answered me. 'Shall I wait this long and thin marry a man to refor-rm him?'

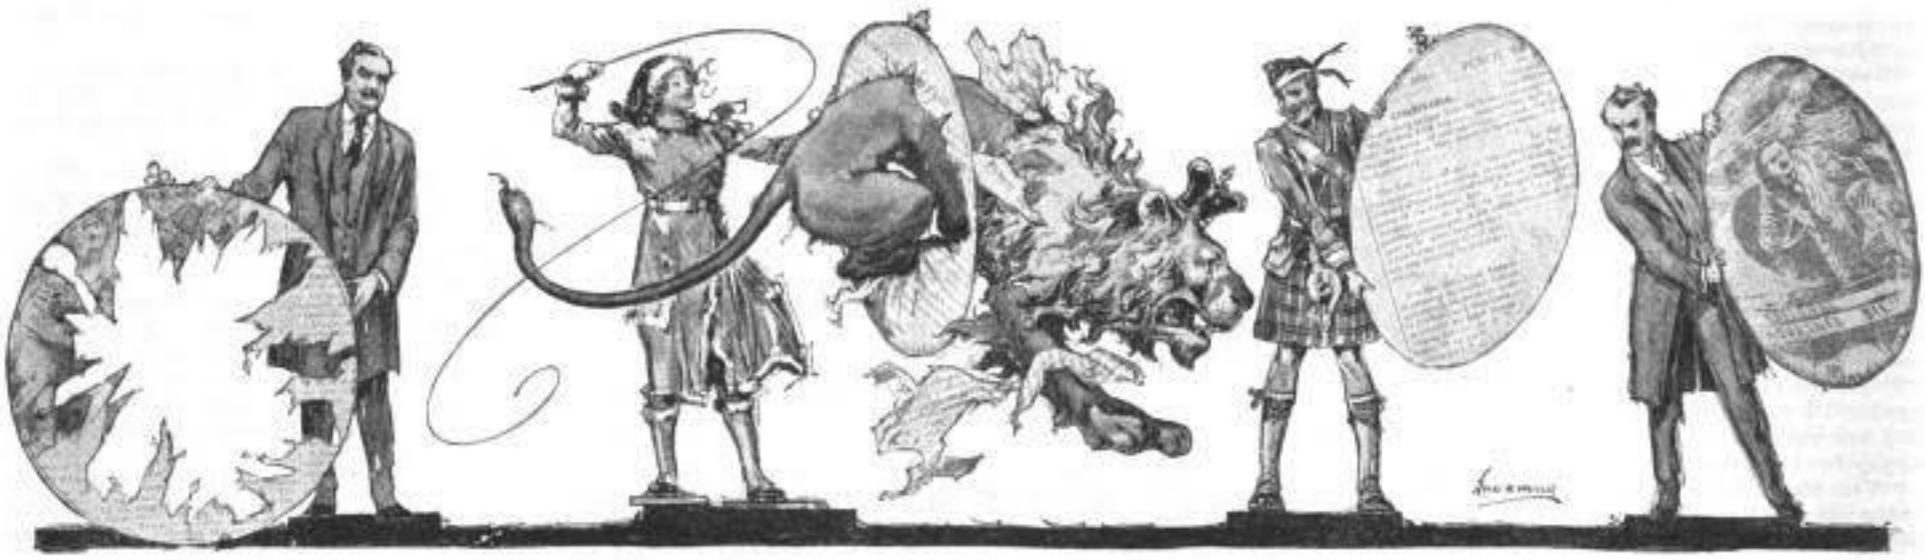
"'Speak plainly, Kate darlint,' I insists. 'Hivin help the person that thries to refor-rm Tom McCarthy!'

"'I will listen to no more nonsinse,' says me sister, getting up. 'Tim and I will go to the theater and leave yez to chatter.' So she left us by oursilves. And once more I asked Kate what the matther was.

"'He came to me like a master and left me like a whipped dog,' she tould me. 'He could not speak for thinking of his sins, and he demanded of me that I help him overcome his faults. He made me his confissor!'

"''Tis the way of men who are in love,' I protisted.

"'And I wed wid no man who is not big enough to have his faults and still be my master,' says she.



"'Whisht!' I retur-rns. 'Is it no sign of love that a man would be clean before marrying?'

THE LIGHTNING CHANGE

The Americanization of the Conservative Party in England

By ROBERT BARR

DECORATION BY JOHN R. NEILL

WITH the retirement of the Right Honorable Arthur James Balfour from the leadership of the Conservative party there departs from English public life the last of the great gentlemen. The door that closes on him closes also upon a very notable and interesting era of English history, an era that reflects the figures of great statesmen who engaged in politics, actuated by personal ambition, of course, but inspired mainly, as we may suppose, by love of country and a desire to promote what they thought would be its welfare—men like Pitt, Peel and Palmerston, like Melbourne and Canning, like Gladstone and Disraeli, like Salisbury and Lord Hartington. The position of the British Empire today among the nations of the world is a monument to their memories. They made many mistakes, no doubt, and the man who knows it all will find much to criticise in their careers; but their general trend was toward the light—toward freedom for the individual and liberty for their country.

To the casual observer, Balfour is a man who has led his party to defeat three times in about double as many years. The general election of 1906 was overwhelming. The Conservatives were buried under a landslide. The next general election—or budget election, as it is called—resulted in a tie, so far as Liberals and Conservatives were concerned. Great Britain really elected to supreme position a man it did not know it was voting for—namely, Mr. John Redmond, who, with the Irish Nationalists, held the balance of power. The third and latest general election produced a victory for Mr. Balfour. His party had a majority of two; but once more Mr. John Redmond held the balance of power. Now no man in public life is more honored, respected and even loved than Arthur James Balfour. He himself knows this very well; why, then, does he chuck up the game at this interesting point?

There is one expressive word which sums up the whole situation, and that word is "scrapped." Mr. Balfour has voluntarily scrapped himself. It is as if the venerable "one-hoss shay" accomplished its final act on meeting its first automobile. Balfour is "the knight in shining armor," as William Hohenzollern picturesquely expressed it; but the mailed fist of the latter, potent in its day, is of no use when it meets another holding an automatic revolver. Balfour belongs to a day that is gone, so far as England is concerned; and to understand this we will turn, if you please, from him to his constituency—from the man to Manchester.

The Splash that Mrs. Rylands Made

THE letter M is potent. "As Maine goes, so goes the Union," we used to say, and Maine begins with M. "Any man can carry Michigan!" cried Conkling contemptuously, even though M is Michigan's initial letter.

"What Manchester thinks today England will think tomorrow!" claim the inhabitants of that town. For long the Manchester school of politics ran the country. Manchester is solidly built, to last till the Judgment Day, or after. Its architecture is the final word in ugliness and utility. Its weather is the most drizzly, foggy and dismal on the planet. Nevertheless, the Manchester man possesses plenty of self-conceit. The Manchester man is as granite-hard as his city and is almost universally disliked, but he doesn't mind that. He cares nothing for the Colonies, except as they furnish him a market; he cares nothing for the Empire, except as an organization that enables him to make more money.

It is odd that the dreamiest, most literary philosopher in all England should have represented such a man and a section of such a city; but there is a streak of snobbishness in the Manchester citizen which inclines him toward a born aristocrat as long as that aristocrat makes no call on his pocket. In even a short conversation with you, a Manchester man is sure to mention his friendship with Sir James Thingummy or Lord John What-d'ye-call-him!

I do enjoy the treatment which Mrs. Rylands meted out to Manchester. Old John Rylands was in trade, of course, and every one knew he was well off; but none realized how rich he really was, for John was a nonentity in Manchester—a self-effacing, taciturn man, who lived frugally and had no friends to speak of. Neither had he any aristocratic connections; and as his mode of living convinced people that, though not exactly hard up, he couldn't be wealthy, society had nothing to do with him. He married somewhat late in life a very inconspicuous, commonplace woman, easily ignored—and she was ignored. In due time John died; and when his will came under the publicity of probate Manchester learned with amazement that he had been unbelievably rich. Mrs. Rylands was probably the wealthiest widow in England. Everything had been left to her.

Society began to sit up and take notice, but Mrs. Rylands proved much more exclusive than even the most aristocratic of duchesses. As more became known of John Rylands, it was discovered that in his quiet way he had been an amazing collector of books; rare and priceless editions had been bought, together with treasures of art and what-not. Mrs. Rylands, who would accept no advice, no friendships from Manchester society, continued this collecting, privately purchasing world-famed libraries that came into the market.

Through an agent she acquired one of the largest and costliest building sites situated on the main street of Manchester, and here was erected a structure differing from anything else in that town, considered by architects one of the finest of modern buildings. There was no publicity about this—no interviews: Mrs. Rylands would talk to nobody, would see nobody. When the building was finished it was used to house the priceless collection that had been accumulated, and was called the John Rylands Library. On ascending its broad stairway from the entrance, you are confronted with the honest, rugged face of John Rylands, done in white marble. This sumptuous palace and its contents of such incalculable value are free to all the world, and commemorate that face of stone which all must pass who enter the precincts of the library.

And now came the climax. Mrs. Rylands was a deeply religious woman, and the Bible has a text to the effect that an honest man shall stand before kings. She invited royalty to stand before the monument of her husband and present the gift of the magnificent building and its contents to the city of Manchester. As a usual thing, royalty does not accept invitations from private persons. It will open a great university or a senate house or some notable municipal achievement, but it won't launch a Dreadnaught or inaugurate even the most sumptuous Carnegie library. Mrs. Rylands' great if unostentatious benefactions were known in elevated circles, however, and royalty accepted the task of unveiling the bust of John Rylands.

Now Manchester awakened to the fact that the greatest social function of its day and generation was at hand; now was its time to grovel and beg for invitations; but Mrs. Rylands was not encouraging any groveling. She issued no invitations, leaving all that sort of thing to a committee of the court, and did not herself attend the gorgeous function.

Whatever may be said against Manchester from an esthetic point of view, it is, nevertheless, an efficient town. It knows what it wants, goes for it—and gets it too. When the mountain would not come to Mohammed, Mohammed went to the mountain. Manchester is much more modern. When it wished to be a seaport it didn't go to the sea, but lassoed the old ocean with its ship canal and hog-tied Neptune at its gates. The wonder is it put up with a meditative, inefficient man like Mr. Balfour for so long as it did; but at last he threatened its pockets by proposing to tax food. It would thus cost labor more to live and Manchester would be compelled to pay higher wages. So Manchester smashed him. Here is an English journalist's very human and touching note about Mr. Balfour when the debacle was announced:

> I saw him once in one of the greatest moments of his life. It was in the Conservative Club in Manchester, on that January night in 1906 when he suffered the overwhelming defeat of his career. His own constituency had rejected him. The whole of Manchester had abandoned his cause. The whole of England was denouncing his policy. There was a scene of bewildering excitement; and in the midst of it, with the gentle-faced, gray-haired sister weeping by his side, he stood erect and undismayed, humbly accepting personal responsibility for defeat, but proudly, serenely confident in the justice of his cause and its ultimate triumph.

And so, farewell, Mr. Balfour.

Who takes his place?—a roughrider of very different caliber. Well may Manchester, standing stolid like a bucking horse, gaze on the cowboy rising from the ground, who, with a grim smile, is brushing the dirt from his clothes. Manchester has flung him too. A year or two ago he was sent to contest a division of Manchester and, though he lowered the Liberal majority, he was defeated.

The Iron Man From Glasgow

ANDREW BONAR LAW is an iron man in every sense of the word. He dealt in iron in the iron city of Glasgow, and most successfully. He is a Canadian-Scotchman, or a Scotch-Canadian, whichever way you like to put it. Being one of that breed myself, I have naturally taken a great interest in his rise in the political world. He was born in Canada and I was born in Scotland. In our youthful days we changed places, and passed each other on the ocean, as it were. He had relatives in Scotland and I had relatives in Canada. His birthday is September sixteenth—so is mine. He wanted to get a university education—so did I. He tackled Glasgow University and I made an attempt on the University of Michigan, but neither of us pulled it off. He went to a practical school in Glasgow that taught him business, and I went to a practical school in Toronto that taught me my profession, so far as I was capable of understanding it. I prophesied that he would be the next premier of England, and thus combined we are the law and the prophet.

Keep your eye on Bonar Law. He is the only man in Britain who wrestled with Lloyd George and, oratorically speaking, flung that Welshman on his back, both shoulders and one hip touching the mat. It is odd to read in the papers that England does this or England does that. The

Digitized by Google

truth is, England does nothing. Its victories in war or peace are achieved by Irishmen, Scotchmen or Welshmen. It was a Scotchman—Campbell Bannerman—who led the Liberal party to victory and defeated another Scotchman, Balfour. It is an Irishman who rules the Empire today—John Redmond; while the bravest, most reckless, most resourceful, most competent politician in the Liberal ranks is David Lloyd-George, a Welshman. Even Winston Churchill is half American. Roberts and Kitchener, who saved England in South Africa, are both Irishmen; and, as I have admitted, I am a Scotch-Canadian.

Mr. Bonar Law brings an asset to the Conservative party it has never before possessed, and that is American efficiency. He is a human calculating machine. It's hard luck for any opponent of his who is careless in his facts or his figures, in Parliament or on the platform. Bonar Law, like a steam hammer, smashes him into smithereens.

"Not quite fair as a controversialist," wails one of the Liberal papers this morning in speaking of the new leader. Any one who has listened to Bonar Law in debate will appreciate the pathos of this remark. Mr. Law is a sort of looseleaf encyclopedia. During his speeches I have never seen him refer to notes; but they are there, all the same. He is like a magician who fishes up unexpected rabbits from impossible places. Let one of his figures or one of his facts be challenged, and quietly, from vest pocket, or from outside or inside coat pocket, or from hip pocket, or from trousers pocket, Mr. Bonar Law produces his authority. There's the original document in every case—statistics, reports of speeches, pages from the Hansard, which is the parliamentary Congressional Record, as it were. If you stood the man on his head and shook him out there would float from his pockets enough of fragmentary information to fill up Webster's Unabridged. He is the live wire of controversy; and even the confident Winston Churchill keeps clear of the current when he can. Proceedings in Parliament will be interesting from now on.

To illustrate what I have been trying to tell you, I shall relate two incidents exactly as they occurred during the last election in our cherished city of Manchester. The incidents are strictly true, though I suppress all names to prevent heartburnings.

When a man is nominated to contest a constituency he or his friends must put up a certain sum of money with the returning officer, or whoever the official may be, which sum varies from a hundred dollars to three thousand or thereabouts, depending on the size of the constituency. I am not learned enough in election practice to know just what the particulars of this donation are. I think the money is returned to the candidate after election and that the donation is merely a sort of guaranty fund, so far as the candidate is concerned—an evidence of good faith, like the signing of your real name when you communicate with the newspapers. Anyhow, the law demands it, and the money must be paid on a specified day between the hours of twelve noon and three P. M., during which time the officer is at his post in the Town Hall to receive it.

In one of the divisions of Manchester at the last election a wealthy young aristocrat received the Tory nomination. He and his agent called with the cash in Bank of England notes at eleven o'clock that morning, and were informed the money could not be received until twelve.

"In that case," said the young fellow, "let's go and have luncheon." So they went out, got into his automobile and departed to a spot where the feeding was good, for the Manchester man loves the pleasures of the table and has the boodle to pay for them. Some time later a certain noble lord who takes a vivid interest in elections came up with a few friends to the room of the official, to make sure the money was paid. The official courteously informed him that the candidate and his agent had called in with the cash, but came too early. They had gone to luncheon and he was expecting them back every moment.

The afternoon wore on, as novelists would say, but neither the candidate nor his agent put in an appearance. Too late, the noble lord, who had been consulting his watch a good deal and comparing it with the big clock over the official's desk, rushed out and into the nearest bank.

"Give me five hundred pounds in Bank of England notes!" he cried.

He was well known, was a mighty lord, tremendously rich; and, in spite of Manchester's accurately businesslike bank habits, the money was produced and flung to him, without check or note. He made record time back to the office. The clock showed it was four minutes after three.

"Too late," said the official.

The remarks of the noble lord would not be printed in this weekly if I wrote them. A few moments later, panting and disheveled, in rushed the election agent with the money in his fist; and so heedlessly he ran and so exhausted was he that he fell full length on the floor. He was followed into the room more leisurely by the inane candidate; but his opponent was already a Member of Parliament. He had been elected without a contest the moment the hour of three had struck—elected through the default of the other side in not lodging the money in time.

Here you have inefficiency *in excelsis*.

The next dramatic scene I have to relate took place at midnight of the day that ushered in the last general election. The scene is the very comfortable dining room of the Conservative Club in Manchester. All political work was finished and the next twenty-four hours would record the result. A midnight meal had been spread out for the tired Conservatives, when there entered a young man, rather shopworn in appearance, with a slouch hat pushed well to the back of his head. He shied this hat into a corner and sat down at the table with a sigh of exhaustion. He was received with something like a cheer. The noble lord aforementioned was on the opposite side of the table, and beside him was the editor of the chief Conservative journal.

"How goes it?" said the latter across the board to the tired young man.

"I think I've got 'em!" he replied confidently.

Now a few weeks before that young man had no more idea of standing for the British Parliament than he had of aeroplaning to the moon. He was a Canadian from the same district that had produced Bonar Law, but he had never resided in England. On this occasion he was over in the old country merely on a visit, when he suddenly made up his mind to take part in the fight, and so was given a hopeless constituency. The Liberal who represented it had a majority considered safe. The Canadian had given Manchester the campaign of its life. A few nights before he had hired every motor to be procured, filled them with the best speakers he could get, and thus paraded his constituency. The motor cars, when collected together, would fill the biggest square in Manchester.

Now, as he said, he was hungry as a bear.

"What have you got to eat?" he cried.

"Anything you like, sir," replied the urbane waiter.

"Put me on, then, the biggest beefsteak you can find."

Inner Secrets of a Merchant's Rise

By Edward Mott Woolley

ILLUSTRATED BY HY. J WATSON

AT THE age of eighteen I was a clerk in a hardware store about two hundred miles from the city of New York. One day it occurred to me to build a locomotive in our show window, using for its construction as many different items of hardware stock as I could get into it.

"This was not the first idea of the kind I had put into execution. I had built a warship, a fort, a factory, a threshing machine and other somewhat unique displays, all of which had attracted a great deal of attention from our townspeople. So now, when I started my locomotive, on a more elaborate scale than I had ever attempted before, I had an audience at once. Our local newspaper indulgently announced that 'Buddie Jones has begun work on a locomotive in the window of our enterprising friends, Smith Brothers, and half the town is watching him. Unfortunately Buddie can work on it only during his spare hours; and, since the Smiths are busy folks, the engine is growing slowly. Buddie says he hopes to finish it in about two weeks. We are proud to have such an enterprising boy in our midst. Some day he will be a great architect or engineer.'"

This local newspaper, however, was very much mistaken. The man who quoted the foregoing extract is today one of the greatest merchants in New York. Had the newspaper been analytical it would not have made the mistake of predicting a professional career for "Buddie."

This man's rise from obscurity to a high position in the world of commerce was very rapid. A good many sketches of his career have been published lauding his ability, industry and perseverance; but no one has ever printed the real secrets of the formula by which he climbed the ladder. He gives them here for the first time in such concrete form that any man of ability and reasoning power can adapt the principles to his own case.

"My locomotive," he went on, "was about six feet long, taking up pretty much the whole window. I worked from a photograph I had taken one Sunday. I used a concealed framework of wood, into which I fashioned many kinds of cutlery, cooking utensils and general hardware. At best, the thing was a grotesque locomotive, but it had the general outlines; and, what was more important, it drew the biggest crowds ever seen round a show window in our town. Everybody was talking about Smith Brothers' locomotive, and even the farmers for miles about came in to see it. Of course a lot of trade drifted our way because of it.

He Was Not Naturally a Bold Merchandiser and Had to be Crowded All the Time

"One day, when I was putting the finishing touches on my creation, a man came into the store and spoke to me:

"'Boy, where'd you get that idea?'

"'Why, I got it out of my head, I suppose,' said I, a little suspicious. 'Don't you like it, sir?'

"'Yes, of course,' said he; 'if I hadn't liked it I wouldn't have bothered coming in here. Do you think you could get more ideas of that sort out of your head?'

"There was a big crowd outside the window watching us. Unlike some window-trimmers, I worked in the open. I was doing the thing to attract attention, so why hide behind a curtain? Half our town seemed to be fascinated in watching that clumsy contrivance grow day by day.

"'Well,' I told him, 'I rather think this isn't the last, by any means. Look at those people out there! So long as I can draw the crowds, I imagine I'll keep on digging up ideas.' Then I told him about the warship and fort and factory and threshing machine.

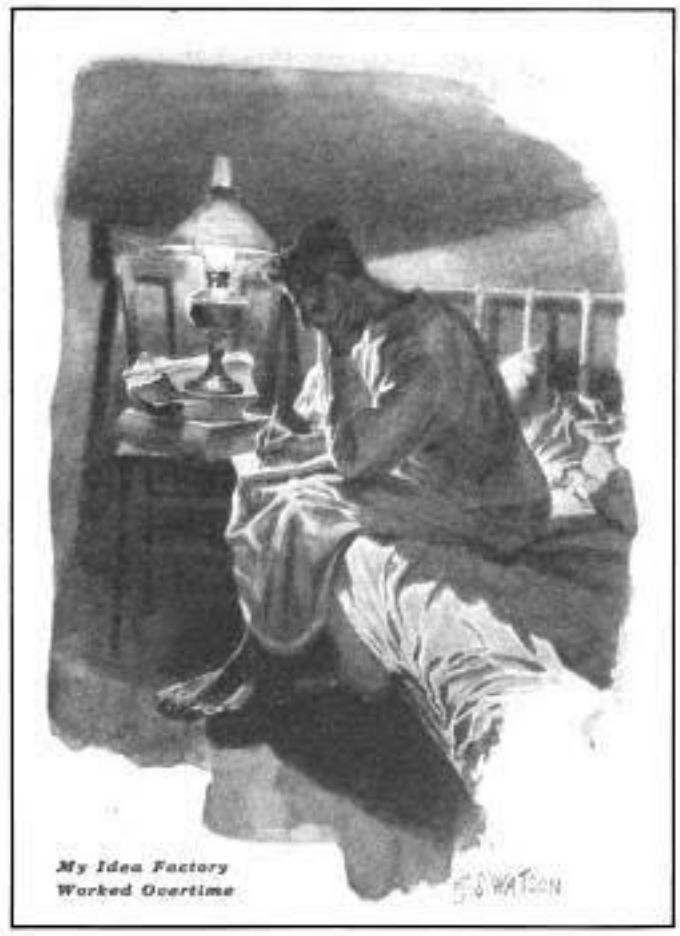
"'How much wages are you getting for all this?' he asked.

"I wasn't quite sure I ought to tell him, but finally I confessed that Smith Brothers allowed me five dollars a week, but generously promised me six after New Year's.

"'Well,' he said, 'I'll give you ten dollars a week if you'll work for me in Blankville. I run a hardware store over there, you see. And let me tell you, boy, if you make good on these ideas you seem to have there's practically no limit to the money you can earn in time. What we men in business want is chaps who can get the trade for us, and wages don't count if you show results.'

Digitized by Google

"I was staggered. That night I put the proposition before my father and mother, and they consented reluctantly to my going to Blankville, a city of a hundred thousand people forty miles away.



"So here I made my first upward step; and luckily I had an employer who gave me to understand very clearly how it had come about. It wasn't merely a boy he wanted. He could get plenty of husky eighteen-year-old youths in his own city. There were thousands of them who could sweep the store and handle stoves, and even sell goods over the counter; but somehow—it seemed very strange to me—there was a scarcity of boys and men who had ideas. In all the history of this Blankville hardware store, nobody connected with it had ever drawn the crowds in the way I had drawn them for months to Smith Brothers' little store.

"I think the events I have so far narrated were the most vitally formative of anything that ever happened to me. They gave me, at the beginning of my career, the key to success. The ordinary hardware clerk, I perceived, worked merely with his hands; I had been working with both hands and brain. And, now that I had the principle of the thing brought home to me by the episode of the locomotive, I set to work to think out ways by which I could get the people to trade at our store. That, I realized, was what I had been hired for; and my fabulous salary of ten dollars a week spurred me on. I simply had to make good!

"When I returned from dinner the first day I was in Blankville I noticed that all the stores on the street were very much alike in outward appearance—indeed, so much alike that I had to look sharp to make sure I was getting into my own place of employment. This set me to thinking. I had been hired, I imagine, chiefly as a window-trimmer with original ideas, but already I was outgrowing my job. I asked my employer why he didn't do something to make his store-front different from the common lot, so that people could spot it at a distance and remember it.

"This rather primitive idea struck him as unique. Like most business men, he hadn't even thought of making himself distinctive. He said he would get a painter at once and change the color to red. 'Why don't you paint it black?' I asked. 'Black is the natural hardware color; and, besides, it's a color that isn't likely to be imitated. If I were you I'd paint it the blackest black I could get.'

"He demurred at first, declaring that black was a funereal color, but finally he decided that even a brisk funeral was better than some live folks he knew. Black it was thereafter, and the effect was absolutely startling! Among those cold drab fronts that lined the street our store stood out in somber gravity, but unmistakable distinction. 'Now if we only had a brass band and a procession,' he remarked dubiously as he stood on the opposite side of the street the day after the painting was finished, 'we'd be ready to march to the graveyard!'"

My Idea Factory Worked Overtime

The Rise of the Black Store

"WE GOT the brass band a few weeks later, and the procession followed—a procession of customers. For some days I had been building a model kitchen in our show window, for the purpose of displaying to the best advantage our stock of cooking utensils, and I had been trying to think up the best way of getting the people out to see the thing. Suddenly recalling the remark about the band, I dropped my work and hunted up my employer, suggesting that we build a little balcony outside the upper windows and really get a band to give a series of afternoon and evening concerts. The plan proved popular; our funereal-looking store was really getting to be a lively proposition. Already it stood out among the stores of the city in a way that was undeniable. There was nobody in town now who didn't know the black store.

"I can't just explain how all these ideas came to me, but I know that ideas, after all, are a sort of habit. So far as I could see, I was cast pretty much in the mold of other men, but the men about me certainly didn't get ideas the way I got them. I haven't a shadow of doubt but they could have got them had they really tried. One must go after ideas and catch them, and when they are caught must chain them up so they can't escape. All my life I have been running up against men who had valuable ideas flitting through their heads and didn't know it. I have gathered from other people a host of selling schemes in just this fashion—often from my competitors.

"That, indeed, was the way I got my idea for a traveling show window, which was one of the biggest hits we made during those early years. It chanced that I boarded at the same house with a young fellow who worked in a competing hardware store. One night at supper he asked me, with some sarcasm: 'Well, Bud'—my nickname had followed me to Blankville—'what window monstrosity are you going to have on parade next?'

"Quick as a flash the idea was mine—and I kept it dark, you may be sure. As soon as I got away from the table I took out my notebook—in which I was in the habit of scrawling fragments of ideas as they came to me—and wrote: 'Window on parade.' Thus I chained up the idea for future use. That notebook was really a marvel. Why, even to this day I go back over that first soiled and almost illegible record of ideas and get from it material for present use. Since then I have filled notebook after notebook; I am still doing it and always shall. There is scarcely an hour of the day that I don't take it out to imprison some fleeting germ of a selling scheme which otherwise would be gone in a moment. Without doubt I have sold millions of dollars' worth of goods through the ideas I thus corralled.

"To go back to the particular idea I thus abstracted from my competitor's clerk at the boarding house. I pondered it long and deeply. Why wasn't it just as logical to take our show window round the city as to have the city come down on Main Street to see it? My employer agreed with me that it was. He was getting to be an enthusiast in ideas, like myself, for he was reaping substantial returns from them.

"We hired a suitable wagon, inclosing it with a special body having long glass windows on both sides. In this we fitted up a very pleasant sort of living room, the most conspicuous feature of which was a big baseburner stove. My employer hired a pretty girl to ride round in this cheerful living room; and, with a real fire in the stove, the thing was as catchy a piece of advertising as I ever invented. Our policy was to have it cover different streets day by day, making frequent stops of an hour or two on the corners, so as to give the advertising a chance to soak in. Of course we had placards and literature accompanying it.

"I've forgotten how many stoves we sold that season, but I do know that we put out a great many more than ever before. The wagon was continually surrounded, wherever it went, by an interested crowd. The whole town talked about the black hardware store.

"We followed up the traveling stove display with others, such as a moving cutlery exhibit, a razor demonstration, a garden-implement display, a tool exhibition, and the like. Some of these were so successful that we sent the wagon out among the farmers. The most notable of our efforts in this campaign, however, was our paint display. That year we more than doubled our sales in this line of goods.

"All this time our chief competitor never dreamed that one of his own clerks had given us an idea that helped us to exceed him greatly in volume of sales and profits. Of course he might have taken the plan himself after he saw we were making good with it, but he didn't want to put himself in the position of imitating us. And, not having any original ideas of his own, and no policy of capturing the escaped ideas of others, he lay back and watched us grow.

"My idea factory worked overtime. Nobody realized how hard it worked to get up selling schemes. These were my hobby, my delight, my companions day and night. I can say without hesitation that my success has come from a multiplicity of selling schemes. And yet these schemes did not come to me ready made, any more than the products of industry come to the manufacturer ready to sell. It was my deliberate business to reach out in every direction for the microbes of plans to be put into cultures and developed. I made mistakes, a lot of them, and came near capturing a pestilence now and then; but far oftener I succeeded. Better a man who falls down now and then than one who never ventures in a difficult path!

"I have often been amazed at the selling opportunities some business men let slip through their fingers without even seeing them. For instance, I learned by investigation that an average of half a dozen weddings a day took place in our city among the well-to-do people. The majority of these newly married couples settled down to housekeeping right there and, of course, became steady customers of various stores. Yet no systematic effort was being made by a single merchant in town to get their trade.

"I kept thinking of this curious state of affairs and wondering how we could appeal to such prospective customers, when one day I was invited to a wedding myself. It was up to me to send a present and I selected a coffee-pot from our stock. It was a new design and of new material, and I learned afterward that it was much admired. Straightway I had my idea for the selling scheme. I proposed to my employer that we order a special lot of these coffee-pots and then, watching the marriage licenses, make each bride a wedding present of one, together with our compliments and literature. It would give us a splendid opening wedge, I suggested, into a valuable line of trade, and we could clinch it with a diplomatic follow-up campaign. Of course, I admitted, we should have to use some discretion and several grades of coffee-pots. Some of them might well cost us two or three dollars apiece, while others would have to be kept down below a dollar.

"My employer looked askance at the plan at first. He was not naturally a bold merchandiser and had to be crowded all the time. He consented to try the scheme as a feeler. Well, we sold to those newly wedded folks that year enough goods to pay for the coffee-pots a hundred times over; and, furthermore, we secured scores of steady customers who remained with us for years. In the first place, it was a delicate and personal appeal, which general advertising never would have had; in the second place, the black hardware store already had an individuality that clinched the thing. I often saw the wisdom of establishing a personality before we specialized like this.

"Then I saw another selling opportunity—generally overlooked—in the carpenters and builders. Here was a big line of tools in which no dealer in our city had specialized. We ordered a lot of first-class hammers; then we selected from our lists a hundred journeyman carpenters and made each a Christmas present of a hammer, along with a card that read: 'Don't knock anybody with this; but remember that the black hardware store can sell you high-grade tools at the lowest prices.'

"Did it pay? Why, we were amazed at the tools we sold! We kept getting results during the whole year; and you may be sure we kept up our specialized campaign in this direction. We had a most marvelous system of follow-ups.

"So, in like manner, we took up all the various trades that used our lines and worked ourselves into their good graces by every insidious scheme I could invent. No line of trade was too small to be captured. We even directed an individual campaign upon schoolboys by offering prizes in a Saturday jack-knife guessing contest."

How Bud Boomed Blankville

"I AM not telling you these schemes for you to imitate, though some of them are still good. Conditions have changed in some respects since those days, and old ideas often can be vastly improved upon. Indeed, we found it wise even then to originate new schemes constantly and let the old ones die when they had lost their novelty. Selling is a lively game when it really gets results; and one reason so many men fail at it is because they don't work their idea factories hard enough.

"My employer was strong on store management and values, but weak on the actual selling. Most merchants don't seem to understand that the goods comprise only half the art of business. The other half is the handling of the people. Either half by itself must fail.

"When I was twenty-five years old I was receiving a salary of forty dollars a week, which was not so bad at that period. About this time we began to reach out into new territory. If we could sell so many goods in Blankville, why not in other towns? So, one by one, my employer picked up a chain of small, unsuccessful hardware stores. One of the first he acquired was the store where I had built my original hardware locomotive. I felt sorry for my former employer. I could see all about him the same opportunities for selling that I had found up at Blankville. The markets were there, but he hadn't risen to them. He hadn't made the specialized, sustained effort necessary to

Digitized by Google

get them. Business with him was a lump sum; in reality, it is a complex maze, each problem of which must be reckoned with by itself. The same scheme that will sell a bride a stove will not sell a carpenter a kit of tools or a builder a lot of door-hinges. You must reach out and get hold of your different lines of customers, and not merely stand behind the counter and call to the general public.

"The local paper in my old town now came out with a genial personal, in which it said: 'Our former townsman, Buddie Jones, has been in town for several days, making arrangements to take over for his company the store of Smith Brothers. We understand that Smith Brothers, always enterprising, have sold out at a handsome profit and will look round a while before engaging in business again. Buddie is now general manager for his house and will make his headquarters, as formerly, in Blankville; but we hope to see him oftener at his old home. We always predicted that Buddie would make a howling success of business. Lucky boy, Buddie!'

"This was about as close as anybody—our competitors included—came to analyzing my success correctly. Lucky boy, indeed! It is about as close as some men come to analyzing success today."

Bud Shakes Up His Own Town

"RIGHT there in my birthplace I duplicated the things I had done up at Blankville. My first employers had had seven years in which to watch me since I left them. It seemed to me that any men, with even mediocre capacity for observation, might have seen how I had done it; but, even under the shadow of success, they had gone along courting failure. The 'handsome profit' spoken of by the local newspaper was in reality a despairing grasp at a straw. The store that I had given an individuality with my warship and locomotive, and the like, was about as limp a little proposition as one could find. I had to take hold all over again and bolster it up; but within two years I had made it the most profitable enterprise in the town. By getting my selling grip on people I made them buy. To tell you one-tenth of the schemes I put into operation would take a book. I used the same black paint, the same brass-band idea, the same traveling show window. I broadened the black idea by using black wrapping paper and twine, and heavy black lettering on all our literature. I never lost an opportunity to feature our store and goods, but watched with hawklike eagerness. In some way every local event had our store pinned to it. If there was a fair, or church sociable, or picnic, there the black store was busy with a contribution or a puzzle game or a booth—or something whereby the people gained as well as the store. At births, weddings—and even funerals—we were on hand. To every boy born in the village we presented a sled or something of the sort; to every girl a doll's buggy or an appropriate toy. Each bride got a handsome present and every new widow a cluster of white roses, with our condolence. It was a little town, and we were very close to the people. We meant to make our store the most popular institution in town, and we did.

"And then the special sales we held! Why, the people came from the country and surrounding villages to take advantage of them! I announced, for instance, that if it rained on a given day I would mark down certain goods forty per cent. The interest in this proposition was really amazing. I got echoes of it from far out in the country districts. The day in question dawned bright, but in the afternoon there was a furious thunderstorm. Then came the crowd—and we had to keep open until eleven o'clock that night to get rid of customers. We sold enough stuff to make up the loss on our gamble and a neat profit besides. In addition, we kept the game moving, which was my chief motive.

"Another time I staked my reputation as a weather prophet on the announcement that the temperature would go to zero on a specified day; if my prognostication proved correct, then I would celebrate my skill by giving from ten to twenty per cent discount on various lines of stock. In this little scheme I not only stimulated a great deal of interest in the black store but I assured the store of a very fair trade on a day that must otherwise be extremely dull. Well, it did go to zero; but the farmers came in just the same and carried away a cheerful lot of merchandise.

"Again, I advertised that if the weather were bright on a Tuesday it would be a splendid day for painting barns and the like, and that therefore I would offer big bargains in paints and brushes if bought between the hours of eight and five. This was in the summer, and I knew how absolutely dead our store would be on a bright day in harvest-time, with all the farmers in their fields. If I sold them anything on such a day it would have to be through skillful engineering. Furthermore, I knew that few of the farmers would come themselves, but would send their sons and daughters and wives. I claim, however, that my cunning was thoroughly legitimate. What is a man in business for? I fixed up a special display of everything in the store that would appeal especially to women and children.

"The day was perfect. Between eight o'clock and two the forerunners began to straggle in; by two o'clock the store was pretty lively; by four there was a veritable crush of womenfolk and children—and we did the biggest summer day's business on record.

"And all this—Heaven save the day!—was in that little old store where first I got a job!—the same little old store that had barely lived for so many years, yet suddenly had been galvanized into a proposition that cleared—net—five or six thousand dollars a year! Will anybody say that Buddie Jones was merely lucky?

"No; this thing we call success is a definite art that one must cultivate with the exercise of his gray matter.

"But I had a test ahead of me that was far more severe than this. At the age of twenty-eight, when I was drawing sixty dollars a week as general manager of our chain of hardware stores, I received an extraordinary offer from a New York wholesale house. Already I had refused several New York offers, for I had a girl in Blankville and was in no hurry to leave. Now, however, with a salary of six thousand dollars a year in sight and an interest in the wholesale business, I could not afford to let the opportunity slip. My Blankville employer realized too late that he had made a mistake in not letting me in on the good thing I had built up for him. He offered now to set aside a partnership interest for me and raise my wages to seventy-five dollars a week; but I saw a bigger thing in the metropolis.

"So we had a quiet wedding, and my wife and I moved down to the great town on the Hudson. I scarcely realized the tremendous fight I was undertaking, but I think I should have gone anyway. The fight for business is to me the greatest sport in life.

"The wholesale hardware house of which I was now the general manager was, I soon discovered, a losing proposition. I was almost dismayed when I began to realize how it had been dropping down in the list of aggressive houses. I understood now why the chief owners of the business had sent up to Blankville for a manager.

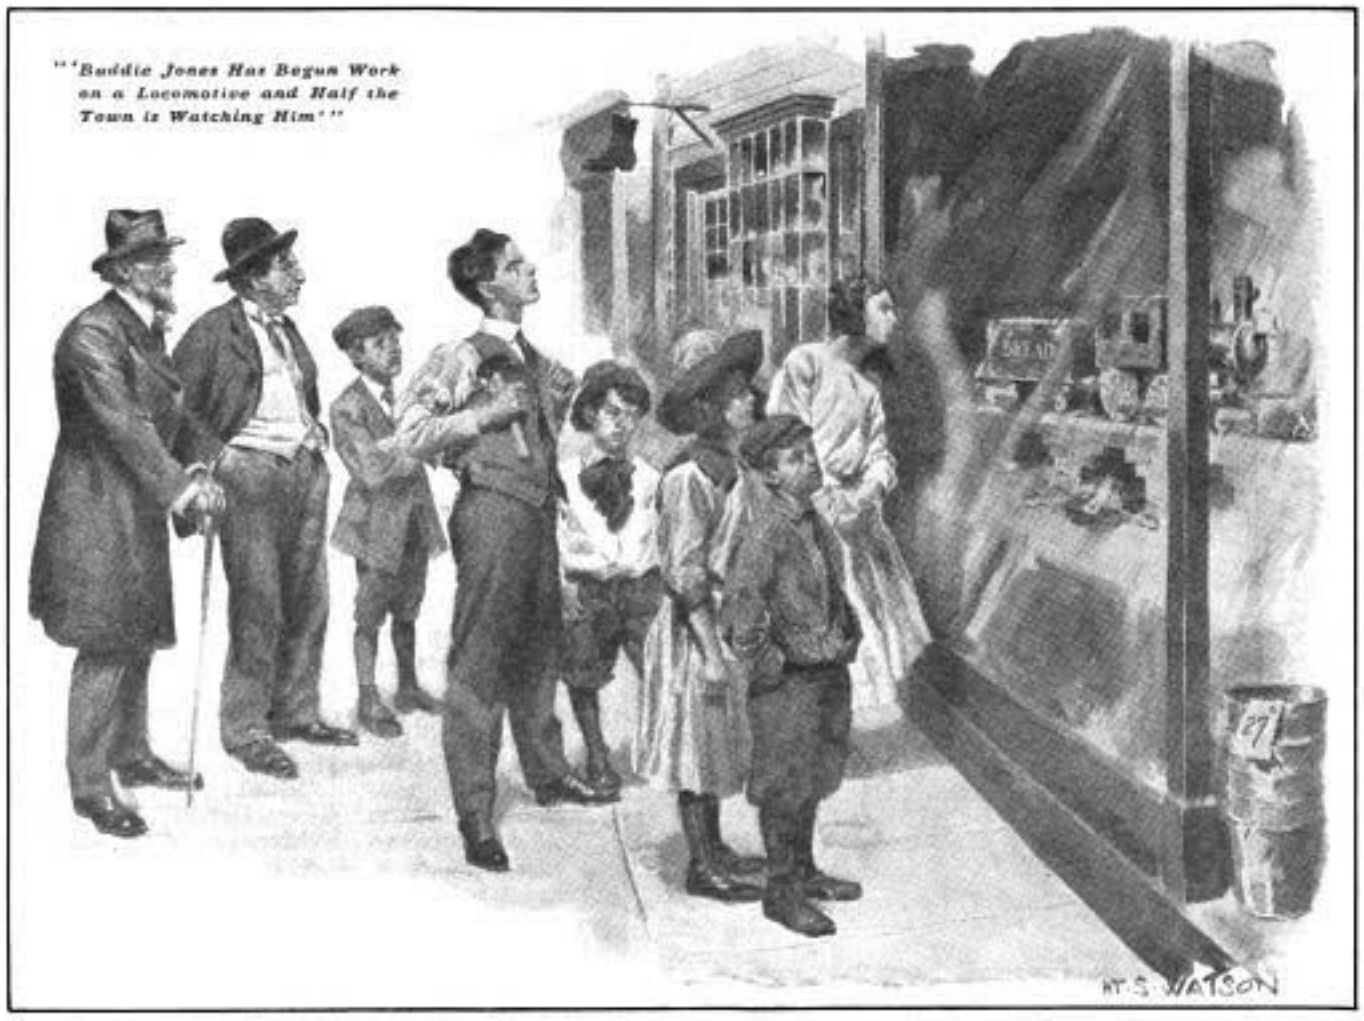
"It took me quite a while to get my bearings and measure our competitors. They were a powerful lot, backed by great capital and carrying goods that had the advantage of popularity and trademarked reputations. Our own establishment was by no means young and in its earlier years had enjoyed an excellent trade; but bad management on the part of the heirs who had fallen into it had brought it to its present straits.

"My first proolem, then, was to find out the precise elements that had gone tc make up that bad management. I never waste breath over lump-sum propositions. Many a time I have seen a man buy out a poorly managed business and then go right along in the old rut!

"A careful analysis of our goods showed me that many of them were mediocre or lacking in a definite standard. For instance, we were carrying a nameless half-breed line of tools, some of which were very fair and some practically worthless. Formerly we had carried a certain line put out by a high-grade manufacturer; but another house had got it away from us and was handling it exclusively."

Putting Life Into a Dying Business

"TO GET our goods back on a sound basis was the problem requiring my earliest attention. What I did with our lines of tools is typical of my efforts with other goods later on; I concentrated first on tools, because it was vitally necessary to get quick action on something. My advice to the downhill business always is to concentrate—first upon the most likely line available, and then, one by one, on other lines.



"I went up into Massachusetts and had a day's earnest talk with the head of a certain establishment manufacturing hand tools. I proposed that together we undertake a determined selling campaign. I agreed to invent all the selling schemes and do the actual marketing, while he was to strengthen his qualities to a definite standard, trademark some of his lines in a pulling way and spend some money on specialized advertising. Of course my house was to have the exclusive handling of these particular trademarked lines.

"The reputation I had gained up in the Blankville territory enabled me to close the contract, especially as this manufacturer had been wondering for a long time how he could sell more of his product.

"While the manufacturer was getting his quality into shape I was busy with my selling organization. We had only nine traveling men at that time and our financial handicaps prevented plunging, even had I wanted to go about it that way. I called in all our salesmen and studied them at first hand, went over their records, analyzed their territories and put the results on paper. I have always found that an analysis, no matter what, takes on a different aspect when it is written out in cold words.

"Then I gave a little dinner to these men, taking care that no outsiders were within hearing. Over our cigars, I talked until three o'clock in the morning. I suppose what I said about the art of salesmanship sounded rather fantastic to some of those men, but every word of it was based on what I had done at Blankville. I told them that selling was really a science composed of a host of little things and that each one of these little things was of itself a selling scheme. One by one I took up a score of these lesser ingredients of salesmanship—entirely removed from the great problem of the goods themselves—and

LOVE IN LONGACRE SQUARE

A PAGE OUT OF THE SOUTH SEA ISLANDER'S BOOK

By Robert Emmet MacAlarney

ILLUSTRATED BY MAY WILSON PRESTON

GEORGE HENRY LEFFINGWELL was not interested in the tenets of the man who was said to have discovered the germ of business efficiency.

"How in the dickens can he have the nerve to say he has found the secret of running your business for you better than you are running it yourself?" he would ask when his opinion of this new cult in trade was called for.

"Of course there are badly run businesses. Why not? But they get snuffed out as soon as the dry rot sets in. The man who can't conduct his own enterprises without calling in a spectacled first-aid visitor—at a more than efficient salary—is booked to shoot the chutes; he ought to shoot them—the quicker the better. I believe in efficiency all right. When I find that the advertising game is going against me I won't wait to be told what is the matter with my office. I'll just shut it up and take to conducting on a pay-as-you-enter car until I get a stake to hit the efficiency trail in some other line. Do you get me?"

Leffingwell's visitor usually would "get him" and know that he meant what he said.

From all of which it may be inferred that the head of the G. H. Leffingwell Display Advertising Company, with a suite that occupied the top floor of the Vampire Building, was a deliberate efficient. He was. He represented the residue of what had been subjected to that most acid of tests—competition to splotch Broadway and the theater and hotel zone with yellow-and-red painted tin in the daytime and surprising electrical displays at night. No play producer ever worked more savagely to stage spectacular drama than did this young man to devise an ad in green and red tungsten bulbs which should have the "kick" in it.

You know his work just as well as you know that a canvas with yellow sunlight dripped over it is Sorolla's, or that a blend of wiry ponies, a few redskins and a cloud of alkali dust has been painted by Remington. You've seen, and remembered, and told your second cousins in Punxsutawney, Pennsylvania, about the creations of the Leffingwell School, when those second cousins have come to town to pay that long-threatened visit.

You haven't? Let's see about that. Remember the three motors racing round a hairpin turn just abaft the Hotel Astor? The motors were in red and green and the hairpin turn in white and yellow lights. Oh, yes? Well, that was a bit of Leffingwell impressionism. And the giantess in red, whose skirts flapped in streaks of white rain while her umbrella, in green, blew inside out—with the legend beneath her that the Cantbreakem Umbrella was the only sort that would withstand Manhattan's zephyr changes? Of course you do. Well, that was what George Henry Leffingwell could produce when in pre-Raphaelitish mood.

As one of George Henry's diamond-cut-diamond competitors said in the Forty-Second Street Country Club—a clever Sun reporter once called the genial bar with the picture of Old King Cole behind it by that name, and it has stuck—after business hours, when even advertising men may tell the truth and shame the demon that lies at the bottom of a highball glass—as this rival display artist remarked: "You go to the theater in New York to see a show; but the best show you see is the ads in electricity that you get going in and coming out."

Leffingwell looked for talent wherever it might be had. He read the newspapers and the magazines, faintly hoping to find the man with bizarre ideas. Bizarre ideas are hard to get into the magazines because the editor is afraid of them. You see, he can't stand in front of his latest effort and hear the folks on the sidewalk saying: "Oh, how pretty!" and "Ain't that the clever idea though?" or "That's punk! Why can't they put up something that gets over?" He has to sit at a desk and wait for the public's impressions to filter in to him second and third hand, with a ready ear always to the complaint of the circulation man.

That's where George Henry had his advantage. He knew in twenty-four hours whether he had "put it over." When the local color of Broadway and the lobster-palace belt is chronicled by scribblers a few centuries hence, people who like their fiction flavored with the used-to-be are going to read about Longacre Square and its umbrella giantesses and hairpin-turn motor-car races in electricity.

They will read about such things just as we like to read about the lamps in Vauxhall Gardens, while we relish the stories which lug in good old Samuel Johnson and Garrick, and Topham Beauclerk, and his long-suffering and angelic Lady Di, and the rest of that fascinating, far-off crowd.

And though it is probable that no modern John Stow will take the trouble to put upon paper the name of George Henry Leffingwell, none the less his handiwork will be talked about much longer than many a canvas that is being smeared today in double-decker studios, with arras on the walls, a polar bearskin on the floor near the fireplace, and plenty of tea, with thin bread-and-butter sandwiches, poured by purring and art-loving ladies at four of the clock every afternoon.

But, conquering hero of the hoardings by day and of the pleasure-hunting crowds by night, George Henry—Minnie always called him George Henry, and so shall we—had been baffled in landing the biggest prize of his busy existence.

A Half-Grown Girl Acting as a Kindergarten Cerberus at the Gates of the Firm

To put it brutally frankly, he had been "turned down" by Miss Minnie Marsh, who, with her one-time college roommate, Clara Blackney, had opened modest law offices in the Trinity Building, where they were beginning to catch the drippings which now and then came their way when the more prosperous offices—with the two and three tier names on the frosted glass doors—were unable to consider cases which afforded no retainers whatever, and which really ought to have been referred to the Legal Aid Society in the first place.

"You Stay In Here!" She Ordered

The firm of Marsh (Minnie) & Blackney (Clara) had not begun practice with definite ideas regarding that legal *x*, the unknown quantity—the retaining fee. And when widow or orphan or disabled longshoreman—the latter sent to them in a moment of jest by a law clerk in the offices across the hall, said longshoreman being much under the influence of West Street whisky—appeared for advice, the formality of initial cash down for studying the evidence was usually waived.

Marsh & Blackney had put a partition between two-thirds of an office that in size was nothing more than a sublimated hall bedroom. The other third was occupied by a half-grown girl who spent half of her day at a business college and the remaining half acting as a kindergarten Cerberus at the gates of the firm, hammering out the few letters that Marsh & Blackney found it necessary to write in their restricted sphere of legal activity. The kindergarten's correspondence usually had to be rewritten—by hand—by one of the firm; but Miss Marsh was hopeful that Gertie would learn how to punctuate and spell in time; and besides it looked well to have some one banging away at the keys of the firm's second-hand typewriter.

And here, lest the fact that a jestful law clerk across the hall piloted to their door a genially tipsy longshoreman be taken to indicate that the partnership of Marsh & Blackney was a joke as well, let this be entered on the record: Both Marsh (Minnie) and Blackney (Clara) had passed their bar examinations with an ease which aroused consternation in the bosoms of several score products of university law schools, who had been plucked in their efforts to take the Albany hurdle which every law student must negotiate before he is turned loose to ravage the unsuspecting client.

The showing made by these two onetime college roommates, with firmly rooted convictions about being useful in a world which, regrettably but none the less actually, was after all a workaday place, had furnished the topic for one or two Sunday newspaper stories. And a modestly gloating paragraph in the college weekly—not among the alumnæ notes, where the paragraphs are lumped under class numerals, but occupying two sticks of space with a head all its own—had been featured at the college town beside the rumor about a new and much-needed dormitory.

Yes, it was an earnest but none the less charmingly feminine young person who had turned down George Henry Leffingwell.

"Look here, Minnie," he had said; "I'm a practical person. I know that dawdling round, with nothing but bridge and an occasional Saturday matinée at the opera on your mind, is worse than selling six-button gloves over a Wednesday bargain counter. But you don't seem to understand me. I shan't interfere with your career. You can motor down to your own office when I go to mine. The car could drop me at the Vampire Building and then whiz you down in time to open up the busy headquarters of Marsh & Blackney before the rush of clients begins."

"Don't try to imitate the funny law clerk across the hall, George Henry!" Miss Marsh had snapped—Leffingwell had heard about the longshoreman litigant.

"I'm not trying to be funny," he had assured her. "I mean it. I believe in careers for women—if they want them. But think how snug we could be in that apartment on the Drive I told you about! You can't carry your office home with you in the evening. If you do you wake up without a fresh idea in your head the next day. You'd

Digitized by Google

shake the law for a few hours and I'd toss into the discard my brand-new ideas for something big in crisscross colored searchlights. And we'd look at one another over the crown roast and then go out into the parlor and rehang an etching, and then ——" George Henry found himself gearing his conversation at a lower speed because of the withering stare in the eye of the young woman across the restaurant table. "Well, there is always cribbage. That's literary and improving anyway, you know. Sir John Suckling invented it."

Miss Marsh's eyebrows were uplifted with well-defined if half-amused interest. "Indeed! That is interesting, George Henry," said she. "I didn't know you dabbled in the world of meter. How did you become interested in Sir John?"

The head of Leffingwell & Company blushed. He was a practical man; he believed in facing realities frankly. Still it was a bit disconcerting to know that derision lurked behind the dark brown eyes regarding him.

He rallied in good order, however. "I often use the poetry thing in going after the public," he said. "You'd be surprised to see the nice little library I've got stacked up beside the Dun and Bradstreet reports and the business directories in the office. There's a whole set of Shakspere and a lot of other good stuff besides. My ad writers need reference volumes. One of them picked out a slice from Suckling that made a hit on Broadway, in yellow and red bunchlights, two years ago." He sighed. "That was before I met you, Minnie. You wouldn't remember that electric sign, would you?"

The senior member of Marsh & Blackney softened at the unconscious wistfulness in his question.

"No; I don't think I do," she replied. "What was it?"

"It was a corker," said George Henry. "We had a new line of petticoat braid that Barnum & Company laid down fifty thousand—cash—to push. You're probably wearing some of that braid now, for it went—big. We put up an electric show girl in Herald Square, big enough to see it a mile off. She was coming down some steps, one hand grabbing her skirts the way women do. And below her were two lines of poetry—to rub in the petticoat-braid idea, you see. I've forgotten what the words were, but it was Suckling all right."

Miss Marsh interrupted him, with memories stirring of the course in Cavalier Poets she had taken in her Junior year.

"Her feet beneath her petticoat,
Like little mice stole in and out,"

she murmured, playing with her coffee-spoon. "You used that to sell skirt braid! Shades of Sir John! And yet probably he would have peddled that for the same thing if they had used electric signs in his day. Sir John was a utilitarian rhymester if ever there was one."

"How the deuce can you remember it?" cried George Henry in admiration. "Those were the words. I remember the mice part. Jim Horner, that young Harvard chap in the office, cooked the thing up. He was proud of it. I wanted to have little electric mice, in green or red, come running downstairs beside the show girl, alternating with the poetry—first flash the show girl and the poetry, you know, and then make the poetry dark and turn on the scampering mice at half-minute intervals; but Jim wouldn't stand for it. He said it would be too much of a joke and make the people forget to read the name of the braid—in big letters at the top. Jim was right, I guess. There's such a thing as putting too many ideas in one display. One idea too many kills the rest."

"Perhaps," remarked Miss Minnie Marsh noncommittally.

"When Jim came in with the scheme he had his finger between the pages of a book and said: 'Here's a funny thing. I've played about a million hands of cribbage, but I never knew that this Suckling gink invented the game.'"

"'Did he invent cribbage?' I said. 'Well, any man who can frame up a game like that is worth while using to push Barnum's braid.' But that's shop talk, Minnie. When I get to talking shop it winds me up. Aren't you going to throw a life-preserver to a man who's getting to see red and green electric lights in everything he eats and drinks? Honest, Minnie, I want you awfully bad."

There was no softening, however, in the dark brown eyes of the senior member of Marsh & Blackney. Then George Henry did the cowardly thing that a man in love never does until he feels that it is a last resort.

"I need you awfully, too, Minnie," he said. It was George Henry's vox-humana stop pulled out to the limit. And, like every other woman, Miss Minnie Marsh, attorney-at-law, felt its throbbing note.

"I'm sorry, George Henry," she said, putting out one hand to touch his on the tablecloth; "but I've got my career. And, besides, Clara and I have organized the suffrage campaign in our assembly district. Election day is only four weeks off and we are going to try to defeat the man who broke his promise to us at Albany last winter."

"But, Minnie, I'm for suffrage. I'm the hottest brand of dyed-in-the-wool male suffragette! I'll carry handbills for you. I'll make carttail speeches alongside of you. My elocution's horrible, but I've got a voice like the bull of Bashan. I could bore a hole through any yelping the street-corner rabble might start going when you unrolled the glorious yellow banner of Votes for Women. I'm the original wild suffragette from Ballot Borneo. I'd eat any policeman that slapped Mrs. Pankhurst—alive! 'B-rought here at an incalculable expense, ladies and gentlemen, from the wilds of his native jun-gul! The horrible, hideous suffrage snatcher! Step up lively and get your little yellow badge. They're going like hot cakes ——'"

George Henry Leffingwell discovered that his table vaudeville was not making a hit with Miss Minnie Marsh. He halted abruptly, the grin effacing itself from his boyish features.

"Clara was right," remarked Clara's law partner with conviction in her tone. "She told me that the average man ——"

Now it was George Henry's turn to interrupt. He eyed Miss Marsh placidly as she began buttoning her gloves.

"Then you won't?" he asked.

"I won't." Miss Marsh's tone was as sharp as the snap of the last fastener as it clicked into place.

"Take it from me, Minnie," declared George Henry—"I'll make you! You're trying to make yourself believe you want a career without a home. And you don't. What you want is a career plus a husband who will fag for you and humor you when you come home at night discouraged because the law business is on the blink and naughty boys have been throwing ticker tape into your taxi, after you've gone down to convert the neathen in front of the Stock Exchange at the luncheon hour."

"Indeed!" gasped Miss Marsh. She knew that this was inadequate; but for the moment she could think of nothing else to say.

"I mean it," grinned George Henry. "I'm not sore, Minnie. You aren't to blame. Neither is Clara; though frankly I should like to give Clara a good hard slap on the wrist.

"Why doesn't she marry that Murray boy? He'll joy-ride once too often if he doesn't acquire a wife who'll make him keep within the speed limit. I wouldn't say all this if I didn't know you cared for crude, coarse little me—George Henry, the electric ad man.

"We're going to be good friends for a while; but I'm going to knock you on the head and run away with you pretty soon, the way those genteel South Sea Islanders do when they want a bride. This isn't a threat—it's a promise. You aren't going to be angry, Minnie, are you?" Again a suspicion of that vox-humana stop.

Through the window they could see the streaks of electric rain splashing on the flapping skirt of the giantess with the inside-out umbrella.

"You aren't going to be angry, Minnie?" repeated George Henry. "Because if there's one thing in New York that burns brighter than those six thousand tungsten bulbs over yonder it's my caring for you!"

"Some speech for a common or garden ad man," he reflected as he watched her frown fade.

"Why, George Henry!" she exclaimed. "You seem to have been studying Sir John to advantage. I don't think I'm angry. Do you know that what you just said was near poetry?"

"Maybe I'll invent a cribbage of my own one of these days," was George Henry Leffingwell's reply.

In the advertising game it is the rule not to let Broadway grass grow under your feet. The Leffingwell Company—meaning George Henry—always adhered to the rules of any game it played, even if it did play a bit harder and surer than its competitors. That is why George Henry was satrap of an entire suite on the top floor of the Vampire Building.

One week after he had pulled the vox-humana stop out to the limit—without, however, persuading Miss Marsh to alter the angle from which she regarded him—he was dining with her again at their favorite corner table in Trittori's. They were going to a play later, and conversation had been steered into midchannel, at a safe distance from the rocks of her career and his caring.

As their taxicab slid into Longacre Square, however, slowing to become a unit in the stream of motors that inched toward the theater, George Henry touched Miss Marsh upon the arm.

"Hello!" he said. "There's that new sign the whole town is talking about."

The senior member of Marsh & Blackney looked out of the taxi window and saw, splotching the perspective, an exclamation in huge white electric letters. The sign said:

I LOVE!

She turned to George Henry suspiciously.

"It seems to me ——" she began.

"Oh, that is only the beginning," said he. "Broadway is waiting to read the rest of it. They'll be making verses about the new sign mystery for the topical songs in the musical comedies by day after tomorrow."

Miss Marsh eyed him with disapproval—an uncertain, inquiring disapproval; but she later enjoyed the play to the fullest extent.

One Week After He Had Pulled the Vox-Humana Stop Out to the Limit, He Was Dining With Her Again

An Old Woman and a New One In the Old World

By CORRA HARRIS

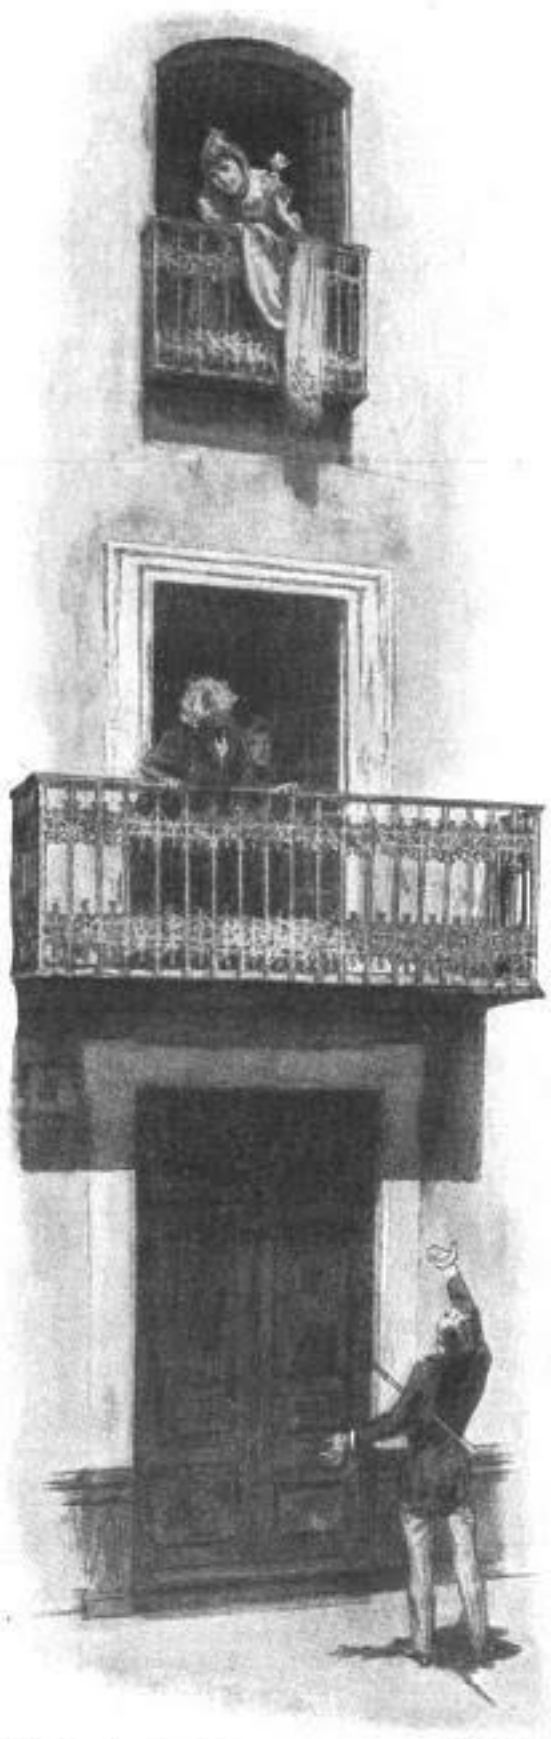
ILLUSTRATED BY HENRY RALEIGH

SLEEP is a queer, transient death, the quiet grove in which we rest for a few hours before we are resurrected into the next day's life. It is a little repairing-time when Nature forgives us, "knits up the ravell'd sleave of care" and nurtures us, without the interference of that nervous, peevish thing, the human mind. If a man could sleep soundly enough he might awaken a hundred years forward or backward in time without experiencing any grave shock. There would be nothing but his memory to confirm the past, and there is so little difference between memory and a dream, if you do not attempt to confirm it by the Encyclopædia Britannica or some other outside authority.

It was with a strange peace and some such confusion of the senses as this that I awakened after a deep sleep one Sabbath morning in October of our pilgrimage. We were on the train bound for Madrid, moving very slowly, almost noiselessly. I climbed out of the berth in our stateroom, pulled up the shade, looked out of the window and saw Spain for the first time, in the pallor of early dawn. It was as if we had been traveling steadily back through the centuries all night, as if the land had drawn us back a thousand years into the past. If we had not been in a twentieth-century railway coach, if Peggy had not been asleep in the upper berth—a convincing proof of the fact that Columbus did discover America, the only country in the world capable of producing exactly that kind of young woman—I should have half believed that I myself was some being of the middle centuries.

A Spanish Breakfast En Route

WE WERE passing through a kind of desert, a sea of yellow dust, covered thickly with grass so dry it was white, like the straggling beard upon the sallow face of a very old man. In the distance lay the barren cheekbones of a range of mountains. Presently we were slipping down through their foothills, the same desert made wilder, more desolate by herds of huge gray boulders, as if the earth some day long ago had cast them in a fury from her breast and had driven them together into that place, to remain there forever with their leviathan backs humped against the distant horizon. The only habitations visible were flagmen's huts miles apart along the railroad track. No fields, no harrowed ground, no green hint of hope in the land, only an occasional shepherd with his flock in the distance, always wrapped in his cloak, a mournful figure in a mournful country, left over from ages that are gone. We began to pass by olive trees scattered among the rocks, such sad old beggar trees, with their gnarled limbs half clothed in branches of pale green leaves. I thought of Gethsemane. My heart ached for the Son of Man, Who in the loneliest hour of His life had only such ragged sentinels to watch with Him. My mind trailed away into a mist of sorrowful memories, haunted by angels. At last we met the sun—a red mystery at first behind the rocks and olive trees—which presently covered the land and the distant shepherds and their flocks with a fan of yellow light, as if God was reaching out His hand over them, claiming them, everything, even the little branches of glistening green leaves upon the limbs of the olive trees.



I got out my Testament and crawled back into my berth. There was no literal scripture in it to confirm the emotions through which I had just passed. The scenes of it are laid in another land; but no one can travel in Spain without recognizing its close relation to Africa and to the Holy Land. This part of it can never support a modern civilization, even if the people were capable of it, which they are not. It must forever remain a sort of natural museum of that past when men cast long shadows upon the midnight hills and found their way by the stars.

It was ten o'clock before I rose and realized that Peggy was still asleep and that we had had nothing to eat.

"Peggy," I called from below, "wake up and order breakfast."

She refused actually to awaken, merely reached out languidly and pressed the bell-button. When the porter appeared she murmured her demand in imitation Spanish carefully learned from her book of Spanish conversation the night before for this purpose.

A few minutes later a porter came in. He carried a small tray upon which were two pint cups of black coffee, two long rolls of bread crossed on top like a man's straw hat, a saucer with a slice of butter and a knife on it. There were no glasses for water, there were no plates, there was no silver except a spoon with which to stir the coffee. To

"Oh, Don't, Aunt Peg! They are Sweethearts. Don't Embarrass Them!"

each of us he offered a cup, then wiping half the butter on one roll and half of it on the other, he handed them to us—literally with his hands. Then he withdrew as nonchalantly as if he had served us in courses. I could not see Peggy in the upper berth, but her stillness excited my curiosity. Nothing in the Old World has entertained me so much as the different ways she has submitted from time to time to strange customs and conditions. I carefully deposited my cup and roll upon a stationary table under the window and, holding to a convenient strap, stuck my head out and stared at the figure of my niece. She was sitting cross-legged in the middle of her berth, her black hair streaming over her shoulders. In one hand she held the buttered bread, with the other she held the enormous cup. She was swaying from side to side with the motion of the train, and with every movement the coffee leaped like a long-tailed black imp over the brim of the cup and fell on the bedclothes. She was staring straight ahead, with the corners of her mouth pulled down like those of a prayerful virgin about to make a libation upon an invisible altar.

"Peggy," I laughed, "eat your breakfast!"

"Have we been insulted?" She looked down anxiously.

"No, we have been fed!"

"But that's just it. Fed!"

She was thoroughly awake now and began obediently to lift to her mouth first her right hand, then her left.

We reached Madrid in the late afternoon and saw the sunset through the arches of the palace. Peggy came down into it from our little stateroom in the railway carriage, with her head up and her feet firmly planted. But I could see that she was panicky. There was none of the noise and bustle about the station that we had observed in other foreign cities, but it is a nerve-racking experience to step face foremost, with a blindfolded experience, into a "jimber-jawed" nation, even if it is a Sunday afternoon. For the Spaniard is a man who frowns with his chin, whose lower teeth are too often visible, and who achieves a formidable dignity of manner even when he is begging.

I think it was entirely because of these features and this manner that Peggy insisted upon letting the American consul at Madrid know that we were in town. As a matter of fact, we found the people much milder, gentler, than the French; but they do not look it. So Peggy wrote to Mr. Hoover, the consul, to say that she had come; she also informed him of her mission—that she was trying to learn something about Spanish women. She wished him to know how innocent her motives were and hoped he'd tell the people. I have never known her to be so mild, so anxious to pursue the line of least resistance.

This was a fortunate inspiration, as it turned out, for not only were the Hoovers themselves very cordial, but through them we met some of the most delightful people in Madrid. Thus our experiences there were different and happier than they were anywhere else on the Continent.

Peoples Who Never Grow Up

BUT before I come to that I must give some impressions of the streets and of the people. Strangers alone have photographic minds. This vivid negative state lasts but a few days. Once the sights become familiar, they are like blurred plates, never distinct, far more difficult to record. Most Americans, I have observed, employ this precious period in studying the monuments, museums, picture galleries and historical features of the country they happen to be in. Therefore, when they return home they are apt to give vague or false impressions of the people, as if they exhibited the old family album of that race rather than the race itself. I should have made the same mistake but for Peggy, whose mind was so fixed upon the hopes of the modern woman that wherever we went we saw the people first and the art galleries last.

The people in Spain do not fit into their history or resemble the barbaric splendor of their monuments, any more than their children resemble their grandparents. They are a little like the people here in our South, who until recently have lived too much upon the glory of the past and worked too little at the glory-fetching business themselves. The explanation is simple if you are willing to see it. The character of achievement has changed in the last fifty years. You do not win glory now with a sword, but you win wealth instead through the strength of your corporation and through your ability to outdo the other fellow. The Spaniards are not yet ready for this kind of success, if indeed they ever will be. They are lazy and proud. They are no longer grandees, but merely primitive beings stripped of their armor rights and their feudal privileges. They are not prepared mentally or morally to grasp the meaning of modern civilization. They have changed, but they have not yet evolved. They are the children of the past, not of the present—but children, you understand. This, I believe, is the real difference between the Anglo-Saxons and—say—the Latins. There remains in them something irresponsible, which never has changed or developed in any of their many civilizations, which never matures even when they reach the highest intellectual attainments. Whatever it is, it is unmoral and conscienceless, like the quick temper of a child.

So much I say in general before we come to particulars. Peggy soon recovered from her timidity, for, after Paris,

Digitized by Google

They Take the Place of Newsboys

Madrid is like a lazy Southern town. We spent some happy days driving and walking leisurely through the narrow streets. Quite unconsciously to herself, she showed much more interest in the men than in the women. This may have been due to the splendid appearance of the soldiers, who are undoubtedly the handsomest, most spirited we saw in Europe. They march with a quicker step, carry themselves with a fiercer and more graceful precision, which shows that the native mettle of this people is for war and nothing else.

The palace is far from the fashionable quarter of the city. It is surrounded by narrow streets in which the working people live. In front is the Plaza de Oriente, a circular garden surrounded by the statues of the ancient kings of Spain. And to the horror of all English visitors to Madrid, a tramline passes along the street directly in front of the palace. Undoubtedly the English are the most snobbish people in the world. From their point of view this tramline in sight of royalty is scandalous, suggestive of the poor, the meanly respectable. But to me there was something more becoming to monarchy in the scenes before the palace of the Spanish king than is to be observed about any other royal residence in Europe. All day long the people are there—the real people. Workmen in their blue blouses sit in the shade of the garden at noon with their wives and children to eat their soup and bread, the inevitable midday meal, which is taken out in the open if possible. Always the great ox-teams are moving majestically past. Mule-carts and donkeys follow in and out everywhere, laden with baskets of vegetables or, it may be, bearing some wild-looking, bareheaded Spanish girl from the country, who sits erect with her bare feet in the basket hanging at one side of the animal. Upon the steps, under the statues, and in the middle of the street pushing carts, walk the women of the people—poor mothers in gay rags, carrying their children, and pretty maidens with their glossy black hair parted on the side. And mixed through all the varied, never-ending pageant are troops of brilliantly uniformed soldiers and an occasional royal carriage, a beggar, anybody, anything, however mean or however splendid.

The Women of Madrid

WE WERE told that it was impossible to give a truthful impression of Spanish women without taking into consideration the different races in different parts of the country. The Castilian must never be confused with the Andalusian. The Basque people in the north were quite different from the Catalans, and the descendants from the Moors in the far south were different from all the others. But they are all Spanish, differing merely in the shapes of their noses and a few minor customs. So far as Peggy's purposes were concerned, the women of Spain were divided into only three distinct classes. First, those who wear hats and are to be seen every sunny afternoon driving along the promenade. They do not differ greatly from those to be seen on Rotten Row in Hyde Park, or driving on the Champs Elysées. They are only a little less fashionable in appearance, not because their gowns are less smart but because the figure of a Spanish woman cannot be made to look stylish. It is too natural, even when she is slender, and those who drive in the promenade rarely ever are slender. They rouge less than their Parisian prototypes and powder more, and they all look subdued, as if they were asleep with their soft black eyes wide open. Of the second class are those who wear black mantillas, who walk instead of ride. They are nearly all very round, like human vowels, with no distinction, no accent. These are the wives and daughters of shopmen, clerks, and so forth. The third class are the women of the poor, who wear neither hats nor mantillas. They are homely with a wrinkled brown homeliness that seems to relate them to the desert. There is something arid about them. They have no expression of pathos or sorrow stamped upon them, common to women who endure great hardships. One receives the impression that they have no minds, only instincts which adjust them to the lives they live as unflinchingly as the earth yields to the weather. They move through the streets, crying their wares, with a celerity and grace that is as swift and dramatic as if the wind carried them. They take the place of newsboys in the Puerta del Sol, where their raucous voices may be heard above the din of that crowded thoroughfare, hawking the daily papers, lottery tickets, herbs, anything that is comparatively valueless. They fill the markets with their donkeys and their clamor. They squat under sunny walls to suckle their babies, little old-looking creatures as brown and withered as their mothers. But never do you see intelligent care or anxiety upon their faces: merely want, curiosity, determination. One might as well try to induce an eagle hen to hatch duck's eggs in a barnyard nest as to attempt to rescue these wild creatures from the street desert life. They are born to it as tragedians are born to the stage. But it is all acting, no real suffering.

One day we made an excursion into the oldest part of the city, where the desperately poor live. I have observed this in every great city—that the oldest sections have always been invaded and conquered by the poor. It is a significant circumstance and suggests that this ever-increasing horde will, in time, come into the next streets and the next, until at last they fill the palaces and overrun the very gardens of the once rich and prosperous. In these narrow streets we saw the former homes of princes, with unspeakably filthy doorways, filled from garret to basement with men and women in rags, with half-naked children, all swarming in and out like insects. As we were returning we came to a church in the Calle de Alcalá where noonday mass was being celebrated. We entered the brown twilight through the old paneled doors. The candles upon the altar before the Virgin shone like steady stars. More than a hundred women and girls were kneeling here and there upon the floor, all with their faces turned in a kind of trance toward this altar. But there was scarcely a man to be seen anywhere, except the priests.

The same afternoon we went to the matinée in a little theater adjoining this church. The audience was composed almost entirely of middle-aged men.

"Where are the women, señorita?" I inquired of the beautiful Spanish girl whose guests we were upon this occasion. "In America it is the women more particularly who go to the theater in the daytime."

"They are at home," she answered, smiling. "In Spain when a woman marries she stays at home. Her husband expects that of her, and she obeys, while he entertains himself here, at the club, anywhere he chooses to go. Most of the men you see here are married, but their wives are at home, alone or with their children. Spanish men do not like them even to receive visits from the girl friends they had before their marriage. They are jealous of these also. This is perhaps the chief reason why our women receive so little education beyond the religious and needlework training they get in convents. The men believe that mental development renders them dissatisfied with their lot. Consequently they see to it that they do not get this development. A really educated girl in Spain stands little chance of getting a husband. Our men do not want the companionship of intellectual women. They want them only for domestic purposes."

She delivered this astounding information gravely, without a trace of malice in her voice or manner, merely as if she were stating a national characteristic.

I come now to one of the most interesting and delightful events during our visit to Madrid. This was a tea-party at the home of Señor and Señora Collaje, to which we had been invited. The hospitality of a Spanish home is as informal as it is graceful, and this was a particularly happy occasion for two reasons. First, a friend of Señor Collaje had just presented him with a very handsome piano. In Spain, if you love your friend, if you have some special reason for being grateful to him, you do not give him a watch or a walking-stick, but, say, a thousand-dollar piano. Señor Collaje is one of the most celebrated physicians in Spain. He had saved the life of this gentleman, who paid his bill and added the piano as an expression of gratitude. The other circumstance that made the party memorable was the fact that on the following day the son of the house was to leave for Berlin, where he was going to finish his education. This also accounted for the presence of a number of young men in the party, who are never ordinarily invited into a Spanish home where there are daughters unless they are betrothed to them.

Always on the Continent any social gathering is cosmopolitan. There were a number of young señoritas, two Cubans, a famous statesman from Uruguay, a Frenchman and four Americans in the company about Señora Collaje's tea-table, besides half a dozen young men, some of them belonging to the oldest and most noble families in the country.

I cannot say that these latter looked upon Peggy with favor when they learned that she had come to Spain for the purpose of writing about Spanish women, but they hastened to avail themselves of the opportunity to compliment their hostess and her daughters. Señor Criado, of Uruguay, proceeded to write an appreciation upon a flyleaf of his notebook and offer it to his hostess with a bow like that of an orator who has finished a proper peroration. When translated into the comparatively commonplace American tongue it means:

A Literary Tea-Party

"THE Spanish woman is the mixture of all the races that inhabit the Iberic Peninsula. She conserves the Phœnician slenderness, the Greek esthetics, the Arabian sculpturalness and the Gothic beauty—a mask of grace and genuine frankness which attracts all who see her!"

The other young men were impatient to follow Señor Criado's example. They made haste to copy their sentiments and offer them to Peggy. All were in Spanish, but to save space I set down here only the translation of two more. The first written by Señor Fernando Aguilas, whose father is secretary to the queen; and that of Señor Edoardo Perez Artega, a young officer in the army.

Señor Aguilas is very proud of his English and insisted upon making his own translation, standing over Peggy, a tall, dark Adonis with tremendous black eyes and arms designed by Nature for the making of graceful gestures. I give the exact translation, unadorned by the gestures. One sees immediately that he has cause to be proud of his English:

"The Spanish woman is the true prototype of beauty on account of her different dispositions. And she has characteristic manners, as in Andalusia exists the type beautiful and arrogant. The proof of this is given they are seen in the Feria de Sevilla, showing her garb and genteelness. And also, considering the women of the north, it is seen that if this one is pretty she is not so pretty as that one, but for conditions of work [he means domestic duties!] she is more complete. Summing up: The Spanish woman calls the attention wherever she is found."

Being a military man, Señor Artega was briefer. He had large, dreamy black eyes and regarded Peggy from time to time as his pencil moved slowly over the paper.

With Every Movement the Coffee Leaped Like a Long-Tailed Black Imp Over the Brim of the Cup

Digitized by Google

Having finished, he offered it with an imploring softness, as if he petitioned her not to read what he had written until she was quite alone. Peggy was never able to translate all of it, but the divine inspiration of femininity led her to decipher this much:

"The opinion I have for women, Spanish, Greek, Russian or American, is the same, independent of nationality. It is the sum of all goodness without a spot of evil."

I have copied these sentiments exactly, because they represent the masculine language of the best class of Spaniards when it is set down for the delectation of women. You will find passages like it in Richardson's novels in English literature, and some a great deal like it in the literature of the Southern states before the Civil War. Then all women represented prettily trailing stanzas of poetry whom the years never quite converted into prose. As long as they lived these women of the old South retained a veiled sweetness. As long as they lived they suggested faded copies of the old Juanita love-song, combined with tender hymns. Now and again you may come upon one like a worn copy of a very old collection of verses set to high treble music. But they are rare: rare enough to be out of drawing with the life about them. The queer thing is that they last longer in the ideality of men than they do in actual modern society. It was interesting to find them still enthroned in the hearts of these Spanish gentlemen. You observe that not one of them expressed the least desire for intelligence in his description of the excellent woman. She is to be praised only for her beauty and virtue.

Romeo Method of Courtship

BUT when a Spanish gentleman marries exactly this kind of woman he puts her in his house, closes the door and goes his way to his club or to the theater. He has a good deal more time for amusement than other men because he works less. I do not say that there are not others, but the only man I heard of in Spain who habitually remained at home with his family in the evenings was one who had lived two years in the United States and capped the climax by marrying an American wife, a brilliant woman who adapted herself to Spanish life and customs, but who probably knows more about the art and music and literature of the country than any woman born there. My impression is that, whenever men succeed in producing exactly the kind of women they think most desirable and satisfactory and obedient to their views and wishes, these are the very men who are most unfaithful to them in married life. They tire of such women sooner, tyrannize over them more, and neglect them altogether in the comradeship that should exist between them. This is why so many European women fail to command the real honor and respect of their men. They are the products of poor creators, the creatures of masculine fancy rather than of masculine honesty and integrity. The woman who best keeps the attention and affection of a man is the one who loves him and remains faithful to herself, which is a much higher standard of virtue than remaining faithful just to him. She then retains forever some of the charm and mystery of the unknown and unconquerable, like a fair and beautiful land along the frontiers of which he travels, often entranced, not by what he knows and sees but by the deeper, distant parts that he never reaches and about which his fancy is all the better exercised. There is no such subtlety about Spanish women. They are primitive and simple, whether they are dancing girls or saints.

That evening, after our return from the tea-party, Peggy and I sat inside the window of my room, which opens upon the narrow iron balcony, watching the people in the street below—a blind beggar playing a Spanish love-song upon his guitar; another asleep in the corner of the wall; men coming and going in and out of a wine-shop; half a dozen boys engaged in a mimic bullfight; a soldier in the tobacco shop opposite ogling the pretty girl behind the counter; women walking slowly with little children clinging to their skirts; and, rising out of it all, the soft, lisping sound of Spanish conversation.

"Peggy," I said after a long silence, "you might as well look for an electric light in the tomb of Rameses as to expect to find the advanced woman in Spain."

"Why?" she demanded.

Up to this time she had not begun an active search for the Señorita Suffragist, being concerned first to get some general idea of women and their apparent relation to things.

At this moment we were interrupted by the voice of a man on the pavement below, an adoring, vibrant voice. Immediately he was answered by another voice from the balcony above ours. I regret that I cannot say softly answered, but the truth is that the average señorita has a squawky, broad, flat, duck note in her voice that even love does not soften.

I leaned forward, determined to see what was going on.

"Oh, don't, Aunt Peg! They are sweethearts. Don't embarrass them!" Peggy was positively pink with sympathy.

"Why shouldn't I? The whole street can see them." As a matter of fact, the people in the street pretended to be oblivious, but I leaned out, turned my head this way and that. A young girl with a small round white face and in a white dress was bending from the gallery above, swinging a yellow rose in her hand. On the ground beneath stood Romeo, a very handsome young man with brilliant black eyes. He was standing with his head thrown far back and his hand lifted imploringly for the rose. I must say that he looked astonished and not altogether agreeable when the wrinkled face and gray head of an old woman intervened between him and the flower. But it was only for the space of a moment. I drew back and almost at once the rose came drifting down, the long stem whirling and the leaves fluttering in the gentle wind.

Peggy was so indignant that she excused herself to write one of those letters which I observed she wrote every day now since that night in Paris, when in a paroxysm of tears she had confessed to the "mistake" she had made about Philip Ring. But I kept my place by the window, listening attentively to the two lovers, understanding not a word of what was said, but feeling that excited interest old people often have in these affairs of the young.

Such courtships are to be witnessed every evening from ten until one o'clock in nearly every street in the city. You may look down the narrow chasm between the tall houses and see sometimes two or three young gallants here and there under different balconies in the most exaggerated attitudes of adoration. This is due partly to the warmth and passion of Spanish love-making and partly to the fact that they must hold their heads so far back to see the señoritas who are probably leaning out of fifth or sixth story windows, like white lilies with veils over their heads. This is the custom. A young man sees a girl he admires in the park or at the theater. He follows her, finds out where she lives. Then the pavement courtship begins. The parents of the girl pretend to be ignorant of what is going on, although they know and approve.

At last, when the lover can endure his suspense and torture no longer, he goes, accompanied by his father, to the house of the señorita. The affair has been arranged beforehand. He is expected. He carries a bracelet, which he gives to the girl, while the two fathers discuss and draw up the marriage contract. Sometimes the girl gives the gallant a ring. The betrothal is very formal and is made in the presence of a priest and both families. Until then the young man cannot enter the house, but after the engagement he comes as often as he likes, only he never sees the girl alone until after the marriage.

If I had not seen it I could not have believed that the Romeo and Juliet form of courtship still existed anywhere in the civilized world. But there is much to be said in favor of it. For one thing, it appeals to the romantic, adventurous spirit of youth, which is too much suppressed in some other countries, like France, for example. And it proclaims the triumph and charm of a señorita in her neighborhood, where they might not otherwise be known. One should not begrudge this to a woman whose married life becomes so narrow and desolate. Above all, it is the safest form of love-making for the woman that I have ever seen devised. The most ardent and unscrupulous Romeo cannot take many liberties with a Juliet perched fifty feet above his sea-level, so to speak.

Peggy's First Countess

I NEVER learned what would happen if two lovers attempted to stand under one señorita's balcony. But my opinion is that no man living would risk so dangerous an experiment. Spanish men are obviously afraid of each other. This is illustrated by their serious politeness. Wherever you see men extremely courteous to one another you may infer one of two things—they are either puerile or dangerous. The French, I think, are extraordinarily polite because they are neurasthenic and because they have no very deep or real sense of the dignity of manhood. The Spaniards are polite because upon the slightest provocation they are always ready and extremely willing to cut one another's throats. This is the characteristic crime of the country, not theft or drunkenness, but a well-developed instinct to stab, especially where a woman is involved. No pistols, no quarreling, merely a quick, long, keen blade.

Peggy met her first countess in Madrid. They both labored under a singular mistake. The Condesa de San Rafiel thought the young American girl was interested in charities, and Peggy thought the countess was a suffragette. She went to call upon her in response to an invitation, and if I live to be a hundred I shall probably never witness a more diverting interview.

We were ushered into a beautiful salon. I wore my best things, and I never saw Peggy looking more piously, deceitfully sweet than she did in her new winter suit and a white hat that folded over her head like a nesting bird.

The countess came in prettily a moment later. She was a short woman with gray hair, blue eyes and pleasant face. She greeted us cordially, and I afterward learned that she told us her house was ours, which is what every Spaniard tells you when you cross his threshold, and what he means.

The trouble began at once. The countess did not speak a word of English, Peggy could not understand a word of Spanish, and the interpreter had not come. They sat eying one another like little Pandoras anxious to pull each other's lid off. At first sight I knew that my niece was doomed to disappointment. I perceived by the ritual expression of the countess' face that she belonged to the ancient order of good women, not to the new order of provisionally good ones. But it was impossible to endure that phonetic silence. I began to talk. Our hostess looked at me amiably, with a kind of Spanish interrogation in each serene blue eye. Peggy tried to stop me, but I went on with desperate animation. I discussed the weather, the prophets, the court life of Joseph the Second of Austria. Our hostess began to look

X

MR. WEATHERLEY laid down his newspaper with a grunt. He was alone in his private office with his newly appointed secretary. "Two whole days gone already and they've never caught that fellow!" he exclaimed. "They don't seem to have a clew even."

Arnold looked up from some papers upon which he was engaged.

"We can't be absolutely sure of that, sir," he reminded his employer. "They wouldn't give everything away to the press."

Mr. Weatherley threw the newspaper he had been reading on to the floor and struck the table with his fist.

"The whole affair," he declared, "is scandalous—perfectly scandalous. The police system of this country is ridiculously inadequate. Scotland Yard ought to be thoroughly overhauled. Some one should take the matter up—one of the ha'penny papers on the lookout for a sensation might manage it. Just see here what happens," he went on earnestly. "A man is murdered in cold blood in a fashionable restaurant. The murderer walks out of the place into the street and no one hears of him again. He can't have been swallowed up, can he? You were there. What do you think of it?"

Arnold, who had been thinking of little else for the last few days, shook his head.

"I don't know what to think, sir," he admitted, "except that the murderer up till now has been extraordinarily lucky."

"Either that or he was fiendishly clever," Mr. Weatherley agreed, pulling nervously at his little patch of gray side whiskers. "I wonder now—you've read the case, Chetwode?"

"Every word of it," Arnold admitted.

"Have you formed any idea yourself as to the motive?" Mr. Weatherley asked nervously.

Arnold shook his head.

"At present there seems nothing to go on, sir," he remarked. "I did hear it said that some one was trying to blackmail him."

Mr. Weatherley pushed his scant hair back with his hand. He appeared to feel the heat of the office.

"You've heard that too, eh?" he muttered. "It occurred to me from the first, Chetwode. It certainly did occur to me. You will remember that I mentioned it."

"What did your brother-in-law think of it, sir?" Arnold asked. "He and Mr. Rosario seemed to be very great friends. They were talking together for a long time that night at your house."

Mr. Weatherley jumped to his feet and threw open the window. The air that entered the office from the murky street was none of the best, but he seemed to find it grateful. Arnold was shocked to see his face when he turned round.

"I Can Quite Imagine Rosario Defying Him"

"The Count Sabatini is a very extraordinary man," Mr. Weatherley confessed. "He and his friends come to my house, but to tell you the truth I don't know much about them. Mrs. Weatherley wishes to have them there and that is quite enough for me. All the same I don't feel that they're exactly the sort of people I've been used to, Chetwode, and that's a fact."

Mr. Weatherley had resumed his seat. He was leaning back in his chair now, his hands drooping to his side, looking precisely what he was—an ungraceful, commonplace little person without taste or culture, upon whom even a good tailor seemed to have wasted his efforts. A certain pomposity that in a way became the man—had proclaimed his prosperity and redeemed him from complete insignificance—had for a moment departed. Arnold could scarcely help feeling sorry for him.

"I shouldn't allow these things to worry me if I were you, sir," Arnold suggested respectfully. "If there is anything that you don't understand I should ask for an explanation. Mrs. Weatherley is much too kind and generous to wish you to be worried, I am sure."

Then the side of the man with which Arnold wholly sympathized showed itself suddenly. At the mention of his wife's name an expression partly fatuous, partly beatific, transformed his homely features. He was looking at her picture which stood always opposite to him. He had the air of an adoring devotee before some sacred shrine.

"You are quite right, Chetwode," he declared, "quite right, but I am always very careful not to let my wife know how I feel. You see the Count Sabatini is her only relative, and before our marriage they were inseparable. He was an exile from Portugal, and it seems to me these foreigners hang together more than we do. I am only too glad for her to be with him as much as she chooses. It is just a little unfortunate that his friends should sometimes be—well, a trifle distasteful—but one must put up with it. One must put up with it, eh? After all Rosario was a man very well spoken of. There was no reason why he shouldn't have come to my house. Plenty of other men in my position would have been glad to entertain him."

"Certainly, sir," Arnold agreed. "I believe he went a great deal into society."

"And no doubt," Mr. Weatherley continued eagerly, "he had many enemies. In the course of his commercial career, which I believe was an eventful one, he would naturally make enemies. By-the-by, Chetwode, speaking of blackmail—that blackmail rumor, eh? You don't happen to have heard any particulars?"

"None at all, sir," Arnold replied. "I don't suppose anything is really known. It seems a probable solution of the affair, though."

Mr. Weatherley nodded thoughtfully.

"It does," he admitted. "I can quite imagine any one trying it on and Rosario defying him. Just the course that would commend itself to such a man."

"The proper course, no doubt," Arnold remarked, "although it scarcely turned out the best for Rosario."

Mr. Weatherley distinctly shivered.

"Well, well," he declared, "you had better take out those invoices and ask Jarvis to see me at once about Budden & Williams' account. . . . Bless my soul alive, why, here's Mrs. Weatherley!" A car had stopped outside and both men had caught a vision of a fur-clad feminine figure crossing the pavement. Mr. Weatherley's fingers, busy already with his tie, were trembling with excitement. His whole appearance was transformed.

"Hurry out and meet her, Chetwode!" he exclaimed. "Show her the way in! This is the first time in her life that she has been here of her own accord. Just as we were speaking about her too!"

Fenella entered the office as a princess shod in satin might enter a pigsty. Her ermine-trimmed gown was raised with both her hands; her delightful nose had a distinct tilt and her lips a curl. But when she saw Arnold a wonderful smile transformed her face. She was in the middle of the clerks' office, the cynosure of twenty-four staring eyes, but she dropped her gown and held out both her delicately gloved hands. The fall of her skirts seemed to shake out strange perfumes into the stuffy room.

"Ah! you are really here, then, in this odious gloom? You will show me where I can find my husband?"

Arnold stepped back and threw open the door of the inner office. She laughed into his face.

"Do not go away," she ordered; "come in with me. I want to thank you for looking after me the other day."

Arnold murmured a few words of excuse and turned away. Mr. Tidey, Junior, carefully arranged his necktie and slipped down from his stool.

"Jarvis," he exclaimed, "a free lunch and my lifetime's gratitude if you'll send me into the governor's office on any pretext whatever!"

Mr. Jarvis, who was answering the telephone, took off his gold-rimmed spectacles and wiped them.

"Some one must go in and say that Mr. Burland, of Harris & Burland, wishes to know at what time he can see the governor. I think you had better let Chetwode go, though."

Mr. Tidey, Junior, turned away, humming a tune.

"Not I!" he replied. "Don't be surprised, you fellows, if I am not out just yet. The governor's certain to introduce me."

He knocked at the door confidently and disappeared. In a very few seconds he was out again. His appearance was not altogether indicative of conquest.

"Governor says to forget Burland, or words to that effect," he announced ill-naturedly. "Chetwode, you're to take in the private checkbook. I tell you what, Jarvis," he added, slowly resuming his stool, "the governor's not himself these days. The least he could have done would have been to introduce me, especially as he's been up at our place so often. Rotten form, I call it. Anyway, she's not nearly so good-looking close to."

Mr. Jarvis proceeded to inform the inquirer through the telephone that Mr. Weatherley was unfortunately not to be found at the moment. Arnold, with Mr. Weatherley's checkbook in his hand, knocked at the door of the private office and closed it carefully behind him. As he stood upon the threshold his heart gave a sudden leap. Mr. Weatherley was sitting in his accustomed chair, but his attitude and expression were alike unusual. He was like a man shrinking under the whip. And Fenella—he was quick enough to catch the look in her face, the curl of her lips, the almost wicked flash of her eyes. Yet in a moment she was laughing.

"Your checkbook, Mr. Weatherley," he remarked, laying it down upon the desk.

Mr. Weatherley barely thanked him—barely, indeed, seemed to realize Arnold's presence. The latter turned to go. Fenella, however, intervened.

"Don't go away if you please, Mr. Chetwode," she begged. "My husband is angry with me and I am a little frightened. And all because I have asked him to help a very good friend of mine who is in need of money to help forward a splendid cause."

Arnold was embarrassed. He glanced doubtfully at Mr. Weatherley, who was fingering his checkbook.

"It is scarcely a matter for discussion——" his employer began, but Fenella threw out her hands.

"Oh! *là, là!*" she interrupted. "Don't bore me so, my dear Samuel, or I will come to this miserable place no more. Mr. Starling must have this five hundred pounds because I have promised him and because I have promised my brother that he shall have it. It is most important, and if all goes well it will come back to you some day or other. If not you must make up your mind to lose it. Please write out the check, and afterward Mr. Chetwode is to take me out to lunch. Andrea asked me specially to bring him, and if we do not go soon," she added, consulting a little jeweled watch upon her wrist, "we shall be late. Andrea does not like to be kept waiting."

"I was hoping," Mr. Weatherley remarked with an unwieldy attempt at jocularity, "that I might be asked out to luncheon myself."

"Another day, my dear husband," she promised carelessly. "You know that you and Andrea do not agree very

Digitized by Google

well together. You bore him so much and then he is irritable. I do not like Andrea when he is irritable. Give me my check, dear, and let me go."

Mr. Weatherley dipped his pen in the ink, solemnly wrote out a check and tore it from the book. Fenella, who had risen to her feet and was standing over him with her hand upon his shoulder, stuffed it carelessly into the gold purse she was carrying. Then she patted him on the cheek with her gloved hand.

"Don't overwork," she said, "and come home punctually. Are you quite ready, Mr. Chetwode?"

Arnold, who was finding the position more than ever embarrassing, turned to his employer.

"Can you spare me, sir?" he asked.

Mr. Weatherley nodded.

"If my wife desires you to go, certainly," he replied. "But, Fenella," he added, "I am not very busy myself. Is it absolutely necessary that you lunch with your brother? Perhaps, even if it is, he can put up with my society for once."

She threw a kiss to him from the door.

"Unreasonable person!" she exclaimed. "Today it is absolutely necessary that I lunch with Andrea. You must go to your club, if you are not busy, and play billiards or something. Come, Mr. Chetwode," she added, turning toward the door, "we have barely a quarter of an hour to get to the Carlton. I dare not be late. The only person," she went on as they passed through the outer office and Arnold paused for a moment to take down his hat and coat, "whom I really fear in this world is Andrea."

Mr. Weatherley remained for a moment in the chair where she had left him, gazing idly at the counterfoil of the check. Then he rose and from a safe point of vantage watched the motor drive off. With slow, leaden footsteps he returned to his seat. It was past his own regular luncheon hour, but he made no movement to leave the place.

XI

THE great car swung to the right out of Tooley Street and joined the stream of traffic making its slow way across London Bridge. Fenella took the tube from its place by her side and spoke in Italian to the chauffeur. When she replaced it she turned to Arnold.

"Did you understand what I said?" she asked.

"Only a word or two," he replied. "You told him to go somewhere else instead of to the Carlton, didn't you?"

She nodded, and lay back for a moment silent among the luxurious cushions. Her mood seemed suddenly to have changed. She was no longer gay. She watched the faces of the passers-by pensively. Presently she pointed out of the window to a gray-bearded old man tottering along in the gutter with a trayful of matches. A cold wind was blowing through his rags.

"Look!" she exclaimed. "Look at that! In my own country, yes, but here I do not understand. They tell me that this is the richest city in the world and the most charitable."

"There must be poor everywhere," Arnold replied, a little puzzled.

She stared at him.

"It is not your laws I would complain of," she said. "It is your individuals. Look at him—a poor, shivering, starved creature, watching a constant stream of well-fed, well-clothed, snug men of business passing always within a few feet of him. Why does he not help himself to what he wants?"

Arnold looked at her in sheer amazement. It was surely a strange woman who spoke! There was no sympathy in her face or tone. The idea of giving alms to the man seemed never to have occurred to her. She spoke with clouded face, as one in anger.

"Don't you believe," he asked, "in the universal principle—the survival of the fittest? Where there is wealth there must be poverty."

She laughed.

"Change your terms," she suggested—"where there are robbers there must be victims. But one may despise the victims all the same. One may find their content ignoble."

"Generally speaking it is the industrious who prosper," he affirmed.

She shook her head.

"If that were so all would be well," she declared. "As a matter of fact it is entirely an affair of opportunity and temperament."

"Why, you are a Socialist," he said. "You should come and talk to my friend Isaac."

"I am not a Socialist, because I do not care one fig about others," she objected. "It is only myself I think of."

"If you do not sympathize with laws you at least recognize morals?" he asked.

She laughed gayly, leaning back against the dark green upholstery and showing her flawless teeth; her long, narrow eyes, with their seductive gleam, flashed into his. A lighter spirit possessed her.

"Not other people's," she declared. "I have my own code and I live by it. As for you ——"

She paused. Her sudden fit of gayety seemed to pass.

"As for me?" he murmured.

"I am a little conscience-stricken," she said slowly. "I think I ought to have left you where you were. I am not at all sure that you would not have been happier. You are a very nice boy, Mr. Arnold Chetwode, much too good for that stuffy little office in Tooley Street, but I do not know whether it is really for your good if one is inclined to try and help you to escape. If you saw another man holding a position you wanted yourself, would you throw him out if you could, by sheer force, or would you think of your laws and your morals?"

"It depends a little upon how much I wanted it," he confessed.

She laughed.

"Ah! I see, then, that there are hopes of you," she admitted. "You should read the reign of Queen Elizabeth if you would know what Englishmen should be like. You know I had an English mother, and she was descended from Francis Drake. . . . Ah, we are arrived!"

They had lost themselves somewhere between Oxford Street and Regent Street. The car pulled up in front of a restaurant that Arnold had certainly never seen or heard of before. It was quite small and it bore the name of the Café André painted upon the wall. The lower windows were all concealed by white curtains. There was no commissionaire and only a very small entrance hall. Fenella, who led the way in, did not turn into the restaurant proper, but at once ascended the stairs. Arnold followed her, his sense of curiosity growing stronger at every moment. On the first landing there were two doors with glass tops. She opened one and motioned him to enter.

"Will you wait for me for a few moments?" she said. "I am going to telephone."

He entered at once. She turned and passed into the room on the other side of the landing. Arnold glanced around him with some curiosity. The room was well appointed and a luncheon table was laid for four people. There were flowers upon the table, and the glass and cutlery were superior to anything one might have expected from a restaurant in this vicinity. The window looked down into the street. Arnold stood before it for a moment or two. The traffic below was insignificant, but the roar of Oxford Street only a few yards distant came to his ears even through the closed window. He listened thoughtfully and then, before he realized the course his thoughts were taking, he found himself thinking of Ruth. In a certain sense he was superstitious about Ruth and her forebodings. He found himself wondering what she would have said if she could have seen him there and known that it was Fenella who had brought him. And he himself—what did he think of it? A week ago his life had been so commonplace that his head and his heart had ached with the monotony of it. And now Fenella had come and had shown him already strange things. He seemed to have passed into a world where mysterious happenings were an everyday occurrence, into a world peopled by strange men and women who always carried about with them secrets. And in a sense no one was more mysterious than Fenella herself. He asked himself as he stood there whether her vagaries were merely temperamental, the air of mystery that seemed to surround her simply accidental. He thought of that night at her house, the curious intimacy that from the first moment she had seemed to take for granted, the confidence with which she had treated him. He remembered those few breathless moments in her room, the man's hand upon the window-sill, with the strange colored ring worn with almost flagrant ostentation. And then with a lightning-like transition of thought the gleam of the hand with that selfsame ring raised to strike a murderous blow, which he had seen for a moment through the swing doors of the Milan. The red seal ring upon the finger—what did it mean? A doubt chilled him for a moment. He told himself with passionate insistence that it was not possible that she could know of these things. Her words were idle, her theories a jest. He turned away from the window and caught up a morning paper, resolved to escape from his thoughts. The first headline stared up at him:

THE ROSARIO MURDER
SENSATIONAL ARREST EXPECTED
RUMORED EXTRAORDINARY DISCLOSURES

He threw the paper down again. Then the door was suddenly opened. It was Fenella who appeared.

"I am going to order luncheon," she announced. "My brother will be here directly."

Arnold bowed a little absently. Against his will he was listening to voices on the landing outside. One he knew to be Starling's, the other was Count Sabatini's. He closed his ears to their speech, but there was no doubt whatever that the voice of Starling shook with fear. A moment or two later the two men entered the room. Count Sabatini came forward with outstretched hand. A rare smile parted his lips. He looked a very distinguished and very polished gentleman.

"I am pleased to meet you again, Mr. Chetwode," he said, "the more pleased because I understand from my sister that we are to have the pleasure of your company for luncheon."

"You are very kind," Arnold murmured.

"Mr. Starling I believe you met the other night," Count Sabatini continued.

Arnold held out his hand, but could scarcely repress a start. Starling seemed to have lost weight. His cheeks were almost cadaverous, his eyes hollow. His slight arrogance of bearing had gone; he left behind a most unpleasant impression.

"I remember Mr. Starling quite well," Arnold said. "We met also, I think, at the Milan Hotel a few minutes after the murder of Mr. Rosario."

Starling shook hands limply. Sabatini smiled.

"A memorable occasion," he remarked. "Let us take luncheon now. Gustave," he added, turning to the waiter who had just entered the room, "serve the luncheon at once. It is a queer little place this, Mr. Chetwode," he went on, turning to Arnold, "but I can promise you that the omelet, at least, is as served in my own country."

They took their places at the table, and Arnold, at any rate, found it a very pleasant party. Sabatini was no longer gloomy and taciturn. His manner still retained a little of its deliberation, but toward Arnold especially he was more than courteous. He seemed, indeed, to have the desire to attract. Fenella was almost bewitching. She had recovered her spirits and she talked to him often in a half-audible undertone, the familiarity of which gave him a curious pleasure. Starling alone was silent and depressed. He drank a good deal, but he ate scarcely anything. Every passing footstep upon the stairs outside alarmed him. Every time any voices were heard he stopped to listen. Sabatini glanced toward him once with a scornful flash in his black eyes.

"One would imagine, my dear Starling, that you had committed a crime!" he exclaimed.

Starling raised his glass to his lips with shaking fingers and drained its contents.

"I had too much champagne last night," he muttered.

There was a moment's silence. Every one felt his statement to be a lie. For some reason or other the man was afraid. Arnold was conscious of a sense of apprehension stealing over him. The touch of Fenella's fingers upon his arm left him for a moment cold. Sabatini turned his head slowly toward the speaker, and his face had become like the face of an inquisitor, stern and merciless, with the flavor of death in the cold, mirthless parting of the lips.

"Then you drank a very bad brand, my friend," he declared. "Still, even then, the worst champagne in the world should not give you those ugly lines under the eyes, the scared appearance of a hunted rabbit. One would imagine ——"

Starling struck the table a blow with his fist that set the glasses jingling.

"Stop, Sabatini!" he exclaimed. "Do you want to ——"

He broke off abruptly. He looked toward Arnold. He was breathing heavily. His sudden fit of passion had brought an unwholesome patch of color to his cheeks.

"Why should I stop?" Sabatini proceeded mercilessly. "Let me remind you of my sister's presence. Your lack of self-control is inexcusable. One would imagine that you had committed some evil deed, that you were indeed an offender against the law."

Again there was that tense silence. Starling looked round him with the helpless air of a trapped animal. Arnold sat there, listening and watching, completely fascinated. There was something that made him shiver about the imperturbability, not only of Sabatini himself but of the woman who sat by his side.

Sabatini poured himself out a glass of wine deliberately.

"Who in the world," he demanded, "save a few sentimentalists would consider the killing of Rosario a crime?"

Starling staggered to his feet. His cheeks now were ashen.

"You are mad!" he cried, pointing to Arnold.

"Not in the least," Sabatini proceeded calmly. "I am not accusing you of having killed Rosario. One can scarcely understand your agitation. If you are really accused of having been concerned in that little *contretemps*, why, here is our friend Mr. Arnold Chetwode who was present. No doubt he will be able to give evidence in your favor."

Arnold was speechless for a moment. Sabatini's manner was incomprehensible. He spoke as one who alludes to some trivial happening. Yet even his light words could not keep the shadow of tragedy from the room. Even at that instant Arnold seemed suddenly to see the flash of a hand through the glass-topped door, to hear the hoarse cry of the stricken man. "I saw nothing but the man's hand!" he muttered in a voice that he would scarcely have recognized as his own. "I saw his hand and his arm only. He wore a red signet ring."

Sabatini inclined his head in an interested manner.

"A singular coincidence," he remarked pleasantly. "My sister has already told me of your observation. That certainly is a point in favor of our friend Starling. It sounds like the badge of some secret society, and not even the most ardent romanticist would suspect our friend Starling here of belonging to anything of the sort."

Starling had resumed his luncheon and was making a great effort at a show of indifference. Nevertheless, he watched Arnold uneasily.

Digitized by Google

"Say, there's no sense in talking like this!" he muttered. "Mr. Chetwode here will think you're in earnest."

"There is, on the contrary, a very great deal of sound common-sense," Sabatini asserted gently, "in all that I have said. I want our young friend Mr. Chetwode to be a valued witness for the defense when the misguided gentlemen from Scotland Yard choose to lay a hand upon your shoulder. One should always be prepared, my friend, for possibilities. You great ——"

He stopped short. Starling, with a smothered oath, had sprung to his feet. The eyes of every one were turned toward the wall; a small electric bell was ringing violently. For the next few moments events marched swiftly. Starling, with incredible speed, had left the room by the inner door. A waiter had suddenly appeared as though by magic, and of the fourth place at table there seemed to be left no visible signs. All the time Sabatini, unmoved, continued to roll his cigarette. Then there came a tapping at the door.

"See who is there," Sabatini instructed the waiter.

Gustave, his napkin in his hand, threw open the door. A young man presented himself—a person of ordinary appearance, with a notebook sticking out of his pocket. His eyes seemed to take in at once the little party. He advanced a few steps into the room.

"You are perhaps not aware, sir," Sabatini said gently, "that this is a private apartment."

The young man bowed.

"I must apologize for my intrusion, sir and madam," he declared, looking toward Fenella. "I am a reporter on the staff of the Daily Unit and I am exceedingly anxious to interview—you will pardon me?"

With a sudden swift movement he crossed the room, passed into the inner apartment and disappeared. Sabatini rose to his feet.

"I propose," he said, "that we complain to the proprietor about this excitable young journalist and take our coffee in the palm court at the Carlton."

Fenella also rose and stepped in front of the looking-glass.

"It is good," she declared. "I stay with you for one-half hour. Afterward I have a bridge party. You will come with us, Mr. Chetwode?"

Arnold did not at once reply. He was gazing at the inner door. Every moment he expected to hear—what? It seemed to him that tragedy was there, the greatest tragedy of all—the hunting of man! Sabatini yawned.

"Those others," he declared, "must settle their own little differences. After all, it is not our affair."

XII

IT WAS fully half past three before Arnold found himself back in Tooley Street. He hung up his coat and hat and was preparing to enter Mr. Weatherley's room when the chief clerk saw him. Mr. Jarvis had been standing outside, superintending the unloading of several dray-loads of bacon. He laid his hand upon Arnold's shoulder.

"One moment, Chetwode," he said. "I want to speak to you out here."

Arnold followed him to a retired part of the warehouse. Mr. Jarvis leaned against an old desk belonging to one of the porters.

"You are very late, Chetwode," he remarked.

"I am sorry, but I was detained," Arnold answered. "I will explain it to Mr. Weatherley directly I go in."

Mr. Jarvis coughed.

"Of course," he said, "as you went out with Mrs. Weatherley I suppose it's none of my business as to your hours, but you must know that to come back from lunch at half past three is most irregular, especially as you are practically junior in the place."

"I quite agree with you," Arnold assented, "but, you see, I really couldn't help myself today. I don't suppose it is likely to happen again. Is that all that you wanted to speak to me about?"

"Not altogether," Mr. Jarvis admitted. "To tell you the truth," he went on confidentially, "I wanted to ask you a question or two."

"Well, look sharp, then," Arnold said good-humoredly. "I dare say Mr. Weatherley will be getting impatient and he probably saw me come in."

"I want to ask you," Mr. Jarvis began impressively, "whether you noticed anything peculiar about the governor's manner this morning?"

"I don't think so—not specially," Arnold replied.

Mr. Jarvis took off his gold-rimmed spectacles and wiped them carefully.

"Mr. Weatherley," he proceeded, "has always been a gentleman of very regular habits—he and his father before him. I have been in the service of the firm for thirty-five years, Mr. Chetwode, so you can understand that my interest is not only a business one."

"Quite so," Arnold agreed, glancing at the man by his side with a momentary curiosity. He had been in Tooley Street for four months, and even now he was still unused to the close atmosphere, the pungent smells, the yellow fog that seemed always more or less to hang about in the streets; the dark, cavernous-looking warehouse with its gloomy gas-jets always burning. From where they were standing at that moment the figures of the draymen and warehousemen moving backward and forward seemed like phantoms in some subterranean world. It was odd to think of thirty-five years spent among such surroundings!

"It is a long time," he remarked.

Mr. Jarvis nodded.

PHILADELPHIA, JANUARY 20, 1912

The Yellow Peril

FOUR hundred and thirty-three millions is the latest estimate of the population of China. Whether these people, or any large proportion of them, are capable of making a real nation at this time and "adopting Western civilization" no one can yet pretend to say; but we rather hope not, for it might prove uncomfortable for the rest of the world.

If China were capable of exerting a national power in proportion to her population at all approximating that of an Occidental state or of Japan, and adopted Western civilization, she would, of course, at once begin to pillage and oppress every state that was weaker than herself—just as Western civilization has pillaged and bullied her ever since she has had any experience of it. Following Great Britain's civilized example in the Opium War, she would promptly dispatch a fleet, four and a half times as powerful as ours, to shoot up San Francisco and other Pacific Coast cities until we agreed to admit her coolies or any other product which she wished to force upon us. A local ordinance in Seattle that injured the hand-laundry business would be quite sufficient excuse for her to establish a protectorate over Washington, Oregon, and as much of the hinterland as she could profitably use. It was only a few years ago that Western civilization turned loose upon Peking a horde of looting vandals who destroyed whatever precious stuffs they did not choose to steal.

We should really shudder to see China adopt the methods Western civilization has taught her, provided her power to follow the example were in proportion to her numbers.

Purchasing Power of an Acre

ON THE face of the returns, and so far as existing records go, the year 1909 was highwater mark for agriculture in the United States. Taking our chief crops, the Department of Agriculture finds that the product of an average acre was then worth more than in any other of the forty-five years for which it has statistics—more than in 1896, the low mark, by nearly eight dollars and a half, or one hundred and seven per cent, and even a little more than during the inflated prices that followed the Civil War.

It was higher than in 1899 by more than seven dollars an acre, or nearly eighty per cent; and from that year onward the Department has also retail prices in many localities of a great list of articles that are commonly purchased by farmers. It thus deduces that the purchasing power of an acre increased fifty-four per cent in the decade—in other words that, with the product of an acre, a farmer could buy fifty-four per cent more of the things he commonly needs. Now 1899 was not a positively bad year for agriculture. Most farmers, no doubt, then purchased the things they really needed; and we might jump to the flattering conclusion that in 1909 the farmers had a net surplus equal to about half their total income.

Of course it never works that way. Net surplus tends always to vanish. The tables show those necessary or strictly useful articles that an average farmer might have bought in 1899 and again in 1909; but no possible tables can show what he did buy. The plain kitchen chair that cost seventy-two cents in 1899 could have been had for eighty-two cents in 1909; but, in fact, the farmer bought an upholstered chair at two-fifty. The yard of calico that cost five and a quarter cents in 1899 was not only bought at six and a half cents in 1909, but silk ribbon went with it. Otherwise, what would be the use of prosperity?

The Investing Public

WALL STREET complained of a poor year, but sales of bonds on the Stock Exchange were larger than in the year before by about two hundred million dollars; and returns to the Journal of Commerce from two hundred and thirty-four big railroad and industrial corporations show that their stock is now held by nine hundred and thirty thousand persons, the number of stockholders having increased during the year by more than sixty-four thousand.

The investing public continually grows in number and in monetary power. The corporations reporting to the Journal of Commerce have nearly eleven billion dollars of capital stock outstanding, about equally divided between ninety-one railroad companies and a hundred and forty-three industrial companies—the five and a quarter billion dollars of capital stock of the latter now being held by five hundred and thirty thousand persons. These industrial companies include, of course, the more conspicuous trusts; and, it is asked, Instead of fighting them, why don't the people own them by investing surplus capital in their shares?

The most obvious answer is that by owning them the people could not in the least control them. Over nine hundred thousand persons have contributed capital, by stock investment, to the big corporations above referred to, and many thousands more have contributed capital by investment in bonds; but probably the effective control of these corporations is in the hands of two or three hundred men—and it is possible, no doubt, to pick out a score of men who could exert a more powerful influence over their policy than nine hundred thousand relatively small and scattered stockholders could. The bigger the company and the more widely its stock is distributed the less possible is it for the body of stockholders to participate in control—the more they are bound to follow a few leaders. There is no power or agency in sight, except the National Government, that can participate effectively in control.

A Bit of Beef-Trust History

IN MAY, 1902, the Government sued for an injunction against the big Chicago packers, alleging that they agreed together as to bids for live animals and in disposing of their products, thereby suppressing competition and creating a "restraint of trade" under the Sherman Law. Such agreeing together was no doubt illegal, and Judge Grosscup so held it; but it was commonly held, under the decisions of the Supreme Court up to that time, that for these packers to consolidate their plants and businesses outright by turning them over to a New Jersey holding company was quite legal.

Accordingly, as evidence recently taken at Chicago shows, the packers and certain eminent financiers agreed upon a merger under the holding-company plan. The tangible assets of the concern would have been something under three hundred million dollars, for which bonds and preferred stock were to be issued. Also, the holding company was to issue something over six hundred million dollars of common stock, representing goodwill—or water. The promoters were to get ten million dollars for financing the combine, and no doubt there would have been vast speculation and manipulation of the watered stock, as in the case of the Steel Trust.

The country was saved from this stroke of high finance only by exigencies of the money market; but if the deal had been carried through we could have thanked the Sherman Law for that six hundred millions of "goodwill" common stock, because it was that law which forced a resort to the holding-company scheme.

Insurance in Great Britain

ONLY twenty-one votes were recorded in the House of Commons against the National Compulsory Insurance Bill, under which some nine million men and four million women will receive medical attendance and a money allowance during illness, a life pension upon becoming permanently disabled, and in some cases a money allowance during unemployment.

There was very little opposition to this insurance bill; and The Statist, a recognized authority upon life-insurance, presents a novel argument in its favor. Life-insurance, The Statist shows, has made big advances in Great Britain of late. Thus, in twenty years the number of policies in "ordinary" life companies has increased from less than a million to more than three millions. At the same time the number of policies in "industrial" companies—insuring mostly small-salaried people and wage-earners—has increased from less than ten millions to more than thirty-three millions and the amount of insurance in force from ninety million pounds to over three hundred and thirty millions. This shows, The Statist thinks, not only that nearly all classes of the British public are in receipt of larger incomes, so that a far greater proportion now has some surplus over actual necessaries of life, but also that all classes, especially wage-earners, are more inclined than formerly to make provision for the future when their means permit. The national insurance bill will lighten the dread of poverty through sickness and unemployment that many wage-earners now feel. Its effect will be much the same as assuring greater permanence of employment and steadier income; so more wage-earners than ever will take something from the weekly pay envelope for insurance other than that provided by the national bill.

Certainly the whole bread-winning population of every country ought to be insured.

Our Old Friend, Cost of Living

THE new year begins with prices substantially at the top notch, and if the supply of gold is to be the governing factor there is no sign of any important decline. The African mines have again, as usual, broken the record, but more decisively than in any recent year. In 1909 the output increased something over three per cent, and in 1910 in about the same proportion; but in 1911 the increase was nearly ten per cent—so that the Transvaal alone last year yielded almost as much gold as was produced in the whole world in 1894. As for the world, its yearly output is over four times what it was in 1888. The year just closed was by no means a boom period. In some lines business was rather dull and there was much talk of reaction and depression; but from spring onward prices generally tended to advance. Notwithstanding a big drop in cotton, the Department of Agriculture's index number for the prices of leading farm products advanced about fifteen per cent. Apparently, if a dollar goes any farther in the present year of grace than in any recent year, it will do so only because its possessor stretches it harder.

Pensions for Government Clerks

WITH great alacrity, the House passed a military pension bill which was accompanied by a report from the Interior Department that its provisions, if applied to the number of pensioners on the roll June 30, 1910, would increase pension expenditure by seventy-five million dollars. Whatever the merits of this measure may be, they certainly do not include increased efficiency and economy.

The case of civil pensions stands, in this respect, in complete contrast. One department head and bureau chief after another have urged a retiring allowance for Government clerks strictly on the ground that it would promote economy. It has been shown repeatedly that every—or nearly every—department contains clerks who have passed their efficient years—men of sixty-five and upward. The Government retains these old men simply because it hasn't the heart to turn them into the street—for which, certainly, we are thankful. Secretary MacVeagh repeats that a system of contributory retirement pensions may be set up that will cost the Government very little in actual money and will decidedly increase the efficiency of the clerical force.

The military pensions are partly a matter of sentiment. Civil pensions are strictly a matter of business. It is not altogether creditable to Congress that sentiment should get all the attention and business none.

Illogical Eloquence

ONE of the most eloquent appeals that has ever reached us comes from a devoted antivivisectionist. It is couched in such noble language and contains so many beautiful sentiments that upon reading it we immediately felt ourselves to be a little brother to the dog and the cat—a quite unworthy little brother too: one of the sort that privately eats the best apples in the basket before divvying up, and then lies about it.

Upon reflection, it set us to wondering what would be the effect if a carefully selected assortment of reptiles were suddenly liberated in an antivivisection convention. Would there be noble reminders of our duty to love all divinely created things?—or wild shrieks for a club?

The whole strength of the antivivisection movement lies in the picture of a beautiful dog, bandaged, upon which scientists are about to perform an experiment. If the picture showed the anesthetic that makes the dog insensible to pain it would lose two-thirds of its appeal, and the movement would be correspondingly crippled. If it showed him frothing with rabies pity would change to abhorrence—except as the Pasteur treatment, made possible only by vivisection, has diminished our terror of mad dogs. If it showed an ugly animal—a bat, say, or a toad—nobody would care in the least what became of it. Many times more stray dogs and cats are killed in the city of New York alone than are used in all animal experiments; but they are presumably ill-conditioned, mangy brutes, and we never heard of a tear being shed over them.

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

The Meditations of Marcus

ONE morning the original Marcus Aurelius, having had a good breakfast, lighted a Flor de Catacumba cigar and walked out on the terraces of the imperial palace to do a little meditating. Marc, as is well known, was full of meditations when he wasn't full of choice Falernian; and, though he was a Roman, did his classiest meditating in Greek, just to show some of the hammer-throwers round the place that he had an education, and with the end in view of putting his thoughts into a book and making it a best seller—which was a cinch, when you come to figure on it, for the Greeks might buy it and the Romans would have to or it would be the galleys for theirs.

The emperor was feeling very fit. Things were coming his way. His campaign for renomination was going along smoothly and there were no disquieting rumors that the T. R. of the period had it in mind to be a candidate against him. Naturally his meditations took on a pleasant turn and, instead of reflecting on death as was his wont in many instances, he qualified for membership in the S. P. Q. R. Optimist and Marching Club. As he stood on the terrace and listened to the haunting melodies that came floating out on the soft Italian air from the atrium, where the Royal Hungarian Orchestra was playing, he meditated as follows: "This is pretty soft. Marc, old scout, they are coming in carriages for you. The ways of the gods are full of providence."

Commentators differ about the first part of that meditation, holding, in some instances, that the text is corrupt; but the last part of it stuck, being vouched for by that well-known disseminator of the classics, H. Altemus, and appearing in all editions of the Meditations put out by him. "The ways of the gods are full of providence." And, strangely enough, not so long ago another Marcus Aurelius, walking out of the club at Tucson, Arizona, looked off toward the Old Mission and meditated along similar lines. There, in the brilliance of a Tucson night, Marcus Aurelius Smith, removing a broad-brimmed hat, took a twist at his handsome mustachios and murmured: "The ways of the gods are full of providence."

Which, dear brethren, is the charming fact, so far as Marcus Aurelius Smith is concerned—not, of course, that the gods had anything to do with the particular circumstance that evoked the murmurous thanksgiving from Marcus Aurelius Smith, but that in a broad, general sense the term may be used as applying to the free and untrammeled voters of Arizona, the same being a new star in the flag—an imperial commonwealth, a little stranger in the glorious galaxy of states—and Marcus Aurelius Smith having been chosen as United States Senator therefrom.

United States Senator! Think that over for a moment in view of the years and years when Marcus Aurelius was merely a delegate in the House of Representatives from Arizona, a territory—a delegate—an imitation legislator, who could talk until he was black in the face and introduce bills; but who, when it came to the real excuse for being in the House—the voting—had to sit silent as the roll was called. A voice without a vote—a pipe without tobacco—a thirst without a drink—a cause without a result—an automobile without gasoline!

The Essence of Arizona

AND now, at one jump, Marcus Aurelius has landed in the Senate, where he can vote without let or hindrance; has achieved the upper house without stopping to be a Representative; has leaped from neuter to nectar, from trammel to toga—a Senator! "The ways of the gods are full of providence"—and that goes double for Arizona—and Mark.

Many persons have observed territorial delegates in the House of Representatives sitting round on the edges, having none but vocal functions—excess baggage in the legislative halls—and wondered why. To what end should a man persist in coming to Congress from a territory when his coming meant nothing to anybody save the salary for himself and an occasional chance, by courtesy, to make a speech? He has no functions. He is an added member of committees, always at the bottom, and merely a noise at committee meetings if so be he chooses to be noisy. To be sure, he can help some in getting legislation for his territory if he is popular, but it is all by personal solicitation and not by any power of voting that he may have.

To what end, did I ask? Well, in the case of Marcus Aurelius Smith, aforesaid, it has been to the end just attained—the United States Senate, to be exact; and maybe Mark didn't know what he had in mind! Maybe he didn't—and then again maybe he did! The dids have it.

PHOTO. BY CLINEDINST, WASHINGTON, D. C.

A Voice Without a Vote Has Compensations

He did! Arriving in Washington as a territorial delegate, with a voice and no vote, Marcus Aurelius didn't bore anybody with his voice. He just moved round and watched developments.

He first came to the Fiftieth Congress, a soft-spoken, genial, pleasant man, who soon developed as a good story-teller, a likable companion and a citizen of parts. He was modest and unassuming and effective. Even in those days there was a demand that Arizona should be a state. Mark fostered that demand. In season and out of season he worked for statehood. Occasionally when the matter was up he made a speech about it and showed how valid the demand of his territory was; but mostly he circulated and talked and maneuvered and planned and tried to get statehood over. It was a long job and a tiresome; but Mark stuck to it.

He came back to the Fifty-first, the Fifty-second and the Fifty-third Congress, dropped out of the Fifty-fourth, got to the Fifty-fifth, dropped out again for the Fifty-sixth, was there in the Fifty-seventh, couldn't make it for the Fifty-eighth, but did get to the Fifty-ninth and Sixtieth. They beat him for the Sixty-first or he didn't run—I forget which. Anyhow, all these years every time there was any talk, however desultory, about statehood for Arizona, Mark Smith was on the job. He was there, and urged his claims and the claims of his people. On several occasions it looked good—but at the last moment something happened. Mark took a few twists at his mustachios and began all over again. Though it may be he didn't have much to do with the enabling act, as it was passed finally, it is undeniably true that his work during all these years laid a good share of the foundations for the statehood Arizona now has.

Nor did Marcus Aurelius lose sight of the fact that when a state is made two Senators are made also, or can be made. He had an eye on that toga from the beginning. Politics in a territory is as various as elsewhere—and mostly more so. He had to fight for everything he acquired personally; and some of the fights were bitter ones. Still, the fighting part of it didn't bother him much, for he comes of a line of sturdy Kentucky folks; nor did he let any grass grow under his feet—if grass does grow in Arizona—let any cacti grow under his feet—that's better—for he hadn't moved from Kentucky more than a year when he went out for the office of prosecuting attorney for his district and was elected. He has been active in Arizona politics ever since—and that was away back in 1882.

As the original Marcus Aurelius meditated on an occasion when he was meditating in good form: "That which comes after ever conforms to that which has gone before." What went before for Mark Smith was sixteen years of consistent, intelligent service for his people as territorial delegate. He is experienced in legislative ways, knows the mechanics of Congress, is popular and an able citizen. Also he will be a notable addition to the Democratic Story-Tellers' Club; but he will not devote so much time to that end of the game that he will not get all that is coming to him as representative of the new state in the Greatest Deliberative Body in the World. Three cheers!

Reverting to the Great Meditator, he once handed out this advice: "Look to the essence of things." They gave that to our present Marcus Aurelius when he was a boy in Kentucky. For sixteen years and more he looked carefully to the essence of things—which was a Senatorship from Arizona. He never forgot the essence for a minute. All of which goes to show that being a voice without a vote has compensations—especially if one can spare the time.

Not Enough Naughts

GRAND CENTRAL PETE was a noted bunco-steerer of the old days, but he could neither read nor write. Once he fell upon hard times, and he and a younger but equally luckless confidence man undertook to beat their way on a freight train to Washington. A brakeman kicked them off at Trenton.

It was getting late and neither of them had a cent. Across the tracks from where they had landed was a good-looking hotel and right next door was an express office. Grand Central Pete had an idea. He went into the express office, borrowed one of the large manila envelopes such as are used for transporting currency, filled the envelope with pieces of newspaper cut to the size of banknotes and sealed it carefully.

"Now, then," he said to his partner, "you take your fountain pen and write on the back of that envelope $9000. Then we'll go over to that hotel and explain that we've lost our baggage, and I'll hand this envelope to the clerk and ask him to lock it in the safe. He'll look at the figures on the back—and he'll take us for moneyed guys and give us rooms and grub until we can raise a stake."

The scheme sounded good to the younger man. He got out his pen and obeyed orders. Grand Central Pete took the envelope back in his hands and examined it carefully.

"Does that say nine thousand dollars?" he demanded.

"Yep," said his partner.

"Well, it don't look big enough to me," said Pete. "You'd better add on some more of them naughts."

The younger con man protested, but Pete would have his way and kept after him until the educated one had tacked on three more naughts, making the grand total $9,000,000.

Then Pete marched grandly over to the hotel, registered for himself and his friend, passed the stuffed envelope across the desk to the clerk and called for the bridal suite.

The clerk took one look at the envelope, another look at the soiled faces and shabby apparel of the newcomers—and rang the bell for the house bouncer. A minute later the discomfited pair were sitting on the sidewalk.

Grand Central Pete raised himself painfully and eyed his companion with a scornful, angry glance.

"There now—dad-gum you!" he shouted; "I told you you hadn't wrote enough of them naughts!"

A New Route

"YES, gentlemen," shouted an orator at a recent convention in New Orleans, "this Panama Canal will be a great thing for New Orleans—a grand thing! It will increase our business and our facilities for doing business. It will make trade easier for us. Why, gentlemen of the convention, it will enable us to get our manufactures and produce to Brazil without going round the Horn!"

Conducting a Collection

THE Reverend Allen Fort, pastor of the Baptist Tabernacle in Chattanooga, asked J. B. Capeheart, a railroad conductor, to take up the collection one day. It was Mr. Capeheart's first experience as a taker of collections in church.

He started down the center aisle. There were several children in the first pew and each put in a penny. The people in the next pew also contributed something each. A big, glum fellow sat alone in the third pew. Capeheart passed him the plate. The man shook his head and stuck his hands deep in his pocket.

Capeheart stopped, put up his hand as if to jerk the bell-cord and said: "Well, you'll have to get off."

"She knows how!
That's the secret."

AND not such a deep secret either.

Often when you hear this simple explanation given for the success of some unusually clever hostess, you'd be surprised to learn how much of this "knowing how" lies in the judicious use of

Campbell's
SOUPS

She knows just which of our inviting "21 kinds" will make the happiest introduction to any particular dinner or luncheon or supper; so that she provides an appetizing course to begin with. And she knows it will be ready on the minute, and *just right.*

Try these satisfying soups and see how helpful they will be in *your* social affairs. Why not try one *today?*

21 kinds
10c a can

Asparagus	Julienne
Beef	Mock Turtle
Bouillon	Mulligatawny
Celery	Mutton Broth
Chicken	Ox Tail
Chicken-Gumbo (Okra)	Pea
Clam Bouillon	Pepper Pot
Clam Chowder	Printanier
Consommé	Tomato
Vegetable	Tomato-Okra
Vermicelli-Tomato	

Look for the red-and-white label

"A hurry call has sounded
In my little tummy tum.
And with ecstasy unbounded
For my *Campbell's Soup* I come."

An Old Woman and a New One in the Old World

(Continued from Page 18)

alarmed. She arose and moved briskly from one bell to another, ringing up all the servants in the house. If you have never tried it it is a thrilling experience to listen for fifteen minutes to an animated monologue addressed to you and in a foreign tongue. I sympathized with her, but I went on doing my duty as a well-trained social being, scarcely drawing breath as I passed from Joseph the Second to two or three lines I recalled from Wordsworth's Ode to Immortality. The countess was on the verge of hysterics and Peggy had begun to titter. Fortunately the interpreter arrived at this moment.

I subsided into silence and left my niece to ask for what she wanted to know. But my lady continually referred to me with her eyes, as one watches a homely old pot that is apt to boil over.

And I cannot think Peggy was sufficiently explicit, for the countess never understood the kind of little suffragist serpent she was nursing in her noble bosom. On the contrary, she ordered her carriage and took us for a drive to see her good works. She showed us her workingmen's bazaar, where through donations she has accumulated about twenty carloads of every imaginable thing, from household furniture to shoes for club-footed children. During the past year the work of repairing this stuff and rendering it salable has kept enough people employed to support twenty-seven families. The things are sold to the poor at nominal prices, merely enough to pay for the repairing. In addition to this, the countess had rescued from the streets of Madrid four hundred and fifty girls, whom she has distributed in the twenty-eight convents in the Order of Adoratrice. We saw a hundred and fifty of them in the convent at Madrid, all working over embroidery frames. Here they have good food, clean beds. They spend several hours at prayer every day, but they may go to the little theater in the evenings which is a part of the convent and in which morality plays are given by the girls themselves.

The Ideal State for Women

Spain is a far more expensive country to live in than France or Germany. Some idea of the condition of women who cannot work will be understood when you consider that house servants receive from fifteen to twenty pesetas a month—that is, less than three or four dollars. Few women work in the shops, where the wages there are scarcely more. None of the professions is open to women. And it is only recently that they have been employed in telegraph offices and as stenographers. In this kind of work they rarely receive more than seventy-five pesetas a month.

There is no law in Spain corresponding to the married women's property act in other countries. The husband has the same rights over his wife that he has over his children. He can punish her if he chooses, and strange tales are told about instances of this kind even in the best social circles. A woman has no right to her children unless they are illegitimate. She cannot testify as a witness in the courts. She is classed with children and idiots and minors. The men have recognized the "danger" of feminism, and they are deliberately taking every precaution to prevent the spread of this pernicious body of ideas in Spain. Their success may be inferred from the fact that the women are furiously antagonistic to the suffrage movement in all its forms. They are like those slaves in the South before the war who petitioned the Government not to cast them out into freedom. They are absolutely dominated by their masters, the men. And this is really the ideal state for women—I say it and stick to it!—if the men knew how to or were disposed to take proper care of them, as many Southerners before the war did of their slaves. But no one intelligent person can live in Spain a day without realizing that the women are not properly cared for, not properly loved or cherished, even when they are magnificently provided for with every luxury that wealth affords. Yet the only suffragist we found there was a retired officer of the army, a dingy old man who confided to Peggy, naïvely wagging his gray head, that his friends thought he was a bit "touched" because he believed in more freedom and better laws for women.

As for me, I do not think Spain is any more benighted than some parts of the United States. In Tennessee I have seen the second wife and her children live in luxury upon the first wife's estate, while the first wife's children suffered privation. I have known a rich woman to marry a worthless man without a penny, who turned her out of her own house and continued to live in it on her income, while she depended upon the charity of friends for support. And this was all legally done according to the laws of that state. While we are looking at the condition of women abroad we may as well look round at home some. No history of the women of any nation has ever been written. When that of American women is published—if it ever is—we shall hear less than we do now about her dominating ways and arrogant abuse of rights and privileges. Ah me! I actually tremble when I think what will happen in the world if the women actually do take a notion to tell all they know, and especially what they have suffered from the tooting gallantry of men. They will have a frightful advantage if they ever do begin it, because men can never tell what they have suffered from women without doing some violence to the reticence and courage of their manhood. It is written for every man: "Thou shalt not complain or tell on thy woman, however mean and abominable she has been to thee!"

The Gossip of the People

I do not know what is going to happen to us. The immediate future for women seems angry and dark, full of fury and accusations against the very beings we love most. What I wish is that in our country at least the men who govern would get together in this matter before it is too late, revise our laws and make others for the better protection of women, and stop this suffrage movement before it really takes deep hold upon the minds of American women. It may be the right thing, the lifted wing of our next evolution in the scale of things—this franchise of women—but to me it seems terrible in its dangers and responsibilities. I reckon this is because I am old and have lost the courage of the young present.

So far I have confined myself to general impressions of Spanish life and to the conditions of those poor little vowels of humanity—Spanish women. But this account of our visit in Spain would be incomplete without some attempt to describe another experience we had there. However much of a stranger you are in a strange country, you may always know what circle of society you have got into by the quality of conversation current. If it is very poor the topics most discussed are the daily needs of the people and their daily crimes. The poor always have bloody imaginations. They are always interested in murders and violent deaths. And out of their great necessity comes much talk about the cost of living. But if the conversation is ugly gossip about the immorality of men and women, you may know that you are in the back-door circles of the better class, garbage conversationalists who batten eagerly upon the faults of those above them. If the talk is always of pleasures, indulgence, if everybody is planning his own comfort, you will understand at once that you are among the idle, selfish, anemic rich. If the subjects most discussed are impersonal, matters of art and science, music and literature, you will understand that you have the dubious good fortune of being in the best, truly refined circle of society. I say dubious because, after all, mere talk about these things does not indicate the existence there of the people who actually accomplish them. I have observed everywhere that those who achieve do not belong to any circle of society. They are silent forces, dumb, foolish, embarrassed-looking "lions" at dinners, men and women who have acquired some stronger instrument of expression than the merely garrulous human tongue. But over and above these distinctions there is in every nation some subject of conversation more or less common to all classes and circles of society. In England you are bound to hear more or less about cricket and politics at five o'clock teaparties. In Germany there is always dinner-time talk of music and the opera, with a little beery spice of pessimism about life in general thrown in. In France it is the latest scandal or witticism and aviation. In Spain everywhere we heard of the lottery and of the bullfight, just as in America one hears of graft and baseball. In the streets of Madrid there is not a beggar so poor that he cannot afford to buy at least one ticket a month in the lottery. There is not a child old enough to speak who cannot tell you about the last bullfight he saw.

The popular heroes there are not warriors or statesmen, but the favorite toreadors, just as in our country the boys no longer idealize George Washington, but the best pitcher in the baseball leagues.

Safe in the Gallery

Peggy, of course, being young and ardent, was more interested in the tales of the bullring than I was. She urged over and again that we should go to see the next bullfight, which was to be on Friday before we left. I demurred. I have always been afraid of cows, to say nothing of bulls. She overcame this objection with the assurance that we should have seats in the gallery fifty feet above the ring, entirely out of reach of the most ferocious bull. But my circulation is not good. When I get excited my feet swell and I should have to take off my shoes even if we were at the grand opera. In vain I held this out as a threat, and I consented at last to accompany Peggy to the bullfight.

We had good seats in the gallery—too good. Beneath us was tier after tier of stone benches, then the space between the seats and the ring, which was a circle about two hundred yards across and inclosed by a stout stockade a little higher than a man's waist. I have seen many a spotted Georgia yearling that could jump it without lifting his tail. My comfort was that cows cannot climb a staircase like this one below us formed by the tiers of stone seats. We were immediately under the royal box, which was in the next gallery. One of the arguments Peggy had used to get me to attend this fight was the fact that the long ribbon streamers, with which the bulls are decorated, are often made by the queen and the various *infantas* of Spain. It was inconceivable that women, royal women, the leaders of life and sentiment in the best society of the nation, would countenance an absolutely revolting and barbarous performance.

Scenes at the Bull Fight

It was a cloudless afternoon. We took our seats amid the fourteen thousand other spectators, including several members of the royal family in the box above. The stockade was informally and brilliantly decorated with the cloaks of the toreadors, red, blue, purple, pink, orange-colored, all gleaming in the afternoon sun like rainbow rays hanging upon the sides of the ring. There were many women to be seen besides the Spanish, who were distinguished by their white and black mantillas. Most of the others, I think, were English and Americans. I did not meet in Spain a single person of another nationality—man or woman—who was not fierce in his condemnation of bullfighting, but who, when pressed, did not admit that he had attended more than one fight if he had been there long enough to get to a second one.

Presently the sunny silence was rent on all sides by continued calls for "The bull! The bull!"

A gate was thrown open and two gayly uniformed horsemen galloped into the ring, crossed it, stood under the president's box and asked for the keys of the city. They immediately disappeared. Another gate was flung open and six toreadors streamed into the ring. They were dressed in tights of as many colors as were represented in the capes already hanging on the sides of the stockade, and very handsomely embroidered in gold and silver. After these came four picadors mounted upon horses. I was disappointed in the horses, poor old worn-out hacks with sprung knee joints, no more capable of speed than blind mules. In fact, there was a bandage over one eye of each horse, the one on the side that was to be next to the charging bull, as we afterward learned to our unutterable horror. Each picador carried a long spear, and lumbered round the ring upon his ludicrous

Digitized by Google

steed amid the joyful exclamations of the crowd. Meanwhile the toreadors that were on foot had withdrawn to safety behind narrow wooden barriers placed inside the stockade for this purpose. At this moment a bugle sounded from the president's box. A gate was flung open and an immense black bull rushed into the ring, bellowing and sweeping his long horns from side to side—horns that had been sharpened at the ends for a purpose that we should presently understand. The streamers from between his shoulders fluttered wildly. A little girl in the seat next to me, who had been telling her English governess of how she had been entertained the previous Sunday watching the slaughter of lambs at some shambles she had visited in the country, paused in the midst of her story to watch the bull—eager-eyed, delighted at what was to come. A boy not more than four years old began to cry because there was no blood. His father began to comfort him with the promise that there would be a plenty! This was the first intimation we had of what was really to come.

The Last Stand of the Bull

The bull, blinded by the fierce light in the ring, saw nothing at first. It merely charged madly round and round. Each time the picadors turned the blind sides of their horses to him and awaited. It was not in the plan of the sport that these poor beasts should have the slimmest chance of escape. Presently the enraged animal paused, became aware for the first time that he had enemies in the ring nearer than those he had seen vaguely in the seats beyond. He singled out an old gray horse fifty yards away and started with lowered head, bellowing as he came.

"Peggy!" I screamed, "my feet are swelling! If that cow gets that horse I'll have to take off ——"

I never finished the sentence. That instant the old gray rolled over, his side ripped from flank to shoulderblade. While the gray was receiving this wound the picador was thrusting his spear into the neck of the bull. There was the wildest excitement among the spectators, yells of frenzied delight as the infuriated beast charged from one horse to another, each time doing fatal work with his sharpened horns, each time receiving into his own flesh the terrible spear of the picador.

Again the bugle sounded, the toreadors turned from their hiding-places and began to play the bull with their capes. The old gray mercifully lay dead. A picador led through the gate another horse that was dragging his entrails in the sand. The other two, still ridden, limped after with wounds that gaped in their sides. The shoulders of the bull were covered with blood.

I looked round and at first did not see Peggy. She had slipped down and hidden her face in the folds of my skirt. And she did not lift it again until the bull was dragged dead from the ring. No such merciful courage to turn my head away was possible to me. I was fascinated. I could not keep from staring at the hideous drama below. There is nothing so tyrannical in its hold upon attention as horror, once you are dominated by it. I saw two men in red tights, as slim and active as if they had wings, with *banderillas* as poised and malevolent as inspired devils, and before that maddened creature and incite him to charge. When he did each successive bull's lowered head and thrust the wings into his neck. There was an instant explosion.

Peggy Gets Enough

Red blazes shot out over him and fire streamed down with the blood upon his shoulders. No word can describe the intensity of his rage and terror that followed. The bugle sounded again. A slim youth in lavender tights embroidered in silver jolted over the stockade. He carried a red flag in one hand and a sword in the other. For the next ten minutes the crowd was as silent as if it held its breath. This was to "square" the bull and kill it with one thrust between the shoulders. If he made a mistake, failed to thrust in the vital spot, he would be shamed and disgraced, also he might lose his life—not that that mattered to the spectators, except that it would bungle the science of this brilliantly scientific sport.

The bull charged and turned and charged again. The boy moved like a marionette, always keeping the red flag a little to one side, waiting for the moment before each charge when the bull would stand squarely in front of him with lowered head. Suddenly the instant arrived. The boy rose fully six feet in the air, the sword gleamed and disappeared. Only the hilt of it was visible now between the bloody shoulders. The bull stood perfectly still. In the twinkling of an eye his nature was changed, gone from him. He looked mildly from one of his tormentors to the other, disregarding the bondage of the red and purple cloaks flaunted before him. He saw them—the men who had tortured him—clearly for the first time. His air was so gentle it was as if he said:

"Gentlemen, there is some mistake. I do not understand what has happened. I am tired. The grass is green here. Excuse me."

He knelt slowly, with that singular, deliberate dignity which belongs to all great animals.

The bugle sounded. The gate was thrown open. Two mules that had had their tails cut off and red and yellow pompons fastened to the stumps trotted in, backed up gayly to the fallen form of the only hero I saw in Spain. A chain was buckled round the base of the dead bull's horns and the mules trotted out, dragging the immense body.

"Peggy," I whispered, "it is over. Let us get out of here quick before the next one comes in!"

We hurried out, Peggy white and so limp she could scarcely stand. At the door of the gallery the ticket man smiled.

"Your first time, I reckon. A heap of folks can't stand it the first time. But, ha! ha! they always come back again. It's great sport! I'm an ——" His voice followed us indistinctly as we clattered down the stairs.

Outside all was peaceful and still, as if this part of the great city had suddenly moved far out into the country. There was not a human being to be seen. They were all inside. There were still five more bulls to fight and kill.

An hour later, when we had reached our *pension* and I had put my niece to bed with a hot-water bottle at her feet and had given her a teaspoonful of aromatic spirits of ammonia, I said this:

"Peggy, the next time you want to go to a bullfight take some one else, for you'll never take me; not if the Infanta Isabella offered me a seat beside her in the royal box!"

She looked at me meekly and said nothing. And that was the last reference to a bullfight between us.

The Love of the Horrible

What I have written here is not elegant. The theme does not lend itself to nice literary treatment. But I have told the truth. And my readers will not have any nice literary magazine excuse of ignorance if they are ever tempted to go to a Spanish bullfight.

What I wish I knew is this: Does the national mind of a people, as it grows old and callous, rot into a degraded sort of appetite for what is bestial and cruel? Do we come at last to crave horror as a motive in any drama of life? In this connection I recall a circumstance connected with Strauss' opera, Salome. Some years ago, when it was put on at the Metropolitan Opera House in New York, the people revolted at the monstrous meaning. Even in New York, where so much of life is neurotic and diseased, they could not bear the motive of the thing, which was horror. It was taken off after the third performance. But the next season it was put on and had a rather successful run. In a year the sensibilities of the audience had decayed that much.

How would a Spanish audience, the same people who rejoice in a bullfight, receive an opera like Salome? They are said to be rather squeamish about what goes on the stage in Spain. Is bullfighting merely an illustration of the universal cruelty of the Latin people everywhere in their relation to the lower animals?

It is hard to say. But, for one, I am not sure that it is not healthier morally and mentally to witness a bullfight than to see some of the febrilely refined and decadent plays that are so popular in some American cities.

Editor's Note—This is the sixth in a series of articles by Corra Harris. The seventh will appear in an early issue.

You can see through it just as you see the violets here.
10c a cake—3 for 25c.
Look for the name Jergens

The moment you see it, you will want it

Hold it to the light.

It is crystal-clear, just as this picture shows it—a pure, translucent green, the shade of violet leaves. Everywhere that this soap has been brought out, the demand for it has been instantaneous. Every person who sees it wants it. You, too, will want it.

Then smell it. It has the fragrant odor of freshly cut violets, just enough to make it delightfully refreshing. After using it, your hands have a faint odor of violets about them.

There are a dozen other reasons why you will like this soap; its instant lather—soft, fine and plentiful, even in the hardest water; the glycerine in it, the finest skin food there is. But hold it to the light—smell it, you will want it the moment you do.

Write for sample cake, today.

We are now prepared to send samples anywhere in the United States. Dealers everywhere now have the soap, so that your own dealer can supply you when you have used this trial size cake. Fill out the coupon below and send it to us with a 2c stamp and receive your cake by return mail. Address Dept. P, The Andrew Jergens Co., Cincinnati, Ohio.

STANDARD

TAPER ROLLER
BEARING

You should certainly know all about the bearings of the car you own—or expect to own.

97% of all the automobile manufacturers of America consider the matter of bearings vital enough to unite in a general specification of Standard Products.

They specify Standard Bearings because actual test has proved the high efficiency of Standard Bearings in maintaining the ease—the safety—the long life of the cars they build.

Their search for a bearing that would transmit engine-power to driving-wheels without friction and waste revealed only Standard Bearings as adequate.

For instance, in the Taper Roller Bearing they discovered an accurate engineering solution of front axle troubles.

In no other type of bearing is the cramping and twisting of the rollers so successfully overcome.

The Standard alone will safely absorb the heavy weight of a motor car thrown violently against a front wheel in turning corners.

This is only one of a dozen points of superiority that has convinced manufacturers—and should convince you—that no car is wholly safe if less safely equipped than with Standard Bearings.

Our Booklet, "The Road-bed of Power," will guide you further in your study of correct automobile construction—write for it today.

Standard Roller Bearing Co.
Philadelphia, Penna.

BOOK-RAISIN'

By Blanche Goodman

"DIS heah presen' gingeration," said Viney as she sprinkled down the clothes preparatory to ironing and tightly wadded each piece before placing it in the basket, "lays too much sto' by books."

"Folks says," observed Uncle Peter, "dat hit's books what mek de young people smahter'n de ol' uns nowdays."

"Folks!" sniffed Viney scornfully. "What folks says dat? De young uns deyself says hit, dat's who. But you an' me knows better. De things what 'mounts to somep'n am always heah to be learnt, ef dey is put down in books er not; an' de things what don' 'mount to shucks dries up an' blows 'way, jes' lak all no 'count things does ef you goes on an' lets 'em alone. I had a exspe'unce oncet where I run plumb up against dat book-learnin' business, an' you can be de jedge of who come out on top.

"I was out in de yahd one day hangin' out clothes when Miss Fanny sent word fo' me to come on up to de house right dat minute an he'p her git ready to go 'way, 'cause she'd jes' got bad news fum Miss May an' she was gwine to take de train dat ve'y aft'noon an' go to her.

"I run as fas' as my laigs could tote me, an' when I come on up to de house I foun' Miss Fanny dat tore up an' worritted dat I couldn't sca'cely do nothin' wid her. She tol' me dat a telegraph had come sayin' Miss May had a pensights an' have to have hit tuck out ef she want to live. Dat's whut Miss Fanny tol' me 'tween cryin' an' wringin' her han's. Fum de soun' of hit I knowed dat whut Miss May had mus' 'a' been somep'n awful, an' I helped Miss Fanny to git ready as fas' as I could.

"'Viney,' say Miss Fanny as I went on out to de ca'ige wid her an' de Cunnel to tell her goodby, 'I reckon Miss May'll be ca'ied to de infernery, an' Ise a-gwine to sen' de white nuss she's got ovah heah wid de baby, 'cause hit'll be better fo' hit to be heah twel she am all right again; an' I'll pen' on you to ovahsee things even ef de nuss am a fus'-class one.'

"Dat was on a Choosday, an' on Thu'sday Cunnel Slocum got word to meet de nuss an' baby at de depot. Isom hitch up de ca'ige an' me an' him an' de Cunnel went on down to wait twel de train come in. Pretty soon here hit come a-rumblin' an' puffin' in, an' when hit slowed up an' stopped a white lady carryin' a baby in huh ahms steps off.

"We all got in de ca'ige, an' den I tuck a good look at de baby. Laws, Uncle Peter, I don' know when I has evah seed such a puny lookin' chil'—nothin' but skin an' gristle—an' fo' de life er me I couldn't he'p sayin': 'How come de baby so po' an' spin'ling?' I don' think de Cunnel notice how bad dat li'l thing look, he was so chuck full er bein' a gran'pa, er else he didn' want to let on.

"'De baby am puffeckly well,' say de train nuss. 'He am not perzackly what you calls fat, but he am healthy, 'cause we's a-raisin' him cordin' to de rules laid down in Doctor Bolter's book an' he's a-gwine to be de fines' baby in de lan'.'

"I says to myse'f: 'Ef he's a-gwine to he better hurry up an' git on de road, fo' he's a fur ways frum hit.' Den I says out loud: 'S'posen you lets me hol' him in my ahms a while so dat you can res'.' I was jes' achin' to fol' dat li'l lamb up to me. At dat de nuss open her eyes wide at me an' 'spon's: 'Thanky, Viney, but 'cordin' to de book hit's bad fo' de baby to be helt by so many dif'ent people so I'll jes' keep him.' Well, ef dat didn' beat my time! I ain't open my mouf after dat, an' I jes' set an' listen to de Cunnel axin' questions 'bout Miss May an' how she was gittin' on, while we rid on up to de house. Dat mawnin' I had gone on up to de garret an' brung down a cradle what was up dere—de ve'y one dat Miss May herse'f had been rocked in—an' had put hit in de room where de nuss an' de baby was to be. De minute we come in de room an' her eyes lit on hit she say: 'Am dat fo' de baby?' 'Yes'm,' says I, awful proud, 'dat's de one dat de baby's own ma slep' in.' An' den what you reckon dat nuss say, Uncle Peter?" The old man shook his head as he gazed at Viney with a blank expression.

"She tol' me," said Viney slowly, watching the effect of her words on Uncle Peter, "dat de rules er de book was dead agin cradles! Yes, dat's what she said! Den she went on to 'splain dat de rockin' did somep'n er other to de baby's diges'ment an' addled up some sort er gray stuff what am in de brames, an' a lot mo' fool talk 'bout things what no one evah hearn tell of outside er de man what writ de book, an' he nevah was no ma hisse'f, so how could he tell?

"Well, I seen den an' dere dat one of two things was gwine to happen—dey was gwine to be a set-to, er else I'd have to jes' nachully let her walk all ovah me an' not say nothin'. As I knows better'n to be unmannerable to white folks I stepped back an' give her de middle er de road.

"Of all de nonsense dat evah I hearn tell of dat baby was put thoo de wussest. You mus'n't pat him on de back when he have de colic 'cause hit jars de spine. You mus'n't 'low no one to kiss him 'cause dey am li'l wiggly things on folks dat you cain't see wid de neckid eye, what am li'ble to drap off on de baby an' give him all kinds er 'zeases. I ax de nuss: 'How come ef folks has got dem things on 'em dat dey ain't got de 'zeases you say dey gives to de baby?' but she couldn' 'splain hit to me un'erstandably, an' I don' b'lieve she knowed herse'f. You mus'n't talk much in front er de baby, 'cause dat gits hits mind to wukkin' befo' de time sot fo' hit to wuk an' de book am strong agin dat. I cain't 'member all de things dat nuss did tell me, but no matter what she say, I always tol' her 'Yes'm,' 'cause I knowed hit was de bes' way to ac'.

"De baby wan't pickin' up a bit, an' dem book doin's was hahmin' him. Anybody wid a half-eye could see hit. Babies has got to have some love, an' dis un didn' have nothin' but rules to live off'n. One aft'noon when de nuss had gone out to take her airin' I went on up to de room where de baby was layin' an' frettin' sof' lak to hisse'f, jes' wantin' to be tuck up in some one's ahms. 'You po' li'l angel,' says I, 'I don' keer ef a hun'erd books an' fo'ty-nine train nusses say hit's agin de rules, I'm a-gwine to rock you to sleep.' Wid dat I tuck him out'n de bed, an' settin' down in a rockin' cheer I commence goin' back an' fo'th an' singin', jes' lak I use to sing to my own chillen an' Miss Fanny's. I ain't got no fu'ther ways long dan,

Blow, Ga'b'el, blow, an' call yo' chillen home,

when de baby open his eyes at me wid de queerest look, lak as ef he was pleased but didn' know what to mek of hit. Den he closed 'em agin an' put his li'l haid on my bosom, much as to say: 'Go on wid it. Dat's what I has been missin' all dis time.' I went cl'ar to de back er my haid fo' all de songs I use to sing to de chillen when dey was babies, an' one after another I sung an' sung an' us two havin' de grandes' time together whatevah you hearn tell of. He jes' sung long wid me, in de way babies does, sorter croonin' lak, twel bimeby de han's er de clock had crep' roun' mos' to three an' hit was time fo' de nuss to come back. I had kep' a eye on de window so's I could see up de street, an' sho' nuff heah she come back fum her airin'. De baby was soun' asleep. I laid him on his bed an' I says: 'Don't yo' fret no mo', honey lamb, you an' me am a-goin' to have a good time together ev'ry aft'noon.' An' dat's jes' what we done. Somehow befo' long hit seem lak dat baby commence lookin' mo' happier; but yet he wan't doin' de way a baby ought to be doin', fo' what he needed was fat. I couldn' see how he was a-gwine to evah git a staht.

"One day when de nuss was standin' down in de kitchen fixin' de milk an' stickin' a li'l glass stick in hit to see how many hots hit was—she could er jes' as well poke her finger in hit to fin' out—I says to myse'f: 'Milk ain't all dat chil' needs.' An' dat aft'noon when de nuss was gone I ca'ied some pot-liquor up to de baby. You ought to seen de way he enjoyed hit an' smack his lips ovah hit fo' mo'. 'Dat shows what you needs,' says I, an' sho 'nough 'twan't many days befo' de pockets in his skin begin to fill up an' he look lak a real baby stid er a imbertation er one.

"De nuss was takin' de credit to herse'f an' swellin' up 'bout dat book-raisin' business, an' I jes' set back an' let her. I reckon she nevah would a foun' de real cause ef she hadn't a walked in on me an' ketched me feedin' de baby while I was holdin' him on my lap in de rockin' cheer.

"When she ketched her breff she dashed at me lak a houn' after a possum, grabbed dat baby up an' say 'tween her teef: 'How das' you tech dis baby what's in my cha'ge? How das' you set in a rockin' cheer wid him? How das' you feed him milk widout me pescribin' hit?' At dat I broke in—tho' dey wan't 'nough room in her conbersation to git in a pinpoint sca'cely: 'Dis ain't milk, hit's pot-liquor'; an', Laws! you ought to hearn de yell she let out.

"Cunnel Slocum was downstairs in de libery wid de rheumatiz, but all dat noise distracted his intention an' he drug hisse'f upstairs to see what de fracas was 'bout.

"'Cunnel Slocum,' de nuss hollered as soon as he hit de do', 'dis heah woman am feedin' de baby pizen when my back am turned, an' interferin' wid my wuk heah!' At dat de Cunnel's eyes bulge out too fo' a minute, but befo' he had time to say a word I picked up de cup an' spoon dat quick an' belt 'em un'er his nose. 'Pot-liquor,' says I, jes' lak dat, an' de Cunnel's eyes went back in again.

"'Tut! tut!' he say to de nuss as he sniffed at de cup; 'ef dis am pizen I reckon dey wouldn' a been no sojers in de Souf to fight in de wah, fo' dey wan't none of 'em but what knowed de tas'e of dis stuff when dey was babies.'

"'You means,' says de nuss, 'dat you's a-gwine to let dis baby be fed on stuff what dey ain't no rules in de book fo'?' 'Viney's de one dat can settle de question,' 'spon's de Cunnel. 'She's brung up all my chillen an' her'n, an' I reckon she knows somep'n 'bout hit.'

"'Den,' says de nuss, 'I designs my job right heah!' an' dat's what she done.

"'You's all mine now,' says I to de baby, an' he crowed at me lak he un'stood what I say. De Cunnel an' me made hit up dat we wan't gwine to say nothin' to Miss Fanny ner Miss May twel dey come.

"De time pass by an' de baby doin' finer ev'y day twel he was so fat an' sassy you wouldn' a knowed him. Miss Fanny writ dat she was ready to bring Miss May back wid her an' keep her heah twel she git mo' stronger. Dey come on home one evenin', an' de fus' thing Miss May ax fo' of cose was de baby. She was dat anxious an' 'cited dat she couldn' sca'cely wait twel I brung him in de room—an' such a-goin' on as dey was when I toted him in an' helt him out to her! She couldn' sca'cely b'lieve hit 'twas her own chile, de improvements on him was so pow'ful much. As soon as she sorter settled down she say: 'But where am de nuss? Why ain't she in de room? She am a puffeck wonder an' I wants to see her right dis ve'y minute!'

"'You's a-lookin' at her right now,' says de Cunnel, chucklin' to beat de band. 'Heahs de onlies' nuss what knows how to raise de Slocum babies anyhow,' an' he laid his han' on my ahm. Den he ups an' tells de whole story, an' I don' nevah remember when I ha' seed Miss Fanny ner Miss May so please wid me.

"In de middle of de talk, though, I notice Miss May sniffin' an' sniffin' at de baby, sorter curious lak, an' den she say: 'Viney, hit 'pears to me lak I smells bacon on de baby.' 'Dat's jes' edzackly what you smells,' says I, 'fo' I lets him chaw on a strip now an' den de same lak I use to let you.'

"'Bacon!' say Miss May; 'bacon! Why, Viney, de book say ——' an' at dat she stopped an' we all busted right out laughin'. Dat was de las' I evah hearn of book-raisin' in dat house."

"Den," said Uncle Peter, "I reckon you don' set much sto' by no kin' er book dat dey has now'days, does you?"

"Ef you's bawned widout common sense, dey ain't a-gwine to do you no good; an' ef you's bawned wid common sense, you don't need 'em," was Viney's answer.

The Senator's Secretary

YOU may have observed some recent pother in the Congress and at the White House over the Russian passport question. The Republican President, the Democratic House of Representatives and the what-is-it? Senate all took a hack at it. Far be it from me to say there was any politics in this question of national honor and discrimination against American citizens; but if so be there was a suspicion of politics—a soupçon of the same, so to speak—diligent care was taken that all interested might know where to bring their admiring tributes of thanks, and where, furthermore, to deposit their admiring tributes of votes when the time should come when voting shall be desirable.

There were those who know the ways of Washington that predicted, when William Sulzer, of New York, was made chairman of the Foreign Affairs Committee, there would be something doing. William was not keen for the chairmanship of the Committee on Foreign Affairs—that is, he was not apparently keen. He was ranking minority member on the Committee on Military Affairs for several Congresses when the Republican party was in power. Being somewhat of an experienced person in strategy as it applies to committees, William ascertained that it was not the intention of the Committee on Committees to make him chairman of the Committee on Military Affairs. Whereupon William let out a roar that could be heard for miles, demanding that place as his by right, by justice and by heck! He made such a fuss that the Committee on Committees sought to placate him by asking what he desired that was just as good. Reluctantly—that is, reluctantly, with the reverse English on it—William condescended to let them salve his wounded feelings with the chairmanship of the Committee on Foreign Affairs. Thus was justice done, for that was what he wanted all the time.

Mr. Sulzer Gets Action

Now William represents a district in the city of New York where there are more Jews than there are in Jerusalem. He knew all about the Russian discriminations against those men and women who, as American citizens and provided with passports, were accorded no passport rights as set forth in the treaty of 1832 between Russia and the United States—and had known all about those discriminations for years. Moreover, he had spoken frequently on the subject in the House of Representatives and had spoken also against the massacres of Jews in Russia.

The matter was one of common knowledge. Sulzer agitated it and introduced resolutions and made speeches—and the Republican Committee on Foreign Affairs and the Republican House of Representatives laughed at him and voted his resolutions under the table, and otherwise had fun. Presently, however, William arrived as chairman of the Foreign Affairs in the manner described. At that moment there also arrived a crisis in the Russian-Jewish question. He was in a position to do things, and he began to do them with a rapidity that brought everybody up standing.

Influential Jewish citizens had been passing resolutions and calling on the President and the Congress for action; and the matter had been dragging along. When the regular session of Congress opened in December it ceased to drag and began to gallop. William Sulzer, Esquire, was on the job, and he stirred up that passport question until, for a few days, it seemed as if we were about to go to war with Russia and that William would lead the troops.

The policy of the State Department and the White House had been to express regret to the American protesters and let the matter alone. Suddenly, a series of scouts began galloping up to the White House and shouting: "For Heaven's sake, get busy on this Russian passport business! Bill Sulzer has got it going in the House of Representatives; and he is a Democrat and the House is Democratic—and the Democrats will grab all the credit unless you do something!"

"Do what?" asked the White House.

"Do anything—everything—something! Get busy, we tell you—or the Democrats will grab all the glory of it!"

It is not too much to say the White House got busy. The activity round that historic edifice was hectic—even feverish. Meantime Sulzer's own resolution had been reported unanimously out of his Committee on Foreign Affairs and the House was ready to pass it with a whoop. There were as many conferences at the White House as if war had been declared; and the Russian Ambassador was as much round the Executive Offices as if he were a member of the Golf Cabinet, while they burned the cable with messages to Curtis Guild, our representative at the court of the Czar.

William Sulzer put his resolution over with but one dissenting vote. It was a resolution that slapped the Czar rudely on the wrist. The press dispatches said it was an insult, which is probably what William intended it to be; but that is neither here nor there. Whatever knobs there may have been on the language, that language was pretty fair for home consumption, and it was language officially adopted by a Democratic House at the behest of William Sulzer. Do not forget that. After the House resolution had passed it was eminently up to the White House to get into the game good and hard, though the White House had been invited to get in a dozen times a year for a dozen years. So Mr. Taft announced he would abrogate the treaty himself, leaving out all of William's rough talk; and then there came a howl from the Senate.

The Senate labors under the delusion that it is the only treaty-making power there is. This theory has had several rude shocks in the past when treaties have been handed to that august body with curt instructions to ratify them and be quick about it; but the Senate has a sort of an eye on politics too, and it wanted its share of the perquisites resultant from this affair, whatever those perquisites might be in the shape of votes. So the Senate messed into the situation also.

There were hopes the Supreme Court and the Interstate Commerce Commission and the Civil Service Board and the Waterways Commission and the Soldiers' Home might take a hand also, for all those institutions are bipartisan—or, to be more exact, some Republican and some Democratic; but the situation was saved without that. Rather the politics was saved; and it now rests with the skillful protagonists of the various parties to get the votes, American honor having been vindicated in a tearing hurry, but vindicated just the same—and not so very long before a presidential election.

An Expert in Programs

There seems to be no adequate reason why the other Senators shall not have a bully time this winter and spring, provided they leave the Honorable Francis G. Newlands on the job—where, by the way, the Honorable Francis G. Newlands is perfectly willing to be left. Mr. Newlands is a Senator of earnest spirit, active habit and intense agility of mind. It has irked him for a long time to observe the hit-or-miss, slipshod methods by which the Senate does business. Though willing to admit the Senate gets its results in the long run, and generally along those lines the experienced result-getters have laid out, he is of the opinion that what the Senate really needs is some scientific shop management; and to that end he has offered his services and has laid out a program.

Laid out a program! That is absolutely the best thing Senator Newlands does. He can lay out a program—and will, if encouraged—for anything from the christening of a pair of twins to the reconstruction of China. He is our grandest little programmer. To be sure, it often occurs, after the Senator has laid out a program, that he forgets the program he has laid out and begins to lay out another; but that is of no consequence! The main fact is that he lays out the program.

The Senator, having thought deeply on the problems before the body of which he is a member and before the country at large, has decided there are thirteen topics of immediate and vital concern on which the Senate should take legislative action at this session; and he has arranged them in orderly fashion in a resolution, beginning with the tariff and ending with a reduction in the cost of the upkeep of the army and navy to some two hundred millions of dollars a year—which is number thirteen. Between the vanguard of the tariff and the rearguard of a hundred millions each for the army and navy are marshaled about all other legislative questions that can be imagined—even by an expert imaginer of our needs.

It is the Senator's idea that what the Senate needs is a guiding hand—a man at the tiller who can steer it straight to the desired haven of accomplishment. Wherefore he offers his services. He desires to organize the opinion of the Senate as he thinks it should be organized; and then, if the Senate knows a good thing, he will proceed unfalteringly along the path he has marked out and do those things he has selected as the things that should be done.

It is a grand idea! At one comprehensive swoop, Senator Newlands has relieved the Senate of all its responsibilities. He has picked out the paramount measures; and all the Senate has to do now is to take them up, from one to thirteen inclusive, pass them as he shall indicate—and a lot of trouble will be escaped, a lot of useless political manipulating avoided, and a lot of valuable time reserved for the Senator himself in which to elucidate some few of his well-known ideas touching on all sections of human knowledge, human need and human accomplishment. Oddly enough, the Senate has not yet grabbed at this attempt to organize its opinion for it.

Congressional Christmas Money

Once more the boys in the House of Representatives came marching to the front and saved their twenty cents a mile for mileage. An impious Pennsylvanian or two and others from near by tried to reduce the rate, but the chaps from the Far Western points and from about every other point rallied, and the rate stands—at twenty cents a mile. Besides, it was allotted in time to give the statesmen some Christmas money—and if there is anything a statesman dotes on it is Christmas money, especially at the rate of twenty cents a mile from home and back, said travel costing him about three cents a mile or less.

There was Palmer, of Pennsylvania, who had the audacity—to say nothing of the temerity and the ingratitude—to stand up and say his mileage, at twenty cents a mile, from his home in Pennsylvania to Washington and back, is one hundred and three dollars, while his ticket actually costs him ten dollars and fifty cents. Wherefore he thought the rate might just as well be cut in half. Immediately there came loud cries from the West and South—a clamor from patriots who pay out about one hundred and twenty-five dollars for their round trips and garner about two thousand dollars mileage—that this outrage on the rights and perquisites and immemorial precedents of the members must not and should not prevail. They are all for the strictest economy, they say, as witness their votes in keeping down clerical salaries and in disallowing just claims; but to be economical at the expense of that ancient but established mileage of twenty cents a mile was a sacrilege that would not be permitted. Nor was it. They turned in and voted themselves the twenty cents a mile. Meantime they couldn't see their way clear to give five thousand dollars to a young woman who, when working in the Census Office, was caught in a shaft and had her scalp torn off—and by no fault of hers!

Nor is it any wonder that Oscar Underwood has decided he must stay in Washington and keep an eye on things if the Democrats are to go into the next campaign with a record for economy, however his presidential prospects may suffer. His fellow Democrats are fixing up a rivers-and-harbors bill and a public-building bill, and they are insisting that to the victors belong the spoils—which was true enough in the time of it; but there are various candidates for the Democratic nomination for president among the Democratic members of the House, and they read it another way. If these hungry Democrats do not listen to reason, so far as these candidates are concerned that sentiment will read: To the victors belong the spoiled!

If We Made This Watch to Order—

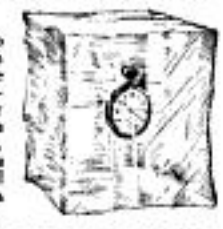
SUPPOSE you asked us to make you a watch incorporating your ideas of what a watch should be. And suppose we delivered the following. Wouldn't you say, "This is just what I wanted"?—

¶ A watch with a "tailor-made," stylish appearance in a modern, neat, thin, flat case—one you are proud to take from your pocket and show to anyone, anywhere.

¶ A truth-telling watch whose time you can always depend on—a remarkable watch that will make ***notable records*** of time-keeping.

¶ A watch that is sturdy as well as accurate—one that will last lifetimes and give perfect service throughout.

¶ A watch, in fact, that's as near perfection as anything man can make—one that meets every requirement in service and size.



¶ In short, a watch that you ***know*** is your ideal the minute you ***see*** it.

¶ This is exactly what we ***already*** have made for you. We need not ***make*** it to order. Your jeweler probably ***has one in stock.*** It's a regular model, called

"The South Bend Watch"

¶ You can have one in a solid gold case for $75 or in "Twenty-Year Guaranteed" and other less expensive cases at reasonably lower prices.

¶ In this watch you have one which has been inspected 411 times in the making. A watch which has run for seven hundred hours in an accuracy test. A watch which the jeweler can regulate to your personality so you will always have the correct time in your pocket.

¶ Ask your jeweler to show you the South Bend Watch and have him tell you how important the jeweler regulation is. Write us for the free book, "How Good Watches Are Made." It tells all about watches and is a guide to right buying.

THE SOUTH BEND WATCH COMPANY
Dept. 297 (60) SOUTH BEND, IND.

Great in Flavor

Great in Favor

Morning after morning, Kellogg's is welcomed on millions of breakfast tables from the Atlantic to the Pacific. It's the Nation's favorite food. Simply because of that *great* flavor—that rare, delicious taste of sun-ripened corn, Kellogg's is everybody's favorite from the first taste.

Kellogg's
TOASTED
CORN FLAKES

That favor-winning flavor comes from the flinty little hearts of fine white corn. Cooked for hours, combined with the Kellogg flavoring—then flaked and toasted to tempting, golden films, it's the most delicious food you ever ate. Get a box *today*.

Look For This

The Grand Cross of the Crescent

(Continued from Page 5)

at Newport, when all she ever saw of Newport was Burgers and the Meuschenheim-Kings."

"It's plain to see you hate yourself," said Peter. "You must not get so despondent or you might commit suicide. How much money will you want?"

"How much have you got?"

"All kinds," said Peter. "Some in a letter-of-credit that my father earned from the fretful pig, and much more in cash that I won at poker from the pashas. When that's gone I've got to go to work and earn my living. Meanwhile your salary is a hundred a week and all you need to boost Gilman and the Order of the Crescent. We are now the Gilman Defense, Publicity and Development Committee, and you will begin by introducing me to the man I am to bribe."

"In this country you don't need any introduction to the man you want to bribe," exclaimed Stetson; "you just bribe him!"

II

THAT same night in the smoking room of the hotel, Peter and Stetson made their first move in the game of winning for Professor Gilman the Order of the Crescent. Stetson presented Peter to a young effendi in a frock coat and fez. Stetson called him Osman. He was a clerk in the foreign office and appeared to be "a friend of a friend of a friend" of the assistant third secretary.

The five volumes of the Rise and Fall were spread before him, and Peter demanded to know why so distinguished a scholar as Doctor Gilman had not received some recognition from the country he had so sympathetically described. Osman fingered the volumes doubtfully, and promised the matter should be brought at once to the attention of the grand vizier.

After he had departed Stetson explained that Osman had just as little chance of getting within speaking distance of the grand vizier as of the ladies of his harem.

"It's like Tammany," said Stetson; "there are sachems, district leaders and lieutenants. Each of them is entitled to trade or give away a few of these decorations, just as each district leader gets his percentage of jobs in the street-cleaning department. This fellow will go to his patron, his patron will go to some under-secretary in the cabinet, he will put it up to a palace favorite, and they will divide your money.

"In time the minister of foreign affairs will sign your brevet and a hundred others, without knowing what he is signing; then you cable me, and the Star of the Crescent will burst upon the United States in a way that will make Halley's comet look like a wax match."

The next day Stetson and the tutor sailed for home and Peter was left alone to pursue, as he supposed, the Order of the Crescent. On the contrary, he found that the Order of the Crescent was pursuing him. He had not appreciated that, from underlings and backstair politicians, an itinerant showman like Stetson and the only son of an American Cræsus would receive very different treatment.

Within twenty-four hours a fat man with a blue-black beard and diamond rings called with Osman to apologize for the latter. Osman, the fat man explained, had been about to make a fatal error. For Doctor Gilman he had asked the Order of the Crescent of the fifth class, the same class that had been given Stetson. The fifth class, the fat man explained, was all very well for tradesmen, dragomans and eunuchs, but as an honor for a savant as distinguished as the friend of Mr. Hallowell, the fourth class would hardly be high enough. The fees, the fat man added, would also be higher; but, he pointed out, it was worth the difference, because the fourth class entitled the wearer to a salute from all sentries.

"There are few sentries at Stillwater," said Peter; "but I want the best and I want it quick. Get me the fourth class."

The next morning he was surprised by an early visit from Stimson of the embassy. The secretary was considerably annoyed.

"My dear Hallowell," he protested, "why the devil didn't you tell me you wanted a decoration? Of course the state department expressly forbids us to ask for one for ourselves, or for any one else. But what's the Constitution between friends? I'll get it for you at once—but, on two conditions: that you don't tell anybody I got it, and that you tell me why you want it and what you ever did to deserve it."

Instead, Peter explained fully and so sympathetically that the diplomat demanded that he, too, should be enrolled as one of the Gilman Defense Committee.

"Doctor Gilman's history," he said, "must be presented to the Sultan. You must have the five volumes rebound in red and green, the colors of Mohammed, and with as much gold tooling as they can carry, I hope," he added, "they are not soiled."

"Not by me," Peter assured him.

"I will take them myself," continued Stimson, "to Muley Pasha, the minister of foreign affairs, and ask him to present them to His Imperial Majesty. He will promise to do so, but he won't; but he knows I know he won't, so that is all right. And in return he will present us with the Order of the Crescent of the third class."

"Going up!" exclaimed Peter. "The third class. That will cost me my entire letter-of-credit."

"Not at all," said Stimson. "I've saved you from the grafters. It will cost you only what you pay to have the books rebound. And the *third* class is a real honor of which any one might be proud. You wear it round your neck, and at your funeral it entitles you to an escort of a thousand soldiers."

"I'd rather put up with fewer soldiers," said Peter, "and wear it longer round my neck. What's the matter with our getting the second class or the first class?"

At such ignorance Stimson could not repress a smile.

"The first class," he explained patiently, "is the Great Grand Cross, and is given only to reigning sovereigns. The second is called the Grand Cross, and is bestowed only on crowned princes, prime ministers and men of worldwide fame ——"

"What's the matter with Doctor Gilman's being of worldwide fame?" said Peter. "He will be some day, when Stetson starts boosting."

"Some day," retorted Stimson stiffly, "I may be an ambassador. When I am I hope to get the Grand Cross of the Crescent, but not now. I'm sorry you're not satisfied," he added aggrievedly. "No one can get you anything higher than the third class, and I may lose my official head asking for that."

"Nothing is too good for old man Gilman," said Peter, "nor for you. You get the third class for him, and I'll have father make you an ambassador."

That night at poker at the club Peter sat next to Prince Abdul, who had come from a reception at the grand vizier's and still wore his decorations. Decorations now fascinated Peter, and those on the coat of the young prince he regarded with wide-eyed awe. He also regarded Abdul with wide-eyed awe, because he was the favorite nephew of the Sultan and because he enjoyed the reputation of having the worst reputation in Turkey. Peter wondered why. He always had found Abdul charming, distinguished, courteous to the verge of humility, most cleverly cynical, most brilliantly amusing. At poker he almost invariably won, and while doing so was so politely bored, so indifferent to his cards and the cards held by others, that Peter declared he had never met his equal.

In a pause in the game, while someone tore the cover off a fresh pack, Peter pointed at the star of diamonds that nestled behind the lapel of Abdul's coat.

"May I ask what that is?" said Peter.

The prince frowned at his diamond sunburst as though it annoyed him, and then smiled delightedly.

"It is an order," he said in a quick aside, "bestowed only upon men of worldwide fame. I dine tonight," he explained, "with your charming compatriot, Mr. Joseph Stimson."

"And Joe told?" said Peter.

The prince nodded. "Joe told," he repeated; "but it is all arranged. Your distinguished friend, the Sage of Stillwater, will receive the Crescent of the third class."

Peter's eyes were still fastened hungrily upon the diamond sunburst.

"Why," he demanded, "can't some one get him one like that?"

As though about to take offense the prince raised his eyebrows, and then thought better of it and smiled.

NOW

Everybody needs

Whitman's

INSTANTANEOUS CHOCOLATE

Always ready for instant service

The perfect drink and food for winter weather.

Doubly welcome and valuable for folks in the north exposed to *chill* and stormy weather.

A cup that cheers, warms, comforts; that restores the circulation and gives *real* strength.

It offers nourishment in a shape that can be instantly converted into vigor.

A complete food; nourishment for brain, body, nerves—and fine fuel for the human engine.

Whitman's

INSTANTANEOUS CHOCOLATE

Carried conveniently by travellers and tourists. Wherever there are facilities for heating milk or water a perfect cup of sweetened chocolate can be mixed instantly. In homes that know its manifold uses, Instantaneous is as staple as bread and butter.

A sample tin mailed for 10c in stamps.

We have a new booklet of *Instantaneous Ideas*, for Desserts, Beverages, Candies, sent on request. It offers, by the way, $250 for new ideas.

Sold by best grocers everywhere and supplied by all jobbing grocers. Also at the stores that are agencies for WHITMAN'S Chocolates and Confections.

"There are only two men in all Turkey," he said, "who could do that."

"And is the Sultan the other one?" asked Peter.

The prince gasped as though he had suddenly stepped beneath a cold shower, and then laughed long and silently.

"You flatter me," he murmured.

"You know you could if you liked!" whispered Peter stoutly.

Apparently Abdul did not hear him. "I will take one card," he said.

Toward two in the morning there was seventy-five thousand francs in the pot and all save Prince Abdul and Peter had dropped out.

"Will you divide?" asked the prince.

"Why should I?" said Peter. "I've got you beat now. Do you raise me or call?" The prince called and laid down a full house. Peter showed four tens.

"I will deal you one hand, double or quits," said the prince.

Over the end of his cigar Peter squinted at the great heap of mother-of-pearl counters and goldpieces and banknotes.

"You will pay me double what is on the table," he said, "or you quit owing me nothing."

The prince nodded.

"Go ahead," said Peter.

The prince dealt them each a hand and discarded two cards. Peter held a seven, a pair of kings and a pair of fours. Hoping to draw another king, which might give him a three higher than the three held by Abdul, he threw away the seven and the lower pair. He caught another king. The prince showed three queens and shrugged his shoulders.

Peter leaning toward him spoke out of the corner of his mouth.

"I'll make you a sporting proposition," he murmured. "You owe me a hundred and fifty thousand francs. I'll stake that against what only two men in the Empire can give me."

The prince allowed his eyes to travel slowly round the circle of the table. But the puzzled glances of the other players showed that to them Peter's proposal conveyed no meaning.

The prince smiled cynically.

"For yourself?" he demanded.

"For Doctor Gilman," said Peter.

"We will cut for deal and one hand will decide," said the prince. His voice dropped to a whisper. "And no one must ever know," he warned.

Peter also could be cynical.

"Not even the Sultan," he said.

Abdul won the deal and gave himself a very good hand. But the hand he dealt Peter was the better one.

The prince was a good loser. The next afternoon the Gazette Officielle announced that upon Dr. Henry Gilman, professor emeritus of the University of Stillwater, U. S. A., the Sultan had been graciously pleased to confer the Grand Cross of the Order of the Crescent.

Peter flashed the great news to Stetson. The cable caught him at quarantine. It read: "Captured Crescent, Grand Cross. Get busy."

But before Stetson could get busy the campaign of publicity had been brilliantly opened from Constantinople. Prince Abdul, although pitch-forked into the Gilman Defense Committee, proved himself one of its most enthusiastic members.

"For me it becomes a case of *noblesse oblige*," he declared. "If it is worth doing at all it is worth doing well. Today the Sultan will command that the Rise and Fall be translated into Arabic and that it be placed in the national library. Moreover, the University of Constantinople, the College of Salonica and the National Historical Society have each elected Doctor Gilman an honorary member. I proposed him, the Patriarch of Mesopotamia seconded him. And the Turkish Ambassador in America has been instructed to present the insignia with his own hands."

Nor was Peter or Stimson idle. To assist Stetson in his press-work and to further the idea that all Europe was now clamoring for the Rise and Fall, Peter paid an impecunious but overeducated dragoman to translate it into five languages, and Stimson officially wrote of this and of the bestowal of the Crescent to the State Department. He pointed out that not since General Grant had passed through Europe had the Sultan so highly honored an American. He added he had been requested by the grand vizier—who had been requested by Prince Abdul—to request the State Department to inform Doctor Gilman of these high honors. A request from such a source was a command and, as desired, the State Department wrote as requested by the grand vizier to Doctor Gilman, and tendered congratulations. The fact was sent out briefly from Washington by Associated Press. This official recognition by the Government and by the newspapers was all and more than Stetson wanted. He took off his coat and with a megaphone, rather than a pen, told the people of the United States who Doctor Gilman was, who the Sultan was, what a Grand Cross was, and why America's greatest historian was not without honor save in his own country. Columns of this were paid for and appeared as "patent insides," with a portrait of Doctor Gilman taken from the Stillwater College Annual and a picture of the Grand Cross drawn from imagination, in eight hundred newspapers of the Middle, Western and Eastern states. Special articles, paragraphs, portraits and pictures of the Grand Cross followed and, using Stillwater as his base, Stetson continued to flood the country. Young Hines, the local correspondent, acting under instructions by cable from Peter, introduced him to Doctor Gilman as a traveler who lectured on Turkey and one who was a humble admirer of the author of the Rise and Fall. Stetson, having studied it as a student crams examination, begged that he might sit at the feet of the master. And for several evenings, actually at his feet, on the steps of the ivy-covered cottage, the disguised press agent drew from the unworldly and unsuspecting scholar the simple story of his life. To this, still in his character as disciple and student, he added photographs he himself made of the master, of the master's ivy-covered cottage, of his favorite walk across the campus, of the great historian at work at his desk, at work in his rose garden, at play with his wife on the croquet lawn. These he held until the insignia should be actually presented. This pleasing duty fell to the Turkish ambassador who, much to his astonishment, had received instructions to proceed to Stillwater, Massachusetts, a place of which he had never heard, and present to a Doctor Gilman, of whom he had never heard, the Grand Cross of the Crescent. As soon as the insignia arrived in the official mailbag a secretary brought it from Washington to Boston, and the ambassador traveled down from Bar Harbor to receive it and with the secretary took the local train to Stillwater.

The reception extended to him there is still remembered by the ambassador as one of the happiest incidents of his distinguished career. Never since he came to represent his Imperial Majesty in the Western republic had its barbarians greeted him in a manner in any way so nearly approaching his own idea of what was his due.

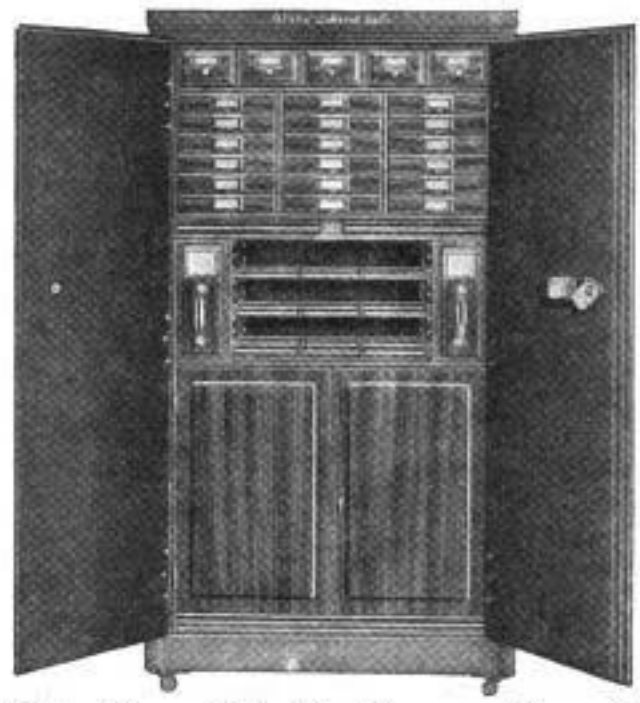
"This ambassador," Hines had explained to the Mayor of Stillwater, who was also the proprietor of its largest department store, "is the personal representative of the Sultan. So we've got to treat him right."

"It's exactly," added Stetson, "as though the Sultan himself were coming."

"And so few crowned heads visit Stillwater," continued Hines, "that we ought to show we appreciate this one, especially as he comes to pay the highest honor known to Europe to one of our townsmen."

The mayor chewed nervously on his cigar.

"What'd I better do?" he asked.



"Mr. Stetson here," Hines pointed out, "has lived in Turkey and he knows what they expect. Maybe he will help us."

"Will you?" begged the mayor.

"I will," said Stetson.

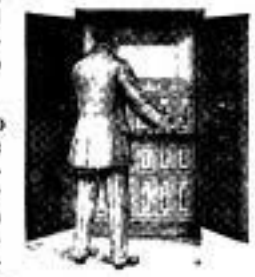
Then they visited the college authorities. Chancellor Black and most of the faculty were on their vacations. But there were half a dozen professors still in their homes round the campus, and it was pointed out to them that the coming honor to one lately of their number reflected glory upon the college and upon them, and that they should take official action.

It was also suggested that for photographic purposes they should wear their academic robes, caps and hoods. To these suggestions, with alacrity—partly because they all loved Doctor Gilman and partly because they had never been photographed by a moving-picture machine—they all agreed. So it came about that when the ambassador, hot and cross and dusty, stepped off the way-train at Stillwater station, he found to his delighted amazement a red carpet stretching to a perfectly new automobile, a company of the local militia presenting arms, a committee, consisting of the mayor in a high hat and

Globe Cabinet Safe

Eliminates Bulk and Weight and Marks a New Era of Protection, Convenience and Business Security

No matter what his line of business may be, every man can now have a Steel Safe partitioned and arranged to suit his own specific needs.



It is no longer necessary to purchase bulk and weight in order to secure protection against loss by fire or theft. It isn't even necessary to consult with the maker regarding the interior arrangements, pay extra for such subdivisions, or bother in the least about securing more shelf space later on.

Any man can buy a **Globe Steel Cabinet Safe** without *any* interior fittings whatever; or if he prefers, he can buy it already equipped with

Globe-Wernicke

Steel Filing Cabinet Units, Shelves and Partitions

There is practically no limit to the variety of steel interior combinations that can be made from the interchangeable, standardized Steel Filing Cabinet Sections which we manufacture and which can be duplicated or added to at any future time.

Steel partitions varying from two to eighteen inches in height and shelves for any combination for any purpose, can be quickly inserted or rearranged without the use of any tools whatsoever.

Our catalog, illustrating many model interiors made up with Filing Cabinet Sections for all lines, any of which are worthy of the investigation of any business man whether he wishes to purchase or not, mailed free on request.

It is advisable to consult a **Globe-Wernicke** agency on office equipment of any kind, because of their attitude and experience in such matters.

No. 2 G 62

$1.00

2 G 62—A Beautiful Waist, one of the smartest of the new Spring models, developed in handsome Japanese embroidery exquisitely worked on sheer lawn with heavy mercerized silk floss. The pattern of the embroidery is in graduated dot effect, with a wide border in a most attractive compass pattern. This border is artistically applied in surplice effect in front, contributing a delightful touch of individuality to the waist. At the top is a little V-shaped yoke of German Val. lace insertion, topped by a collar of Val. and lawn. The dainty elbow sleeves are edged with a chic Marie Antoinette frill of lawn and Cluny lace joined to sleeve by a row of Val. insertion. Like many of the really smart waists this season, the sleeves are set in, the armholes being outlined by Val. insertion as pictured. The back of the waist is made entirely of allover polka dot embroidery. Waist buttons in back. White only. Sizes 32 to 44 bust measure. Price, mail or express charges paid by us $1.00

No. 2 G 64

$1.00

2 G 64—A Delightfully Becoming and Absolutely New Model made of the best quality all-over floral embroidery in an exquisite bordered effect. The waist has the fashionable short sleeves, daintily tucked in clusters and finished with a finely tucked cuff edged with Val. lace and attached to sleeve by dainty crochet insertion. Crochet lace also outlines the graceful set-in sleeves, which are a noticeable feature of the best New York styles this season. The front of the blouse shows clusters of tucks to yoke depth, while the back, where the garment fastens under a plait, is also tucked. The collar is formed of three rows of crochet insertion to match that used on the sleeves. Sizes 32 to 44 bust measure. Price, mail or express charges paid by us $1.00

white gloves and three professors in gowns and colored hoods, and the Stillwater Silver Cornet Band playing what, after several repetitions, the ambassador was graciously pleased to recognize as his national anthem.

The ambassador forgot that he was hot and cross. He forgot that he was dusty. His face radiated satisfaction and perspiration. Here at last were people who appreciated him and his high office. And as the mayor helped him into the automobile, and those students who lived in Stillwater welcomed him with strange yells and the moving-picture machine aimed at him point blank, he beamed with condescension. But inwardly he was ill at ease.

Inwardly he was chastising himself for having, through his ignorance of America, failed to appreciate the importance of the man he had come to honor. When he remembered he had never even heard of Doctor Gilman he blushed with confusion. And when he recollected that he had been almost on the point of refusing to come to Stillwater, that he had considered leaving the presentation to his secretary, he shuddered. What might not the Sultan have done to him! What a narrow escape!

Attracted by the band, by the sight of their fellow townsmen in khaki, by the sight of the stout gentleman in the red fez, by a tremendous liking and respect for Doctor Gilman, the entire town of Stillwater gathered outside his cottage. And inside, the old professor, trembling and bewildered and yet strangely happy, bowed his shoulders while the ambassador slipped over them the broad green scarf and upon his only frock coat pinned the diamond sunburst. In woful embarrassment Doctor Gilman smiled and bowed and smiled, and then as the delighted mayor of Stillwater shouted "Speech," in sudden panic he reached out his hand quickly and covertly and found the hand of his wife.

"Now, then, three long ones!" yelled the cheer leader. "Now, then, See the Conquering Hero!" yelled the bandmaster. "Attention! Present! Arms!" yelled the militia captain; and the townspeople and the professors applauded and waved their hats and handkerchiefs. And Doctor Gilman and his wife, he frightened and confused, she happy and proud and taking it all as a matter of course, stood arm in arm in the frame of honeysuckles and bowed and bowed and bowed. And the ambassador so far unbent as to drink champagne, which appeared mysteriously in tubs of ice from the rear of the ivy-covered cottage, with the mayor, with the wives of the professors, with the students, with the bandmaster. Indeed, so often did he unbend that when the perfectly new automobile conveyed him back to his Boston hotel he was sleeping happily and smiling in his sleep.

Peter had arrived in America at the same time as had the insignia, but Hines and Stetson would not let him show himself in Stillwater. They were afraid if all three conspirators foregathered they might inadvertently drop some clew that would lead to suspicion and discovery.

So Peter worked from New York, and his first act was anonymously to supply his father and Chancellor Black with all the newspaper accounts of the great celebration at Stillwater. When Doctor Black read them he choked. Never before had Stillwater College been brought so prominently before the public, and never before had her president been so utterly and completely ignored. And what made it worse was that he recognized that even had he been present he could not have shown his face. How could he, who had, as every one connected with the college now knew, out of spite and without cause dismissed an old and faithful servant, join in chanting his praises. He only hoped his patron, Hallowell, senior, might not hear of Gilman's triumph. But Hallowell, senior, heard little of anything else. At his office, at his clubs, on the golf links, every one he met congratulated him on the high and peculiar distinction that had come to his pet college.

"You certainly have the darnedest luck in backing the right horse," exclaimed a rival pork-packer enviously. "Now if I pay a hundred thousand for a Velasquez it turns out to be a bad copy worth thirty dollars, but you pay a professor three thousand and he brings you in half a million dollars' worth of free advertising. Why, this Doctor Gilman's doing as much for your college as Doctor Osler did for Johns Hopkins or as Walter Camp does for Yale."

Mr. Hallowell received these congratulations as gracefully as he was able, and in secret rage at Chancellor Black. Each day his rage increased. It seemed as though there would never be an end to Doctor Gilman. The stone he had rejected had become the cornerstone of Stillwater. Whenever he opened a newspaper he felt like exclaiming: "Will no one rid me of this pestilent fellow!" For the Rise and Fall, in an edition de luxe limited to two hundred copies, was being bought up by all his book-collecting millionaire friends; a popular edition was on view in the windows of every bookshop; it was offered as a prize to subscribers to all the more sedate magazines; and the name and features of the distinguished author had become famous and familiar. Not a day passed but that some new honor, at least so the newspapers stated, was thrust upon him. Paragraphs announced that he was to be the next exchange professor to Berlin; that in May he was to lecture at the Sorbonne; that in June he was to receive a degree from Oxford.

A fresh-water college on one of the Great Lakes leaped to the front by offering him the chair of history at that seat of learning at a salary of $5000 a year. Some of the honors that had been thrust upon Doctor Gilman existed only in the imagination of Peter and Stetson, but this offer happened to be genuine.

Doctor Gilman rejected it without consideration. He read the letter from the trustees to his wife and shook his head.

"We could not be happy away from Stillwater," he said. "We have only a month more in the cottage, but after that we still can walk past it; we can look into the garden and see the flowers she planted. We can visit the place where she lies. But if we went away we should be lonely and miserable for her, and she would be lonely for us."

Mr. Hallowell could not know why Doctor Gilman had refused to leave Stillwater; but when he read that the small Eastern college at which Doctor Gilman had graduated had offered to make him its president, his jealousy knew no bounds.

He telegraphed to Black: "Reinstate Gilman at once; offer him six thousand—offer him whatever he wants but make him promise for no consideration to leave Stillwater he is only member faculty ever brought any credit to the college if we lose him I'll hold you responsible."

The next morning, hat in hand, smiling ingratiatingly, the chancellor called upon Doctor Gilman and ate so much humble pie that for a week he suffered acute mental indigestion. But little did Hallowell, senior, care for that. He had got what he wanted. Doctor Gilman, the distinguished, was back in the faculty, and had made only one condition—that he might live until he died in the ivy-covered cottage.

Two weeks later, when Peter arrived at Stillwater to take the history examination, which should he pass it would give him his degree, he found on every side evidences of the "world-wide fame" he himself had created. The news-stand at the depot, the book stores, the drug stores, the picture shops all spoke of Doctor Gilman, and postcards showing the ivy-covered cottage, photographs and enlargements of Doctor Gilman, advertisements of the different editions of "the" history proclaimed his fame. Peter, fascinated by the success of his own handiwork, approached the ivy-covered cottage in a spirit almost of awe. But Mrs. Gilman welcomed him with the same kindly, sympathetic smile with which she always gave courage to the unhappy ones coming up for examinations, and Doctor Gilman's high honors in no way had spoiled his gentle courtesy.

The examination was in writing, and when Peter had handed in his papers Doctor Gilman asked him if he would prefer at once to know the result.

"I should indeed!" Peter assured him.

"Then I regret to tell you, Hallowell," said the professor, "that you have not passed. I cannot possibly give you a mark higher than five." In real sympathy the sage of Stillwater raised his eyes, but to his great astonishment he found that Peter so far from being cast down or taking offense was smiling delightedly, much as a fond parent might smile upon the precocious act of a beloved child.

"I am afraid," said Doctor Gilman gently, "that this summer you did not work very hard for your degree!"

Peter laughed and picked up his hat.

"To tell you the truth, Professor," he said, "you're right. I got working for something worth while—and I forgot about the degree."

JUST pour boiling water on a Steero Cube and a cup of rich, delicious bouillon, perfectly seasoned, is ready to enjoy.

Inner Secrets of a Merchant's Rise

(Concluded from Page 13)

analyzed for their benefit a high-class salesman and a poor one. I knew that I hit some of those chaps pretty hard—and I meant to.

"My next step was to make an extended trip through the Middle and Western states. It was quite an expense, for I was gone a month; but the information I gathered was afterward worth a fortune to me. I did not go to sell goods, but to discover the best section of the country to select for our initial tool campaign. There are two ways to launch a selling campaign. The wrong way is to go it blind, as many a house has done, and dissipate one's energies by lack of specialization. The right way is to hunt out the lines of least resistance. For instance, I might have started the campaign by attempting to cover all our territory, using our nine salesmen. Instead, I picked out two populous Western states and drew a carefully worked-out line that bounded our first season's efforts. This territory I selected for two reasons: First, because it was developing extraordinarily fast, a fact I proved by first-hand statistics; second, because our competitors seemed particularly neglectful of its special opportunities. Here, then, was our opportunity!"

Launching the Campaign

"I went back to New York and called in three men I had chosen for the purpose in view. Since our little dinner, all our traveling men had been doing very much better work; these three especially had proved the truth of my theories.

"Now I took these men up to Massachusetts with me, and we all spent a week in the tool factory, studying our goods and the process of manufacture. We got a wholly new light on this aspect of the business, and I can say that this one week's time was worth to our house many hundreds of thousands of dollars ultimately.

"At last, after several months of preparation, we were ready to spring our coup. My three salesmen were down in their new territories, with strong inducements to do their best work. The local newspapers down there came out with the manufacturer's ads, and we used the street cars and other special advertising mediums. The trademark name—my own conception—was very attractive and was featured as heavily as possible.

"I have already told you some of the novel methods that sold goods for me at Blankville. These selling schemes I now adapted to this special line of tools, and my three lieutenants—who were now thoroughly saturated with my history and my ideas—proceeded to saturate the local dealers down there. Thus all over that territory began one of the most extraordinary selling campaigns I ever engineered. The best of it was that it did not run up a prohibitive expense, either for my house or for the manufacturer. The local dealers were spurred by legitimate hope of gain to undertake the heaviest part of the work. That is the advantage of a properly built organization. No business can achieve great success when the management has to do the detailed work as well as engineer the thing.

"I often observe that many wholesalers fall short of success because they don't understand retailing. What is wholesaling, anyway, but a step toward retailing? If all men in the retail business knew how to sell goods the manufacturer and jobber could afford to lie back and merely supply those goods; but, with only one man out of ten really competent to do the actual retail marketing, the problem for the wholesaler is to educate the retailer and ginger him up.

"Well, we did educate those fellows and ginger them up until they were almost as enthusiastic—some of them—as I had been at Blankville. We tried to make every hardware store in that territory reflect as closely as possible my old Blankville headquarters. A wonderful story that Blankville tale was to those hardware men—a story that never grew old. We proved it to them by indisputable evidence. One day one of these dealers came to New York and I took him up to Blankville in person, and on through the whole chain of stores. He went home immensely enthusiastic. Then I hit on a new selling scheme. I announced to the local Western dealers that my house would pay the expenses of a trip to New York whenever one of them attained a given volume of sales in tools. Whenever a dealer took advantage of this offer I conducted him straightway to Blankville and the chain. This, indeed, was my chief motive. My former employer was quite willing to let us go over the comparative statistics of our growth and to let me point out, by means of the books, the results of our most notable campaigns. In every instance the Western dealer went home with his selling instincts thoroughly aroused and—better still—with a new stock of definite selling schemes. There is nothing that gets a man like success—in concrete, understandable form.

"Those selling schemes were many; but always, so far as we could direct them during that particular campaign, tools were the chief feature! Of course my three traveling men sold a general line of hardware, and a very substantial line it proved to be; but all the fireworks were concentrated on the tools. We featured kits of tools in numerous varieties; we engineered all sorts of special sales; we reached out and got our irresistible grip on the farmers, on the butchers, on the builders, on the city householders, on the workshops, on the schoolboys.

"We kept the names of all customers who bought our tools, and followed them up with propositions they could not ignore. Did you ever stop to think that the average house seems to consider a sale a closed incident? How many hundreds of strangers have you seen go into a place of business, buy something or other and walk out, never to go back again? Imagine yourself the owner of such a store. You wouldn't have known how to follow up these customers, had you wanted to do so, because you let them get away without revealing their identity. Of course, if you had gone about it bluntly to find out a customer's name you would have offended him, no doubt; but there are always fine little schemes by which you can accomplish such things. When a man bought a saw, for instance, our dealers asked his name and address so that he might have a chance to draw a certain neat little kit we were offering at some fair or picnic or entertainment. Then we kept in touch with him if we considered him worth while. The lists we built up in this way proved invaluable in that campaign and subsequently. We made our customers come back again and again to buy our goods."

A Twenty-Fold Increase

"I wish I had time to tell you what we did to build up sales in other lines aside from tools, but perhaps you can put two and two together. We followed the tool campaign in this same territory with a cutlery campaign, and meanwhile we jumped over into another territory with our tools. Then we came along with a special line of cooking utensils, a line of builders' hardware, and so on—continually adding to our selling staff and crowding the enemy's lines harder and harder. Oh yes—the enemy came down upon us in full force, once the opposing generals realized what we were doing; but we had a pretty good start before the other side really woke up.

"Our business grew—slowly at first, but faster as our organization gathered force. At the end of five years from the time I took it, it had doubled in volume; at the end of ten we were selling twenty times the quantity of goods we had begun with when I went down there from Blankville.

"When I had put this hardware business on its feet another chance came to me of which I do not care just now to talk. It was the business in which I am still engaged. A certain group of capitalists came to me with their plans for a huge undertaking. It was a tremendous thing, calling for the highest selling abilities any man could give. In return, it offered me the possibility of a fortune beyond anything I had dreamed of.

"I sold my interest in the hardware company and embarked in my new enterprise. Today it stands as conclusive proof of my assertion that a man's chance in business is just about what he sets out to make it. In building up my present business I have merely elaborated the scheme of selling as I have here outlined it."

Editor's Note—This is the first of a series of articles by Edward Mott Woolley. The second will appear in an early issue.

S-s-s-h-! Don't Tell Her!

Give Her a Double Surprise

NOTE:—This is the beautiful head of the full-length figure shown in the 1912 "Pompeian Beauty" Art Calendar panel in gold and dark red. Size of panel 32 in. by 8 in. It is the Art Calendar hit of the year. See offer below.

Who can deny the immense business value to man, and the great social value to woman of a clear, clean, wholesome skin? Yet in these days of dust, smoke, and soot, what a fight for men to look really "clean cut," and for women to appear "deliciously clean"!

You want your wife to look her best, always. She wants you to look your best, too.

1st Surprise—Your Looks

Don't say anything to her. Give yourself a Pompeian Massage. It takes only a few moments. Rub the Pompeian well into the pores. The cream disappears, but in a few moments out it comes from the pores. Watch the dark, dirt-laden cream as it rolls out and drops into the bowl! That dirt came from your pores, even though you may have previously washed your face apparently very thoroughly. That dirt which soap couldn't reach was reached by Pompeian Massage Cream.

Now look in the mirror. That sallow, twentieth century complexion has begun to disappear. Your face is now "Pompeian clean." Your wife will surely express her delight over your improved appearance.

2nd Surprise—Her Looks

But your greatest enjoyment will come when *she* begins to use Pompeian. The massaging will bring a natural freshness to her cheeks that will marvelously soften the tired lines of worry. Then, too, Pompeian will overcome for her the havoc which dust, smoke and soot have worked upon her complexion. Resolve this minute to give yourself and your wife this double surprise. *"Don't envy a good complexion, use Pompeian and have one."*

POMPEIAN
Massage Cream

1912 Art Calendar

of this charming "Pompeian Beauty" sent with each trial jar. Size 32 in. by 8 in., ideal panel for framing (calendar part can be cut off without injuring picture). Reproduced in exquisite colors (dark red and gold) from original $1,000 painting by Carle Blenner, painter of beautiful women.

Get a jar of Pompeian today from your dealer, or if you wish to try before you buy just clip coupon below. Beware of the dealer who offers you inferior imitations of Pompeian. They cost him less. He wants to make more money—at your expense. Get what you ask for or trade elsewhere.

Trial Jar and 1912 Art Calendar

both sent for 10c (stamps or coin). This is an unusual chance to get a trial jar of the most popular face cream and also a copy of the most popular Art Calendar. Clip coupon before you forget it.

In every package is a Library Slip. Save them. Good for magazines and books.

Sold by 50,000 dealers 50¢, 75¢ and $1

Cut along this line, fill in and mail today.

The Pompeian Mfg. Co., 49 Prospect St., Cleveland, O.

Gentlemen:—Enclosed find 10c (stamps or coin) for which please send me a trial jar of Pompeian Massage Cream and a **1912** "Pompeian Beauty" Art Calendar.

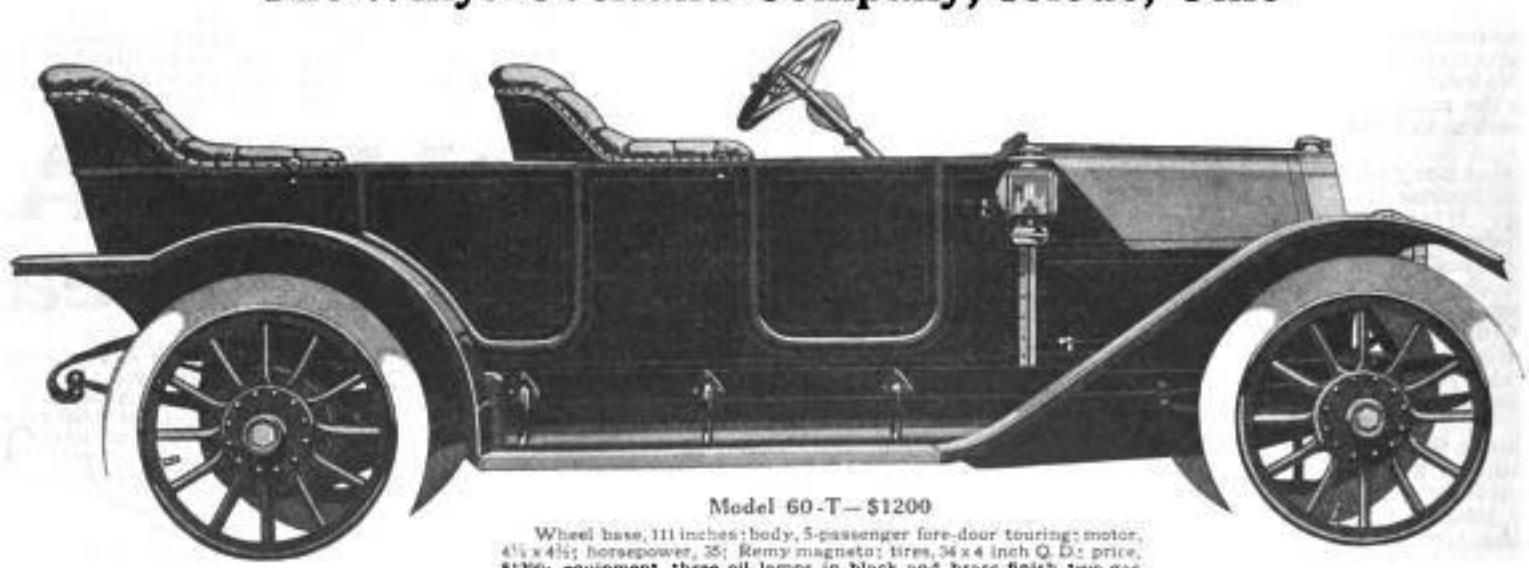
Model 60
$1200

Overland

Your Money's Worth

RECENTLY the president of one of the world's largest industrial organizations made the statement that any product manufactured or handled in the largest quantity could be delivered to the ultimate consumer at a saving of at least twenty-five per cent. And he was not talking at random. His remark was simply the result of a series of careful investigations among a number of different industries in this country and abroad.

There is no industry where this condition is so much in evidence as in the automobile business. And there is no single concern in the automobile business that has the enormous capacity and the economical method of production as that of The Willys-Overland Company.



The Overland plants are the greatest of their kind in the world. They cover over eighty acres. Millions of dollars are invested in automatic machinery and special tools. Over four thousand men are employed. Thirty thousand cars will be made this year.

Over and above this The Willys-Overland Company is controlled by one man—J. N. Willys. He directs the operation of the entire organization. He owns every share of its stock. There is none for sale. There are no bonds to be taken up. There is no hungry manipulating board of directors. Nor are there any dangerous outstanding loans staring the company in the face.

All of which brings us to the point that the cars shown on these pages at $1200 and $1500 are only possible when turned out by a plant of our size, and our healthy operating and financial condition. You have never seen so much real car for so little real money. Take Model 60 at $1200 shown on the left hand page. Just run over a few of the specifications and see how near this comes to the average fifteen hundred dollar car.

It is a big five-passenger car—comfortable and with lots of room. It has a powerful thirty-five horsepower motor, which can easily develop fifty to sixty miles an hour. The wheel base is one hundred and eleven inches.

The Willys-Overland Company, Toledo, Ohio

Model 60-T—$1200

Wheel base, 111 inches; body, 5-passenger fore-door touring; motor, 4½ x 4½; horsepower, 35; Remy magneto; tires, 34 x 4 inch Q. D.; price, $1200; equipment, three oil lamps in black and brass finish, two gas lamps, horn and generator.

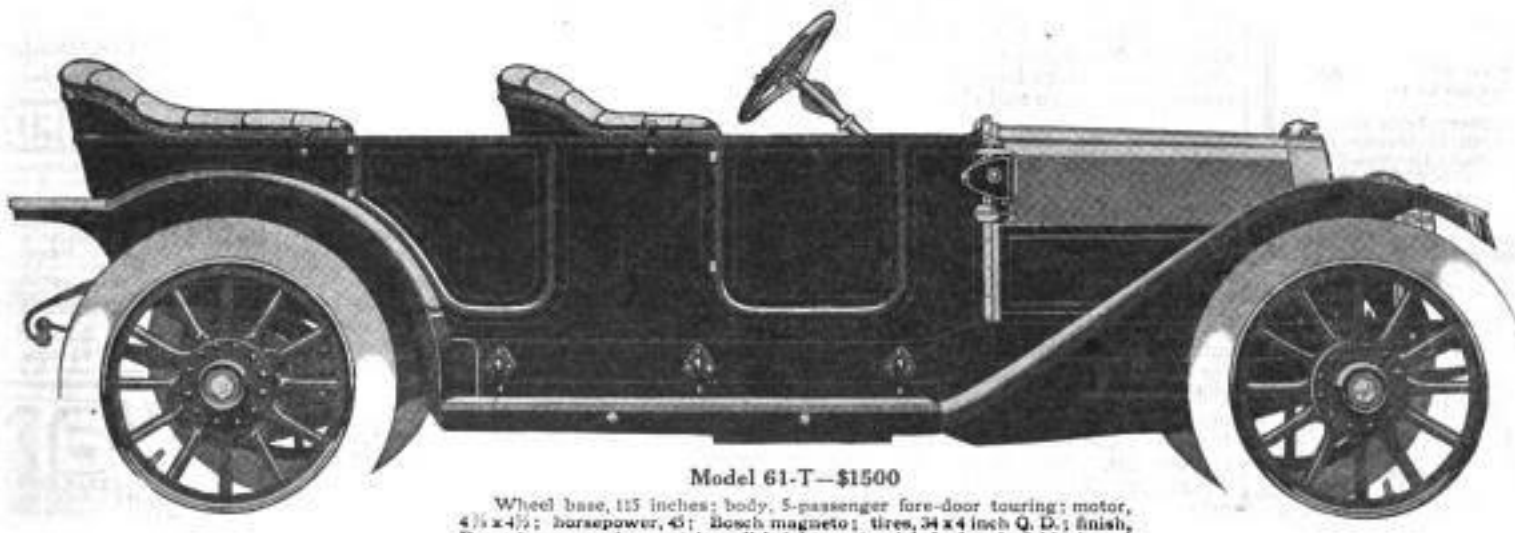
Digitized by Google

Overland

Model 61
$1500

In an Automobile

The transmission is of the selective type—three speeds and reverse—fitted with F & S bearings, which are used in the most expensive cars made. Crank and gear casings are made of pure aluminum. The frame is of cold rolled pressed steel. The shifting levers are in the center of the car. The body lines are graceful and pleasing. The upholstery is of good leather hand stuffed with fine hair.



Can you duplicate this car for much less than $1500? If you want a machine of the thirty-five horsepower touring car type, would you pay $1500 when you can get this car for $1200? Do you want to literally waste three or four hundred dollars?

Model 61 at $1500 is another striking example of how our great capacity can save you money.

This car has a 45-horsepower motor; seats five people. The wheel base is 115 inches. The front axle is one-piece drop forged I section fitted with Timken bearings. The rear axle is full floating, also fitted with Timken bearings. The pressed steel frame has a double drop. It is equipped with Bosch magneto. Tires 34 x 4 inches. The big handsome body is finished in rich Brewster green, ivory striped. All bright parts are heavily nickel plated. Upholstery is of the best leather and genuine hair. This car is big, strong and magnificent. It is hard to figure what more anyone could possibly want in an automobile. It is complete in every detail, having all those little modern refinements that make for comfort. The price of this car is $1500. Go over the market with a fine tooth comb and you will not find its equal for less than $2000.

Let us send you a comprehensive and interesting book which takes you through the Willys-Overland plants—the greatest in the world. A few minutes with this book will show you what a plant of large capacity can do in the way of economical production. When you write please ask for book A-21.

The Willys-Overland Company, Toledo, Ohio

Model 61-T—$1500

Wheel base, 115 inches; body, 5-passenger fore-door touring; motor, 4½ x 4½; horsepower, 45; Bosch magneto; tires, 34 x 4 inch Q. D.; finish, Brewster green ivory stripe, all bright parts nickel plated; 3 black and nickel oil lamps, 2 black and nickel gas lamps. Price, $1500.

Hansen's Gloves
Are More Than Gloves
—They're Friends

YOU get such comfort out of them; you wear them so long—and, best of all, they were *made for you.*

Hansen's Gloves insure protection with freedom of movement—ready fingers, nimble knuckles and limber wrist. No binding seams; no rivets to scratch; no clumsy bulkiness; the glove that helps in work or play—the Friendly Hansen.

HANSEN'S GLOVES

are ready-made, though "made to order" and *made to wear.* They insure to every man at work or play, the glove that exactly "fills the bill" for him. They are made of the best horsehide leather, tanned by special process and *guaranteed* never to shrink nor shrivel, harden, crack nor peel. They feel like velvet, and wear like iron. When greasy or soiled—a washing in gasoline makes them fresh, soft and shapely as new. If you drive a motor car or motor-cycle—take your pick of a dozen kinds—from the "Un-clumsy Mitten" to the glove with one, two or all fingers free.

For Railroad men there are three leading makes—the "Peccary," a stout pigskin, the "Protector Gauntlet"—and the "Glad Hand"—all are heat and steam proof and are impervious to the effects of all moisture.

Linemen, iron-workers, bridgemen—farmers and doctors—the lumberman and hunter—every man needs a Hansen Glove to get the most good out of work or play.

How's Business and Why

IT IS expected that commercial failures increase as a year nears an end, and 1911 was no exception to this rule. Not only did the casualties of November exceed those of October, which had one more business day than the month in review, but the number was the largest since March and larger than in November of any of three previous years. Compared with the panic month of November, 1907, there was but a small decrease in 1911. Furthermore, liabilities of failed concerns in November exceeded those for October and of every November, except three, in the last eighteen years. November failures were 1092 in number and have not been exceeded for the month of November but five times in the last eighteen years. Liabilities for the month were $14,987,386—the three years when they were more for the month being 1907, with $32,653,269; 1896, with $23,104,052; and 1893, with $15,996,199. The number of failures for eleven months—11,358—was the largest for a like period in very many years, barring the 12,756 in 1908, the clearing-up period after the last panic. Liabilities for eleven months were $167,944,254, exceeded in late years only by $276,261,863 for 1907 and $307,227,939 for 1908. The explanation of the exceptional liabilities in those years lies in the fact of the failure of several large banking institutions in the city of New York. If those be eliminated the contrast this year looks rather unfavorable. When the slowness of trade this year is considered it probably will not be surprising to learn of the numerous failures and the dimensions of liabilities. The smallness of profits in many lines of business has operated adversely to solvency in numerous cases.

Though profits have been small in many lines of trade, it is fancied that they have approximated the normal in most lines involving food and drink. It is at least interesting to observe the course of commodity prices, which have been running on high levels, as indicated by Bradstreet's index numbers, covering ninety-six commodities. Unavoidably in preparing the statistics undue weight is given to commodities in limited use; but, since the same practice obtains at all times, the general indication is perhaps as good as can be had. The index number on December 1, 1911, was $8.9835, an advance of one per cent for November, 1911, and the highest price since May, 1910, when the number was $9.0385. On January 1, 1910, however, the number was $9.2310, contrasting with a minimum of $7.7227 at the beginning of June, 1908; and that decline had followed a maximum of $9.1293 on the first day of March, 1907. Barring the number on December 1, 1909, that on December 1, 1911, was the highest ever recorded on the first day of the last month of the year. Comparing the index number of groups of commodities December 1, 1911, with December 1, 1910, it is found there have been advances in breadstuffs, livestock, provisions, fruits, hides and leather, metals, naval stores, building materials, chemicals and drugs; while there have been decreases in textiles, coal, coke and oils.

Little New Building

The item of new building construction is suggestive in the bearing upon business conditions. In a growing country there is always considerable building in progress, and alterations and enlargements are many. This is true whether general business is good or bad, local conditions modifying the influence of general conditions. Chicago, for example, has been uncommonly active this season on account of the taking effect of new restrictions regarding the height of buildings, the desire being to build under the old law. Then there are communities where general conditions are so exceptionally prosperous that much money is put into this form of real estate. By the end of the year, however, there is wont to be some slackening of building enterprise; and so it was in November, 1911. In one hundred and two cities the amount of construction undertaken was $62,919,145, a decrease of 5.6 per cent from October, 1911, and 3.4 per cent from the figures for November, 1910. In more than half of the cities—fifty-nine, to be exact—there was an increase over 1910. For eleven months—November not quite complete—the value of new construction in the country was $759,662,662, a decrease of but 1.62 per cent from 1910, when the amount was about five per cent below that for eleven months of 1909. So far as new building is a sign of the times, it must be said that it shows a condition of "marking time."

Touching the condition of miscellaneous trades—cotton, wool, boot and shoe, and so on—reports are on the whole encouraging. It appears that in many directions dealers have run low on stocks and find themselves forced to renew their supplies, and this has had a favorable effect upon manufacturers. Whether all industries will follow the steel industry in expansion of output is a problem for the future. Considering the season, the business outlook may be styled good. The Christmas trade was not so large as sometimes, and for that condition there may be explanation either in the temperament of the people or in the state of their finances—perhaps the latter rather than the former.

Exports and Imports

The foreign trade of the United States for November, 1911, shows a modest decline in imports and exports compared with last year, $126,000,000 imports comparing with $129,000,000 in 1910 and $142,000,000 in 1909, and $201,000,000 exports being set against $206,000,000 in 1910 and $194,000,000 in 1909. For eleven months of 1911 the showing was favorable to said year as to exports, but not as to imports, unless it shall be considered advantageous to a country to have the imports decline. The total imports for the period were valued at $1,392,000,000 against $1,426,000,000 in 1910 and $1,336,000,000 in 1909. Exports were $1,887,000,000 in 1911 compared with $1,637,000,000 in 1910 and $1,585,000,000 in 1909. The excess of exports over imports for the month of November, 1911, was $75,400,000 against $76,800,000 in 1910 and $53,400,000 in 1909. For eleven months the excess of exports was $457,000,000 compared with $211,000,000 in 1910 and $219,000,000 in 1909. Looking a little closer at the exports, notably at foodstuffs, it is seen that for November, 1911, there was a decrease compared with 1910 in breadstuffs, cattle and hogs, cotton and mineral oils, and an increase in the worth of meat and dairy products. The decrease in cotton was from $87,000,000 in 1910 to $68,000,000 in 1911. The decline in the value of all foodstuffs was from $112,900,000 to $94,200,000; but from the beginning of 1911 there has been an increase in the exports of foodstuffs from $697,800,000 in 1910 to $780,400,000 for eleven months of 1911. There was an increase of $27,500,000 each in breadstuffs and in meat and dairy products, about one hundred per cent in the value of cattle, hogs, and so on, $9,000,000 in mineral oils, while the exports of cotton were valued at $439,000,000 compared with $428,000,000. The increase in the value of manufactures in 1911 was very large. The decreased prices for steel commodities appear to have broadened the foreign outlet quite as much as that at home.

The money market worked itself into a condition near the close of 1911 which some people professed not to expect; and even now they do not perhaps understand it. From a condition of ease, which it seems to have been assumed would last indefinitely, there was a change to a state of temporary tension, and money in Wall Street touched six per cent for a very brief time. Then it dropped to two and a half per cent, went to about four per cent again and ranged round there for a while. The time money market was not particularly affected. The New York banks evidently committed their resources round the first of December to such an extent that they were momentarily short of ready funds; but they quickly recovered themselves and were soon in comfortable circumstances. They are still believed to have large credits abroad and to be able to avail themselves of that resource at any time. Should general business revive, as Wall Street would have it understood it may, perhaps the days of really easy money will prove to have been left behind; but there is no indication of monetary stringency—at least not unless Wall Street shall succeed in convincing the public that this is the hour to lay the foundation for great riches by buying stocks freely, which is doubtful.

THE LIGHTNING CHANGE

(Concluded from Page 11)

The waiter went to execute the order. The young man almost dropped off to sleep in his chair, when in upon the tired group came his election agent with anxious and haggard face.

"We are done for!" he cried.

"As how?" demanded the Canadian, waking up.

"It's all over town that you make your money by cornering grain and cotton, thus interfering with the poor man's food and the rich man's raw material."

"But it's a lie!" exclaimed the young man. "I've never touched either grain or cotton in my life!"

"That doesn't matter," replied the agent. "It's a lie that kills in Manchester. There's no time to refute it."

"Oh, isn't there!" retorted the Canadian, bolting for his slouch hat. He met the waiter at the door, carrying in the red-hot, sizzling beefsteak. "Take it away!" he commanded. "I like my beefsteak cold. Keep it for me!"

A moment later he was in his motor car. He drove to the biggest job-printing establishment, which was kept open all night before election, and set huge posters on the press, using the biggest letters known to typography.

£1000 REWARD!

This sum of money will be paid to any man revealing the identity of the person who started the lie that I made my money out of either grain or cotton. My money comes from timber, honestly earned; and a thousand pounds of it will be instantly paid to the man who identifies the liar!

"Now!" he cried to his agent. "Get together and assemble here the Right Honorable Guild of Billposters. I'll pay them three—five—ten times their ordinary wages. There mustn't be a piece of dead wall visible in my constituency tomorrow."

"But," objected the agent, "every dead wall is already taken. The Liberal bills were put up and finished just before midnight."

"So much the better. The billposters have not yet gone to bed. Rout 'em out!"

"But it's against the law to ——"

"Of course—an act of trespass. I know all about that; but anything to beat a lie! Accept service on my behalf. I'll pay whatever costs the court imposes the day after election."

The young Canadian was elected and sits in Parliament today—the only Tory representing any portion of Manchester; and now his leader is his fellow-countryman, Mr. Andrew Bonar Law.

Robbing the Squirrels

THE tree seeds collected by the Forest Service for planting purposes are obtained largely by theft—that is to say, by robbing the hoards of the squirrels. Pine squirrels gather and store enormous quantities of pine cones, and so likewise do chipmunks and mice; but the greatest collectors of all are the small red squirrels, and it is not uncommon to find in a single one of their caches from eight to twelve bushels of cones.

Such caches are commonly found beneath decayed logs, under bushes and felled treetops, and beneath the overhanging banks of streams—often carefully covered with leaves and mold, making it difficult to locate them; though the squirrels' well-beaten trails serve in many instances as a guide to the seed-collector. The rodents are very industrious and lay by stores out of all proportion to their needs.

Methods have recently been adopted for handling the cones and separating out the seed by machinery, much labor being thus saved. Cone-shakers of several patterns have been devised, some of which are operated by hand and others by gasoline engines. A number of cone-drying houses have been built in the various national forests, where during four weeks of last winter a total of thirty-eight hundred and ninety-four pounds of clean seed was produced. This made necessary the handling of one thousand bushels of cones a week, including the process of drying and opening, shaking out the seed, removing the "wings," putting the seed through a fanning mill and weighing and sacking it for shipment.

Madam! Here Is The Sanitary Couch You Have Been Waiting For

(Slatfabric Telescope Couch extended for bed)

You have always wanted a Sanitary Steel Couch. You have pictured it occupying a pretty cozy corner of your living room; you have felt its need when an unexpected guest arrived.

In fancy, you have imagined a dozen different uses for so handy an article, both as a couch and as a bed.

Why have you waited? Why have you denied your home this comfort—this great convenience? Let us suggest the answer:

You haven't been satisfied with the old-fashioned, round wire sanitary couches. You have been waiting for a Sanitary Steel Couch that would not sag, that would not rust or break, that would not rattle, get out of order or tear the bedclothes.

And now that couch has come. We guarantee it for 25 years.

Slatfabric
Steel Sanitary
Couches, Cots and Bed Springs

The secret lies in the flat wire fabric — elastic ribbons of steel — to be found on all Slatfabric Couches, Davenports, Cots, Cribs and Bed Springs, and only on Slatfabric.

These resilient flat steel wires are secured to solid steel one-piece frames by the best oil-tempered springs, making Slatfabric furniture at once the strongest, best looking and most comfortable ever produced.

SLATFABRIC Couches, Davenports, Cots and Bed Springs are made in all the popular styles and shapes—all sterling in construction and value.

The Telescope Slatfabric Couch (illustrated above) has many special features found on no other couch. It is the only telescope with surface absolutely level when open as a bed. It is equal in comfort to the best bed. It is the only telescope guaranteed for 25 years.

Get a Sanitary Steel Couch! There are many opportunities in your own home to make it serve you well, both as an ornament and as a convenience—bedecked with cover and pillows, in a cozy nook, or opened up into an excellent bed.

Be sure to get SLATFABRIC when you buy. Look for the flat steel wire. No other couch like it on the market.

Your Dealer Has SLATFABRIC Couches, Cots and Bed Springs, or Can Get Them for You

My Farewell Car

By R. E. Olds, Designer

Reo the Fifth—the car I now bring out—is considered by me as pretty close to finality.

So close that I call it "My Farewell Car." I shall let it stand as my topmost achievement.

Embodied here are the final results of my 25 years of experience.

I have spent 18 months on Reo the Fifth. For three months I stopped the whole Reo production to devote all of our efforts to this one car.

The future is bound to bring some minor changes—folderols and fashions. But in all the essentials this car strikes my limit.

Better workmanship is impossible, better materials unthinkable. More of simplicity, silence, durability and economy can hardly be conceived.

I consider this car about as close to perfection as engineers ever will get.

My 24th Model

This is the twenty-fourth model which I have created. My first was a steam car, built in 1887—25 years ago. My first gasoline car was built in 1895—17 years ago.

My whole life has been spent in building gasoline engines—the Olds Gas Engines, famous half the world over. My engine-building successes gave first prestige to my cars. For the motor, of course, is the very heart of a car.

So it came about that tens of thousands of motorists have used cars of my designing. They have run from one to six cylinders, from 6 to 60 horsepower. They have ranged from little to big, from the primitive to the modern luxurious cars. I have run the whole gamut of automobile experience.

In the process of sifting I have settled down to the 30 to 35 horsepower, 4-cylinder car. That is, and will doubtless remain, the standard type of car.

Greater power is unnecessary; its operation expensive. Weight, size and power not needed bring excessive cost of upkeep. Most men who know best, and who can own good cars, are coming to this standard type. So we make for the future just this one type of car.

And in this new car—called Reo the Fifth—I have embodied all I know which can add one iota to the real worth of a car.

My Thousand Helpers

But Reo the Fifth, despite all my inventions, belongs to other men more than to me. A thousand men have contributed to it. I have searched the whole world to secure for each part the very best that any man has discovered.

For that is the essence of motor car designing—to learn what is best and adopt it. No modern car owes more than a trifle to the genius of any one man.

So this car is not mine—it is merely my compilation. It shows my skill in selection—in picking the best—more than my skill in designing. It shows, above all, what my myriads of cars in actual use have taught me.

And I frankly confess that I owe a great deal to the many brilliant designers whom it has been my good fortune to associate with me.

Where This Car Excels

In Reo the Fifth you will find many good features found in no other car. You will find all the best features used in other up-to-date models. You will find them combined with style, finish and appearance which marks the very latest vogue.

But the vital advantages of this new car lie in excess of care and caution. In the utter exactness—in the big margins of safety.

One of the greatest lies in formulas for steel. I have learned by endless experiment—by countless mistakes—the best alloy for each purpose.

All the steel that I use is now made to my order. And each lot is analyzed to prove its accord with the formula. Experience has taught me not to take any chances.

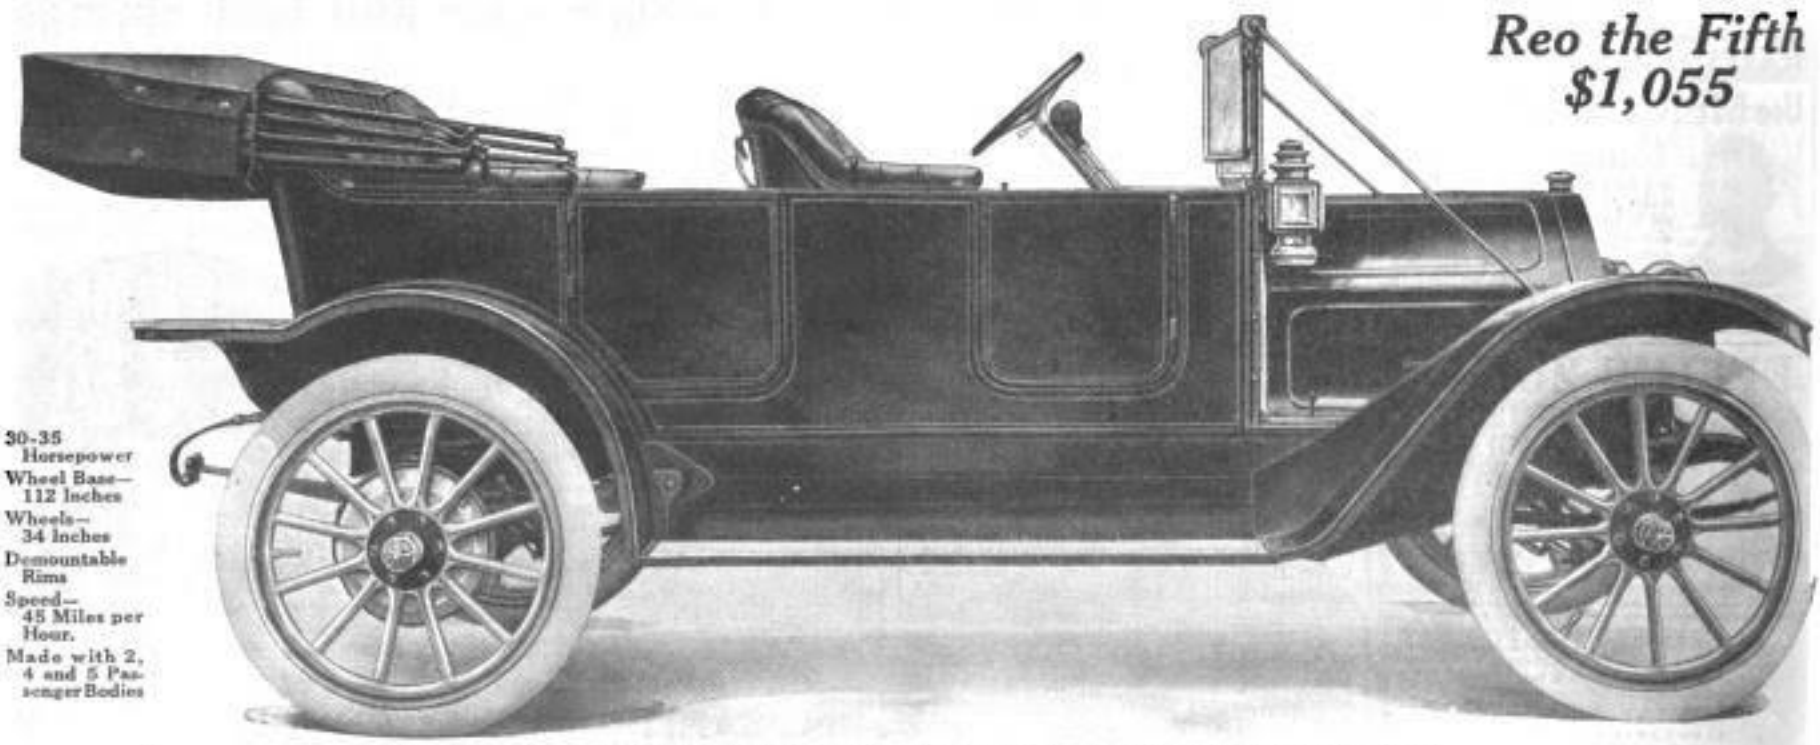
I used to test gears with a hammer. Now I use a crushing machine of 50 tons capacity. And I know to exactness what each gear will stand.

I took the maker's word on magnetos at one time. Now I require a radical test, and I have found but two makes which will stand it.

The axles are immensely important. I use Nickel Steel of unusual diameter, and fit them with Timken Roller Bearings.

The carburetor is doubly heated—by hot air and hot water—for the present grades of gasoline.

The car is over-tired.



So with every part. From start to finish this car is built under laboratory supervision. The various parts pass a thousand inspections.

It is one thing to build a theoretical car, to meet all expected conditions. It is another thing to build one to meet actual conditions. The unusual and unexpected bring out a car's weakness.

The best thing I have learned, in these decades of experience, is the folly of taking chances.

I had one of these new cars run for ten thousand miles—run at top speed, night and day, on rough roads. That is equal, I figure, to three years' average usage. Then I took the car apart, and I found every important part in the whole car practically as good as new.

That's where this car excels—in that excess of caution taught by 25 years of experience. I am not abler than other designers. I have simply been learning longer.

Reo the Fifth
$1,055

30-35 Horsepower
Wheel Base—112 Inches
Wheels—34 Inches
Demountable Rims
Speed—45 Miles per Hour.
Made with 2, 4 and 5 Passenger Bodies

Top and windshield not included in price. We equip this car with mohair top, side curtains and slip-cover, windshield, gas tank and speedometer—all for $100 extra. Self-starter, if wanted, $25.00 extra.

Digitized by Google

The Price of $1,055

It seems an anomaly that this Farewell Car—my finest production—should sell for $1,055. But of all the new accomplishments shown in this car I consider this price as the greatest.

In this final and radical paring of cost I feel that I leave my greatest mark on this industry. And nothing else done by me has required so much invention, so much preparation.

The time has come when motor cars must be sold on a close-price basis. Cost, profit and selling-cost must all come down.

The furores of the future will be due to efficiency—to enormous production, to modern equipment, to automatic machinery.

The time is passing when a doubled price indicates a double value. Men are learning how to judge a car. They are not content to pay more than the market for the utmost one can get.

The Sweeping Change

I have sold thousands of cars at what would now be four times the cost of making. I have seen men stand in line and pay a bonus to get them.

I have spent in the making—in proportion to value—twice what I spend today. But those were days of experiment, of constant change. A wealth of machinery, tools and jigs went every year to the scrap heap. And they were days of hand work, of little automatic machinery.

I have seen overhead expense, in the days of small outputs, cost twice as much as labor. I have seen selling expense cost as much as materials. The prices of those days are now extremely unfair.

Now every operation in the Reo plant is performed by special automatic machinery, invented by us, built right here in our shops. Some single machines divide the labor cost by fifty. And they multiply exactness, too.

Now the Reo is standardized, so machines are not changed. Now we build but one chassis in all this great plant. That fact alone saves nearly $200 per car.

Now the whole of the car is built under one roof, so we pay no profits to parts makers. Now we make thousands of cars where we used to make hundreds, so overhead expense is a trifle.

Selling expense, because of the Reo's prestige, is a fraction of what it was. Profit per car has been cut to the minimum. Our dividends are paid by enormous production.

Those are the reasons for this price on Reo the Fifth—a price far below any car in its class. I believe the dominant car must give most for the money. And I want that to be Reo the Fifth.

The Price Not Fixed

But the price of $1,055 is not irrevocable. All our contracts with dealers provide for advance on two weeks' written notice.

Materials are now at their lowest prices in years, and but little advance will make this price impossible. We have pared every cost to the limit. We have even discounted the prospect of a doubled demand. So added cost, if it should occur, must be added to our price.

But the price today is $1,055. And the price will be kept this low as long as it can be. But no price can be fixed for six months in advance without leaving a big margin, and we haven't done that.

About Skimping

Standard cars which compare with Reo the Fifth are selling today up to $2,500. This difference in price naturally leads to the question as to whether we have skimped on the Reo.

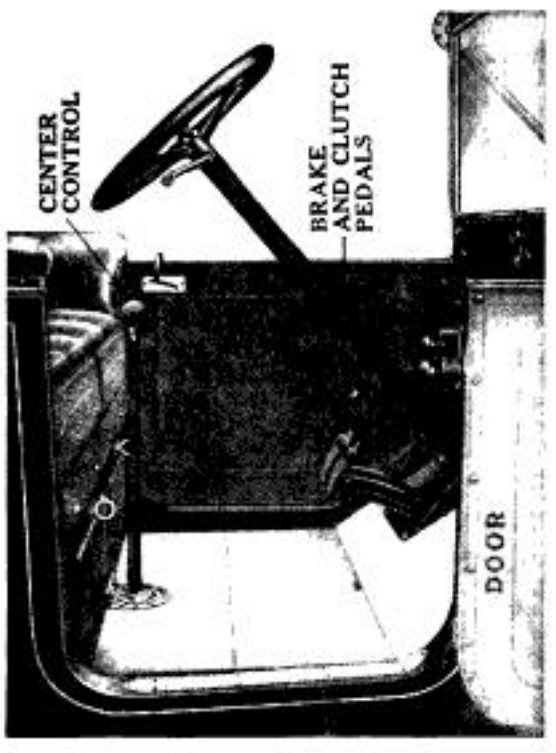
We ask you to judge that for yourself. Our catalog—just out—gives complete specifications. It states the material used in every vital part. Please make your comparisons; or, if you can't do it, have a good engineer make them for you.

If there is one device better than I employ, I don't know it. If there are better materials for any part or purpose, I have failed to find them out. If any maker uses more time, skill or care, I do not know how he employs it.

After 25 years spent in car building I consider Reo the Fifth, in every respect, as my limit. I would not know where to add one whit of real value, whatever price you would pay.

Note the generous tires—the hair-filled genuine leather cushions—the nickel-trimmed engine—the 17-coated body. In every part of the car, both the seen and unseen, I have put that final touch.

No, this car is not skimped. I am putting it out as the cap-sheaf of my career. All my prestige is at stake on it. This is my Farewell Car, and I am glad to think that tens of thousands of motor car owners are going to judge me by it.



New Catalog Ready

Our catalog gives all the specifications, and shows the three styles of bodies. It gives details of all the new features.

Reo the Fifth, at this radical price, will be the season's sensation. The facts about it are exceedingly interesting. Write us today for the book. We will then direct you where to see the car.

R. M. Owen & Co. General Sales Agents for **Reo Motor Car Co., Lansing, Mich.**

Canadian Factory, St. Catharines, Ontario

The Center, Cane-Handle Control
No Side Levers—No Reaching

The most unique feature in Reo the Fifth is this center control, shaped like a cane handle. It is our invention—our exclusive feature.

This car has no side levers—nothing in the way. The driver gets out on either side as easily as you climb from the tonneau.

Both brakes are worked by foot pedals. Either or both of them can be applied without taking the hand from the wheel.

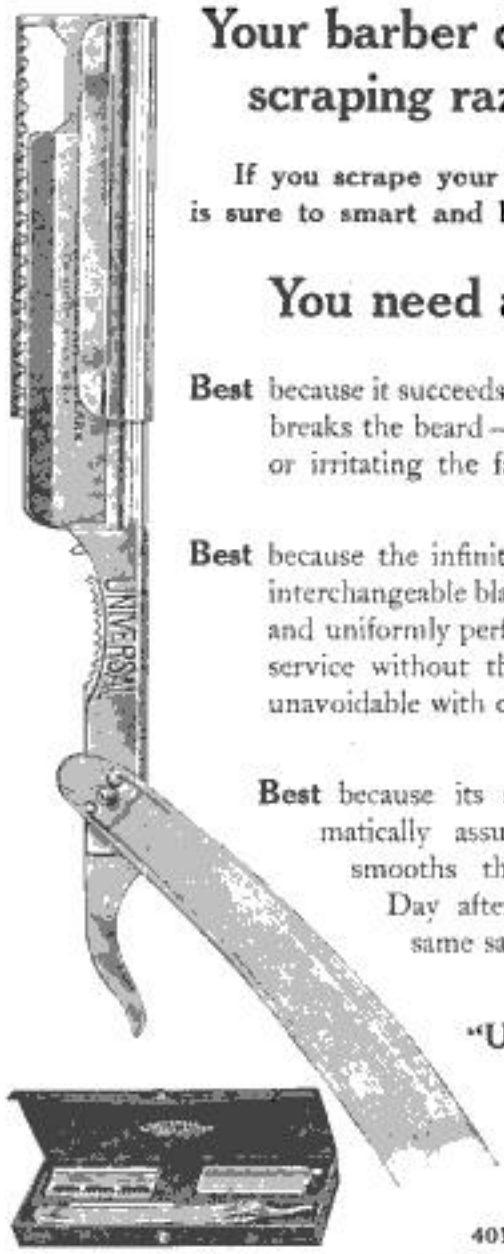
The gear shifting is done by this center cane-handle. The handle straight up means transmission on neutral. One slight motion takes you to low speed, another to intermediate, another to high speed and another to reverse.

Each of these movements is in a different direction. And the top of the handle, in changing from one to another, hardly moves more than three inches. So the handle is not in the way.

No danger of gear stripping. No noise at all. There was never before a gear shifting device even one-fourth so convenient and simple.

Left-Side Drive

In Reo the Fifth the driver sits—as he should sit—on the left-hand side. He is then close to the cars which he passes. He is on the up side of the road. He can look behind in making a turn.



This has always been so on electrics. But with gasoline cars, where there are side levers, the driver is compelled to sit on the right side. And that means the wrong side for driving.

Fore doors have now made side levers impracticable. They come too close to the door. This fact is compelling a center control, to which all cars must come. And this center control enables the driver to sit on the left side—on the proper side of his car.

It is so in Reo the Fifth. But, in addition to that, we have rid the car of both the brake lever and gear lever.

Those are a few of the ways in which this new Reo model shows its up-to-dateness.

Your barber doesn't use a scraping razor. Ask him why.

If you scrape your **face, what can you expect? It is sure to smart and burn, for your method is wrong.**

You need a "Universal"

Best because it succeeds where others fail, for it cuts—not breaks the beard—close to the skin without pulling or irritating the face.

Best because the infinite superiority of its hollow ground interchangeable blades, due to their extreme keenness and uniformly perfect temper, assures steady, efficient service without the constant new blade outlay so unavoidable with other razors.

Best because its self-regulating safety guard automatically assumes the same adjustment and smooths the way for the cutting stroke. Day after day the "Universal" gives the same safe, clean, comforting shave.

"Universal" $2.50 everywhere

including extra blade.

Burpee's Annual for 1912

"The Leading American Seed Catalog"

Is now ready for mailing. The first edition of more than four hundred thousand copies will soon be distributed. As usual it is sent unsolicited only to "Customers of Record." We shall be pleased, however, to mail a copy immediately upon application (a postal card will do) to every one who appreciates QUALITY IN SEEDS.

This SILENT SALESMAN (and we employ no "talking" salesmen to solicit orders) tells the plain truth about The Best Seeds That Can Be Grown. Besides colored plates of Burpee-Specialties, this bright book of 178 pages shows hundreds of the choicest vegetables and most beautiful flowers, illustrated from photographs. It is almost indispensable to all who garden either for pleasure or profit.

The "HOUSE OF BURPEE" is known the world over not only as EXPERTS IN SWEET PEAS but also as SEED SPECIALISTS. No other American firm has ever introduced so many novelties of sterling value,—and no other growers supply seeds annually direct to so many planters. It might be to your interest to read THE BURPEE ANNUAL. It will cost you only one cent for a post-card to send us your address, and you are under no obligation to buy. We never annoy applicants with "follow up" letters!

Shall we mail you a copy? If so, kindly **write to-day.**

W. ATLEE BURPEE & CO., Burpee Buildings, Philadelphia

THE LIGHTED WAY

(Continued from Page 21)

"I mention it," he said, "because you will understand that my remarks to you are not dictated by curiosity or impertinence. Mr. Weatherley's behavior and mode of life have been entirely changed, Chetwode, since his marriage."

"I can understand that," Arnold replied with a faint smile. What, indeed, had so beautiful a creature as Fenella to do with Samuel Weatherley of Tooley Street!

"Mrs. Weatherley," Mr. Jarvis continued, "is, no doubt, a very beautiful and very accomplished lady. Whether she is a suitable wife for Mr. Weatherley I am not in a position to judge, never having had the opportunity of speech with her; but so far as regards the effect of his marriage upon Mr. Weatherley, I should like you to understand, Chetwode, at once, that it is my opinion and the opinion of all of us and of all his business friends that a marked change for the worse in Mr. Weatherley has set in during the last few months."

"I am sorry to hear it," Arnold said.

"You, of course," Mr. Jarvis went on, "could scarcely have noticed it as you have been here so short a time, but I can assure you that a year or so ago the governor was a different person altogether. He was out in the warehouse half the morning, watching the stuff being unloaded, sampling it and suggesting customers. He took a live interest in the business, Chetwode. He was here, there and everywhere. Today—for the last few weeks indeed—he has scarcely left his office. He sits there, signs a few letters, listens to what I have to say, and goodness knows how he spends the rest of his time. Where the business would be," Mr. Jarvis continued, rubbing his chin thoughtfully, "if it were not for us who know the running of it so well, I can't say, but a fact it is that Mr. Weatherley seems to have lost all interest in it."

"I wonder he doesn't retire," Arnold suggested.

"Retire!" Mr. Jarvis said. "Why should he retire? What would he do? Isn't it as comfortable for him to read his newspaper over the fire in the office there as at home? Isn't it better for him to have his friends all round him, as he has here, than to sit up in his drawing room in business hours with never a soul to speak to? Such men as Mr. Weatherley, Chetwode, or as Mr. Weatherley's father was, don't retire. If they do it means the end."

"Well, I'm sorry to hear what you tell me," Arnold said. "I haven't seen much of Mr. Weatherley, of course, but he seems devoted to his wife."

"Infatuated, sir! Infatuated is the word!" Mr. Jarvis declared.

"She is very charming," Arnold remarked thoughtfully.

Mr. Jarvis looked as though there were many things that he could have said, but refrained from saying.

"You will not suggest, Chetwode," he asked, "that she married Mr. Weatherley for any other reason than because he was a rich man?"

Arnold was silent for a moment. Somehow or other he had accepted the fact of her being Mrs. Weatherley without thinking much as to its significance.

"I suppose," he admitted, "that Mr. Weatherley's money was an inducement."

"There is never anything but evil," Mr. Jarvis declared, "comes from a man or a woman marrying out of their own circle of friends. Now Mr. Weatherley might have married a dozen ladies from his own circle here. One I know of—a very handsome lady, too—whose father has been lord mayor. And then there's the sisters of young Tidey in the office there. Any one of them would have been most suitable. But no! Some unlucky chance seems to have sent Mr. Weatherley on that Continental journey, and when you once get away from England, why, of course anything may happen. I don't wish to say anything against Mrs. Weatherley, mind," Mr. Jarvis continued, "but she comes from the wrong class of people to make a City man a good wife, and I can't help associating her and her friends and her manner of living with the change that's come over Mr. Weatherley."

Arnold swung himself up on to the top of a barrel and sat looking down.

"Mr. Jarvis," he said, "you and I see this matter naturally from very different standpoints. You have known Mr. Weatherley for thirty-five years. I have known him for four months, and he never spoke a word to me until a few days ago. Practically, therefore, I have known Mr. and Mrs. Weatherley the same length of time. Under the circumstances I must tell you frankly that my sympathies are with Mrs. Weatherley. Not only have I found her a very charming and beautiful lady, but she has been most unnecessarily kind to me."

Mr. Jarvis was silent for a moment.

"I had forgotten," he admitted, "that that might be your point of view. It isn't, of course, possible to look for any feeling of loyalty for the chief from any one who has only been here a matter of a few months. Perhaps I was wrong to have spoken to you at all, Chetwode."

"If there is anything I can do—" Arnold began.

"It's in this way," Mr. Jarvis interrupted. "Owing, I dare say, to Mrs. Weatherley you have certainly been put in a unique position here. You see more of Mr. Weatherley now than any one of us. For that reason I was anxious to make a confidant of you. I tell you that I am worried about Mr. Weatherley. He is a rich man and a prosperous man. There is no reason why he should sit in his office and gaze into the fire and look out of the window, as though the place were full of shadows and he hated the sight of them. Yet that is what he does nowadays, Chetwode. What does it mean? I ask you frankly. Haven't you noticed yourself that his behavior is peculiar?"

"Now you mention it," Arnold replied, "I certainly have noticed that he was very strange in his manner this morning. He seemed very upset about that Rosario murder. Mr. Rosario was at his house the other night, you know. Were they great friends, do you think?"

Mr. Jarvis shook his head.

"Not at all," he said. "He was simply, I think, one of Mrs. Weatherley's society acquaintances. But that there's something gone wrong with Mr. Weatherley no one would deny who sees him as he is now and knew him as he was a year or so ago. There's Johnson, the foreman packer, who's been here as long as I have; and Elwick, the carter; and Hümmel, in the export department—we've all been talking together about this."

"He doesn't speculate, I suppose?" Arnold inquired.

"Not a ha'penny," Mr. Jarvis replied fervently. "He has spent large sums of money since his marriage, but he can afford it. It isn't money that's worrying him."

"Perhaps he doesn't hit it off with his wife," Arnold remarked.

Mr. Jarvis drew a little breath. For a moment he was speechless. To him it seemed something like profanity that this young man should make so casual a suggestion!

"Mrs. Weatherley, sir," he declared, "was, I believe, without any means whatever when Mr. Weatherley made her his wife. Mr. Weatherley, as you know, is at the head of this house, the house of Samuel Weatherley & Company, bankers Lloyd's. It should be the business of the lady, sir, to see that she 'hits it off,' as you put it, with a husband who has done her so much honor."

Arnold smiled.

"That is all very well, Mr. Jarvis," he said, "but you must remember that Mrs. Weatherley had compensations for her lack of wealth. She is very beautiful, and she is, too, of a different social rank."

Mr. Jarvis was frankly scornful.

"Why, she was a foreigner!" he declared. "I should like to know of what account any foreign family is against our good City firms such as I have been speaking of. No, Chetwode; my opinion is that she's brought a lot of her miserable foreign hangers-on over here and that somehow or other they are worrying Mr. Weatherley. I should like, if I could, to interest you in the chief. You can't be expected to feel as I do toward him. At the same time he is the head of the firm, and you are bound, therefore, to feel a certain respect due to him, and I thought that if I talked to you and put these matters before you, which have occurred, not only to me but to those others who have been with Mr. Weatherley for so many years, that you might be able to help us by watching. If you can find any clew as to what is bothering him, why, I'd be glad

to hear of it, for there isn't one of us who wouldn't do anything that lay in his power to have the master back once more as he used to be a few years ago. Why, the business seems to have lost all its spring nowadays," Mr. Jarvis went on mournfully. "We do well, of course, because we couldn't help doing well, but we plod along more like a machine. It was different altogether in the days when Mr. Weatherley used to bring out the morning orders himself and chaff us about selling for no profit. You follow me, Chetwode?"

"I'll do what I can," Arnold agreed. "Of course I see your point of view, and I must admit that the governor does seem depressed about something or other."

"If anything turns up," Mr. Jarvis asked eagerly—"anything tangible, I mean—you'll tell me of it, won't you, there's a good fellow? Of course I suppose your future is outside my control now, but I engaged you first, you know, Chetwode. There aren't many things done here that I haven't a say in."

"You may rely upon me," Arnold promised, slipping down from the barrel. "He's really quite a decent old chap, and if I can find out what's worrying him, and can help, I'll do it."

Mr. Jarvis went back to his labors and Arnold made his way to Mr. Weatherley's room. His first knock remained unanswered. The "Come in!" that procured for him admittance at his second summons sounded both flurried and startled. Mr. Weatherley had the air of one who has been engaged in some criminal task. He drew the blotting paper over the letter that he had been writing as Arnold entered.

"Oh! It's you, is it, Chetwode?" he remarked with an air of relief. "So you're back, eh? Pleasant luncheon?"

"Very pleasant indeed, thank you, sir," Arnold replied.

"Mrs. Weatherley send any message?" her husband then asked with ill-assumed indifference.

"None at all, sir."

Mr. Weatherley sighed. He seemed a little disappointed.

"Did you lunch at the Carlton?"

"We took our coffee there afterward," Arnold said. "We lunched at a small foreign restaurant near Oxford Street."

"The Count Sabatini was there?"

"Yes, sir," Arnold told him. "Also Mr. Starling."

Mr. Weatherley nodded slowly.

"How do you get on with Count Sabatini?" he inquired. "Rather a gloomy person, eh?"

"I found him very pleasant, sir," Arnold said. "He was good enough to ask me to dine with him tonight."

Mr. Weatherley looked up a little startled.

"Invited you to dine with him?" he repeated.

Arnold nodded.

"I thought it was very kind of him, sir."

Mr. Weatherley sat quite still in his chair. He had obviously forgotten his secretary's presence in the room, and Arnold, who had seated himself at his desk and was engaged sorting out some papers, took the opportunity now and then to glance up and scrutinize with some attention his employer's features. There were certainly traces there of the change at which Mr. Jarvis had hinted. Mr. Weatherley had the appearance of a man who had once been florid and prosperous and comfortable-looking, but who had been visited by illness or some sort of anxiety. His cheeks were still on the fat side, but they hung down toward the jaw, and his eyes were marked with crow's-feet. His color was unhealthful. He certainly had no longer the look of a prosperous and contented man.

"Chetwode," he said slowly after a long pause, "I am not sure that I did you a kindness when I asked you to come to my house the other night."

"I thought so, at any rate, sir," Arnold replied. "It has been a great pleasure to me to make Mrs. Weatherley's acquaintance."

"I am glad that my wife has been kind to you," Mr. Weatherley continued, "but I hope you will not misunderstand me, Chetwode, when I say that I am not sure that such kindness is for your good. Mrs. Weatherley's antecedents are romantic, and she has many friends whose position in life is curiously different from my own and whose ideas and methods of life are not such as I should like a son of my own to adopt. The Count Sabatini, for instance," Mr. Weatherley went on, "is a nobleman

The Howard Watch

The Telephone Operators in New York City handle 180,000 calls every rush hour. They will connect you with any one of 500,000 subscribers in half a minute.

Ask the Exchange Manager how he can handle all these calls, and he will tell you tersely, "By saving the seconds."

"Schedule time" is the keynote of American industry. That means *HOWARD time.* There's always somebody higher up holding a HOWARD Watch on the job — demanding the HOWARD type of accuracy and punctuality.

The HOWARD is the one watch in the world wholly adapted to modern progress. It has the precise construction and the scientific adjustment.

A HOWARD Watch is always worth what you pay for it.

The price of each watch — from the 17-jewel (*double roller*) in a Crescent Extra or Jas. Boss Extra gold-filled case at $40, to the 23-jewel at $150, and the EDWARD HOWARD model at $350—is *fixed* at the factory and a printed ticket attached.

Find the HOWARD jeweler in your town and talk to him. Not every jeweler can sell you a HOWARD. The jeweler who can is a good man to know.

Admiral Sigsbee has written a little book, "The Log of the HOWARD Watch," giving the record of his own HOWARD in the U. S. Navy. You'll enjoy it. Drop us a post-card, Dept. N, and we'll send you a copy.

FOUND ONLY ON THE MODEL 11 VISIBLE

Remington Typewriter

The Key-Set Decimal Tabulator of the Model 11 Remington Biller is an exclusive Remington development. It makes the setting of the tabulator stops mechanical. It does away with hand setting and all loose parts. One key does the setting, and does it as quickly as the hand can move the carriage.

Here is another triumph in typewriter labor saving; the latest of many Remington triumphs, all embodied in the present Remington visible models.

The Decimal Tabulator is a Remington invention. The Built-in-Tabulator is another Remington invention. And this latest improvement, the Key-Set Decimal Tabulator, is again a Remington invention. The history of the evolution of the Decimal Tabulator is Remington history from first to last.

who has had, I believe, a brilliant career in some respects, but who a great many people would tell you is a man without principles or morals as we understand them down here. He is just the sort of man to attract youth because he is brave, and I believe him to be incapable of a really despicable action. But notwithstanding this, and although he is my wife's brother, if I were you I would not choose him for a companion."

"I am very much obliged to you, sir," Arnold answered a little awkwardly. "I shall bear in mind all that you have said. You do not object, I presume, to my dining with him tonight?"

"I have no objection to anything you may do outside this building," Mr. Weatherley replied, "but as you are only a youngster, and you met the Count Sabatini at my house, I feel it only right to give you a word of warning. I may be wrong. One gets fancies sometimes, and there are some strange doings—not that they concern you, however," he added hurriedly, "only you are a young man with your way to make in the world and every chance of making it, I should think; but it won't do for you to get too many of Count Sabatini's ideas into your head if you are going to do any good at a wholesome, honest business like this."

"I quite understand you, sir," Arnold assented. "I don't suppose that Count Sabatini will ask me to dine with him again. I think it was just kindness that made him think of it. In any case I am not in a position to associate with these people regularly at present, and that alone would preclude me from accepting invitations."

"You're young and strong," Mr. Weatherley said thoughtfully. "You must fight your own battle. You start somehow differently to where I did. You see," he went on with the air of one indulging in reminiscences, "my father was in this business and I was brought up to it. We lived only a stone's throw away then—in Bermondsey—and I went to the City of London School. At fourteen I was in the office here, and a partner at twenty-one. I never went out of England till I was over forty. I had plenty of friends, but they were all of one class. They wouldn't suit Mrs. Weatherley or the Count Sabatini. I have lost a good many of them. You weren't brought up to business, Chetwode?" he asked suddenly.

"I was not, sir," Arnold admitted.

"What made you come into it?"

"Poverty, sir," Arnold answered. "I had only a few shillings in the world when I walked in and asked Mr. Jarvis for a situation."

Mr. Weatherley sighed.

"Your people are gentlefolk, I expect," he said. "You have the look of it."

Arnold did not reply. Mr. Weatherley shrugged his shoulders.

"Well," he concluded, "you must look after yourself, only remember what I have said. By-the-by, Chetwode, I am going to repose a certain amount of confidence in you."

Arnold looked up from his desk.

"I think you may safely do so, sir," he declared.

Mr. Weatherley slowly opened a drawer at his right hand and produced two letters. He carefully folded up the sheet upon which he had been writing and also addressed that.

"I cannot enter into explanations with you about this matter, Chetwode," he said, "but I require your promise that what I say to you now is not mentioned in the warehouse or to any one until the time comes that I am about to indicate. You are my confidential secretary and I have a right, I suppose, to demand your silence."

"Certainly, sir," Arnold assured him.

"There is just a possibility," Mr. Weatherley declared, speaking thoughtfully and looking out of the window, "that I may be compelled to take a sudden and quite unexpected journey. If this be so I should have to leave without a word to any one—to any one, you understand."

Arnold was puzzled, but he murmured a word of assent.

"In case this should happen," Mr. Weatherley went on, "and I have not time to communicate with any of you, I am leaving in your possession these two letters. One is addressed jointly to you and Mr. Jarvis and the other to Messrs. Turnbull & James, Solicitors, Bishopsgate Street Within. Now I give these letters into your charge. We shall lock them up together in this small safe that I told you you could have for your own papers," Mr. Weatherley continued, rising to his feet and crossing the room. "There you are, you see. The safe is empty at present, so you will not need to go to it. I am locking them up," he added, taking a key from his pocket, "and there is the key. Now you understand?"

"But surely, sir ——" Arnold began.

"The matter is quite simple," Mr. Weatherley interrupted sharply. "To put it plainly, if I am missing at any time—if anything should happen to me or if I should disappear—go to that safe, take out the letters, open your own and deliver the other. That is all you have to do."

"Quite so, sir," Arnold replied. "I understand perfectly. I see that there is none for Mrs. Weatherley. Would you wish any message to be sent to her?"

A boy passed along the pavement with a bundle of evening papers.

"Hurry out and get me a Star, Chetwode," Mr. Weatherley ordered.

Arnold obeyed him and returned a few moments later with a paper in his hand. Mr. Weatherley studied it for a few moments intently and then folded it up.

"It will not be necessary for you, Chetwode," he said, "to communicate with my wife specially."

The accidental arrangement of his employer's coat and hat upon the rack suddenly struck Arnold.

"Why, I don't believe that you have been out to lunch, sir!" he exclaimed.

"To tell you the truth," Weatherley said, "I completely forgot. Help me on with my coat, Chetwode. There is nothing more to be done today. I will call and get some tea somewhere on my way home. Tell them to get me a taxicab," he directed. "I don't feel like much walking today and they are not sending for me."

Arnold sent the errand boy off.

"Well, I hope, Chetwode, that I haven't said anything to make you believe that there is anything wrong with me or to give you cause for uneasiness. This journey of which I spoke may never become necessary. In that case after a certain time has elapsed we will destroy those letters."

"I trust that it never may become necessary to open them, sir," Arnold remarked.

"As regards what I said to you about the Count," Mr. Weatherley continued after a moment's hesitation, "remember who I am that give you the advice and who you are that receive it. Your bringing up, I should imagine, has been different. Still a young man of your age has to make up his mind what sort of a life he means to lead. I suppose to a good many people," he went on reflectively, "my life would seem a common, dull, plodding affair. Somehow or other I didn't seem to find it so until—until lately. Still there it is. I suppose I have lived in a little corner of the world, and what seems strange and wild to me might, after all, seem not so much out of the way to a young man with different ideas like you. Only this much I do believe at any rate," he went on, buttoning up his coat and watching the taxicab that was coming along the street, "if you want a quiet, honest life, doing your duty to yourself and others and living according to the old-fashioned standards of honesty and uprightness, then when you have had that dinner with the Count Sabatini tonight forget him, forget where he lives. Come back to your work here, and if the things of which the Count has been talking to you seem to have more glamour forget them all the more zealously. The best sort of life is always the grayest. The life that attracts is generally the one to be avoided. We don't do our duty," Mr. Weatherley added, brushing his hat upon his sleeve reflectively, "by always looking out upon the pleasurable side of life. Good evening, Chetwode!"

He turned away so abruptly that Arnold had scarcely time to return his greeting. It seemed so strange to him to be talked to at such length by a man whom he had heard utter scarcely half a dozen words in his life that he was left speechless. He was still standing before the window when Mr. Weatherley crossed the pavement and entered the waiting taxicab. In his walk and attitude the signs of the man's deterioration were obvious. The little swagger of his younger days was gone, the bumptiousness of his bearing forgotten. He cast a glance up and down the pavement to hail an acquaintance. He muttered an address and stepped heavily into the taxi.

Tailored to Fit the Leg

If You Keep Chickens You Need An Incubator

But listen what Mr. Chas. F. Townsend, President of the National Poultry Association, says: "In our extensive tests of incubators we found several of the 'right' kind, but none of them appealed to me so strongly as did the 'Buckeye.' We had one that cost only eight dollars. That machine was 'it' every minute. It ran itself, did its own regulating, and supplied its own moisture. And hatch? It hatched every hatchable egg we ever put into it. It produced as large and strong chicks as any incubator I ever saw, and a number of those same chicks won a lot of blue ribbons and silver cups. That 'BUCKEYE' incubator appealed to me because it required practically no attention; it hatched every hatchable egg; and it didn't cost much money. I am now using the Buckeye Incubator exclusively."

Buckeyes have been on the market 21 years—over 225,000 in successful operation. Guaranteed to hatch every hatchable egg and remain in perfect working order for 5 years. Sold by over 1800 dealers in every state in the Union. Write today for "Incubator Facts," name of your nearest dealer and copy of guarantee.

HEART'S DESIRE

(Continued from Page 9)

"'Is it no sign of a woman's love that she would take a man wid his faults and thank Hivin that she has him all?' she retor-rted.

"'He fights for the love of it—which is sin,' I says.

"'He would fight for the woman he loves, then,' says she.

"'He drinks har-rd liquor till his eyes shine,' I wint on.

"'And whin his eyes were bright he would come to look at his wife,' says me bould Kate.

"'He has loved manny women,' I continued.

"'What joy is there in a man who does not forget whin he sees his sweetheart?' she remar-rked.

"'Then yez have given him up?' I said prisintly.

"The pale hands of her wint up to her eyes and she thried to laugh.

"'Afther all, 'tis only the wind we hear, Mickey O'Rourke,' says she. 'We are fools to listen to it, for our hear-rt's desire is not in this wor-rld. And to find that out is to grow ould. I am ould, Mickey!'

"I took an ould man's privilege and studied the gir-rl. There was no sign of age about her. Her black hair had the sheen of youth in it, her white throat was widout hollows and the lips of her were fresh as flowers. 'Twas only the eyes that tould of her years; and women's eyes don't go by the years they have lived, but by the things they have seen.

"'Yez are still a gir-rl,' I infor-rmed her.

"'Twas unmaidenly,' she remar-rked, 'but I have tould yez that whin I was a slip of a colleen I loved ye. Now I love Tom McCarthy—but I will niver marry him.'

"'Yez know nothing about him,' I said. 'Have yez iver seen him at wor-rk? 'Tis there ye will find out the enthrails of a man. And his belly is not empty!'

"She thought over this a long time and then she whispered:

"'Tis the truth yez are speaking to me, Mickey. I will go and see him wid his engines!'

"'We are both transferred to a collier for the time being,' I remar-rked. 'A wor-rd to the superintindint might get yez a passage.'

"'And the steamer's name?' she inquired.

"'The Aztec,' I tould her.

"So whin the ould boat left Pier Forty in San Francisco for Mororan, in Japan, it carried mesilf and Tom McCarthy as engineers; and in the cabin, with the wife of the agent at Hakodate, was Kate Maguire. I can see Tom's face yet when he came up on deck the first evening out and saw the gir-rl's white face! He was dirty and sooty, and his jumper was half open across his chest. He merely stared at her and wint below, like a man sthruck suddintly from behind.

"We had a passage like glass across the Pacific and in two weeks' time we had loaded the ould hooker and were standing out for home, l'aving the Straits of Psugar in the teeth of an easterly gale. All the voyage over niver a wor-rd had Kate said to Tom nor a wor-rd had Tom said about her; but whin we were homeward bound he remar-rked:

"'I supposed she would stop in Japan.'

"'Her health is poor and she thought a voyage would do her good,' I remar-rked.

"'I trust it is better,' he growled.

"'I have not yet spoken to her,' I retur-rned. 'I will wash me face and address her respictfully sometime.'

"'Tis poor business for women to be traveling on such packets as these in winter time,' says me bould Tom. 'We will have dirty weather.'

"And dirty weather we did have. 'Twas the infamous year of '96 and the gales poured out of the east and the north, and the seas piled up; and in due time the ould Aztec looked like a scrapheap. Her boats were gone, the funnel-stays were slack and the ould funnel rolled like a straw between the jury-stays we rigged to keep it upright. Thin the coal took fire in the hold and it was double watches below—one of us looking to the pumps and the other seeing to the main engines and the fireroom.

"A week of it loosened the nerves of us and we enjoyed it for another week. There is some pleasure in keeping a vessel under way and above water against odds; but at the end of the week we were all weary and cross, and then the strength of Tom McCarthy showed up. He was ten men in

$659 an Acre from Tomatoes

Mr. S. C. Medley at Orange, in the Gulf Coast Country of Texas and Louisiana, raised 360 crates of tomatoes on a half acre patch. Gross sales $329.81, equivalent to $659 an acre. Crating, harvesting and expressage $115.51; net profit $214.30. Not bad for a half acre in three months' time when you can grow two or three more crops on the same land in one year.

Early vegetables from the Gulf Coast Country of Texas and Louisiana are marketed when you and your neighbors are the only ones with anything to sell. You offer your crops, the big metropolitan centers jump at the chance to get them and pay well for the privilege. The handsomest, the biggest and most luscious fruits on the market come from the

Gulf Coast Country of Texas and Louisiana

Every month has its crops, its profits and gratifying surplus for the bank account. Every month is a joy—warm in winter, refreshing gulf breezes in summer. Every month is a money maker and a health builder. Do not let the steady grind of office, factory or shop deprive you of your right to freedom from the fear of being superseded or superannuated in the employ of others. You can lead a life of freedom and happiness and be your own boss in the Gulf Coast Country of Texas and Louisiana.

Investigate: The trip down there, via the Frisco, is worth the little cost of going. On the first and third Tuesdays of each month, round trip fares, via the Frisco Lines, to the Gulf Coast Country of Texas and Louisiana are very low. Chicago $37.50 or less, St. Louis and Kansas City $32.50 or less, Birmingham $37.50 or less, New Orleans and Baton Rouge $20 or less.

The Frisco Lines operate splendid, electric lighted, all steel trains daily, from Chicago, St. Louis, Kansas City, Birmingham and New Orleans. Every day of the year these trains carry through cars to the Gulf Coast Country, and on excursion days have through tourist sleepers.

FRISCO LINES

Three Splendid Books FREE

One on the mid-coast country of Texas, one on the lower irrigated sections of the Rio Grande Valley, and one on Louisiana. THE CURTIS PUBLISHING COMPANY, Philadelphia, Pennsylvania

one, going widout sleep, fighting ivery hour wid the firemen, bullying the oilers to their work, keeping iverything running, though the smoke from the forward hold poured thick into the engine room and fair choked us all.

"And the water we poured into the hold gave her a list; and before we had got a hundred miles east of the longitude of Honolulu the ould Aztec was lying on one side, like a wounded duck. Then the captain came down and consulted wid us. 'Twas a long talk we had, but at the end Tom McCarthy spoke up.

"'If yez can make her keep a course we can keep the propeller tur-rning,' says he.

"'I can keep a course,' says the bould skipper.

"'Thin back to the bridge and leave us to our wor-rk,' says Tom.

"And we kept steam up and wor-rked the pumps and stood our double watches till the eyes of us looked white against the grime on our faces. I could see even big Tom's lips lose their redness and I could hear the croak of his voice as his throat swelled up wid weariness. One night he came over to me, who was thrying to clear one of the pumps, and said:

"'I have killed a man!'

"'I hope it was the fool that shut that valve and allowed the pump to suck it into its innards,' I remar-rked.

"'I killed a fireman!' he went on, wiping his black face.

"'"Twas a mistake,' I infor-rmed him. 'The divil has plenty of stokers already.'

"'But what will she say?' demands me bould Tom.

"'Ask her,' I retor-rts. 'I am busy!'

"'Twas true—Tom had sthruck a Chinese fireman whom he caught thrying to steal another man's coal and he hit him too har-rd. Tom tould the skipper and the ould man stared at the coolie for a long time before he ordered him taken topside for burial; but he said nothing. That evening, whilst I was eating me poor supper and winking at the lamp, who should come into the messroom but Kate!

"'He killed a man!' she whispered.

"'He did,' I responded.

"'Was it—did he do right?' she went on, clasping her hands.

"'I will answer no foolish quistions,' I infor-rmed her. 'Ask Tom himsilf and go away and let me sleep.'

"So the poor gir-rl took me at me wor-rd and wint below, and I found her standing beside Tom on the lower platfor-rm. The grimy and dirty man that he was! He was only half dressed, and his lips were cracked and his eyes half shut wid weariness. She stood opposite him, braced against the tilt of the plates, her white face tur-rned toward him. He was talking savagely to her and I caught the wor-rds.

"'You've no business down here, Kate,' he was saying. 'I'm running this engine room and I don't intend to answer for my actions to annybody.'

"'Did you iver kill a man before, Tom?' she asked him.

"'Women are safe,' he answers her very shor-rtly.

"'Yez mean?'

"'That yez have no business down here at all at all. Go up on deck and watch the wild waves roll,' says he.

"'It wasn't the man ye killed that brought me down,' says me brave Kate, facing him out. '"Twas that I found out something. I have done yez an injustice. If yez want me—iver—I'll ——'

"He tur-rned his black face on her. 'Leave me to me wor-rk, Kate,' he ro-mar-rks. 'Whin it is done I will come for yez. Now don't risk your life coming down here again! Do yez hear me?'

"She tur-rned to the ladder and I saw the light in her eyes.

"'I won't bother yez anny more, Tom,' she said in a whisper. 'I'll wait for yez and I'll be good!'

"She passed me on the upper platfor-rm widout seeing me. And the face of her was the face of one who has got her hear-rt's desire—the face of the woman who has hear-rd the voice of the master of her hear-rt! And whin she was gone I hear-rd the whisper in the wind!"

IF your eyes require double-vision lenses, wear them! No need to dread the unsightly appearance of old-fashioned two-vision lenses because

KRYPTOK LENSES

(Worn by over 200,000 people)

are perfect double-vision lenses that look like ordinary single-vision lenses. No disfiguring seams between near and far vision lenses.

LOVE IN LONGACRE SQUARE

(Continued from Page 18)

"We'll dine at Trittori's on Tuesday," id George Henry as he left her at the merson—"that is, unless you'll be too sy with your suffrage campaign."

They had dined.

"They've added another line," he said hen they turned into Longacre Square ain. "And perhaps Broadway isn't ondering what is coming now!"

Another time Miss Marsh had peered rough a taxicab window and had seen the ectric splotch. This time it spelled:

I LOVE!
WHO DO I LOVE?

"Ridiculous!" she exclaimed. "What a ly way to advertise! Why, it isn't even ammatical! It should read: 'Whom do ove?'"

"By Jove!" cried George Henry. "I'll ve to tell Jim—oh, I see! There wasn't ace enough to tack on that M and stick the same size letter. It'll do for an ad; fact, we billboard men are hoping the ne will come when we can use simplified elling. Think how much more you could t in a small space if you could use that!"

Sure enough, the low comedian in The ttle Jade Joss, the musical show at the sino that George Henry took Miss Marsh see that night, had a verse in his topical ng which referred to the new Longacre uare sign. And the audience knew what was singing about. The way they ghed and clapped their hands indicated st. The electric letters had been burning almost a week, and Broadway is quick dy in anything that will afford material a moment of giddy conversation.

"Election day is almost here," said orge Henry as they left the Casino. Ve shan't be able to dine at all that last ek. Let's make it a continuous performce for the rest of this. Unless the law actice and suffrage campaigning needs u, let's reserve that corner table at ittori's for the rest of the week. Are you ry busy?"

"One must eat dinner somewhere," said iss Marsh. It was the most unkind reark she had ever made to her boyish, od-natured escort. She shuddered to nk how vinegary she had been as she ned out her reading lamp at the Emerson. As a matter of fact, the law business was t at all good. And reporters from the low newspapers had been pestering her get suffrage "write-ups," which, she nd, meant mostly that she should assist m in caricaturing herself. Besides, semblyman Barkis was making headway his district despite the best efforts of i-militant suffragettes, backed up by loyal but not quite so semi-militant n's League for Equal Suffrage. There l been some excuse for her being pepy—but how was George Henry to know t?

"We won't go to the theater tonight," told him at Trittori's. "I'm feeling tired. Late hours don't agree with me."

f she had not laughed at him so often might have asked his advice in the tter of Assemblyman Barkis; but she her even little teeth and was as gay as could be.

The taxi did not have to traverse Longe Square this time, but the chauffeur his instructions.

Now the sign is fetching them!" said rge Henry admiringly, as he pointed to north, where the electric glow of ten letters had deepened. Why not, since r letters, equally big, had been added o them? Now the sign blazoned forth:

I LOVE!
WHO DO I LOVE?
MINNIE,
THE QUEEN

liss Marsh turned upon him with fury uperheated as the tungsten bulbs that ed the heavens.

George Henry Leffingwell!" she cried. all the coarse, ruffianly —— Is this r work?"

I thought it would get over," said the ish-looking ad man. "It's making a bigger hit with the sidewalk crowds. y want to know who the queen is that ebody loves. I'm going to tell Broadway the answer to that question tomorrow evening. The morning papers will announce that the rest of the sign will be turned on at dark. I'll bet they'll need the reserves from two or three police stations to handle the bunch that'll be waiting in Longacre."

As the senior member of the firm of Marsh & Blackney crumpled up in one corner of the taxi, outrage and panic and hurt being woven equally into her sobbing, she did not see George Henry move as if to comfort her—and then bite his lips and lean back with an effort as the cab bowled Harlemward.

"It's the South Sea Islander way of doing it, Minnie," he said as she fled into the vestibule to ring the elevator bell. "You won't give in any other way. I've simply got to use the club. I wouldn't do it if you didn't care; but I know you do."

"You coward!" choked Miss Marsh as the cage shot her upward—which reply she knew was even shabbily futile, but which was the only fragment of vocabulary at her command.

The kindergarten at the second-hand typewriter in the outer office wondered what important case was absorbing the attention of her employers the next morning. Marsh (Minnie) & Blackney (Clara) had gone into executive session, the senior member having thrice refused to speak to a certain Leffingwell party on the telephone, said party having used dots and dashes over the wire when the kindergarten had informed him of this fact.

"We'll get out an injunction!" declared Miss Marsh. "This is the most dastardly attempt to coerce a woman I ever heard of!"

"But you like him, don't you?" inquired Miss Blackney timidly.

She had excellent reason for being timid, for the senior partner eyed her balefully. "Of course I like him!" she snapped. "I shouldn't go out to dinner and to the theater with him if I didn't. But I like my career too. Don't you?"

"Ye-es," returned Blackney (Clara); "but Dick Murray has been bothering me terribly of late. He says he doesn't see why a woman can't make a career and a home at the same time."

Ah, this was brummagem verbal ware! Blackney (Clara) knew it; she had the grace to blush.

"Clara!" cried Miss Marsh. "You're weakening! You're worse than weakening!" She leaned across the desk and glared at her shrinking partner, extending an accusing finger. "You're engaged!" Her tone was the nth power of soprano accusation.

"Well—what if I am?" returned Miss Blackney, beginning to recuperate from her moment of drooping.

"Then the firm is dissolved!" Miss Marsh announced in awesome fashion.

She put her head upon the desk, where the blotting pad absorbed moisture that was not tinctured with aniline dye. The second-hand typewriter kindergarten, listening at the keyhole, nodded deprecatingly as she returned to clack erratically upon the keys of the machine.

"Women lawyers that cry are no good," she mumbled to herself. "Cry-babies in a law office ain't —— Period. Dear Sir—In reply —— Goodness gracious! I declare if I haven't forgotten the shift key again!"

"I'm going to stick it out until Christmas," said Miss Blackney, intending to be comforting, but only extorting a fresh movement of the shoulders above which she bent. "We'll see the suffrage campaign through. We must induce the voters to defeat that odious Assemblyman Barkis."

Miss Marsh sat upright, with a faint smile which had a world of tortured forgivingness painted upon it. "I hope you will be very—ver-ree—happy, Cl-Cla ——" Her head was upon the blotting pad again when the kindergarten person knocked and entered.

"Please, ladies, there's a party named Leffingwell on the telephone. He says he must speak to the firm. It's important. I can tell that by the words he uses when I say the firm is busy. Maybe it's a case!" She spoke hopefully.

Blackney (Clara) fell into her own desk-chair with a hysterical giggle.

"It's a case all right!" she screamed. "Minnie, you'll have to answer him. It's the tenth time this morning."

"I'll get out an injunction!" muttered the senior member. "He dare not drag me

"Foolish dependence on rubber alone may make you liable for criminal negligence."

Consider the safety of the occupants of your car—consider the safety of other road users. Even if you don't value your own life, what right have you to imperil the lives of others?

Weed Chains absolutely prevent skidding—then why don't you put them on?

Weed Chains

are attached in a jiffy without the use of a jack or other tools—are **free to creep**—continually shift their position on the tire. **Cannot injure tires** because they **do creep.**

Manufacturers will not guarantee their tires, when tire chains are used, unless the chains are "free to creep."

Insurance Companies strongly advise their use on every car they insure.

ALSO USED ON THE FRONT WHEELS Weed Chains give comfortable, easy steering—no cramped fingers, no cramped arms, no sore muscles.

At All Reputable Dealers

Out of car tracks, ruts, snowdrifts and heavy going, just like steering on smooth roads. Try them and be convinced.

into his horrid, common advertising signs in Longacre Square. If ever I cared for him the least little bit, Clara Blackney, I detest him now!"

"Will you talk to the case, ma'am?" asked the fidgeting kindergarten patiently as she heard the gurgle of Central trying to raise her again with the receiver off the hook.

"Hush!" Miss Marsh commanded severely. "An injunction! We'll make out the papers at once."

"But, Minnie," said Miss Blackney, emerging from incipient hysteria, "you'll have to give a reason. You can't ask for a *duces tecum* without stating explicitly your belief that an injury is to be inflicted. How would you feel to go into court and have all those horrid men hear you state that you believed George Henry Leffingwell meant to spread in electric letters tonight, while the populace cheered, 'I love Minnie Marsh, the Queen'?"

Again hysterics threatened the junior member.

Miss Marsh rose with sudden decision. She turned to the second-hand typewriter expert.

"You stay in here!" she ordered. She slammed the thin partition door behind her before she grasped the gurgling telephone receiver.

So it came to pass that again the corner table at Trittori's was filled. There was one thing to be said for George Henry. He knew how to order a dinner.

"Well, Minnie," he said when the hovering waiter had placed a crême yvette frappé before her and he had lighted one of his pet cigars, "have you decided to yield to the thump of the South Sea Islander's club?"

"You intend to complete your cowardice?" asked Miss Marsh.

"I'm going to have the rest of that electric sign turned on tonight as surely as we are sitting here," George Henry Leffingwell replied. "I told you I'd have to jog your memory."

"My memory of what?"

"Your remembering that you cared for me. Do you?"

Miss Marsh puckered her lips over the straw of her cordial like a child that has just been scolded.

"You can have your career. I promise you, Minnie. I shan't interfere. Why in the dickens can't you come home to a man who needs you? Don't you know you're merely enlisting a fag for life by saying the word?

"You can hold suffrage meetings all over that Riverside Drive apartment if you want to. By the way, here's the key. I rented the tenth floor this morning."

"How dared you?" blazed Miss Marsh.

"I knew you were going to give in," said George Henry serenely. "Going! Going!—for the last time before the electric fountain is turned on. Do you want me to tell the hundreds in Longacre Square tonight the real name of the Minnie I love? Will you marry me, Minnie?"

For the sake of impeccable chronicling let it be written that Miss Marsh started to say "I won't"; but when she came to the letter "w" the audible version that reached the ear of Leffingwell & Company was, "I will."

"Now we'll capitalize that career of yours in the right way," declared George Henry as the taxi charioteered them theaterward. "Huh, we'll be late for the first act."

"I don't care," said Miss Marsh. "Have the man drive through Longacre Square. I want to see darkness brooding over the north end. I want to lay the ghost of those terrible electric letters. I've been dreaming about them for six days and nights. It was despicable of you—but I forgive you."

Miss Marsh did not heed his mumbling about first acts and the inconsiderateness of being late for them. And, in the end, the chauffeur tacked westward as she wished.

No gloom enveloped the northerly zone of Longacre that night however. The curious hundreds that traffic-squad policemen were herding away from the car-tracks and cab-lanes were staring heavenward at the most garish array of colored bulbs that Manhattan had ever blinked at.

Miss Marsh gave one hurried glance and buried her face in her muff.

"You've broken your word, George Henry!" she cried. "I daren't look. Is it all there?"

Leffingwell drew the muff away and laughed uneasily.

"Look, Minnie!" he said. "It isn't what you think it is."

And she looked. This is what she saw:

> I LOVE!
> WHO DO I LOVE?
> MINNIE,
> THE QUEEN OF BOTTLED WATERS

Beside the staring letters was the gigantic outline of an Indian maiden catching a white electric waterfall in a beaker labeled Minnehaha Spring Water.

It was George Henry Leffingwell's *magnum opus.* Broadway would rate him by that for the rest of time. He heard the people giving vent to "Ohs!" and "Ahs!" It was flattering unction to his advertising soul.

"You—you tr-ricked me!" she groaned. "You never meant to do it!"

"It was luck that the gods provided," explained George Henry, coming back to earth. "I had to start that spring-water advertising tonight or lose the contract. It came to me like a flash that I could turn it into the South Sea Islander's club. But you had me going. You had me going! I couldn't have waved it over you after tonight. You aren't sorry—now, Minnie?"

The senior member of the dissolved firm of Marsh & Blackney pondered wildly.

"Besides, you don't know what a wonderful engagement present I'm going to give you. That Cantbreakem Umbrella contract expires tomorrow. We won't rent the display space until after election day. I'm going to give you the space to use in your campaign against Barkis, Minnie. You've got the choicest display for electrics in town. It ought to make a monkey of that promise-breaking assemblyman. You can put him on the run if you use it wisely. Think how solid all those red and green and yellow lamps will make you with your campaign committee! You're giving them hard cash, girl. That location is worth two hundred and fifty a glimmer, even for fly-by-night space-grabbers—the kind we fill in with between contracts. You aren't sorry, are you, Minnie?"

"You are very helpful, George Henry," said Miss Marsh, eying the electric giantess and her inside-out umbrella with suddenly acquired interest. "Do you suppose we could manage a portrait of Barkis in yellow, with some snappy advice underneath—just one safe jump away from libel?"

"Do you suppose we can, Minnie?" cried George Henry Leffingwell—so loudly that Miss Marsh was afraid the chauffeur might hear. "God Bless Our Home! That's what ought to be on the coins of the U. S. A. Do you suppose we can? Do you?"

Peanut Promotion

THE peanut is taking a step forward, so to speak. It is assuming a new and more important place in the agriculture of this country. The cotton boll weevil is responsible for this. That pestiferous insect, invading the Southern States, has made cotton-growing unprofitable over wide areas, and the fruitful goober, for which it has no liking, is being largely substituted as a farm crop.

This new departure was begun only two years ago with the planting of a few hundred acres in Northern Louisiana, under a coöperative arrangement between farmers and oilmill owners, helped by the Department of Agriculture. The experiment so thoroughly demonstrated the practicability of growing peanuts on a large scale for market in Louisiana and adjacent states that, contrary to the original intention, the bulk of the first crop was sold for seed.

As a result, the area planted in 1910 was increased to nearly twenty thousand acres. Of this crop at least one hundred and fifty carloads were sold for seed; and in 1911 three hundred thousand acres were planted with peanuts.

As a feed for farm animals the peanut takes the place of both grain and forage. Experiments have proved that by planting peanuts rather closely it is possible to cut a ton of peanut hay, and afterward to produce a surprising weight of pork to the acre on the peanuts themselves.

The oilmills of the South are preparing to crush the large surplus output of peanuts for oil, which, by the way, is rapidly gaining appreciation for table purpose in this country.

"A Safe Leave!"
—and only one point needed to win!

Ever-changing situations such as this, constantly new problems that call upon all the skill of hand, eye and brain, account for the intense fascination of Billiards and Pool.

Do you play? You can do so now, without frequenting a public poolroom. You can have in your own home a

THE FIFTH AVENUE SHOPS

(Concluded from Page 7)

as a cashgirl at two dollars a week," the manager of one of the big department stores tells us.

I always try to get little Miss Lynch, who waits on me at S——'s, to talk to me about her customers. These girls are as full of gossip as an orphan is of prunes. They know every wealthy woman in New York by sight and have all the story. It seems that the easiest customer to sell to is the one who is with the styles. The woman who has the courage of the fashions is easily fitted out. When the models come from Paris designed for a waist, she has a waist; when they are in the elongated, birch-bending-by-a-stream-slender-and-gray manner, she is ready for them. It is the woman who is afraid of the mode, who does her hair in the simple knot and likes everything that is shown her for some hypothetical other woman—but she herself "never wears those extreme fashions!"—who is the problem of the fashionable-shop girl.

Paris never counts on these women, but the wise shopgirl does.

"Sometimes we just put away a hat at the end of the season because we know it will be what Mrs. Carlton Trask will want next year. I've done it myself many a time." And Miss Lynch glances at us to see if we are with her in this intelligent duplicity.

"I know just what your aunts will want when I see them coming in at the door," she says when she feels secure that we are to be confided in. "There isn't a girl in the store who doesn't like to wait on them. They're so sweet and it is so simple. Mrs. James will always want something rich, inconspicuous and dark; Mrs. Saintsbury the same; and Mrs. Crawford Deane the same, only with a long coat."

Mrs. Ten-Thousand-a-Year

One day last winter I saw a little Life of Shame being fitted out for a flight to Paris. She was scarcely out of her mother's lap—so slim and young, and standing drooped a little backward, as young things do. The man who was with her looked as if he were nice. He looked as if he were the kind of man with whom it would be pleasant to sit in cafés, watching people. He would tell you stories which he devised about them and make jokes of which the humor was always one-third wisdom. As I sat waiting for my fitting he ordered seven tailored suits and ten evening dresses. She passed as his sister. Do prosperous business men, with thick, handsome hands, order seventeen dresses for quiet little sisters who have silver-blue pools in their eyes and poignant scarlet Celtic mouths?

She was assenting rather mechanically to his choices, but there was one dress she suggested she did not need.

"Well, you had better have it," he advised. "There may be evenings when that is just the thing you would like to wear."

The woman who was waiting on them had no conscience, but she had a lovely color sense. When a dress was accepted she would bring a wrap and hang it about the girl's shoulders.

"This goes nicely with that dress," she would say. Brother would look it up and down, little Life of Shame glancing from him to the glass; he would nod—and it would be added to the pile on the chair. As they went away she was smiling faintly up at him. Poor little Life of Shame! One tried not to think of her too far into the future, when that smile had lost its sweetness and had come to have a kind of mechanical brilliance.

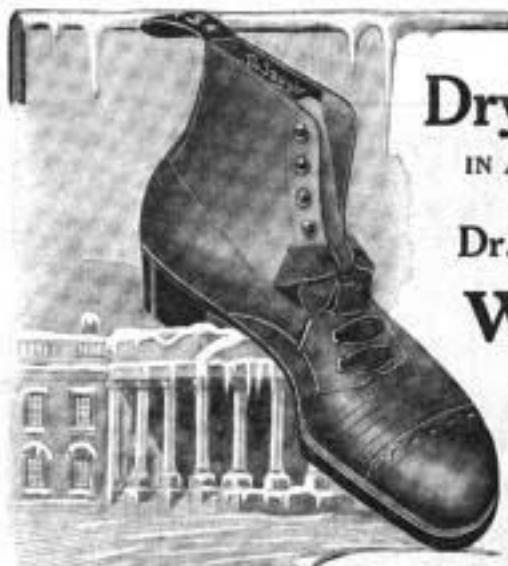
The customer with a fine brisk temper, well aired upon hirelings and uncorroded by moth and rust, gives some of these girls memories from which they tremble for long years with mortification and rage. Mrs. Tewkington Cleves is objecting to some feathers that do not match.

"We haven't any more. Tell her they're the same," says the forelady shortly.

Mrs. Cleves' eyes flash when this information is conveyed to her.

"What do you mean by telling me that?" she says. "They are not the same; and I will not have you telling me they are the same when I can see they are not!" She adds some comments on the insolence and incompetence of uneducated girls.

The woman who once told me this story was ten years away from it. She had married the manager of one of the great department stores and she had five bathrooms and three motor cars! She remembered still, however, how she had cast down her eyes and felt the color burning over her face! She could not think of anything to say, she said. A person who stands looking at the floor, with a quivering lip and tears in her eyes, when you have no more than given her a belting that she richly needed, is insufferable! Mrs. Cleves lays down the hat she was considering emphatically, and gathers her wraps about her, sweeping out with eyes sparkling like two wet stones and a face cut into the stony glare of a Japanese tragedian. There is a letter from her the next morning at the office about an extremely disagreeable saleswoman whom "something had upset before I came in." Such episodes do not ingratiate one with the management! Mrs. Tewkington Cleves is as large upon the horizon of New York as the Palisades. You are expected to hit upon some way to avoid offending ladies whose accounts run over ten thousand dollars a year!



Little comedies of duplicity, ambition, innocence in the net, the flattery of power, like those in the plays and drawings of the Restoration!—slyly humorous, and with their great, patterned background of strange contrast! As The Rich and Great and I came out on the street, with hats brought to bay for another year, the heavy lace curtains were being drawn in these shops out of which we had just come. The Avenue was growing softly and vaguely bright. Street lights hung along the curb like palest lavender lilies, two on a stem. The great sun was throwing up handfuls of Chinese gold at the ends of the cross streets, as an artist would throw it upon the pale blue dress of a dancer. A white moon was chalked on the fading sky over Tiffany's—the street grown rather vacant. The play was on now—the workers no longer needed. Whirled away to other Elysian Fields—to tea at the Plaza, to dine, to dance, to listen and speak, retreat and draw near to each other, in high-ceilinged studios with a winding stair, in rich drawing rooms ambrosial with flowers, in the whirling crush of balls, under the superb agony of the *Liebestod*, in stolen brief meeting, when the lips tremble like the leaves of a young tree in the night air—they shall feel, and learn what they can, each in his degree—even feel the deep bolt of love!

The End of the Day

By five minutes after six the street has become one for the workers. Out of the employees' entrances they begin to pour now, a thousand of them from one shop, going off with quick-falling feet—little errand girls in half-soiled summer clothes; mothers of families, plump and hurrying; fashionable-looking girls, with wide frills on their coats and hats aslant; groups of slim, gay young ones—all too slim and gay, some of them, and not quite designing enough to pull off a stable place in life. Sometimes one is very pale and bent, with a deep crease between her brows. A little hunchback, with a book under her arm, lifts her head and looks up at the pink glare the city begins to fling against the sky. A boy does an imitation of Gaby Deslys, showing white, closely set teeth and deep dimples. Another slides through the press to a girl who blushes as only seventeen can blush, pulls on her gloves and tries not to look pleased because it is not according to the rules to look pleased. Cohorts of men—the tailors.

All these, too, shall eat, dance, draw near to each other—and even love; but in a more strident and minor key. They live for ends they do not see. They are gone. Everybody is going uptown now—mostly business men, walking with bent heads, telling each other how Charley used his fade-away ball with deadly effect, and what the score was when they left! The hotel windows are all alight. Temple Emanu-El lifts its minaret into the vast night. At a bright window a little shop assistant stands scratching an ankle with the other foot as she looks. She turns toward us when we pause beside her—in her face the gleam, still bright, of youth's intentness to acquire. It is such a lovely night that I say to The Rich and Great as we stroll on:

"Perhaps she will be owning one of these shops some day!"

THE HOME-SEEKERS OPPORTUNITY THAT WAS OVERLOOKED

ALABAMA GEORGIA

It is in Alabama and Georgia, and consists of low-priced land that earns more net money than land which costs three or four times as much where unimproved land is scarce.

Other advantages of the country served by the Central of Georgia's two thousand miles of modern railway are, an exceptional opportunity for the general farmer in the nearby markets and large local demand, at good prices, for all his products; long growing seasons with abundant rainfall, making more than one crop each year; and a healthful, mild climate, suited to fruits and truck crops.

We want more farmers along our lines, and to prove these advantages, will mail a free book profusely illustrated with photos engravings, supported by signed statements from the men who grew the crops and raised the live-stock; and tell how we can help find just the farm you want. Write TODAY.

The City of Edison-Mazda-Light

IF *all* the buildings lighted by Edison Mazda Lamps could be grouped together the result would be a city composed of the leading hotels, largest stores, most modern office buildings, banks, theatres, colleges, schools, museums, hospitals, factories, railroad stations, municipal and private buildings of all kinds—and hundreds of thousands of homes.

Only a very small city can be shown here, but in these three dozen buildings there are 200,000 Edison Mazda Lamps giving a total light of over 6,000,000 candle power. Nineteen cities are represented by buildings well known locally and, in some cases, nationally. One of these is the largest and another the tallest office building in the world.

Millions of these sturdy Edison Mazda Lamps are used in buildings of all kinds, on automobiles and railroad trains, and in all places where any electric incandescent lamp can be used. Edison's dream of "Electric-light-for-everybody" has come true.

Begin today to use this lamp that gives nearly three times as much light as the ordinary carbon filament lamp consuming the same amount of current.

Your lighting company or electrical supply dealer will furnish any size from 25 to 500 watts, plain or frosted. Be sure you get Edison Mazda Lamps—the G-E monogram (GE) on the package and on the lamp is for your protection.

Which of the following 20 to 40 page, illustrated pamphlets, shall we send:

"The Lighting of Hotels and Cafés"
"The Lighting of Office and Public Buildings"
"The Lighting of Iron and Steel Works"
"The Lighting of Textile Factories"
"A New Era in Lighting" (Homes, etc.)

The Sheerest Hose for Dress Wear—*Guaranteed*

IT is easy enough to guarantee hose that are cumbersome, coarse and hot. "Holeproof" are entirely different. They are fine and light weight, if you want them light—the sheerest hose made of cotton. We make them in silk also. There are ten weights and five grades and twelve colors to choose among.

How Our Light Weights Are Guaranteed

The wear in "Holeproof" is in its *yarn*, not its *weight*. The light weights will wear just as long as the heavy. The reason is that we use the best cotton yarn we can buy. We pay for this yarn an average of 70c a pound—the top market price, no matter how it may vary. We could buy common yarn at the common price—30c a pound. But our yarn is 3-ply Egyptian and Sea Island cotton—the softest, most flexible, lightest weight, yet the strongest yarn that's sold. That's why *the hose* can be made light and strong. That's why *95 per cent of our output* has always *outlasted our guarantee*, including these *light weights*. There's no reason on earth why hose cannot be made to suit "the particular" and be made to *wear* at the same time. We want those who doubt, to try "Holeproof."

FAMOUS Holeproof Hosiery
FOR MEN WOMEN AND CHILDREN

A Million Wearers

A million people know "Holeproof." We are not advertising to them. The fact that so many have been convinced should bring more or less conviction to you. If a million have tried them and swear by them now, don't you think you may do the same if you try them?

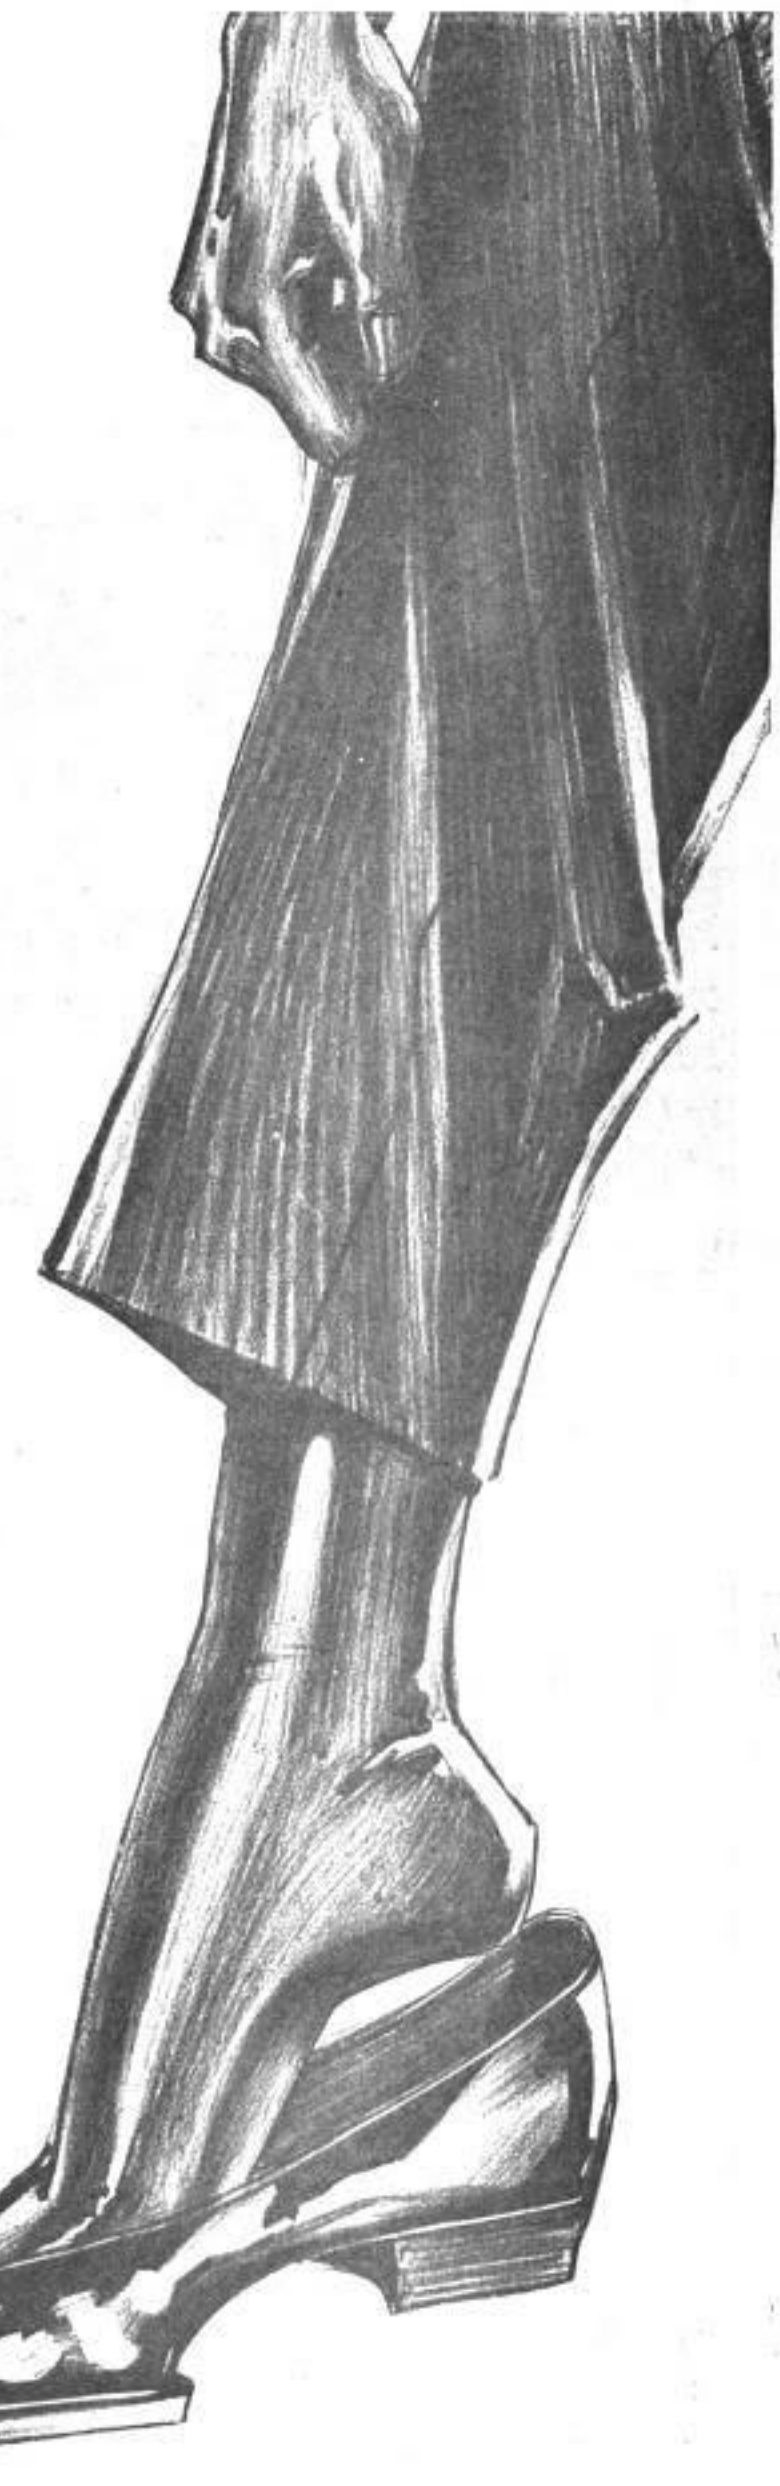
Carl Freschl

The signature above identifies the genuine "Holeproof," and you *want* to identify it for it is the original guaranteed hosiery, and there are scores of the heavier kinds.

Thirty-nine years of experience go into every pair of "Holeproof." Twenty-six years of this experience went into the very first pair turned out.

So careful are we that "Holeproof" shall maintain its lead that we spend $55,000 a year for inspection—to see that each pair is perfectly made. You never will get a pair that's defective.

Prices range from $1.50 for six pairs, guaranteed six months, up to $3.00, according to the finish and weight. Silk hose for men, *three* pairs guaranteed *three* months, $2.00—for women, $3.00.



The genuine is sold in your town. We'll tell you the dealers' names on request or ship direct where there's no dealer near, charges prepaid on receipt of remittance.

Write for free book, "How to Make Your Feet Happy."

The First Touring Car Under $1000

With Self-Starter

Model S S

R-C-H "Twenty-Five" 5-Passenger Touring Car

110-inch Wheel Base

$950
F. O. B. Detroit

Equipped with self-starter, **32 x 3½ tires, dual ignition, demountable and quick-detachable rims, gas tank, extra rim, top, windshield, 5 lamps, horn, tools, and tire repair kit,** long stroke motor, 3 speeds, enclosed valves, magneto.

ANY manufacturer can claim that his car is the best on the market for the money—most manufacturers do. In considering the R-C-H, let's put the judgment up to you for a change. You read motor-car announcements day after day—have you ever seen a value approaching this?

If we took every price-mark from this page, leaving merely the equipment details and specifications; if you had to fix the price of the R-C-H by comparison with any previous standard of car value—you'd say $2000—or more. And when we tell you that no $5000 car could be better built—that $2000 will not buy you as great value anywhere else, ***we want you to challenge those statements.***

For we can't tell you about the R-C-H in a magazine page—you've got to see and test the car for yourself in order to realize its extraordinary value.

Some Construction Features of the R-C-H

Just a few are all we've space for. We use 123 drop forgings—more than in any other car in the world, irrespective of price. This means much greater strength and durability as compared with castings. It means, too, a much more perfect interchangeability of parts, because drop forgings permit an absolute accuracy of machining impossible with castings. And we think that every part of the R-C-H is more readily accessible than in any other car at any price.

The motor is the first adaptation in this country of the long stroke idea so successful abroad. And the motor is really long stroke (3½ x 5) with just the proper relation of stroke to bore that the best engineering practice has demonstrated to be most economical and efficient. It should be borne in mind that merely making the stroke of a motor long and widening the bore correspondingly does not achieve the much-desired long-stroke effect.

The drive is left side, the only sensible drive for American road rules, and the control is center lever, out of the way, yet most convenient to the operator, and at his right hand. Come and see the car and judge it for yourself—that's all we ask.

STANDARD MODELS

Regular equipment of top, windshield, lamps, generator, horn, tools and kit, without self-starter and other special equipment quoted above.

5-passenger Touring Car	**$850**
Touring Roadster	**800**
Roadster	**700**
(Equipped for 4 Passengers)	**750**
Colonial Coupé	**1050**

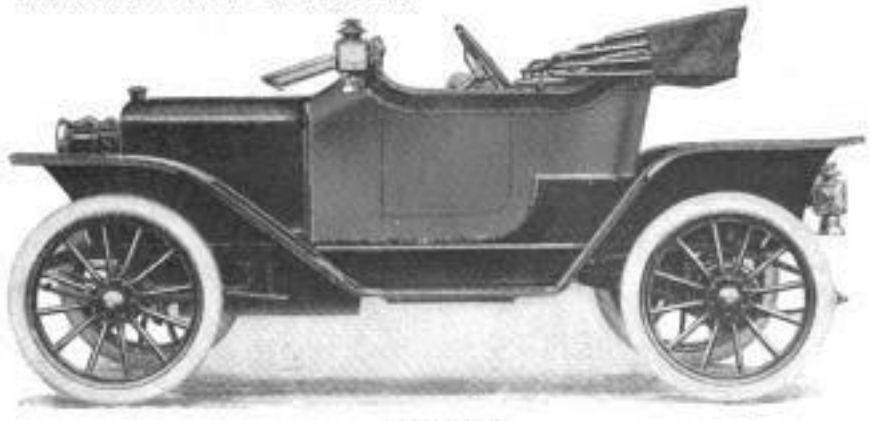
CANADIAN PRICES

These are as follows, f. o. b. Windsor, duty paid: ***S S Models*** — Touring Car, $1175; Touring Roadster, $1125; Roadster, $975; Roadster, 4-passenger, $1050; Coupé, $1425. ***Standard Models*** — Touring Car, $1050; Touring Roadster, $1000; Roadster, $850; Roadster, 4-passenger, $925; Coupé, $1300.

SPECIFICATIONS

Motor—4 cylinders, cast en bloc—3½ inch bore, 5 inch stroke. Two-bearing crank shaft. Timing gears and valves enclosed. Three-point suspension. **Drive—left side.** Irreversible worm gear. 16 inch wheel. **Control—Center lever** operated through H plate, integral with universal joint housing just below. **Springs**—Front, semi-elliptic; rear, full elliptic and mounted on swivel seats. **Frame**—Pressed steel channel. **Axles**—Front, I-Beam, drop-forged; rear, semi-floating type. **Body**—English type, extra wide front seats. **Wheel Base**—110 inches. Full equipment quoted above.

WRITE FOR BOOKLET. Descriptive folder sent free on request. But see the car itself—that's the only way to judge it.



R. C. HUPP, *Manufacturer*, 111 Lycaste St., Detroit, Mich.

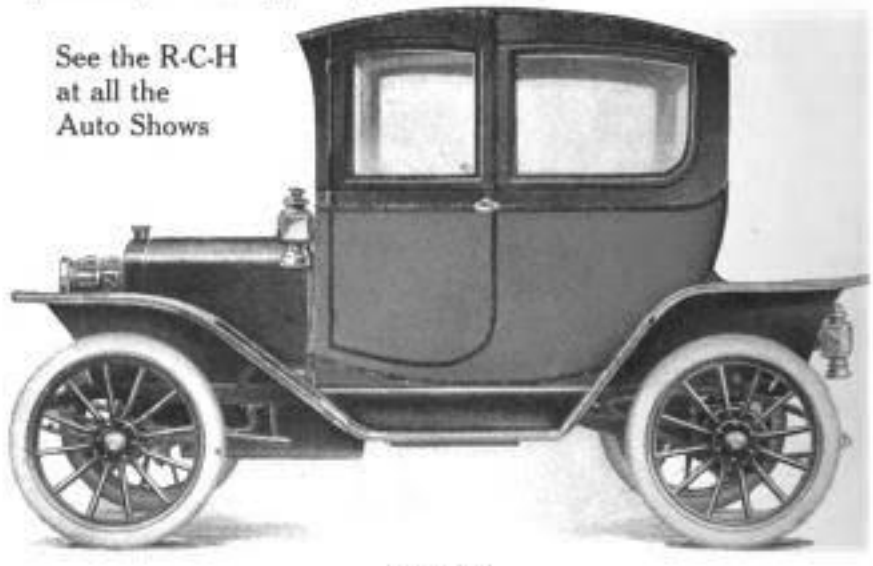
Distinct from and having no connection with the Hupp Motor Car Company

Branches: **Boston, 563 Boylston St.; Buffalo, 1225 Main St.; Cleveland, 2122 Euclid Ave.; Chicago, 2021 Michigan Ave.; Denver, 1620 Broadway; Detroit, Woodward and Warren Aves.; Kansas City, 3501 Main St.; Los Angeles, 1242 Flower St.; Minneapolis, 1334 Nicollet Ave.; New York, 1989 Broadway; Philadelphia, 330 N. Broad St.; Atlanta, 548 Peachtree St.**

DEALERS: We have already under way an advertising campaign on the R-C-H which will reach every nook and corner of the country. Color pages and spreads in such national mediums as *The Saturday Evening Post*, Collier's, Life, Leslie's, Literary Digest, Scientific American and others are being used. The same thing is being done in trade papers. And large display space in local newspapers everywhere completes the campaign. We have hundreds of dealers now — we have room for many more. The public response to the R-C-H announcements is tremendous and country-wide.

We need you — if you're the right man in the right place — to help fill this demand. Write, wire, phone or call — but do it quickly.

Model S S



$800
F. O. B. Detroit

R-C-H "Twenty-Five" **English Body Roadster**

Equipped with **self-starter**, 32 x 3½ tires, dual ignition, demountable and quick-detachable rims, gas tank, extra rim, top, windshield, 5 lamps, horn, tools and tire repair kit—**long stroke** motor—**3 speeds**—enclosed valves—**magneto**.

Touring Roadster, same equipment, $900. Extra large gasoline and oil capacity. Wheel-base of roadsters, 86 inches—other specifications same as touring car.

See the R-C-H at all the Auto Shows

Model S S

$1150
F. O. B. Detroit

R-C-H "Twenty-Five" **Colonial Coupé**

SPECIFICATIONS:—Enclosed body; drop seat for third person; 100 ampere hour lighting battery. Full equipment includes 2 electric lamps, combination electric and oil side and tail lamps. Other specifications and complete equipment same as roadster. In no closed car at any price will you get greater comfort, service and beauty than this.

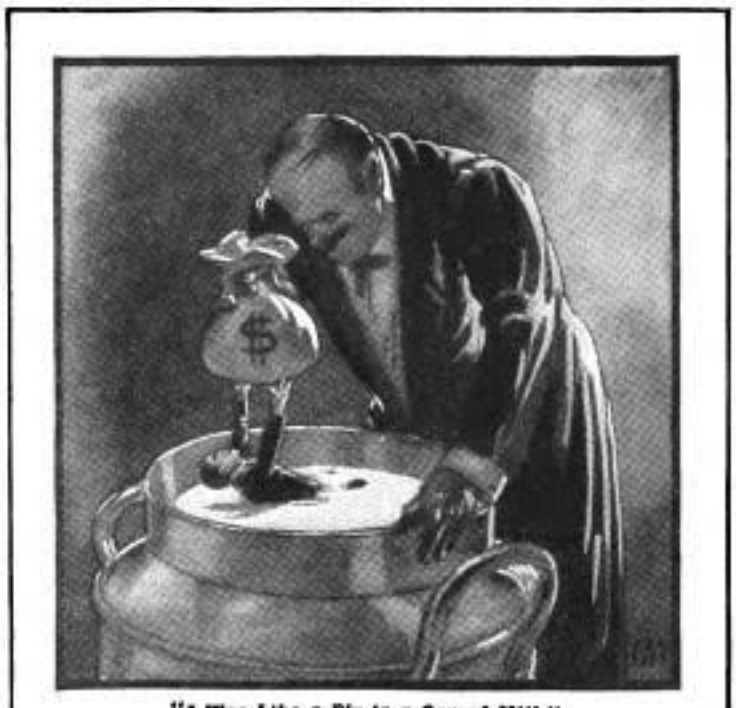
How Pittsburgh Got Half a Loaf

By WILL PAYNE

ILLUSTRATED BY M. L. BLUMENTHAL

PITTSBURGH'S greatest and latest graft exposure occurred in March, 1910, and the Steel City immediately became the most ridiculed town in the world. Newspapers the country over were pointing fingers of derision at it. Of course Pittsburgh had experienced graft exposures before that and had been condemned for them. Nearly every considerable town in the United States had had its graft exposure, or several of them, and suffered general reprobation until the next graft exposure somewhere else distracted the attention of press and public. For years exposure of municipal graft under the Stars and Stripes had been a virtually continuous performance, with rapidly shifting scenes. Usually exposure was followed by a spasm of reform that sometimes lasted through a whole administration.

However, when Pittsburgh's turn came in March, 1910, a remedy had been discovered in the commission form of city government. Her business men undertook to apply this remedy, with the important result that on November seventh last a city council of nine men, in whose integrity every one has complete confidence, was elected without opposition. Other cities have fought graft and adopted the commission form of government, but the Pittsburgh situation was and is rather unique. Nowhere else have good citizens, being firmly resolved to dig their town out of a political mire, encountered more discouraging obstacles.



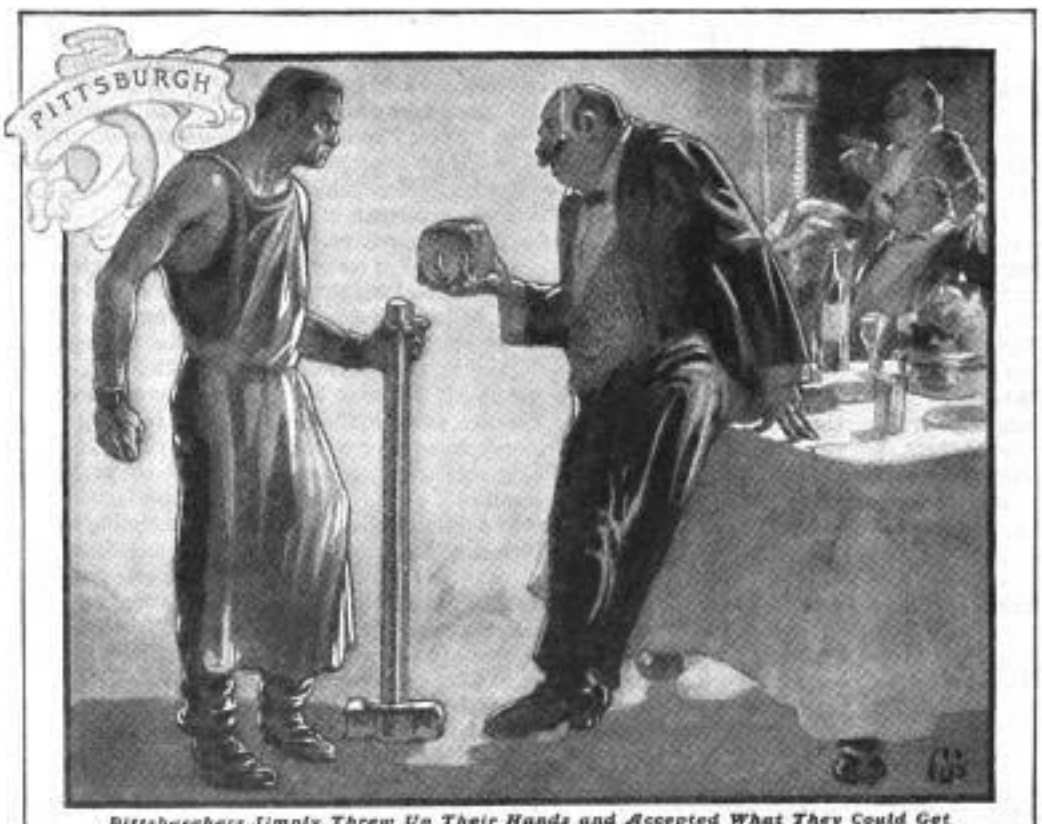
In theory the government was beautifully democratic. After consolidation with Allegheny, Greater Pittsburgh was ruled by a legislative body comprising the common council, with one hundred members, and the select council, with fifty-nine members—one for each ward—all of whom were elected by the people. There you had "representative government" in its full flower.

Moreover, there were forty-six subordinate school districts in old Pittsburgh and fifteen in Allegheny, each subordinate school district being a virtually autonomous and sovereign body with its own educational board of six members, who were also elected by the people. Thus, in addition to one hundred and fifty-nine councilmen—reduced to sixty-seven after the greater city was redistricted—the people were privileged to elect three hundred and sixty-six school directors and an alderman for each ward, the aldermen being petty magistrates corresponding to justices of the peace elsewhere. They elected also a mayor and city controller, and helped to elect a long list of county officers—not to mention eleven state senators and a baker's dozen of representatives in the lower house of the state legislature.

Altogether there were something like six hundred elected officers, and it must have been a rare city block that did not contain at least one resident who was being voted for sometime during the year for some office or other.

The result of this multitudinous voting and representing was, of course, that Pittsburgh had no representative government at all. Actually the government represented anything and everything except the people. If the government did occasionally represent the people—as in the central school-board of Allegheny and in the City Hall under Mayor Guthrie—it was only by a happy accident.

The sort of character and ability which ruled the town under this system was painfully illustrated in the graft exposure, when ninety-eight persons either confessed that, as councilmen, they had taken bribes or were indicted for that offense on the testimony of others.



"I Was Like a Fly in a Can of Milk"

Of course "business" gave the bribes. It usually takes business to bribe because the operation requires the command of considerable money. In this particular instance it was a combination of banks rather than a public-utility corporation. These banks wanted to handle the city's funds and got the council to pass an ordinance making them city depositories. A loquacious person is said to have exhibited his share of the boodle to an honest councilman. Detectives were hired, an investigation started and the distributer of the bribe money was presently caught and convicted.

Some three or four years before this a councilmanic distributer of bribe money in connection with a street-railway ordinance was caught and convicted, whereupon his employers and pals are said to have made up a purse of thirty thousand dollars, in consideration of which he served his sentence in dignified silence. In this later case the employers and pals of the hooked distributer are said to have declined his proposal for a cash indemnity; whereupon he turned state's evidence. When it was known he had confessed there was a stampede among the bribe-takers. By the dozen they flocked to the district attorney's office with their confessions.

A noteworthy feature of these confessions was the extraordinary cheapness of the grafters. One councilman—a merchant in comparatively prosperous circumstances—confessed that he sold his vote for eighty dollars. Others got as low as fifty dollars. A few got several hundred, and one or two had sufficient self-respect to demand adequate pay for their rascality. The general impression produced by the confessions, however, was that councilmanic votes in Pittsburgh were sold about like potatoes.

Another feature of the situation deserves notice. Business did the bribing; but business did the prosecuting and subsequent reforming too. Times have changed in the United States. Fifteen years ago—unless I am much mistaken—if half a dozen prominent banks had been accused of bribing a city council the leading business interests of the city would, at least, have sympathized with the banks. Other business men would have said: "Our city council contains a lot of rascals; and the only way you can do any business with them is by bribing. The blame rests with the people who elect these rascals to the council and not with the banks."

Pittsburghers Simply Threw Up Their Hands and Accepted What They Could Get

Times have changed, however. It is no longer true that business—or even all of "big business"—is either engaged in or indifferent to political corruption. In Pittsburgh, from the beginning, leading business interests, embracing thousands of business men, lined up solidly against the rascals. Thus it was the Voters' League—an organization backed by business men, of which A. Leo Weil, a corporation lawyer, is president—that got the first evidence against the grafters and stood behind the prosecution. One bribe-giving banker who was sentenced to the penitentiary largely through the efforts of the league and its president is said to have been, at a former time, a valued client of Mr. Weil.

When the mess of corruption was uncovered it was the Civic Federation, another organization backed by and largely composed of business men, that called a mass-meeting to consider the situation.

The situation, of course, was an old and painfully familiar one. Here was

Digitized by Google

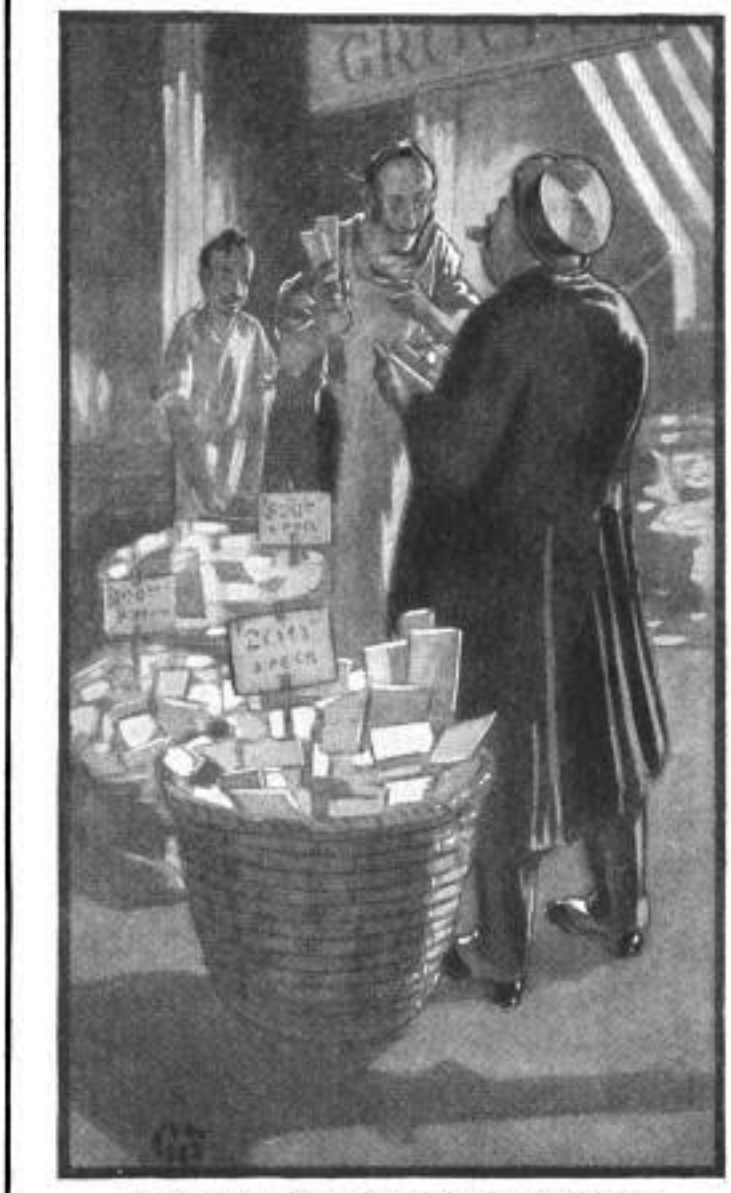
a city of more than five hundred thousand people, with an assessed valuation of three-quarters of a billion dollars, preëminent industrially, which had produced and contained a great many notably able men, but was governed in part by a crew of grafters so shameless that they sold their votes almost openly, and so stupid that they weakly accepted any poor little rag of a bribe. And this, broadly speaking, was the typical experience of an American city. Only a few years before Pittsburgh herself had had an experience quite similar and then had triumphantly elected a reform mayor in the person of George W. Guthrie, a man of high character and of ability, who did, to the utmost of his power, give the city an honest, efficient administration; but Mayor Guthrie's power had been limited. Ordinances procured through bribery had been passed over his veto by the council. Obviously, to elect an honest and able mayor did little good. Moreover, Guthrie's term had expired and the mayor's office was now held by William A. Magee—a familiar type of Pennsylvania machine politician. In short, the spasm of reform had run its brief course and passed away.

However, Des Moines—borrowing and improving Galveston's great invention in American municipal policies—had adopted the commission form of city government. The idea had spread with remarkable rapidity, hundreds of municipalities in a score of states having adopted it. So, when the best men of Pittsburgh proposed to redeem their city from its scandalous state they turned inevitably to the Des Moines plan. They knew the utter uselessness—proved by years of experience in hundreds of towns—of calling upon the people to choose sixty or seventy honest, able, broadgauge men—all elected by wards—to rule the city. They knew the only way to keep cheap, inefficient and even dishonest men out of the council was to cut down its membership to a very small number, all of whom should be chosen by the whole city to act for the whole city instead of for some petty subdivision of it. The first mass meeting, therefore, adopted resolutions, prepared beforehand, in favor of the Des Moines idea.

The Chamber of Commerce, the Board of Trade, the Pittsburgh Credit Men's Association, the Bar Association and a dozen or more other commercial bodies, with an aggregate membership of many thousand, promptly joined the movement and appointed delegates to a new charter committee. This was in April, 1910.

The new charter movement was inspired by the Des Moines idea; but it did not adopt the Des Moines plan. The scheme which the committee evolved was entitled The Pittsburgh Plan. The difference is highly significant. Under the Des Moines plan, which is now the standard commission form, the people elect five men at large and all the powers of city government are vested in them. They manage the city as completely as a board of directors manages a bank. By a majority vote they appoint all other city officers, including magistrates. Virtually they are the city government—legislative, executive and judicial; but they are always subject to the people through initiative, referendum and recall.

The Fight for Commission Government



NOW Des Moines, Topeka, San Diego, Colorado Springs, Birmingham, Moline, Gloucester, Bismarck, Austin—in short, scores of cities situated in many commonwealths might go to their state legislatures and say:

"An overwhelming majority of the people of our town are sick of the old style of municipal government, with multitudinous elected officers, bedquilt partisan ballots, inefficiency and graft. We want to clean all that out and organize on a new, intelligent basis. It's really our own affair, you know, and we expect you to pass an act that will enable us to govern ourselves as we deem best."

These other cities, in many states, might say that to the legislature with much assurance; but not Pittsburgh, in Pennsylvania, where real popular government enjoys no popularity at all among the powers that rule the state. The Pittsburgh men, backed though they were by popular sentiment, knew it would be useless to go to Harrisburg and ask the form of local government they wanted.

In the first place, there was Mayor Magee, with an unexpired term to serve and most decidedly not sympathetic with this newfangled notion from the West—or any other notion that threatened to shake his hold upon the local political machine. The mayor was and is a powerful factor in the state machine. So the Pittsburgh plan provided that the office of mayor be continued with the same powers as theretofore. It proposed, also, that the elective office of city controller be continued.

Votes in Pittsburgh Were Sold About Like Potatoes

The progressive features of the plan were that the city council be reduced to nine members, to be elected at large, to serve four years; that they be paid a salary of sixty-five hundred dollars a year each; that any ordinance, upon petition of ten per cent of the voters, be submitted to a referendum; that fifteen per cent of the voters, by petition, could initiate legislation; that all elected officers be subject to a recall election on petition of twenty-five per cent of the voters; that the city ballot be non-partisan, names of candidates being arranged on it by lot, without party designation.

To organize, settle upon the plan and draw up a bill embodying it required some time; but when the legislature convened at Harrisburg last winter the charter committee was ready for the campaign. Meanwhile it had elected Colonel Thomas J. Keenan chairman of the general committee and of the executive committee. Colonel Keenan used to be a newspaper man. For some time he was owner or majority stockholder of the Pittsburgh Press. He believes in publicity; also he believes in a fight if that seems necessary. At present he owns a seventeen-story office building on Liberty Avenue and various other parcels of real estate. Some of his business associates thought that looking after his own private affairs would require as much time and energy as could reasonably be expected from one man. This was true; so he let the private affairs look after themselves.

During the fall and winter the committee issued a series of bulletins to the people of Pittsburgh. The first bulletin bore the heading, "It hurts!" and the subtitle: "What America's leading newspapers said about Pittsburgh during the recent councilmanic graft exposure." The body of the bulletin comprises three pages of pithy excerpts from well-known journals in all parts of the country. "Shame, scandal, rottenness, rank corruption, stench, disgusting!" are terms that recur in these editorial extracts.

Bulletin number two, with the heading, "It's up to you!" runs as follows: "It's up to you as a member of the state legislature whether Pittsburgh gets decent government or not.

"The citizens of Pittsburgh have done what they could by exposing the graft in their city government.

"Altogether, one hundred and eleven individuals were involved. Of this number, fifty-four confessed, ten were convicted and forty are yet to be tried.

"Out of a total membership of one hundred and fifty-five in councils, ninety-eight were indicted. There are in Pittsburgh's councils today sixteen men under indictment.

"This means one of two things: Either a majority of Pittsburgh's voters who elect these councilmen are corrupt, or there is something wrong with Pittsburgh's system of city government. We believe the system is at fault. Only the legislature can change the system. Pittsburgh wants a chance to redeem herself. Is she going to get it? It's up to you."

Bulletin number three recites the confession of a grafting council member: "I was like a fly in a can of milk."

The bulletin says: "Pittsburgh wants a single councilmanic body of nine men, to be paid a salary of sixty-five hundred dollars each. It has had enough big bodies of little men—flies in a can of milk."

Blocked by the Bosses

BULLETIN number four recites the confession of another grafter: "I voted for my first crooked ordinance not for money but to stand in with the gang and get improvements for my ward. The next time I took money." Councilmen, it says, should be elected for the whole city and not for wards.

Number five says: "In Pittsburgh, franchises to street railways have been given in perpetuity without compensation to the city; the city's wharves have been taken; a boulevard costing millions was voted away by councils. City money is being deposited today in banks which were elected depositories by bribery. Would this have been possible under the referendum?

"Pittsburgh is paying fifty thousand dollars a year for collection of delinquent taxes. Manufacturing concerns have been driven out of the city because councils demanded graft for switching privileges. A manufacturer who wanted to pay the city for a street vacation was forced to use the money to bribe councilmen. How long would such conditions be possible with the initiative?"

Another bulletin begins: "Is there any reason why a Pittsburgh councilman should be elected under the name of a national party?" And concludes: "The one way for the national parties to rid themselves of the taint of corrupt city politics is to give the cities a non-partisan ballot."

Meanwhile the legislature had met at Harrisburg and the bills prepared by the charter committee to give Pittsburgh a start toward decent government had been introduced in both branches and referred to committees of the Senate and the House. It is hardly necessary to say that the chairmen of both committees belonged to the machine, for a legislator who didn't belong to the machine would stand an exceedingly poor show of being chairman of any committee. Both chairmen pigeonholed the bills.

Week after week passed. The charter committee issued its bulletins. The people of Pittsburgh held massmeetings, passed resolutions, deluged the legislature with petitions, sent delegations to the capital. Local sentiment was so overwhelmingly in favor of the bills that all the newspapers of Pittsburgh supported them. Here was almost the entire decent citizenship of a big town begging for the privilege to reform the local government. Moreover, the Pittsburgh men who were leading the fight at the capital canvassed the members of both the Senate and the House committees to which the bills had been referred and found that a majority of those members personally favored the bills; but until the word went out from a boss to the committee chairmen the bills, it seemed, couldn't budge.

In April the charter committee issued another bulletin, saying in part: "We have demonstrated that the passage of these bills is demanded by an overwhelming majority of the people of Pittsburgh—by the indorsement of every important civic, business and professional organization of the city; by securing a general popular indorsement at more than two hundred public meetings, ranging from gatherings in clubs, labor unions,

Digitized by Google

fraternal societies, mills, railroad shops and churches to the monster demonstration held one week ago in Exposition Music Hall, which was attended by ten thousand persons and is said to be the greatest ever held in the state; by thousands of letters and postcards mailed to senators and representatives from Allegheny County.

"Are political leaders so blind that they will seek to build round Pittsburgh a Chinese Wall to keep out the great wave of municipal reform which is sweeping the United States?

"And will they go before the people of the state with such an issue at the next election?"

Undoubtedly successive demonstrations of the state of public feeling in Pittsburgh respecting the charter bills made an impression upon the persons in control of the machine, and those persons were by no means in accord among themselves. Mayor Magee, of Pittsburgh, aspired to the political overlordship of Allegheny County and Western Pennsylvania, while United States Senator Oliver, also of Pittsburgh, cherished similar aspirations. No love whatever was lost between the Magee faction and the Oliver wing. The passage of the Pittsburgh bills would weaken Mayor Magee's hold upon the city. At the same time, by furthering the measures, Senator Oliver might reasonably hope to enhance his own popularity. So the Senator lent the bills his countenance and support—to a certain extent.

Naturally the charter committee, which contained a number of men who were by no means without experience and skill in politics, played upon this Magee-Oliver quarrel for all it might be worth to them. Mayor Magee, it appears, was strong in the graces of the Philadelphia end of the machine, and it looked as though the chairman of the House committee was hermetically sealed against any influence from Pittsburgh that was inimical to the mayor; but Speaker Cox of the House was an Allegheny County man and a follower of Oliver rather than of Magee. He finally agreed that if the Pittsburghers would get a majority of the committee to sign a favorable statement on the charter bill he would accept that as the report of the committee—thereby ignoring the chairman and shattering a great many parliamentary precedents. They did get a majority of the committee to sign a statement, which the Speaker accepted as the report of the committee.

In this novel fashion the charter bill was brought into the House over the head of the committee chairman. Once the bill was out on the floor of the House, where proceedings were in the open and votes recorded, the popular sentiment in its favor told heavily. Without much fight, and partly through the considerate action of Speaker Cox in calling it up at an unexpected time, it passed by a handsome majority; but not as the Pittsburghers drafted it. The House cut out the recall feature and the non-partisan ballot. It was said that Senator Penrose, the big boss of the machine, couldn't stand those features—however much the people of Pittsburgh might wish to stand them in their own local government!

The fence was now down to an extent. The bill went to the Senate and was referred to another machine committee, which at once cut out the initiative and referendum. It seemed that Senator Boies Penrose couldn't stand them either.

The session was now nearing its close and Pittsburgh was throwing every ounce of muscle into the fight, which waxed red-hot. It seems that only by the utmost vigilance were the machine leaders able to prevent a stampede of their agitated followers; and when the bill came up in the Senate on second reading the initiative and referendum were put back. This is said to be the first time since the Civil War that the machine was ever beaten in a fight in the Pennsylvania legislature.

The vote in favor of restoring the initiative and referendum was twenty-four, and twenty-six votes were necessary to pass the bill on third reading. By unfortunate circumstances—which, however, did not reflect upon their good faith—two senators who were pledged to the Pittsburgh plan had been called away from Harrisburg. They were summoned by telegraph and arrived next day.

The Pittsburghers then had twenty-six pledged votes in hand, and nothing, it seemed, could prevent them from passing the bill as it stood—but something did. The measure had been amended by restoring the initiative and referendum. Before it could come up for third reading the public printer must strike off a fresh copy containing the amendments—and the public printer, it appeared, simply couldn't get round to striking off that fresh copy. It was only a matter of setting up a few lines of type; but his shop must have been overwhelmed with vastly important work, for he was quite unable to get out a new copy of the Pittsburgh bill.

A day passed—two days—three days—and still no fresh copy of the bill was forthcoming. The state of mind and nerves among the Pittsburghers during this delay, as they saw the session about to close and knew the machine was exerting all its power to win over enough votes to beat them, may easily be imagined.

It was another week before the public printer was able to turn out a copy of the bill; and by that time the machine had won over two of the Pittsburghers' pledged senators, as the first vote showed, and these two desertions were soon followed by a third. It was evident that

THE SIGN OF THE WINDMILL

By Joseph C. Lincoln

ILLUSTRATED BY CHASE EMERSON

I'D HEARD the news twice already that mornin'. Fust I heard it at the Poquit House breakfast table, where 'twas served along with the chopped-hay cereal and warmed over and picked to pieces, as you might say, all through the biled eggs and spider-head, plumb down to the doughnuts and imitation coffee. Then I'd no sooner got outdoors than Solon Saunders sighted me, and he 'bout ship and beat across the road like a porgy-boat bearin' down on a school of fish. He was so excited he couldn't wait to get alongside, but commenced heavin' overboard his cargo of information in mid-channel.

"Did you hear about the Higgins Place bein' rented, Cap'n Snow?" he sung out. "It's been took for the summer, and ——"

"Yes, yes; I heard it," says I. "Fine seasonable spring weather we've been havin' these days. Don't see any signs of rain, do you?"

If he'd been skipper of a pleasure boat with a picnic party aboard he couldn't have paid less attention to my weather signals.

"It's been hired for an eatin' house," he says, puffin' and out of breath. "A man by the name of Fred, from Buffalo, has hired it; and ——"

"Fred, hey?" I interrupted. "Humph! 'Cordin' to the proclamations I heard, he cruises under the name of George—Eben George—and he hails from Bangor."

"No, no!" he says emphatic. "His name's Edgar Fred and it's Buffalo he comes from. Henry Williams told me, and he got it from his wife's aunt, Mrs. Debby Baker; and her cousin by marriage told her. She's a Knowles, the cousin is—married one of the Denboro Knowleses—and she got it from Peleg Kendrick's nephew, whose stepmother is a relation to the woman who used to do old Judge Higgins' cookin' when he was alive. So it come straight, you see."

"Yes," I says—"about as straight as the eel went through the snarled fishnet. All right; I don't care. How's your rheumatiz gettin' on, Solon?"

I thought that would fetch him, but it didn't. Gen'rally speakin', he'd talk for an hour about his rheumatiz and never skip a pang; but now he was too much interested in the Higgins Place.

"It's some better," he says, "since I tried the electric ointment out of the newspaper; but, Cap'n Zeb, did you know that this Fred man was goin' to start a swell dinin' room for automobile folks? He is. He's had all kinds of experience in them lines. He's goin' to have furrin help and a chief Frenchman to do the cookin'; and—and I don't know what all."

"I guess that's right," says I. "Well, I don't know what all, either, and I ain't goin' to worry. We'll see what we shall see, as the blind feller said. Hello! there's the minister over there, and I'll bet he ain't heard a word about it."

The Madder He Got the Less English He Talked

That done the trick. Away he put, all sail set, to give the minister the earache; and I went on down to the Ostable Grocery, Drygoods, Boots and Shoes and Fancy Goods Store and Post-Office, where I was part owner and postmaster. And there was my partner, Jim Henry Jacobs, talkin' to a man I'd never seen afore and both of 'em so interested they scurcely noticed me when I came in.

He was a kind of ordinary-lookin' feller at fust sight, the stranger was—sort of a cross between a parson and a circus agent, judgin' by his getup—pretty thin, with black hair and a black beard, and dressed all in black except his vest, which was thunderstorm plaid. I'd have cal'lated he was in mournin' if it hadn't been for that vest. As 'twas, he looked like a hearse with a brass band aboard. Both him and Jacobs was smokin' cigars, the best ten-centers we carried in stock.

"Mornin'!" says I, passin' by 'em. Jim Henry looked up and saw me.

"Ah, Skipper," says he, "glad to see you. Come here. I want to make you acquainted with Mr. Edwin Frank, who is intendin' to locate here in Ostable. Mr. Frank, shake hands with my partner, Cap'n Zebulon Snow."

We shook—the band-wagon hearse and me—and I felt as if I was back aboard the old schooner, handlin' cold fish. Jim Henry went right along explainin' matters.

"Mr. Frank," he says, "has had a long experience in the restaurant and hotel line and he believes there is an openin' for a first-class roadhouse in this town. He has leased the ——"

Then I understood. "Why, yes, yes!" I interrupted. "I know now. You're Mr. Eben Edgar Fred George, from Buffalo and Bangor, ain't you?"

Then they didn't understand. When I explained about the boardin'-house talk and Solon Saunders' "straight" news Jacobs laughed fit to kill, and even Mr. Fred George Frank pumped up a smile; but his pumps was out of gear or somethin', for the smile looked more like a crack in an ice-chest than anything human. However, he said he was glad to see me and I strained the truth enough to say I was glad to meet him.

"So you've hired the Higgins Place, Mr. Frank?" I went on. "Well, well! And you're goin' to make a hotel of it? If old Judge Higgins don't turn over in his grave at that he's fast moored—that's all."

I meant what I said—almost. Judge Higgins, in his day, had been one of the bigbugs of the town and his place on the hill was one of the best on the main road. It set 'way back from the street and the view from under the two big silver-leaf trees by the front door took in all creation and part of Ostable Neck, as the sayin' is. The judge had been dead 'most eight year now; and, bein' a three-times widower without chick or child, the estate was all tied up among the heirs of the three wives and was fast tumblin' to pieces. It couldn't be sold, on account of the row between the owners; but it had been let once or twice to summer folks. To turn it into a tavern was pretty nigh the final comedown.

Jim Henry Jacobs wa'n't worryin' about comedowns however. He never let dead dignity interfere with live business; he didn't shed a tear over Judge Higgins' tomb. No, sir! He got down to the keelson of things in a jiffy.

Digitized by Google

"Skipper," he says, sweet and plausible as a dose of sugared soothin'-syrup—"Skipper," he says, "Mr. Frank's proposition is to open not a hotel exactly but a first-class, up-to-date roadhouse and restaurant. As progressive citizens of Ostable, as business men, wide-awake to the town's welfare, that ought to interest you and me, on general principles, hadn't it?"

I judged this was only Genesis and that Revelation would come later; so I nodded and said that I cal'lated it had—on general principles.

"You bet!" he goes on. "It does interest us. Speakin' personally, I've long felt there was a place in Ostable for a dinin' room, run to hag—to attract, I mean—the wealthy, the well-to-do transient trade. Why, just think of it!" he says, warmin' up; "it's spring now. Inside of another month there'll be a steady string of autos runnin' along this road here, every one of 'em solid full of city people, and all hungry. Now it's a shame to let those suckers—I mean those hungry gents and ladies—go by without givin' 'em what they want. If I hadn't had so many things on my mind—if the Ostable Store's large and growin' business hadn't took my attention exclusive—I should have ventured a flyer in that direction myself. But never mind that; Mr. Frank has got ahead of me and the job is in better hands. Mr. Frank is right up to the minute; he's abreast of the times, and he —— By-the-way, Mr. Frank, perhaps you wouldn't mind tellin' my partner here somethin' about your plans? Just give him the line of talk you've been givin' me, say."

Mr. Frank didn't mind. He had the line over in a minute; and if I'd been cal'latin' that he was a frosty specimen, with the water in his talk-biler froze, I'd got rid of the notion in a hurry. He smiled polite and begun slow and deliberate, but pretty soon he was runnin' twenty miles an hour. He told about his experience in the eatin'-house line—he'd been everything from hotel manager to club steward—and about how successful he'd been and how big the profits was, and what his customers said about him, and so on. Afore a body had a chance to think this over—or to digest it, long's we're talkin' about eatin'—he was goin' under full steam through Ostable, with the Higgins Place loaded to the guards, and beatin' all entries two mile to the lap. He'd never seen a better openin'; his experience backed his judgment in callin' it the ideal location and opportunity—and the like of that. He talked his throat dry and wound up, husky but hurrahin', with somethin' like this:

"Cap'n Snow," he says, "you and Mr. Jacobs must understand that I know what I'm talkin' about. This enterprise of mine will be the very highest class—French chef, French waiters, all the delicacies and game in season. A country Delmonico's, that's the dope—ahem, I mean that this is the reputation this establishment of ours will have shortly—yes!"

I judged that the "dope" had slipped out unexpected and that the miscue jarred him a little mite, for he colored up and wiped his forehead with a red-and-yeller-bordered handkerchief. I was jarred, too, but not by that.

"Establishment of ours," I says slow. "You mean yours, of course!"

He was goin' to answer, but Jim Henry got ahead of him.

"Sure! Of course, Skipper," he says. "That's all right. There!" he went on, gettin' up and takin' me by the arm. "Mr. Frank's got to be trottin' along and we mustn't detain him. So-long, Mr. Frank. My partner and I will have some conversation and we'll meet again. Drop in any time. Good-day."

I hadn't noticed any signs of Frank's impatience to trot along, but he took the hint all right and got up to go. We said goodby and I was turnin' away, when I see Jim Henry wink at him when they thought I wa'n't lookin'. I was suspicious afore; that wink made me uneasy as a spring pullet tied to the choppin' block.

Eben George Edgar Edwin Delmonico Frank went out, dabbin' at his forehead with the red-and-yeller handkerchief. Jacobs kept his clove hitch on my arm and led me out to the settee on the front platform.

"Set down, Skipper," he says cheerful and more'n extry friendly, seemed to me. "Set down," he says, "and enjoy the spring ozone."

We come to anchor on the settee and there we set for as much as five minutes, each of us waitin' for the other to begin. Finally Jim Henry says without lookin' at me:

"Well, Skipper," he says, "that chap's sharp, all right, ain't he?"

"Seems to be," says I, not too enthusiastic.

"Yes, he is. If I'm any judge of human nature—and I hand myself that bouquet any day in the week—he knows his business. Don't you think so?"

"Maybe," I says; "but what business of ours his business is I don't see—yet. If you do, bein' as you and me are supposed to be partners, perhaps you wouldn't mind soundin' the fog whistle for my benefit. I seem to have lost my reckonin' on this v'yage. Why should we be interested in this Frank man and his eatin' house?"

He laughed—louder'n was necessary, I thought—and slapped me on the shoulder.

"And, Since You Ain't Asked Me, I'll Tell You That I Don't Like Him"

"You don't see where we come in, hey?" he says. "Well, I do. A dinin' room like that one of his will need a good many supplies, won't it? And, if I can mesmerize him into patronizin' the home market, the Ostable Grocery, Drygoods, Boots and Shoes and Fancy Goods Emporium will gain some, I shouldn't wonder. Hey, pard! How about that?" And he slapped my shoulder again.

I turned this over in my mind. "Humph!" I says. "I begin to see."

"You bet you do!" he says laughin'. "The amount of stuff I can sell that restaurant will ——"

I broke in here. I remembered that wink and I didn't believe I was clear of the choppin' block yet.

"Hold on!" says I. "Heave to! And never mind poundin' my starboard shoulder to pieces either. I said I begun to see; I don't see clear yet. How did you and he come to get together in the fust place? Did you go and hunt him up or did he come in here to see you?"

He kind of hesitated. "Why," he says, "he come into the store, and ——"

"Did he happen in or did he come to see you apurpose?" I asks.

"He—I believe he came to see me. Then he and I ——"

"Heave to again! He didn't come to see you to beg the favor of buyin' goods of you—'tain't likely. Jim Jacobs, answer me straight. There's somethin' else. That feller wants somethin' of you—or of us. Now what is it?"

He hesitated some more. Then he upset the woodpile and let out the darky.

"Well," he says, "I'll tell you. I was goin' to tell you anyway. Frank's all right. He's got a good idea and he's got the experience to put it into practice; but he's somethin' the way old Beanblossom was afore you took a share in this store—he needs a little more capital."

I swung round on the settee and looked him square in the eye.

"I—see!" I says slow. "Now—I see! He's after money and he wants us to lend it to him. I might have guessed it. Well, did you say 'No' right off? Or was you waitin' to have me say it? You might have said it yourself. You knew I'd back you up."

Would you believe it?—Jim Henry got as red as a beet.

"I didn't say anything," he says. "Don't go off half-cocked like that. What's the matter with you this mornin'? He don't want to borrer money. He wants more capital in the proposition—wants to float it right. And he's been inquirin' round and has found that you and me are the two leadin' business men in the place and has come to us first. It's more a favor on his part than anything else. He offers to let us have a third interest between us; you put in a thousand and I'll do the same. Why, man, it's a cinch! It's a chance that don't come every day. As I told you, I've had the same notion in my head for a long time. A summer dinin' room like that in this town is ——"

"Wait!" I interrupted. "What do you know about this Frank critter? Where'd he come from? Who is he?"

"He comes from Pittsburgh. That's the last place he was in. And he's got his pockets full of references and testimonials; and ——"

"Humph! Anybody can get testimonials—write 'em himself if there wa'n't any other way. I had a second mate once with more testimonials than shirts, enough sight; and he ——"

"Oh, cut it out! Besides, I don't care where he comes from. He's sharp as a steel trap—that much I can tell with one eye shut. And he's run dinin' rooms and hotels—that I'll bet my hat on. That's all we need to know. A roadhouse in this town is a twenty per cent proposition durin' the summer months. It's the chance of a lifetime, I tell you."

"Maybe so; but how do you know the feller's honest?"

"I don't care whether he's honest or not. It doesn't make any difference. If I wa'n't here to keep my eye peeled it might; but I'll be here and if he gets ahead of me he'll be movin' to some extent. Some one else'll grab the chance if we don't. I'm for it. What do you say?"

I shook my head. "Jim," says I, "I can see where you stand. You're so dead sartin that an eatin' house of that kind'll pay big that you're blind to the rest of it. Now I don't pretend to be a judge of human nature like you, or a doctor of sick businesses, which is your profession. But my experience is ——"

He stood up and sniffed impatient.

"Cut it out, I tell you!" he says again. "This ain't an experience meetin'! Will you take a flyer with me in that roadhouse or won't you?"

"Way I feel now, I won't," says I prompt.

He turned on his heel, took a step toward the door and then stopped.

"Well," he says, "you think it over till tomorrer mornin' and then let me know. Only, you mark my words, it's a chance! And, with me to keep my eye on it, there's no risk at all."

So that's the way it ended that day. And half that night I laid awake, feelin' meaner'n dirt to say "No" to as good a partner as I had, and yet pretty average sure I was right, just the same.

In the mornin' my mind was still betwixt and between. I went down to the store and walked back to the post-office department. I looked in through the little window and saw Mary Blaisdell inside, sortin' the outgoin' letters. The spring sunshine, streamin' in from outside, lit up her hair till it looked like one of them halos in a church picture. Seems to me I never saw her look prettier; but then, every time I saw her I thought the same thing. A good-lookin' woman and a good woman—yes, and capable. That she'd lived for so many years without gettin' married was one of the things that made a feller lose confidence in the good sense of humans. The chap that got her would be lucky. Then I caught a glimpse of myself in the lookin'-glass where customers tried on hats, and decided I'd better stop thinkin' foolishness or somebody would catch me at it and send me to the comic papers.

"Mornin', Mary!" says I. "Has Mr. Jacobs come aboard yet?"

She turned around and came over to her side of the window.

"Yes," she says, "he was here. He's gone out now with that Mr. Frank. I believe they've gone up to the old Higgins Place."

"Um-h'm!" says I. "Well, Mary, just between friends, I'd like to ask you somethin': Do you like that Frank man's looks?"

She wa'n't expectin' that and she didn't know how to answer for a jiffy. Then she kind of half laughed and says: "No, Cap'n Zeb; since you ask me, I—I don't. I don't like him. And I haven't any good reason either."

I nodded. "Much obliged, Mary," says I. "And, since you ain't asked me, I'll tell you that *I* don't like him. And my reason's about as good as yours. Maybe it's his clothes. A man, 'cordin' to my notion, has a right to look like a horse-jockey if he wants to; and he's got a right to look like an undertaker. But when he looks like a combination of the two, I—well, I get skittish and begin to shy—that's all. It's too much as if he was baited to trap you dead or alive."

Then Jim Henry come in; and when, an hour or so later, he got me one side and asked me if I'd made up my mind about investin' in Frank's roadhouse, I answered prompt that my mind was made up and the answer was still "No." He was disapp'inted—I could see that—and pretty mad.

"Humph!" says he. "Skipper, you're all right except for one fault—you're as country as they make 'em—and they make 'em pretty narrer sometimes. Well, you've had the chance. Don't ever tell me you haven't!"

"I won't," says I; and we didn't mention the subject for three months. Then—but that comes later. However, I judged that Frank had found folks in Ostable who wa'n't as narrer and country as I was, for inside of a week the carpenters was busy on the Higgins Place. They built on great, wide piazzas; they knocked out partitions between rooms; they made the house pretty much over. Then loads of fancy furniture come from Boston. At last a windmill, three-foot high—made to look like a little copy of the old Cape windmills our great-granddads used to grind grist in, with sails that turned—was set up in the

Digitized by Google

front yard; and on a post by the big gate was swingin' a fancy notice board, with a gilt windmill painted on that, and the words in big letters:

THE SIGN OF THE WINDMILL

Meals at All Hours

Steaks, Chops, Game, etc.

Table d'Hôte Dinner Each Day at 1:15

Special Accommodations for AUTO PARTIES

That was it, you see. The Sign of the Windmill was the name of the new roadhouse.

That wa'n't all the advertisin', however, by a consider'ble sight. There was signs all up and down the main roads for miles, with hands p'intin' in the Windmill direction. And there was ads in the Cape papers and in the Boston papers too. I swan I didn't believe anybody but Jim Henry Jacobs could have engineered such advertisin'! And there was a black-lookin' critter, with the ends of his mustache waxed so sharp you could have sewed canvas with 'em—he was the French chef—and three furrin waiters, and a dark-complected, fleshy woman who seemed to be a sort of general assistant manager and stewardess; and—and—goodness knows what there wa'n't! There was so many kinds of hired help that I couldn't see where Frank himself come in—unless he was the spare windmill; which, judgin' by his gift of gab, I cal'lated might be the fact.

The Sign of the Windmill bought all its groceries and general supplies at our store which, considerin' that we'd turned down the "chance" to be part owners, seemed sort of odd to me, 'cause Frank didn't look like a feller who'd forgive a slight like that. However, I judged Jim Henry had hypnotized him as he done other customers, and so I said nothin'. Our weekly bills with that roadhouse was big ones, but they was paid every week—and I hadn't any kick there either.

As for the business that dinin' room done, it was surprisin'—particularly Saturdays and Sundays, when there'd be twenty or more autos in the front yard, and more acomin'. The table d'hôte dinner at one-fifteen was so well patronized that folks had to wait their turns at table; and on moonlight nights the old house was all lighted up and you could hear the noise of dishes rattlin' and the laughin' and singin' till after eleven o'clock. And our bills with the Sign of the Windmill kept gettin' bigger and bigger.

Though the auto parties was thick and the patronage good, still there was some dissatisfaction, I found out. One big car stopped at the store on a Saturday afternoon and the boss of it talked with me while the womenfolks was inside buyin' postcards and such.

"Well," says I to the owner of the car—a big, fleshy, good-natured chap he was—"Well," says I to him in a casual way, "I cal'late you've all had a good dinner. Feed you fust-rate up there at the Windmill place, don't they?"

He sniffed. "Humph!" says he. "The food's all right. It ought to be at the price! Is the proprietor of that hotel named Allie Baby?"

"Allie which?" I says, laughin'. "No, no; his name's Frank—Edwin George Eben Etcetary Frank. What made you think 'twas Allie?"

"'Cause he's a close connection of the Forty Thieves," he says sharp. "He'd take a prize in the hog class at a county fair, that chap would. What's the matter with him? Does he think he's runnin' a get-rich-quick shop? Three weeks ago I paid a dollar and a half for a dinner there—and that was seventy-five cents too much. Now he's jumped up to two-fifty—and the feed ain't a bit better."

"Two dollars and a half for a dinner!" says I. "Whew! The cost of livin' is goin' up, ain't it? What do they give you—canary-birds' tongues on toast? Any shore dinner ever I see could be cooked for ——"

He interrupted. "Shore dinner nothin'!" he snorts. "I wouldn't kick at the price if I got a good shore dinner; but what we get here is a poor imitation of a country Waldorf. Everybody's kickin'; but we all go there because it's the best we can find for twenty miles. However, I hear another place is to be started in Denboro; and if that makes good your Forty Thieves friend will have to haul in his horns. He'll never get another cent from me or a hundred others I know, who have been his best customers. We're all waitin' to give him the shake, and it looks as if we should be able to do it. Us motorin' fellers stick together; and if the word's passed along the line the Sign of the Windmill will be a dead one—mark my words!"

I marked 'em; and when, a fortni't later, I heard that the Denboro dinin' room was open and doin' a good business, I underscored the mark.

This was about the middle of July. A week later Jim Henry got the telegram about his younger brother out in Colorado bein' sick and wantin' to see him bad. He hated to go, but he felt he had to; so he went.

I said goodby to him up at the depot and told him not to worry a mite. "I'll look out for everything," I says. "Course I'll miss you at the store; but I'll write you every day or so and keep you posted, and you can give me business prescriptions by mail."

"That's all right, Skipper," says he. "I know the store'll be took care of; but there's one thing that—that ——"

"What's the one thing?" I asked. "Overboard with it! My shoulders are broad and I won't mind takin' on another hogshead or so."

He hesitated and it seemed to me he looked troubled; but finally he said he guessed 'twas nothin' that amounted to nothin', anyway, and he'd be back in a couple of weeks sure. So off he went and I had a sort of Robinson Crusoe desert-island feelin' that lasted all that day and night.

It lasted longer than that too. I didn't hear from him for ten days. Then I got a note sayin' his brother had scarlet fever—which seemed a fool disease for a grown-up man to have—and was pretty sick. I wrote to him for the land's sake to be careful he didn't get it himself; and the next news I heard was from a doctor, sayin' he had got it. After that the bulletins was infrequent and alarmin'.

I'd have put for Colorado in a minute, but I couldn't; that store was on my shoulders and I couldn't leave. I telegraphed not to spare no expense and to write or wire every day. 'Twas all I could do; but I never spent such a worried time afore or since. I was worried not only about my partner but about the business he'd put in my charge. There was new developments in that business and they kept on developin'.

'Twas the Sign of the Windmill that was troublin' me. As I told you, the weekly bills for that eatin' house was big ones; but the fust three or four had been paid on the dot. Now, however, they wa'n't paid and they was just as big. Frank's account on our books kept gettin' larger and larger; and not only that, but anybody could see that the Windmill wa'n't doin' half the trade it begun with. The auto parties—the heft of 'em—went right on by to the new roadhouse in Denboro. I remembered what the fleshy man told me; and I judged the word had been passed to the motorin' crew, just as he prophesied.

I went up to see Frank and had a talk with him. I found him in his office, settin' at a fine new rolltop desk, with the dark-complected stewardess alongside of him. She seemed to be helpin' him with his letters and accounts, which looked odd to me; and she glowered at me, when I come in, like a cat at a stray poodle. She didn't get up and go out, neither, till he hinted p'raps she'd better; and even then she whispered to him mighty confidential afore she went. 'Twas a queer way for hired help to act—but 'twa'n't none of my affairs, of course.

He was cordial enough till he found out what I was after, and then he chilled up like a freezer full of cream. He was in the habit of payin' his bills, he give me to understand, and he'd pay this one when 'twas convenient. If I didn't care to sell the Windmill goods that was my affair, of course; but his relations with my partner had been so pleasant that—and so forth and so on. I sneaked out of that office, feelin' like a chicken-thief instead of an honest man tryin' to collect an honest debt. I'd bungled things again. Instead of makin' matters better, I'd made 'em worse—come nigh losin' a good customer and all that. What business had an old salt herrin' like me to be in business anyhow? That's how I felt when I shut that office door and come out into the dinin' room.

The sight of that dinin' room—tables all vacant, and two waiters where there'd been four—fetched all my uneasiness back again. If ever a place had "Goin' down" marked on it 'twas the Sign of the Windmill. I stewed and fretted all the way to the store; and when I got there I found that another big order of groceries and canned goods had been delivered to the eatin' house while I was gone.

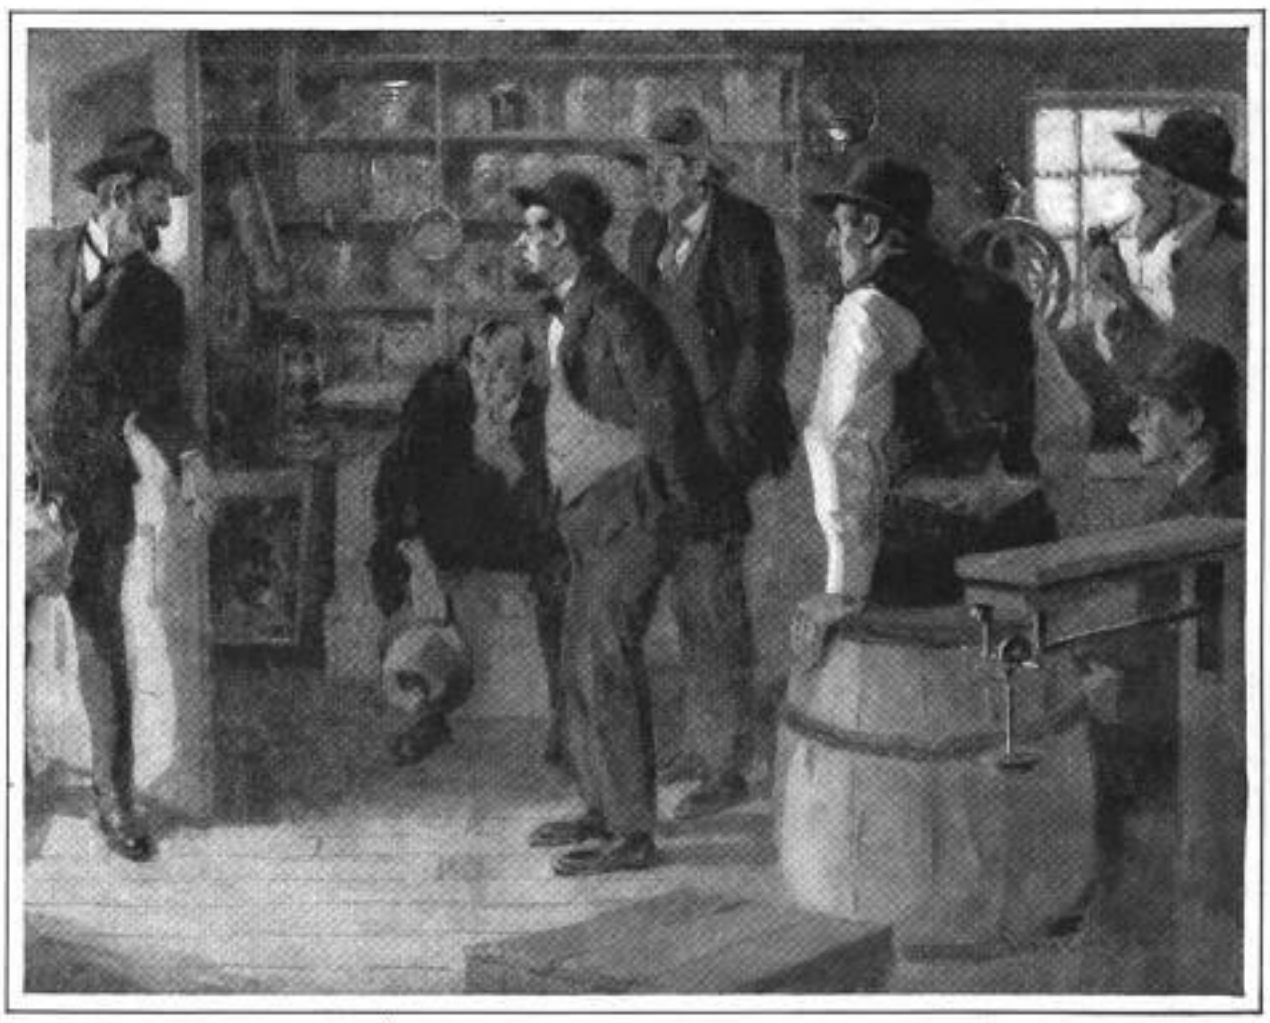
The next week'll stick in my mind till doomsday, I cal'late. Every blessed mornin' found me vowin' I'd stop sellin' that Windmill, and every night found more dollars added to the bill. You see, I didn't know what to do. If I'd been sole owner and sailin' master I'd have set my foot down, I guess; but there was Jim Henry to be considered. I wrote a note to the Frank man, but he didn't even trouble to answer it.

Saturday noon come round and, after the mail was sorted, I wandered out to the front platform and set there, blue as a whetstone. The gang of summer boarders and natives that's always round mail times melted away fast and I was pretty nigh alone. Not quite alone—Alpheus Perkins, the fishman, was occupyin' moorin's at t'other end of the platform and he didn't seem to be in any hurry. By-and-by over he comes and sets down alongside of me.

"Cap'n Zeb," he says fidgety-like, "I s'pose likely you've been wonderin' why I don't pay my bill, ain't you?"

I hadn't, havin' more important things to think about; but now I remembered that he did owe consider'ble, and had owed it for sometime. Alpheus is as straight as they make 'em and usually pays his debts prompt.

"I know you must have," he went on, not waitin' for me to answer. "Well, I intended to pay long afore this, and I will pay pretty soon; but I've had trouble collectin' my own debts and it's held me back. If I could only get my hands on one account that's owin' me I'd be all right. Say," says he, tryin' hard to act careless and as if 'twa'n't important one way or t'other—"Say," he says, "you know Mr. Frank—up here at the hotel—pretty well, don't you?"



For a minute or so I didn't answer. Then I knocked the ashes out of my pipe and says I:

"Why, yes. I know him. What of it?"

"Oh, nothin' much," he says. "Only I was told he was a partic'lar friend of yours and Mr. Jacobs'; and—and ——"

"Who told you he was our partic'lar friend?" I asked.

"Why, he did. I was up there yesterday, just hintin' I could use a check on account—not pressin' him, you understand.

"By-by! Life's a Giddy Jag of Joy, Ain't It?"

Digitized by Google

Course he's all right—but at the present time you see I am mighty short of ready cash; and so ——"

"Hold on, Al!" I said quick. "Wait! Does the Sign of the Windmill owe you a bill?"

"Pretty nigh a hundred dollars," says he. "I've supplied 'em with fish and lobsters and clams and such ever sence they started. Fust month they paid me by the week. After that ——"

"Good Heavens and earth!" I sung out. "My soul and body! And—and, when you asked for it, this—this Frank man told you he'd pay you when 'twas convenient, same as he paid Jacobs and me, who was his friends and was quite ready to do business that way?"

He actually jumped—I'd surprised him so.

"Hey?" he sung out. "Zeb Snow, be you a second-sighter? How did you know he told me that?"

I drew a long breath. "It didn't take second sight for that," I says. "I was up there last Monday and he told me the same thing, only 'twas you and Ed Cahoon who was his friends then."

He let that sink in slow.

"My godfreys domino!" he groaned. "My godfreys! He—he told —— Why—why, he must be workin' the same game on all hands!"

"Looks like it," says I; and, thinkin' of Jim Henry and the business he'd left me to look out for, my heart went down into my boots.

Perkins set thinkin' for a jiffy. Then he got up off the settee.

"The son of a gun!" he says. "I'll fix him! I'll put my bill in a lawyer's hands tonight."

"No, you won't!" I sung out, grabbin' him by the arm. "You mustn't. He owes the Ostable Store four times what he owes you, and it's likely he owes Cahoon and a lot more. The rest of us can't afford to let you upset the calabash that way. You might get yours, though I'm pretty doubtful; but where would the rest of us come in? You set down, Alpheus. Set down, and let me think! Set down, I tell you!"

When I talk that way—it's an old seafarin' habit—most folks usually obey orders. Alpheus set. He started to talk, but I hushed him up; and, havin' filled my pipe and got it goin', I smoked and thought for as much as five minutes.

"Hum!" says I after the spell was over; "the way I sense it is like this: This ain't any fo'mast hand's job—and it ain't a skipper's job neither. It's a case for all hands and the ship's cat, workin' together and standin' by each other. We've got to find out who's who and what's what, make up our minds and then all read the lesson in concert, like young ones in school. This Frank Windmill critter owes you and he owes me; we're sartin of that. More'n likely he owes Ed Cahoon for chickens and fowls and eggs, and Bill Bangs for milk, and Henry Hall for ice—and land knows how many more! S'pose you skirmish round and find out who he does owe, and fetch all the creditors to the store here tomorrer mornin' at eleven o'clock. It'll be church time, I know; but even the parson will excuse us this once—specially as the Sign of the Windmill is supposed to sell liquor, and he's down on that."

We had consider'ble more talk, but that was the way it ended finally. I went to bed that night, but it didn't take; I might as well have set up, so fur's sleep was concerned. All I could think of was poor, sick Jim Henry and the trust he put in me.

I was at the store by quarter of eleven, but the gang of creditors was there to meet me—seven of 'em altogether. Cahoon the chicken man, and Bangs the milk man, and Hall the ice man, and Alpheus; and Caleb Bearse, who'd been supplyin' meat to that roadhouse; and Peleg Doane, who'd done carpenterin' and repairs on it; and Jeremiah Doane, his brother, who'd painted the repaired places. Seven was all the creditors Perkins could scare up on short notice, though he cal'lated there was more.

"There's one more, anyway," says Bill Bangs. "That dark-complected woman—the one you call the stewardess, Cap'n Zeb—was sick a spell ago and Frank told Doctor Goodspeed he'd be responsible for the bill. I see the doc this mornin' and he's with us. Says he may be down later."

They elected me chairman of the meetin' and we started deliberatin'. The debts amounted to quite a lot, though the Ostable Store's was the biggest. Some was for doin' one thing and some another; but we all agreed we must see Judge Thomas, the lawyer, afore we did much of anything. While we was still powwowin', somebody knocked at the door. 'Twas Doctor Goodspeed, on the way to see a patient.

"Well," says he, "how's the consultation comin' on? Judgin' by your faces, I should imagine 'twas an autopsy. Time to take desperate measures, if you asked me. I never did believe that Frank chap was anything but a crook; so I'm not surprised. I'm with you in spirit, boys, though I can't stop. However, here's a couple of pieces of information which may interest you: One is that the Sign of the Windmill's account was overdrawn yesterday at the bank and the bank folks sent notice. T'other is that Judge Thomas is out of town for a couple of days; so you can't get him. Otherwise than that, the patient is normal. By-by! Life's a giddy jag of joy, ain't it?"

He grinned and shut the door with a bang. The eight of us looked at each other. Then Alpheus Perkins riz to his feet.

"Humph!" says he. "Account overdrawn, hey? Well, maybe that Windmill ain't made enough to pay its bills, but it's been takin' in consider'ble cash. If it ain't at the bank, where is it? I'm goin' to find out. And if I can't get a lawyer to help me I'll do without one. That Frank critter's store clothes are wuth somethin'; and if I can't get nothin' more I'll rip 'em right off his back. So-long, fellers! Keep your ear to the ground and you'll hear somethin' drop."

He headed for the door, but he didn't go alone. The rest of us got there at the same time; and I—well, I wouldn't wonder if 'twas me that opened it. I was desperate—and I've commanded schooners in my time.

Anyhow, 'twas me that led the procession up the front steps of the Sign of the Windmill and into the dinin' room. The two waiters was busy. They had five of the tables set end to end and covered with cloths, and they was layin' plates and knives and forks for a big crowd. 'Twas plain that special customers was expected.

"Mr. Frank in his office?" says I, headin' for the skipper's cabin. The waiters looked at each other and jabbered in some sort of furrin lingo.

"No, sare," says one of 'em. "No, sare; Meester Frank he is away—out."

"Away—out, hey?" says I. "You're wrong, son. We're the ones that are out; but we ain't goin' to be out another cent's wuth. Come on, boys; we'll find him."

You can see I was mighty mad or I wouldn't have been so reckless. I walked acrost that dinin' room and flung open the office door. Frank himself wa'n't there; but who should be settin' at his rolltop desk but the fleshy, dark-complected stewardess woman! She glowered at me, ugly as a settin' hen.

"This is a private room," she snaps.

"I know, ma'am," says I; "but the business we've come on is sort of private too. Come in, boys."

The seven of 'em come in and they filled that office plumb full. The stewardess woman's black eyes opened and then shut part way; but there was fire between the lashes.

"What do you mean by comin' in here?" says she. "And what do you want?"

The rest of the fellers looked at me, so I answered.

"Ma'am," says I, "we don't want nothin' of you and we're sorry to trouble you. We've come to see Mr. Frank on a matter of business, important business—that is, it's important to us."

"Mr. Frank is out," says she. "You must call again. Good-day!"

She turned back to the desk, but none of us moved.

"Out, is he?" says I. "Well, then, I cal'late we'll wait till he comes in."

"He is out of town. He won't be in till tomorrer," she snaps.

I looked round at the rest of the crowd. Every one of 'em nodded.

"Well, then, ma'am," I says, "I cal'late we'll wait and stay here till tomorrer."

That shook her. She got up from the desk and turned to face us. If I'm any judge of a temper she had one, and she was holdin' it in by main strength.

"You may tell me your business," she says. "I am Mr. Frank's—er—secretary."

So I told her. "We've waited for our money long as we can," says I. "None of us are well off and every one of us needs what's owin' to him. We've called and we've wrote. Now we're goin' to stay here till we're paid. Of course, ma'am, I realize 'tain't none of your affairs, and we ain't goin' to make you any more trouble than we can help. We'll just set down on the piazza, or in the dinin' room or somewheres, and wait for your boss—that's all."

I said that 'cause I didn't want her to think we had anything against her personal. I cal'lated 'twould soothe her down; but it didn't. She looked as if she would like to murder us—every livin' soul!

"You get out of here!" she screamed, her hands openin' and shuttin'. "You get right out of here this minute!"

"Yes, ma'am," says I, "we'll get out of your office, of course. Further'n that you'll have to excuse us. We're goin' to stay in this house till we see Mr. Frank."

"I'll put you out!" she sputtered. "I'll have the waiters put you out!"

I thought of them two puny-lookin' waiters and, to save me, I couldn't help smilin'. You'd think she'd have seen the ridic'lous side of it too, but apparently she didn't, for she bust right through between Alpheus and me and rushed into the dinin' room.

"Boys," says I to the crowd, "maybe we'd better step out of here. We may need more room."

She was in the dinin' room, talkin' furrin language in a blue streak to the waiters. They was lookin' scared and spreadin' out their hands and hunchin' their shoulders.

"Ma'am," says I, "if I was you I wouldn't do nothin' foolish. We ain't goin' and we won't be put out; but, on the other hand, we won't make any fuss. We'll just set down here and wait for the boss—that's all. Set down, boys."

So all hands come to anchor on chairs round that dinin' room and grinned and looked silly but determined. The stewardess glared at us some more and then rushed off upstairs. In a minute she was back with her hat on.

"You wait!" says she. "You just wait! I'll put you in prison! I'll —— Oh ——" The rest of it was French or Italian or somethin'; but we didn't need an interpreter. She shook her fists at us and run down the front steps and away up the road.

"Well, gents all," says I, "man born of woman is a few days and full of trouble. Today we're here and tomorrer we're in jail, as the sayin' is. Anybody want to back out? Now's the accepted time."

Nobody backed. The two waiters went on with their table-settin', and we set and watched 'em. 'Twas the queerest Sunday mornin' ever I put in. By-and-by Alpheus got uneasy and wandered out toward the kitchen. In a few minutes back he comes, bilin' mad.

"Say, fellers," he sung out. "Do you know what's goin' on here? There's a party of thirty folks comin' in automobiles for dinner. They're gettin' the dinner ready now. And if we don't stop 'em they'll be fed with our stuff—the grub we've never got a cent for! I don't know how you feel, but I've got ten dollars' wuth of clams and lobsters in this eatin' house that ain't goin' to be used unless I get my pay for 'em. You can do as you please, but I'm goin' to stay in that kitchen and watch them lobsters and things."

And out he put, headed for the kitchen. The rest of us looked at each other. Then Caleb Bearse riz to his feet.

"Well," says he determined, "there's a lot of chops and roastin' beef and steaks out aft here that belong to me. None of them goes to feed auto folks unless I get my pay first."

And he started for the kitchen. Then up gets Ed Cahoon and follows suit.

"I've got six or eight fowl and some eggs aboard this craft," he says. "I cal'late I'll keep 'em company."

The rest of us never said nothin', but I presume likely we all thought alike. Anyhow, inside of three

A WALL STREET WIFE

ILLUSTRATED BY HENRY RALEIGH

Most of the Time He Sat and Nibbled His Fingers

WE ARE plain people, my husband and I—or we were, at any rate, at the time these experiences began. By this I mean that, though we spring from plain, homely stock, we are no longer so plain as once we were. It is because we have tasted wealth—riches that came quickly, easily—a fortune that, by the same token, as quickly went. Yes! for in point my story is the story of many women—all, I might say—whose husbands by some trick of chance have become Wall Street traders, dabblers in the stock market. However, in what I have to tell I make no effort to draw a moral, either pretty or otherwise. The facts should speak for themselves.

My husband was young—for that matter he is still young—and virtually we two had just started out in life when the Wall Street fever caught him. By occupation he was a business agent—a salesman handling a line of Western-manufactured power engines. After some years spent in traveling on the road he was promoted to the charge of the firm's New York agency. Then I married him. I was twenty-nine, he was thirty-four.

These facts, no doubt, may seem immaterial. I have a reason, however, in giving them. In the first place, I wish to make clear that, though we were young in years, what happened to us was by no means due to either youth or inexperience. All my life I had lived in New York. I was, as you see, not a stranger to its ways; and, moreover, I had seen something of the Wall Street side of it. To be brief, my sister's husband was in the brokerage business, while one of my best friends was married to a man who had "played the market" long on a heavy scale. From these sources, I may say, I had already formed some conclusions as to gambling in stocks—conclusions, perhaps, that if not profound were still more or less exact. In short, it struck me that all the life dependent upon Wall Street was in the main artificial. Its ostentation, its feverish activity, as well as its incessant pursuit of high-spiced pleasures, gave me the sense that the people in it must be burdened with a constant killing restlessness. I thanked my stars that my husband and I were only "in trade."

His salary at the time was seven thousand a year. Some may think this large; but, on the other hand, there was a string tied to that seven thousand. In fine, to hold his place he was required to entertain somewhat lavishly, not only among his downtown associates but at home as well. Moreover, out of his income it was necessary for us to lay by not less than two thousand dollars a year.

Let me explain. At the time my husband was promoted to the New York office a chance was offered him to buy a share in the business. It was not a large share, but it meant much to us. Nominally the value of the share was thirty thousand dollars; and at the company's suggestion the stock representing it was put in trust for him—"in escrow" I believe is the term. At all events, he was to pay for it in yearly installments of two thousand dollars each, the securities to be turned over to him when the full amount had been paid in.

I objected to the arrangement—that is to say, I demurred at the plan of paying only two thousand dollars a year. It seemed to me that on our income we could do better than that. "When we're just starting out, Steve," I protested, "it's sheer folly for us to spend five thousand a year."

My husband soberly smiled at me. "Listen, Lily," he responded; "you have never heard, have you, why Craddock lost his place?"

Craddock was the man my husband had succeeded. What he had to do with our affairs, however, I failed to see. My husband now informed me.

"Craddock lost his place," he said quietly, "because he lost his trade. . . . And the reason he lost his trade," he as quietly added, "was because he wouldn't spend his salary on it."

It was a revelation to me. I had believed all the seven thousand was ours to use exactly as we liked; instead, I now found the firm had expressly stipulated that a part should be spent on its trade. Of course today I know this to have been conventional. I have heard more than one man brag of his income—a salary of ten thousand, fifteen thousand dollars, even double—who would not care to say how much of the amount represented merely an allowance for expenses. Be that as it may, though, the matter reduced itself to a single issue—the fact that unless I kept a shrewd, careful eye on every penny before long I would far overstep our limit—that we would fall far short of saving even the two thousand I had thought so "little."

I wish to be exact about this. Do not think I make it a plea for all that afterward happened. Instead, it merely contributed to the outcome. I have said we were plain people. We were. Neither by inheritance nor by our situation were we disposed to extravagance, to ostentation. Scaled according to our class, our condition, I should say we stood on a middle round of the social ladder—that is, our antecedents lay in that great mass of Americans whose one motive in life is the bourgeois characteristic of thrift. To save was our fetish. All the rest there is in life—luxury, amusement, those and a more cultivated enjoyment of living—we left consciously to the time when we "made our pile."

So, forgetting my first disappointment—the fact that all the seven thousand was not ours—I settled down to our purpose, thrilled with ambition and firmly resolved to "get there." All was rosy. Every dollar we saved was a joy, a tonic, an added stimulus for us to go on saving more. Moreover, each dollar saved by us was estimated at its full face value. We knew its worth. We held it as the concrete evidence of so much toil, so much thrift and self-denial; for they came hard, those dollars did—the truth being that no one, however thrifty and saving, saves with ease. Still, as hard as it was to lay by a dollar, all the toil, all the drudgery involved, was more than offset by the pride we felt in the performance.

Then came a change. It was at the end of the fourth year that the labor began to grow irksome. We paused to catch our breaths. In those four years my husband had exactly four weeks' vacation in all—in other words, a week each year. He looked haggard and worn. How I myself looked I need not say. Physically the labor had not been hard—I had a capable housemaid, as well as extra help when I needed it; mentally, however, I showed the strain. Consequently, it was perhaps only natural that my mind should now begin to shape those thoughts which are the thoughts of every woman burdened with too difficult a purpose.

I began to question how long our toil was to last. Two thousand a year as a saving had at the first seemed no more than a pittance. Now in its immensity it grew monumental. What I realized was, in short, that unless some windfall befell us we two must keep grubbing along another eleven years—an age-long term!—ere we could pay off even the balance we owed, the remainder of the thirty thousand dollars.

This, however, of my thoughts was the least significant. I tired of the drudgery; I tired of the endless skimping, planning, calculating; I was aweary of the constant, eternal snatching after the ever-fugitive penny; and I wanted freedom—not freedom from my duties, my affairs of the wife—I wanted freedom from my pocketbook. Then, again, I was consumed with a longing for pretty things; but a dollar is a dollar. I knew, as I've said, the dollar's value—how much effort had been required to make it, how much more to keep it from going astray; so I dared not spend. Instead, I teased myself by wandering in the shops, on the Avenue—everywhere—like all the rest of the moneyless women that throng those places—wanting, longing, hankering.

This is no place to discuss the morality—or, rather, the lack of it—that lies in women's extravagance. Still, I cannot resist a word or two. Somehow I was not of that multitude of women—wives—that deck themselves gayly and fashionably on what they can filch from the household money. I knew of this because I saw it all round me. Here in New York I saw—and still see—day after day a hurrying procession of slight lives whose only purpose in existence seems to be the vanity of what they can put on their backs—that and the vanity of sham or pretense. Trite preaching you may call this, as no doubt it is; yet at the same time I call it a pretty significant evidence of the very thing I speak about—the money hunger of women that, more often than is generally understood, drives their men into ways of making money that otherwise these men would not have attempted.

It was I, at any rate—his wife—who first set my husband to gambling in the market.

The fact I make definite. Inspired by my thoughts—those that I've just described—I began to grumble openly. Moreover, I not only grumbled over myself—I grumbled over my husband too. Like more than one wife in my circumstances, in short, I began to question his success in life. The immediate cause of this outbreak was the woman of whom I've already spoken—my friend, the wife of the Wall Street plunger.

In the four years we two had drifted apart more or less, for doubtless our lives no longer held much in common. She had a big apartment, a motor, fine clothes, jewels, a corps of servants—in fine, each and all of the many things I now so much desired. Her husband was successful, eminently so from the money viewpoint, and mine I contrasted with him. Constant brooding had by now made me forget my first thankfulness, the fact that we two were "in trade" rather than in an occupation so unhealthy, so exotic. It was the externals of their life that had affected me. I wanted all those externals—wanted their luxury if not their ostentation; and was more than ready now to exchange all the peace of my life to obtain them.

This man—Mosher, I'll call him—grew more and more on my mind. One day I could restrain my thoughts no longer. "Look here, Steve," I said; "if Mosher can coin money the way he does, I don't see why you can't too. You have double his brains."

My husband laughed good-humoredly. "Mosher doesn't need brains," he said lightly. "He has luck!"

I retorted sulkily: "I wish you had some of it, then!"

For a moment my husband peered at me curiously. "What! Have me dabble in Wall Street!" he exclaimed. Then he wrinkled up his nose. "That's where Mosher gets his money, you know," he added.

I was in no mood to beat round the bush. What I had to say, I said bluntly: "I don't care where he gets it, Steve. It's a pity you can't get some of it too."

Digitized by Google

My husband flushed and turned away. He said nothing more; but, at the same time, I could see he was thinking deeply. My retort had stung.

A few nights later the Moshers came to dinner. It was the first time in months. With them we had also my sister and her husband—Benson, as I'll call him—who, as I've said, was in the brokerage business. Though Mosher dealt with another broker, my brother-in-law knew him and had, in fact, suggested the evening with a view to possible business.

The dinner became a turning point in my life. Today I wonder when I think of it; for it was through no more than a chance remark of Mosher's that our entire existence was ordained to be swept into strange, uncharted channels. At the dessert Mosher turned leisurely to my husband.

"I say, Steve," he said lightly, "I'm going up into Canada, Saturday, for a fortnight's fishing. Why don't you join me?"

There was nothing my husband would have liked better. He shook his head though. Canada—a fortnight's fishing—was as far beyond his ken as, say, a cycle in Cathay!

"Why can't you?" persisted Mosher. "You ought to be able to get away for a couple of weeks."

Again my husband shook his head.

"I haven't the time, Jerry," he answered; then added, "I haven't the money either."

Mosher gave him an indulgent smile.

"Nonsense, man!" he responded in an easy, offhand way. "It will only cost you a couple of hundred."

Two hundred dollars! It made me writhe inwardly to hear the man say it so lightly. I glanced at his wife and saw that she was yawning. It was a signal evidence of the vast difference between our conditions. No doubt two hundred meant to her no more than so much pocket money. Her dress alone would have cost that much; I dare say, too, the pearl pendant at her throat must in itself have represented as much as our whole year's income. I hearkened keenly as Mosher let fall another light rejoinder.

"If you'd only take one of the tips I've been trying to give you," he remarked, "you could knock out two hundred in a morning!"

My husband, after a pause, dryly answered:

"That's all right, Jerry. You've been lucky. . . . That doesn't mean, though," he added, "that if I took a flyer I'd be lucky too."

At this juncture I saw Benson, my sister's husband, look up sharply with a curious gleam in his eye.

"Pshaw!" said Mosher. "It's not a question of luck. It's just being able to dope out the market properly."

Then and there, like all the other dabblers that believe they can "read the tape," Mosher began loudly to expound his settled theories. I do not recall now what they were; but, aside from this, the man possessed a certain fiery eloquence. It was of a piece, I may say, with the eloquence, the earnestness, of all his sort; for, like all the other dabblers—my husband now included—Mosher sought constantly to convert all with whom he came in contact to his passion for Wall Street gambling. The fact is, a dabbler is like any person ridden by a habit. Like the morphine user, he will seek to inoculate you with his own overmastering vice. He believes he does you a service.

What else Mosher had to say I need not dwell upon. My husband intently listened, and that is enough. Through it all, too, my brother-in-law as intently listened, though he said nothing. Even when Mosher appealed to him to confirm some particularly important fact he merely smiled and shook his head. "Don't ask me!" he laughed. However, an hour or more later Benson had plenty to say. A perfect torrent of speech, in fact, poured from him the moment the Moshers departed.

Their motor came early, and Mrs. Mosher—she, I am sure—made haste to use it as an excuse. Stifling another yawn—I could see our simple evening must have bored her nearly to the point of extinction—she slipped into her furs. "Such a delightful time!" she murmured patronizingly, and in the next breath bade her husband hurry.

He and Steve were in a corner, talking earnestly. "All right," I heard my husband say; "if Wall Street's as easy as all that I guess I'll have to take a shot at it."

That was all. In echo my heart gave a bound and secretly I exulted. I heard my sister say: "Come, Phil, we must be going too." Benson shook his head however. When my husband returned from escorting the Moshers to the elevator Benson stood by the fireplace, his hands in his pockets, his jaw set and, as I could see, waiting.

"See here, Steve!" he said abruptly. "You weren't serious with him, were you?—with that fellow Mosher, I mean."

My husband glanced at him surprisedly. "Why not?" he demanded; and at this Benson shrugged himself.

"Why, to tell the truth," he answered, "I didn't think you were just fool enough to tackle the Wall Street game."

Again my husband looked amazed. "Isn't that a little queer from you, Phil?" he drawled; then added: "I supposed it was your job to make people think they could beat the game, you know."

For an instant Benson changed color. "That's all right! So I do," he replied. Then he laughed awkwardly. "Yes, Steve—only you're a member of the family, a friend. If I want to bamboozle a lot of dubs," he added, "it's no reason why I should want to bamboozle you as well. . . . I don't care to see you get stung."

My husband took it lightly, as I may say I did too. "Pshaw!" he exclaimed. "Mosher hasn't been stung, has he? Why, he's already three hundred thousand to the good!"

"I don't care if it's three millions!" Benson retorted. "He'll drop every cent of it yet!"

"Oh, well; don't be alarmed," laughed Steve. "If I'm stung it won't be for much. I'm only going in for a thousand dollars anyway; and if I lose it that'll end the matter for good and all. I'll have had enough by that time."

"Listen!" said Benson, and raised his finger. "If you take a flyer once and win—win, mind you!—you'll think you can win again. You'll get the fever in your blood as sure as shooting!"

Neither my husband nor I took it seriously. "All right," laughed Steve; "if I can win I'm willing."

"Yes, but you won't win—not in the end anyway," answered Benson. "What will happen is that you will get the fever—and finally the fever will get you. You'll keep at it till you've dropped every cent you own. I've never known it to fail. . . . Gad, Steve!" he exclaimed; "the only thing that'll save you is to get wiped out in the very first transaction you make."

"Mosher hasn't been wiped out!" my husband retorted. "He rarely loses."

"You give him time," said Benson grimly. Then he added a fact that, had either of us been in our senses, must have gone far to convince us he was right. "Steve," he said—both his tone and manner grave—"we have on our books today above two hundred separate trading accounts. Of the lot, not one account is more than four years old!"

Why continue? With the same light and laughing show of obstinacy my husband shook his head; so Benson held his peace. The next day Steve made his first venture in the stock market.

"Take My Advice, Lily, Use Your Motor All You Can—While It Lasts!"

I Wanted Solitude in Order That I Might Reflect

I had egged him on to it. Blind to the fact that we played with fire, I suggested that he have at least one try at his luck. A thousand dollars would neither make nor break us. The risk, as I said blandly, was little, while the rewards might be magnificent! My philosophy was this:

He either fears his fate too much,
Or his deserts are small,
That dares not put it to the touch
To gain or lose it all.

Steve did not lose. On a ten-point margin he bought one hundred shares of Little Steel. A fortnight later he was nine hundred dollars to the good. He won; and, as Benson had prophesied, our life was as definitely settled as if this part of it had from the beginning been written by the inexorable finger of Fate.

I shall not dwell singly upon the transactions that followed, for together the mere mention of them would fill a volume. At first, however, they were few and far between and almost always they won. The fact is, at the time a child might have won with equal ease, for the long bull market that preceded the San Francisco fire was then in force. To win one needed only to buy, then hold on until the assured profit came to him.

I recall to the moment the first reward I drew from these winnings. At the end of the first month my husband was no less than fourteen hundred dollars ahead. Think of it—fourteen hundred dollars! In the brief interval of thirty days he had gathered in, without toil or any conscious effort on his part, an amount that to save otherwise would have taken eight months of back-breaking labor. The day he made the turn that effected it he came home jubilant. "Here!" he laughed, and dropped a little packet in my lap. It was a ring—a ruby set between two good-sized diamonds. I thought it the most wonderful present I had ever had. Where the ring is today, though, I could not tell you. Later on, possibly, you may be able to hazard a guess.

A stream of presents followed it. In three months' time—for Steve consistently still won—my first longings began to grow appeased. I had new gowns, a new fur coat, hats galore, gloves, lingerie and what-not. As well, too, I had an extra servant and, with my husband, began seriously to discuss taking another, a larger, apartment.

Nor was this all. New York's great procession of the prosperous found me a ready recruit, for I straightway joined its marvelous army of indolent, idle women. I had my masseuse, my manicure and my hairdresser, for soon enough I learned of these from the new friends my new money brought me. I also took taxicabs where before I'd counted pennies before taking a bus or street car. Once a month, or even more often, I enjoyed a week-end at Atlantic City or Lakewood. Steve joined me there, coming down late Saturday afternoon and rushing home again late Sunday night. I begged him to take a longer rest—but no! "Gad! I can't afford it!" he'd laugh. "If I'm out of the market even a day I feel I'm losing money every minute." I could not doubt it. When he took a day off he seemed utterly unable to enjoy it. Most of the time he sat and nibbled his fingers, scowling over his newspaper; or, on the other hand, if I roused him he would gallop wildly from one amusement to another. His air was

Digitized by Google

always as if something weighted his coattails—as if something held him back when he wished feverishly to plunge ahead. I saw ultimately what it was. The money made so easily had already filled him with an inordinate craving to make more. Already he had become saturated with the insatiable desire for the quick, easy riches that Wall Street's easy money engenders.

"You really ought to take a rest, a vacation, Steve," I insisted. "You have the money now and you'll break down if you don't."

He shrugged himself and answered rudely, irritably: "Oh, piffle!" By now, however, I was growing accustomed to rudeness and irritability. So far as I can see, it is a diagnostic peculiarity of the Wall Street dabbling mania. Let me add, though, that his growing fretfulness soon began to wear on me. More and more I sought Lakewood, Atlantic City—these and other retreats for the idle; for more and more I needed rest and relaxation. However, instead of taking it I allowed the incessant activity in my husband's blood to get into mine as well; and though no less idle, no less indolent than before, I had no peace unless I were devoting myself to some unusual amusement. Bridge, of course, found in me a ready devotee. As is the case with other timefree, frivolous women, I was at it morning, noon and night; or, if it were not bridge it was the matinée or a club luncheon, a club meeting—something or other like that. Yes! For I joined a club—or rather clubs—which, as I take it now, is the inevitable evidence in the case of every middle-class woman that she has too much time on her hands.

To return to my husband however.

His first real setback came in the tenth month of an almost unbroken success. A Wall Street tipster—a "tout," in the vernacular—was responsible for it. The man, as I recall it, professed to have inside information. He assured Steve that a certain road was about to "cut a melon," when, as Steve jokingly reminded him, the only thing that stock had ever cut was a lemon—some "Irish dividend" in the shape of an assessment. However, the fellow persuaded Steve to invest to the extent of five hundred shares; and that same afternoon the stock dropped like a plummet.

For a week my life wellnigh became unbearable. Aside from the fact that my husband had lost nearly twenty-eight hundred dollars, his mood grew so irritable—I might say even irrational—there was no living with him. Again I fled out of town and left him to his own devices. When I returned he was still grumpy, though a little less so than when I had left him. A recent transaction had recouped part of his loss and there was every prospect he would cash in an added profit. A week later he closed out the deal thirty-three hundred dollars to the good. Not counting the money he had drawn out to spend, Steve now had a balance at his broker's of sixteen thousand dollars.

For the first time now I began to feel a small, recurring sense of apprehension. Sixteen thousand seemed to me a lot of money, even though I'd seen how quickly if not easily my husband had made it. Daily—almost hourly, indeed—I recalled Benson's prophetic outburst: "You'll keep at it till you've dropped every cent you own!" Moreover, I'd had a message from my brother-in-law. After that night's heated colloquy he'd held aloof from us; but hearing that Steve was far ahead of the game Benson had risked a further breach with us by making a second appeal. He begged me to urge Steve to cash in his paper profits and quit ere he lost it all.

I felt as he did. That evening, when Steve for a moment had emerged from the depths of his evening paper's financial columns, I broached the topic.

"Hey—what?" my husband exclaimed. "Cash in and quit! . . . Say!" he growled. "You tell Phil Benson that when I want his advice I'll send round and get it."

I had something, then, to say on my own account.

"But, Steve," I protested, "just think! If you'll only draw out that money now we'll have almost enough to pay the balance due on your stock?"

"What stock? What do you mean?" Steve grumbled dully.

I told him I meant the firm's stock—the thirty thousand dollars' worth that the company still held for him in escrow.

"Oh, that!—that stock?" he laughed contemptuously; then added: "Gad! You don't suppose I'm going to stay satisfied, do you, with a piffling shoestring like that?"

In other words, Wall Street and all the money that Wall Street so lightly juggles in the air—this, I say, already had imbued him with contempt for an amount so small, so trivial, as thirty thousand! Like all the other dabblers, his dreams now were to be expressed only in terms of six figures—possibly more.

What is more, this same lust for easy, sudden wealth had begun to have its other, its sinister, side. It had begun to affect him in his business. I knew this, for already I'd begun to hear vague whispers here and there. One cannot dabble in stocks and not let his business suffer.

Wall Street men—they in the brokerage business, I mean—loudly protest that their business is all open, all above board. They defend even marginal trading. At the same time, though, I have yet to hear a Wall Street man—and I have heard many!—consistently explain why so many of their clients either deal under false names or settle their accounts in cash rather than with a check. Nor can these same Wall Street men make clear why other clients shy off from appearing in person at brokerage offices—or, if they do visit them, why they sneak in and out via the back door.

There is, in fact, hardly a brokerage office of any pretension whatever that lacks a secluded private room—a secret cabinet, I may say—where the not too rare secretive ones may transact a business that seems to require an astonishing amount of secrecy. Why?

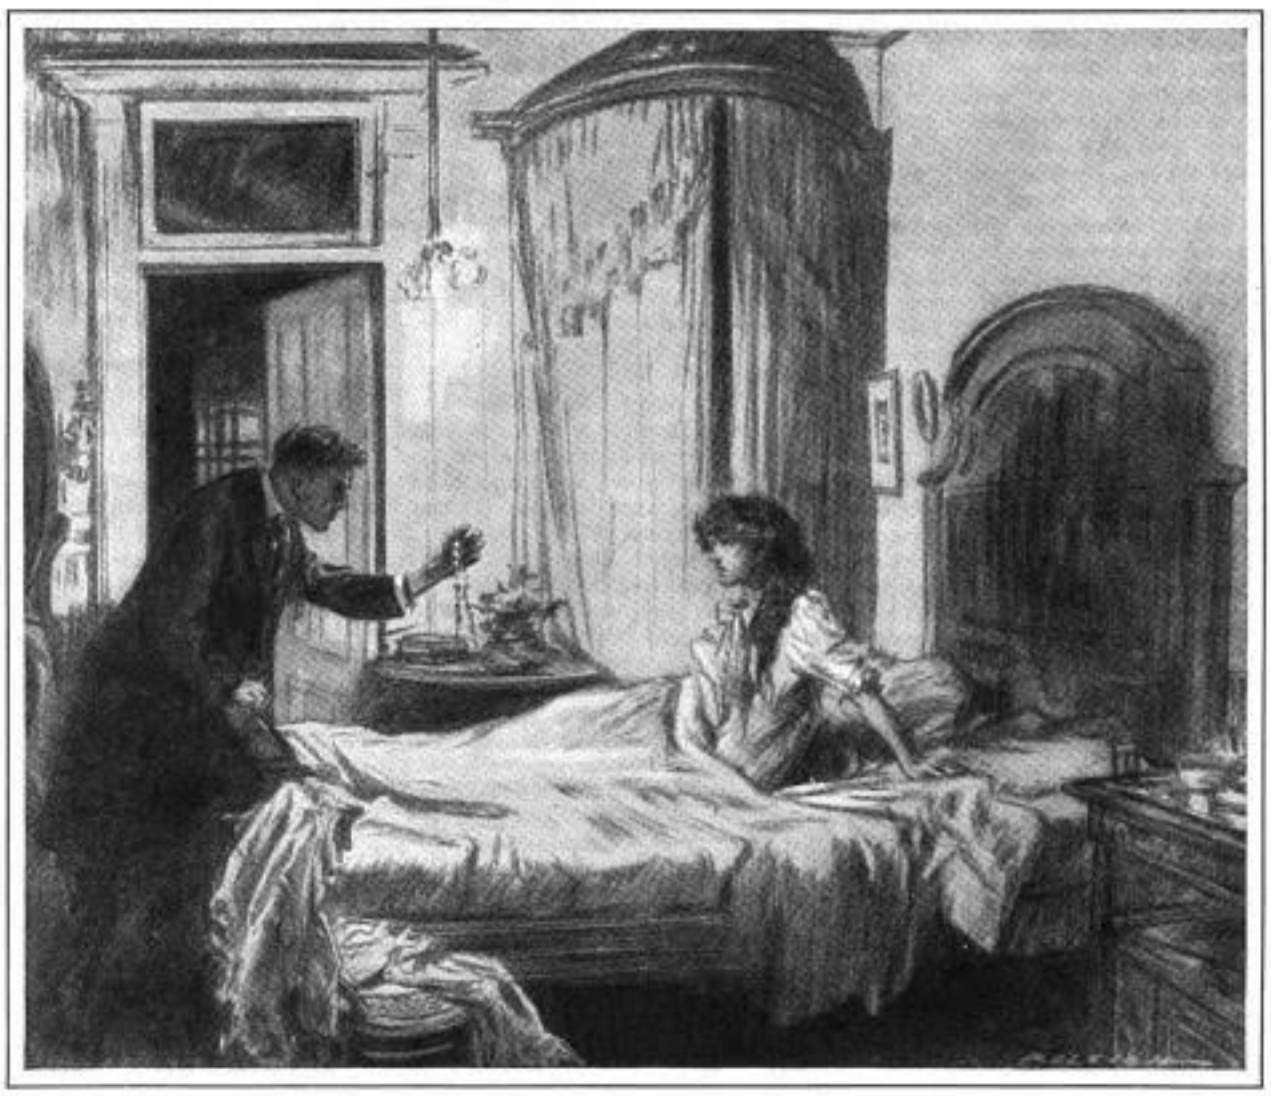
I found out presently. In exactly one year from the day he set out to dabble in Wall Street my husband was discharged by his employers.

It happened in this way: A lighting plant near New York was in the market for power engines to equip its central plant. The order was not exactly "velvet"—that is to say, it was not one in which there was any remarkable profit. Too many other concerns, for one thing, were competing for the contract; then again, it was a slack time in the trade and prices had fallen off. However, each and all of the competing firms were keen to get the order, since it would go far toward keeping their shops from shutting down.

My husband though—well, to use the expression I'd heard him use against another man, he "scamped the job." In other words, he was more concerned in his own Wall Street affairs than he was in having his firm get the trade. A deal in Union Pacific engrossed him—the stock was backing to and fro uncertainly; and rather than close out the transaction at a loss he stayed in town to watch it. The result was that a rival firm snapped up the lighting plant order. Their engines went into the central power plant, where assuredly my husband's employers' should have gone.

I dare say, however, it was not entirely the loss of this trade that cost Steve his place. No, I know that; for all salesmen, however good, sometimes lose an order. The plain fact is the company had heard through some channel or other why the order had been lost. Wall Street! The mere name of it was enough. Moreover, they had already warned him once. So now they gave Steve a month's salary in lieu of a warning, a check was drawn for the amount he had paid in on his stock—it was eight thousand dollars—and he was invited to seek some other berth, with no more consideration than would have been paid a five-dollar-a-week office boy.

I was aghast. More than that, I was terrified! By now I had begun to estimate the real hazards of my husband's hazardous avocation. Even he, filled as he was with the alluring promises of the Street—even my husband now and then let fall a remark that acutely struck terror to my heart. Assuming a nonchalance that I saw he nowise felt, he'd announce lightly: "Brown got his today!" or "They cleaned out Smith this morning!" Moreover, as the market climbed higher—by fits and starts driving toward its peak, the apex being reached the day of the San Francisco earthquake—these announcements grew in number. The fact is, the entire list was already overinflated; so that, even had the calamity on the Coast not occurred, the Wall Street crash would still have happened. At all events, my husband, despite his nonchalance, was, as I could see, inwardly concerned. No doubt he, too, had begun to reflect painfully that some day "they" might "get him" as well.



These periods of reflection, however, rarely lasted long. Even the loss of his place failed to stir him seriously—naturally, since it is another distinctive peculiarity of the dabbling mania to lack interest in sustained effort. By that I mean that men affected with the gambling fever have little liking for the plain grubbing that trade—business—involves. Of course the shock of losing his place for a moment staggered him; but the moment I, now thoroughly frightened, used it as an argument why he should give up Wall Street's gaming and return with me to our former mode of living, he rudely cut me short.

"Pshaw! Don't start in on that again!" he growled irritably. "Look here!" he protested. "Do you want me to grind away the rest of my life on a clerk's salary—on a beggarly income of seven thousand a year? . . . You let me alone!" said Steve, and added: "I'm going to knock out my pile without wasting time about it. Then we'll retire. I mean to have some fun in life."

Then came the San Francisco earthquake. As a result of it two things occurred—events in which I was vitally, personally interested. One was the tragic circumstance that Mosher—Mosher the fortunate! Mosher the lucky—was caught between the devil and the deep sea, if I may use that phrase. Inside of a week—almost overnight, in fact—he was stripped of his paper profits, cleaned out to the last cent he possessed. Today he still lurks round Wall Street, the scene of his former glories. Today, seedy and down-at-the-heels, he lurks in the front rooms of brokerage offices—a hanger-on, a tipster, a tout; engaged in drumming up trade for the very game that ruined him.

The other event, however, the companion result, the one of which I have spoken—that was even far more significant. Steve, my husband, made the first great "killing" of his career!

Billy Fortune and That Young Feeling

By William R. Lighton

ILLUSTRATED BY F. R. GRUGER

HOW do you tell when a man's old? There's different ways, but I claim there ain't but one you can go by. That's the way I'm goin' to use on myself. When I get to be old I ain't goin' to find it out by countin' up to see, nor by my whiskers, nor by my gums, nor none of them signs. They'll all fool you. No, sir! But one of these times I'll get throwed down and I won't bounce back. Then I'll know it's all over. When a man gets that way, he's old. Old, see? It don't make any difference how much longer he lives after that, he don't ever get any older.

Just years don't count. There was a widow woman once, down Laramie way, and a man with three thousand cows that wanted to marry her. The man did. He wasn't but thirty and he was doin' real well and gettin' ahead fine; but she told him "No" the first time he asked her, her bein' a widow woman and figurin' she'd just egg him on some. She reckoned there'd be plenty of time the next time. Yes, only there wasn't any next time. All the man done was just to get discouraged and go back to the cow business. And then the next thing we knew she'd run off with a sheepherder that was comin' seventy-two in the spring and didn't have but three teeth and them scattered, and his nose all on a slant where an old buck sheep had pasted him once, and one eye with a comical glimmer in it, and no great shakes for looks. She didn't want him much, and she kept tellin' him so and fightin' him off the best she could, but it didn't do her a speck of good. He stayed right with it till he got her. That shows. I'll leave it to you which one of them two men was the old one. It wasn't the sheepherder. He had the bounce in him. If a man's got that young feeling it don't matter a mite how many years he's got on his string. They don't cut any figure.

And another time there was the year of the hard winter in the short-grass country, when the snow stayed so long, clear up to your middle, and the new school-teacher was snowed in the schoolhouse down in 4-J Cañon for a whole week, with all the men folks from the Platte up to Rawhide rescuin' her. A plumb twenty of us there was. A body wouldn't hardly think it would take so many, would he? It didn't, either, toward the last; but we was all terrible busy workin' at it while it lasted.

She'd come up from Omaha along in the fall, and took the school to teach while she was holdin' down a claim. Whenever a girl takes to actin' like that, quittin' her home folks and goin' off by herself, it don't take a wizard to tell what it means. It means she's got notions in her head about some man that's lurkin' out in the rim-rocks somewhere. Either the man ain't never asked her or else he's been the wrong one. Either she's been rank disappointed or else she's rank hard to suit; but anyway she's got a man in her mind. Yes, sir, when a girl commences to behave unnatural you can always tell that's what's the matter.

"Hello, Traveler!" She Says With a Sound in Her Voice That Just Exactly Matched Up With the Day

This one, she was goin' to be able to take her pick out of a big bunch where she'd come to, if she wanted to. The look of her showed me that, the first time I set eyes on her, when I stopped at her claim shanty to get me a drink of water. The thirst come on me all of a sudden, the minute I got in sight of her shack from the lower turn of the trail, and remembered what I'd heard tell about her, and I headed for the place on a lope. Halfway there, though, I pulled down to a walk and stood up in my stirrups for a look.

"Why, hello, Billy!" I says to myself. "Her water bucket must be awful popular. Everybody in the country must be dry." "It certainly does look that way," says I, because Red McGee's buckskin was grazin' along the fence, and the little sorrel mare with white legs that belonged to one of the mine bosses down at Sunrise, she was tied to the gatepost; and there was Steve Brainard's big black, of course, and the piebald that belonged to the English sheepman from over beyond Willow, and two or three more I didn't know by sight. There was a right considerable gang of 'em. It bothered me some. I hadn't figured on that. I had half a notion to turn back and come after my drink some other time; but I knew every man in the bunch would be havin' his eyes on me by then, so I just went on and got down and went in.

Anybody Could Have Told He Was Goin' to be Amusin' Just From the Way He Looked

There they was, the whole outfit of 'em, strung round the room, settin' on different things or leanin' round against the wall, with her in the middle. When I got to the door Red McGee, that was squattin' on the floor over by the woodbox, he sung out: "Well, look who's here! Come on in, Billy, and take a number—yours is eight"—like it was a barber shop on a busy Saturday. The Englishman he spoke up: "Yes, Billy, come in. Red didn't mean that. Delilah's shears aren't in sight; you're safe."

"I don't believe Billy's acquainted with the Delilah woman," says Steve. "He'll think her scissors have got somethin' to do with sheep-shearin'."

"Not sheep," says I; "goats, by the look of this crowd." Steve, he just laughed.

"Miss Estes," says he, "this is Billy Fortune that we've been tellin' you about."

She come right straight over to me and give me her hand, with a look right straight in the eyes and a smile fit to warm a man's blood up. She was tall and slim and straight and supple as a sycamore saplin', with a way of carryin' herself that made you think for all the world of a healthy, strong young tree when the wind moved it. A girl don't learn how to do that; it's born in her. You'd have thought that that layout of punchers and wranglers and sheepmen swarmin' in on her that way would be enough to bother her to death; but it didn't. Except for her color, you couldn't tell she wasn't plumb used to it. An awful lovely color it was, just exactly like a peach that's got dead ripe on the very best part of the tree where the sun can get to it all day long. I liked her eyes best though. They was real quaint eyes—I can't tell you about 'em—a funny kind of a changeable gray, with a funny way of lightin' up from behind with soft livin' fire whenever she'd get interested. A man would have to be horrible unreasonable not to be contented with them eyes of hers. I felt as if I could just set and do nothin' for weeks and weeks but just look at 'em. Yes, sir, that girl she could certainly pick and choose if she wanted to.

"I'm awfully glad you came," says she to me with a comical little laugh. Did you ever hear a red-winged blackbird settin' and sort of chucklin' to himself? That was how her voice sounded, rich and soft and sweet. "These gentlemen have been talking about you," she says.

"Who? Them two?" says I. "If Steve and Red have been discussin' me I might as well be goin'."

"Oh, no!" says she. "They've been saying some very nice things."

"We've just been bettin' on how soon you'd get here," says Red, "and what you'd say you'd come for. What was it you come for, Billy—a spool of thread to mend that stretch of fence where the wire's down, or a knittin' needle to fix your cinch, or what?"

"No," says Steve; "you don't do Billy justice. He just dropped in to ask which way is straight up."

"Shucks!" I says. "Anyway, that's better than straight down, the way some others is headed."

The girl, she laughed again. "I know why you came," she says; "you came to see me, and you're very welcome." She fixed a cushion for me to set on on the doorstep. "Now," she says, "if you gentlemen will excuse me, I'll have a pot of coffee for you in a minute. The water's just boiling."

Well, that's the way we got acquainted with her. I expect you'd call it sort of sudden, but it suited us. By the time we went away from her, after we'd hung round as long as we could, she sure had a pack of real good old friends. When we was ridin' out to the main trail from the house, bunched up together and joggin' along, I reckon we all had pretty much the same thing on our minds; but it was the Englishman that said it, slidin' his hat onto the back of his head and lookin' round from one to the other of us.

"Well, boys," says he, "it's right rough to be all grown up, ain't it?" And Red McGee spoke up quick.

"Yes, sir," says he; "it's plumb sad. And the kids these days don't appreciate theirselves, do they? When I was packin' a spellin'-book back yonder, I never had no such advantages. I got my a-b-abs lammed into me by a bald-headed old rooster with goggles that had got both of his ears froze off. He give me a grudge against schoolin'. It's a heap different these days."

"But, say," says the mine boss, "do you guess she'll make much of a teacher? Don't it strike you she's kind of triflin' in her mind?"

Steve Brainard, he give a snort. "Triflin'?" says he. "Listen at him! Triflin'! Just because she likes the men folks and can blush some. Where's your judgment, Tommy? A man like you would call the stars triflin' just because they shine." He commenced to roll him a cigarette, but got it all mussed up and threw it away. "No, sir," he says, "she's as full of solemnness as anybody; but it's all so smothered up in youngness that it don't show on her. Triflin' your granny!"

"You're mighty right, Steve," says the Englishman. "The melancholy of youth ——"

"Aw!" says Red. "Shut up, you two. She's all right, right the way she is. I'd give my best pair of spurs if I could be a kid and set and have her learn me half a day, and I'd throw in my boots and saddle. Yes, I would."

"Yes, I reckon you would," says Steve; "but you spoke too late, Red. A man mostly does when he begins wishin' he was young. I've noticed that."

She didn't start her school-teachin' till Monday week, but I didn't see much of her in between on account of me not bein' there. I was mostly prowlin' round down along the Platte different places, lookin' for signs of a bunch of cow critters that had been rustled out of the Butte country. That was how I come to meet up with the professor.

He certainly was a funny man, the professor was. Why do you reckon it is that one of these wise men has always got to be so comical? Anybody could have told he was goin' to be amusin' just from the way he looked when I run

Digitized by Google

up on him the first time. There he was, settin' straddle of the top of a high rock down beside the Platte, holdin' on with a couple of terrible long legs wrapped tight round it, wavin' a great big green umbrella round and round his head and hollerin' the top of his voice off, and never stoppin' only just long enough to catch his breath. It was me he was yellin' at; I could tell that when I was half a mile off; and I pulled up and set and looked at him. It struck me he must have been at it a good spell, because his voice was soundin' shrill and wore out; but he was keepin' it up regular, one squeal every time his umbrella went round, like he was some kind of a jigger wound up with a spring.

"Billy," I says, "the gentleman's in distress. We better go see about it. It ain't like us not to go see what's ailin' him, is it?" And I racked over to where he was. The nearer I got, the more I couldn't make it out. His hat had fell off and he'd tore a big place in his pants, and his lean face was all puckered out of shape with sufferin', with the sweat runnin' down it like the middle of summer.

"Hello!" says I. "What seems to be the trouble?"

"Thank Heaven!" says he; "you've come!"

"Yes, sir," says I, "that's the solemn truth—I've come. But what have I come for?"

"Please," he says, "I want to come down from here. I've been imprisoned for all of an hour."

"Imprisoned?" says I. It wasn't much of a rock he was straddlin'; if he'd just uncurled his legs he could 'most have reached the ground. "How the Sam Hill did you get up there?" says I to him. "Why don't you just slide?"

"That dreadful beast drove me up," says he.

"Which dreadful beast?" says I, because there wasn't nothin' in sight but him.

"Round here on the other side," says he; and when I'd peeked round, there was an old ram layin' in the shade of the rock in the middle of a mess of truck the professor had dropped when he started to shin up. He seemed to be enjoyin' himself real well, the ram did. He'd tore open the professor's little lunchbasket and eat up what was in it and part of the basket besides, and now he was commencin' on the brim of the professor's nice little straw hat, layin' there and chewin', with his eyes half shut and his stumpy tail flickin' just as contented.

"Well, if it ain't Scotty!" says I. Why, certainly I knew him; I'd been knowin' him years and years. He was the only sheep I ever had knew in my life that I thought anything of. That was mostly because he seemed to think too much of himself to associate with sheep, but just rambled round by himself, up and down the river, pickin' up his own livin' and spendin' his time meditatin'. Everybody in the whole country knew Scotty; he had a pedigree of devilment that would match up with anybody's. But he knew his friends, Scotty did. When he saw me he was just plumb tickled, bouncin' up and lettin' out a blat and beginnin' to prance round on his hindlegs and motionin' for me to come and play with him.

"Well, gee whiz!" says I to the professor. "Did you let that old coot run you up there? He didn't mean nothin' by it; he was just sufferin' for company. Come on down."

"Not for worlds!" says the professor, startin' to wipe the sweat off his face. "Not for worlds! You can have no idea of the ferocity of that animal. It's frightful, sir! I was collecting specimens over there beside that fence and I happened to be stooping over to examine a curious outcropping, when he attacked me unawares from the rear and threw me into the fence and made this great rent in my trousers, and then he pursued me up here. I wouldn't come down under any consideration until you drive him away. I'll be obliged if you'll do it at once, sir."

I hated to do it. "Scotty, old man, you see how it is," I says to him, and with that I drove him off up the hill a ways, and then the professor lit. You'd hardly believe how grateful he was to me, while he was standin' there and stretchin' the cramps out of his long legs and feelin' himself over for sore places. He wanted to give me half a dollar. Yes, he did! "No, sir," I says to him; "I've had a heap more than four-bits' worth of pleasure with the variety you've give me. This life here was gettin' to be all too much of a terrible sameness." "Well," says he, "how far is it to some place where we can spend it for something to eat? That brute has eaten all of my luncheon and I'm famished."

I had a snack in my saddlebags and I dug it out and whacked up with him, us settin' with our backs up against the rock and him explainin' himself to me. He wasn't such a bad lot, when a body began to get onto him; only ain't it a horrible affliction to a man to be afflicted with one of these solemn minds? He wasn't a bit old—I wouldn't guess he was a mite over thirty or so—but he was one of them kind that's just born long and lean and serious. If he'd ever laughed in all his whole life it hadn't left any marks on him. Alexander Kirkwoody, he said his name was, and he was one of these professors of rocks from Lincoln, Nebraska.

"Oh!" I says, when he told me. "That accounts for it. If you'd have been a botany professor, now, I reckon I'd have found you up a tree, wouldn't I?"

He was right in the middle of a big bite of bread and bacon when I said it, and he stopped his bony jaws and looked at me as if he didn't think he'd heard me right. "Sir?" says he.

"Oh, nothin'," says I. "It don't matter a speck. But say, you'd ought to have made friends with Scotty. He could have saved you a sight of hard work, buttin' the rocks open for you."

"Sir?" says he again; and with that I quit and let him do the talkin'.

He wasn't much of a hand at it though. Once in a while he'd say somethin' sort of promiscuous about the country or the weather or such like; but most of the time he was just settin' with his jaws goin' and his eyes blinkin' through his gold-rimmed eyeglasses, starin' off at the hills and broodin' to himself. It wasn't till after the last bite was gone that he seemed as if he was really cinchin' his attention onto me, turnin' round so as to get me in the middle of his glasses.

"Mr. Fortune," says he, "I dare say you're wondering why I'm here, aren't you?"

Well, it had been sort of flittin' through my head, lookin' at him; but it hadn't exactly been worryin' me none. "Why," I says to him, "it's kind of hard to figure out, you bein' such a joker."

"Sir?" says he. "Joker? Mr. Fortune, you mistake me entirely. You do, indeed. I am here on the gravest affair of my life. I have been considering whether I might speak to you about it. I need the service of a friend, Mr. Fortune. You have done me one kindness, assisting me out of a most embarrassing situation, and I feel that it has brought us closer together than mere strangers. I take you to be a man of fine feeling. May I speak freely, in confidence?"

"No Doubt You Have Experienced the Tender Emotions Toward the Softer Sex"

Wouldn't that sound rank ridiculous to you, from a long, bony, growed-up man? It sure did to me. "Professor," I says to him, "speak freely."

It took him quite a little spell to get strung out though. You wouldn't have expected that kind of a man to blush, would you? He didn't hardly seem human enough. But he done it, with the red startin' to crawl up his lean neck and over his face and clear up to the edge of his mop of sandy-colored hair; and then he took off his glasses and wiped 'em, real careful, before he put 'em back on again and looked at me.

"You are a man of broad experience, if I judge correctly," says he, goin' right at it. "No doubt you have experienced the tender emotions toward the softer sex. Am I correct?"

You don't have to believe me if you don't want to, but that's just exactly what he said to me, with me settin' there and holdin' the edge of my tongue in between my teeth till I made the tears start, tryin' not to laugh at him.

"Professor," I says to him, melancholy as an old owl that's missed its supper, "you're correcter than you've ever been in your life. I've felt 'em millions of times. That's my specialty."

He was so absorbed that he never seemed to guess I was foolin'. "Ah!" says he. "Well, then, let us get to the point. It was love that brought me here."

"Ah!" says I, just the same as him; "but don't tell me she don't love you back, professor. I couldn't bear to hear it. Don't you say it!"

He fetched a long breath, lettin' his brushy head drop into his bony hands. "I do not know," says he mournful. "Sometimes I dare to hope, and again I despair. I can't make up my mind."

"Well," I says, "but what about the lady's mind? That's mostly got somethin' to do with it, I've found out. What does she say? Ain't you asked her?"

"Yes," he says; "I laid suit to her very earnestly indeed. It was six weeks ago in the middle of vacation. She couldn't have mistaken my feelings, not at all. But she—she—laughed at me. Not scornfully, Mr. Fortune. No. Not in sport. She didn't mean to give me pain; but—she laughed nevertheless. I had had reason to believe that she respected me, even admired me—I had known her for a long time; but—she laughed."

I was certainly sufferin'. Did you ever have somethin' funny strike your mind in the middle of a funeral? That was the way I was feelin'. "Laughed!" says I. "At you, professor? Shockin'!"

"Yes," he says; "she laughed." It seemed as if that had got stuck in his crop. "I fear she's light-minded, Mr. Fortune."

"Oh," says I, "I wouldn't think nothin' as awful as that. But what did she say?"

He looked at me right distressed. "That is what troubles me," says he. "I cannot recollect exactly. When she laughed I was confused, and afterward I couldn't remember clearly what she had said. Really it was too grave an occasion for laughter, don't you think? It has left me quite uncertain of my position. That is why I am here, sir. I must have the matter determined."

"Here?" says I. "Why, how in the name of Mike are you goin' to get it settled here, playin' tag with old buck sheep and wagglin' green parasols? That looks sort of curious to me."

"That's just what I wish to speak about," says he. "I have followed the young lady up here. I wonder if you may, by any chance, know her—Miss Estes?"

"What's that?" says I. Wouldn't it strike you dumb? It did me. "That girl?" says I. "The schoolteacher? Is she the one?"

"Ah!" says he. "You do know her, then? Would you mind telling me what you think of her?" He was real eager about it, leanin' over close to me with his hand on my shoulder and squintin' into my face.

"Oh, murder!" I says. "I can't, professor—honest, I can't. She's a bird. She's a whizzer. She's a world-beater. You just ask anybody. On the square, you don't mean to tell me she's the one you've been makin' love to?"

He took it just exactly the same as he'd took all the rest, serious as a horse. "Yes," says he. "Candidly, Mr. Fortune, knowing both of us, how does the matter impress you? I mean to say, if she had met your proposal in the way I have described, would you pursue it further? Have you been able to judge of her character clearly enough to advise me?"

What would you have told him? I wasn't goin' to try it. Not me. "Oh, gee whiz!" says I; "you can't judge by what I'd do. I'm apt to be right flighty in my love-makin'." I got up on my feet and went and got my pony and climbed in the saddle, and then I rode up again to where he was. I 'most felt sorry for him, honest I did; he looked so kind of forlorn and down in the mouth. "These women folks are a sight of trouble, ain't they?" I says to him, gettin' ready to stick in the spurs. "Hop to it, professor," I says, and with that I struck off up the cañon. It was the only thing I could think of to tell him.

I went up by the schoolhouse in the mornin'. Right early it was, and cold—one of them crimpy, still mornin's that put the ginger in you outdoors and make you set straight in your saddle and take deep breaths, with your head feelin' bully and ready for anything that comes up. It was so early the kids hadn't showed up yet, but there was teacher out in the yard, loadin' up her slim arms with wood off the woodpile to make a fire. She had her hat off, and some little wisps of her hair loose round her ears and the nice color just bloomin'. She must have been feelin' pretty much the same as me, because when I got close she waved her hand and sung out to me.

"Hello, traveler!" she says with a sound in her voice that just exactly matched up with the day. Haven't you

Digitized by Google

knew folks that always seemed as if they belonged right wherever they happened to be? She was one of 'em. I couldn't help noticin' it in my mind, lookin' at her. If she hadn't happened to be standin' right in that place when I come along it wouldn't have looked right, somehow, without her. Can you understand that?

"Hello, friend!" I sung out to her, and I dropped my rein over the pony's head and slid off and went over to her. "You put that down," I says to her, and I made her drop the armload of wood she had and I packed it in for her. "That ain't your job," I told her. "You let the mavericks do that. You've swept out, too, ain't you?"

"Why, of course!" she said. "I want to keep the place nice and attractive for the children."

She sure had made headway at it. It was nothin' but a log house with some boards inside, but she'd fixed pictures on the walls, all full of pretty color, and she'd carried in armloads of gray sagebrush and made big bouquets out of it for the bare corners and up over the windows and every place there was room. Did you ever know that sagebrush could look like anything? I never. I'd been rank weary with the sight of it, years and years, till right then; but she certainly had made use of it.

"Well, I never!" I says to her. "Ain't it pretty!"

She was real pleased, laughin' a low little laugh and flushin' up. "I can't bear ugliness when there's no excuse for it," she says.

"Excuse?" I says. "Do you reckon there ever is an excuse? If it's got any real good excuse then it ain't real ugliness any more, is it?"

She laughed at me again, with that funny, quaint fire comin' into the deep part of her eyes. "The great mind dwells on the beautiful," she says, "and finds it often at its best in what the small mind calls ugly." Do you expect she made that up out of her head? It's kind of stayed by me ever since, that has.

I built up the fire for her in the stove, and then I went down to the spring after a couple of buckets of water. When I come back she was standin' in the door, leanin' her head against the side and lookin' away off over the big wide jumble of rocks and hills. It was a queer look she had on her face—not dull, like it would have been with some folks, but as if she was dreamin'. It was a shame to interrupt her.

"How do you guess you're goin' to like the country?" I says to her.

She straightened up and spread out her supple arms wide. "Oh, it's wonderful!" she says; "wonderful, wonderful! I love it. I love everything in it." She give me a funny little sort of a sideways look—not a mite familiar, but friendly and honest and gay all together. "Best of all," she says, "I like the country's men. They're so different, with so much of real life in them, and—and—oh, there isn't any word for it!"

The way she said it a man couldn't think she was sayin' it at him, unless he was an awful fool. "There's lots of words for it," I says, "but they don't any of 'em say just what a body means. I know what you mean. It ain't because we're real different; it's because the life's different—livin' free, you know, and facin' things raw with nobody nor nothin' to soften 'em down for you, and not carin' a rip what comes next nor how soon it comes, but just sort of figurin' mebbe you'll be ready for it, or mebbe if you ain't it won't matter much. See? It's because there ain't any funny little rules for livin' in this country. Can you understand that?"

She nodded her head at me again, bright and quick. "Yes," she says, "I understand. It's spirit—that's what it is. That's the best part of a man, and the men up here have it, even the commonest of them."

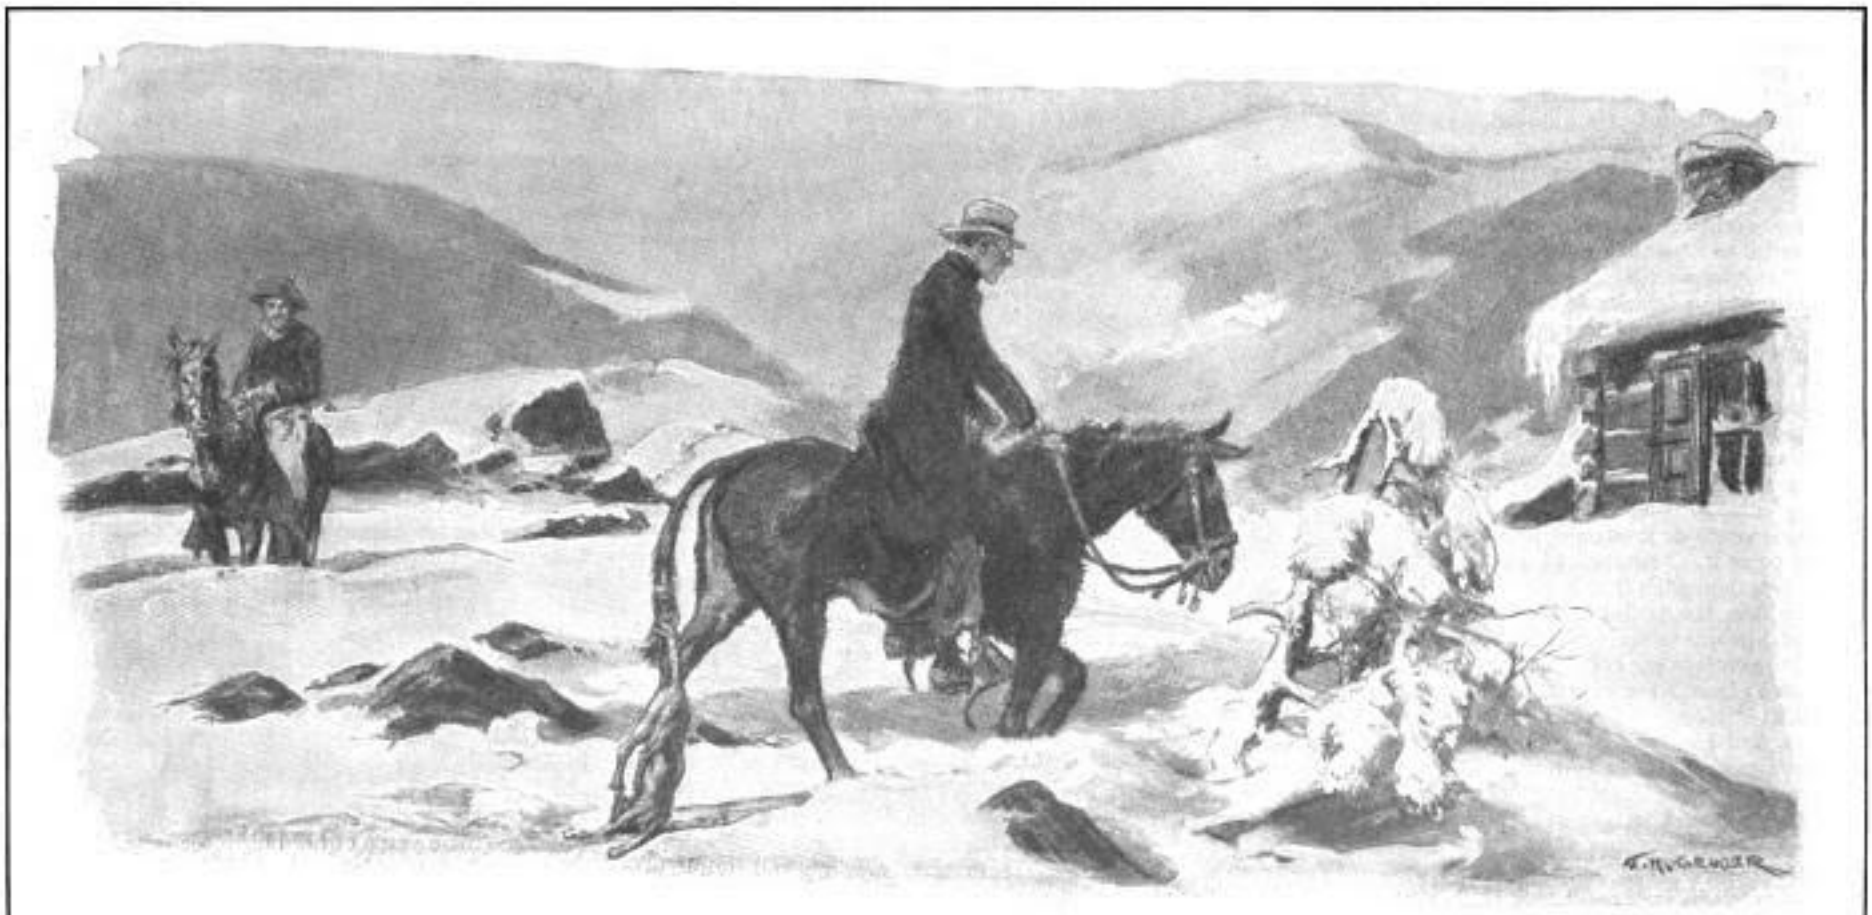
"Spirit," I says after her. It brought me back, because all of a sudden it made me remember. Up till then it seemed as if I'd been thinkin' of just me and her, with just us two together. I'd clean forgot the professor, but that word sent my mind off on a slant to him. She'd laughed at him? I laughed, too, down inside of me.

"Well, now, that's funny," I says to her; "I wouldn't have thought you'd care much for this kind of a man. I'd have thought the kind you'd like best would be one of these nice mild lads that's been brought up right among folks, and can sling good English, and reads the dictionary regular, and that folks look up to—one of these wise boys that had never had anything happen to rough him up none. That's the kind I'd have picked out for you to like best."

I guess it was rank mean of me to say it to her, wasn't it? But I didn't stop to think. I wanted to hear what she'd say. But I might as well have saved my breath, because she never said a blessed word. All she done was just to turn round to me and give me a look, long and slow and deep, with her lips held tight and the red commencin' to glow in her soft cheeks. If she had a mind to answer me she was goin' to take her time to it; but she never did, because right then there come a bunch of kids over the hill, runnin' their ponies like Indians and raisin' the dickens, and then I knew it was all over. "Well, so long!" I says to her, and I went and climbed in my saddle and headed for Rawhide.

Well, now about that snowstorm. You may think you know what a snowstorm is, but you don't, because you didn't see that one. It was the great-granddaddy of all the snowstorms, that one was. It certainly did snow some that time.

I could tell it was comin' before it had got much past noon, because along in the middle of the mornin' things got all soft and sultry-like and heavy. It wasn't the same as summer; it seemed more like a summer day that's got some kind of an unhealthy disease. Things didn't smell right nor look right, and the sun didn't shine right, because away high up in the air, so far you had to feel it instead of seein' it, a mist was hangin', thin and pale, just enough to take the life out of the sunlight, and the wind without any gimp in it but just mopin' round first one way and then the other, real fidgety. It didn't make you feel uncomfortable, but just uneasy in your mind.



"Billy," I says to myself, "this can't last long. You know it can't." "No," says I, "I reckon you're right. There's somethin' comin'." And I hadn't any more than got it out of my mouth till here she come—whoo! Quick? It was like an old maid changin' her mind. One minute it was soggy-warm, and the next minute the sun winked out and the air was full of foggy cold that stung your lungs clear to the bottom, and the minute after that the ice-dust was drivin' straight out of the north, tons and tons of it, sixty miles an hour, so thick it felt like a solid wall against your face. It blotted the trail out from in front of me in just one swift wipe. My nose was choked tight shut with it and my eye-winkers was froze stiff together. My pony stood stock still and shivered and then swapped ends, with his head between his front legs, and started driftin' downwind. I didn't try to stop him; I was plumb pleased to have my back to it till I could have time to fetch my breath. Cold? Oh, hush! It was so cold it felt blisterin'-hot against your skin when it hit. It was just exactly like hell froze over on top sudden. Can you understand that?

"Well, for the love o' country, Billy," I says after I'd laid down on the pony's neck to get my face thawed out, "ain't this the climate, though?" "Climate!" says I. "You can call it climate if you want to, but that word don't suit me. But it don't matter about the name. What I want to know is what you're figurin' on doin'. Where you goin'? You can't ever get to Rawhide, facin' it." "I ain't goin' to be fool enough to try," I says, "nor I don't care where I'm goin', just so I get there pretty soon. This'll get awful humdrum in a little while. It'll be hard on the cattle, too, won't it, that's caught away from the hills?" And then you know how a man's mind runs on. Thinkin' of cattle made me think of sheep, and then of Scotty, and then of the professor, and then about teacher. And that threw a swift scare into me.

"Oh, in the name o' Heaven!" I says, stiffenin' up in the saddle; "what do you reckon has happened to her? It must 've been just about time school was lettin' out when it hit, wasn't it? She ain't never been acquainted with a storm like this, and it must be all of three miles from the schoolhouse over to her shack. And she must have walked, because you never noticed her havin' a horse this mornin', did you?" "No," says I, "I never. She didn't have none. And if she set out afoot she'd never make it in this world. Billy, for the Lord's sake get a move on you!"

Well, I did. It's no use tellin' you that part of it; it would take too long. I aimed to get to her shack first because that was closest. It took me a good spell, just gropin' my way blind through the whirl; mebbe I wouldn't have got there at all except for strikin' a string of fence and followin' down by the wire; but I found it after a while. She wasn't there. I went in and rustled round and fixed up a bundle of blankets and some grub, and then wrapped some more blankets round me and struck out again for the schoolhouse. I like to never made the riffle, three miles straight across the wind, with my pony fightin' every step of the way to have his head. Part of the time I got down and footed it, draggin' him by the bridle. We wobbled a good bit, I expect. It was right on the ragged edge of

Bulwarks of Business Policy

Good Strong Roots—By James H. Collins

ILLUSTRATED BY CHARLES D. MITCHELL

If He Brings a Friend to Lunch the Waiter Serves the Dishes in a Way That Makes it a Real Occasion

NOT long ago a large Broadway restaurant closed up after several years' effort to establish a paying business. All the conditions were apparently in its favor. The district selected is one where the tide of prosperous office population has been rising rapidly, bringing an ever-growing demand for good food and good service. At the same time there was little competition and the establishment was located in a famous building. Advantages were many and shortcomings few. Yet the business was not profitable.

Far down Broadway stands another restaurant of the same class, but in a part of New York where the tide of good office population is steadily falling as business moves uptown. When it was founded, years ago, the city's best firms were all within a few minutes' walk. Now they are gone, however, and the old buildings are either empty or let for manufacturing. The neighborhood is one suited to lunch counters and dairy eating places of the cheaper sort. Every condition is against this second restaurant apparently; and yet it continues to draw a large patronage and is profitable. The first restaurant failed—as much as anything—because it threw down no roots. Planted in the richest of soil, it made no lasting connections. The other restaurant succeeds because, though in soil that is steadily growing less fertile, it has strong taproots reaching down into the subsoil and is gathering every bit of nourishment.

In the big uptown establishment the waiters were strange. They looked as though they had been hired about a quarter to eleven that morning, made halfway presentable in misfit black coats and turned loose among the tables. They were not familiar with dishes on the menu, had to ask where the knives and butter were kept and were uncertain about their tables. Apparently none of them expected to be working there the next day. The guests, too, seemed to be chiefly strangers. At the downtown restaurant, however, the atmosphere is different. The place is homelike. Waiters have worked there since they were boys and know the guests, many of whom have eaten lunch at the same tables at the same hour every day for years, served by the same waiter. The latter knows their little preferences. The kind of butter they like is put on the table and the kind of rolls they always eat. If their waiter is away the head waiter knows. All the waiters know the guest's wife, his son, his daughter, his stepmother, and report to him at noon if one of the family has stopped in for a lunch while shopping. If the guest's appetite is not good the waiter assures him that it is the weather. If he brings a friend to lunch the waiter serves the dishes in a way that makes it a real occasion.

Why the Old Restaurant Succeeded

THE uptown restaurant evidently drew a changing patronage for several years and closed up when it ran out of potential new customers. The downtown restaurant, however, draws the same customers in its own neighborhood and has a national clientèle as well, for thousands of merchants, buyers and salesmen from all over the country, visiting New York occasionally, are pretty certain to drop in there for lunch.

The difference between these two institutions is highly interesting as a matter of policy. In the restaurant that went out of business the management was what might be called brisk. The head waiter snapped his fingers at his men and the manager seemed to be on the spot all the time, watching, economizing, running the place as a moneymaking concern, with the least sentiment; but the necessity for making connections was evidently not seen, and in the end the place did not even make profits. The other restaurant, on the contrary, has always been conducted with considerable sentiment and dignity. The founder looked upon his employees as servants of the family. "Bus" boys grew into waiters and waiters were kept as long as they could get round and do their work. As the proprietor grew rich he stayed away from the office much of the time; and when his sons came into the management they never gave the business the close attention that it got during its first years. Yet, in spite of this apparent neglect, the deep, healthy roots thrown down by the human organization, an outcome of dignity and sentiment in policy, have made the business solid and thrifty despite disadvantages of location.

The Value of Friendly Relationships

A CERTAIN type of executive forms connections almost instinctively. He does not stop at enduring relations with customers and employees, but seeks permanency in details that seem to be of minor importance. A large public-service corporation has many branch stations scattered through an Eastern city. The nature of its business is such that the company has more than one reason to dread fire. If only one of its small branches were burned out the loss would be considerable, while interruption to service would inconvenience the public and hamper the whole organization. At the same time the nature of the equipment is such that there is always a strong possibility of fire.

Branch stations have been put into fireproof buildings wherever this was possible, and employees throughout the service have been trained to deal with a fire in special ways. The first weapon brought into use is sand, which has been found effective in smothering a large percentage of small blazes. If sand does not answer then big tarpaulins are spread to inclose a larger area round the fire and cut off oxygen—this has also been found effective. When the tarpaulins fail then chemical extinguishers are used. If they are not effective then water is brought into play. The character of the equipment is such, however, that water will usually do far more damage than fire. The destruction wrought by a stream from a firehose is such that employees are cautioned to try other methods before resorting to water. Of course as soon as a blaze is discovered an alarm goes in to the city fire department. Very often employees would have a fire under control with sand or tarpaulins when the firemen arrived; yet the latter, taking their own view of the situation, would go to work with axes and hose, zealously douse the equipment, put out the last smoulderings—and do a lot of damage!

This company has a superintendent in charge of its branches who believes in making connections. Study of the fire problem persuaded him that proper connections would solve it. He wrote to the chief of the fire department, told him that the company dreaded fires and water damage, explained the technical conditions of the business, and described the precautions taken to avoid fires and fight them in his own organization. He asked for letters to the fire captains in districts where the company has branches, which were given, and then called on these captains one by one. After getting acquainted he explained the problem, took the captain through the branches in his district, showed how the company had its own peculiar type of fire and how it originated and acted, the special ways followed in fighting it, the damage done by water and the precautions taken to keep a fire on the premises.

This explanation was interesting to the fire captains. It is part of the firefighting business to understand local conditions. They said they would like to have that sort of understanding with every property owner. Steps were then taken to bring the local firemen and the company's employees together. The captain sent his men to inspect the premises. Friendships were formed. This company employs many young men and women. Very often a fireman, impressed with the character of the plant and the work, would ask if there was a chance to get his son or daughter a job. Those who proved available were interviewed and hired. In a little while the understanding between this company and the fire department was so good that the danger of damage from the unintelligent fighting of a fire was cut down to almost nothing.

A connection of that kind is not especially difficult to form and maintain. Yet, not long ago, for lack of such understanding, the firemen in an Eastern city thoroughly tied up a big street-transportation system. Defective insulation caused an electrical blaze. A switch was turned, a circuit broken—and the fire was out. Five minutes after the trouble began traffic might have been resumed; but somebody had turned in a fire alarm and the firemen came, bringing the usual crowd. This incident occurred in a modern station, thoroughly fireproof. There was absolutely nothing to burn; but the firemen found smoke coming from smouldering insulation. Not understanding the company's plant, they set to work with axes and hose. The system throughout the city was tied up for the better part of an hour while they put out the smoke, and remonstrances by the transportation men simply made them more determined.

The Man Who Hated Change

THE business man who has this faculty of making strong connections with customers seldom stops there. It is the other way about—he enjoys good relations with customers because he forms them with everybody else. The president of a certain manufacturing concern began business with little else than the patent rights to a doubtful new invention. It was a novelty more or less crude mechanically, and quite out of the line of popular demand and trade ways at that period. So he had a fight on his hands from the outset. He had to fight to win over the consumer and to fight trade prejudice and stagnation. The device had to be perfected with slender capital; and as soon as he got on fairly firm ground a vigorous competition materialized, bringing another kind of fight. That business today is worldwide in scope and its founder a rich man. It is often pointed out as a business exceptionally well rooted by connections.

The boss is not magnetic, but is rather a conservative hater of change. If he lunches twice in the same restaurant he goes to the same table, so that by the third time he eats there the waiter has accepted him as an old customer. Every night he walks a block out of his way to get his newspaper of the same boy. If he puts up at a hotel in some strange city he gets acquainted with the manager and assures him that he will stop there when he comes again.

An Old Woman and a New One in the Old World

By Corra Harris

ILLUSTRATED BY HENRY RALEIGH

WE CAME from Madrid to Rome along the Riviera, which must be one of the beautifully embroidered edges of creation. There were pines, palm trees, oleanders, aloes, roses everywhere; a fadeless indigo sky overhead. On one side the sea like the sky made versatile with the eternal motion of waves, blue wings of water, ever and ever coming toward you, never reaching you, always dissolving along the shore in a veil of white foam. On the other side the Apennines crowded down like ragged cathedral towers built by giant angels, with the villages of men hanging upon them like amulets.

I have observed this—that the best men and women are not to be found anywhere in the most beautiful and comfortable places. God knew what He was about when He made the greater part of the earth difficult to live in. The best human virtues grow where the soil is poor, where the weather threatens more than it blesses, where the skies are often gray and the sea sends in a cold mist to dishearten the land.

A man finds the match for all his strength in such conditions, and the necessity for using it. And strength is not enough. He has to add to it the desperate hope of faith in God before he is equal to the odds. The last places from which religion and honor and courage and virtue will fail are these terrible coasts, where men live between a grizzly land and a frowning sea. The situation does not call so much for intelligence as it does for a narrow and invincible integrity of the soul.

Where Morals Take a Day Off

BUT coming back to the Riviera, I say it looked too much like a temptation to man. And that is what it is. The people you see there are never at their best. They are taking a day or two off. They are usually resting from their virtues. This explains, not the existence of Monte Carlo, but the reason why it is in that place. When Nature humors us with too much softness and beauty she weakens the moral stamina. She plans a vacation from righteousness. And often when a man takes a vacation he relaxes; he makes up his other mind to be a little less good or not good at all. The resorts along the Riviera seem especially designed to meet his requirements in this mood. A grim, uncompromisingly saintly man or woman would be out of drawing with Nature there.

In saying all this I seem to be accusing Peggy and myself, for we had purchased two of those long-tailed stopover tickets in Madrid. And when we reached Monte Carlo late Saturday afternoon, Peggy announced her intention of getting off and spending the holy Sabbath there.

"But, Peggy," I protested, "you cannot do it. There is no holy Sabbath in this place."

"Precisely!" answered she. "In all the years of our lives we have punctuated every seven days with one Sunday. I want to see how it feels to skip one."

The willful, experimental courage of the new young mind is one of the dangers we have to face in the future. Sometimes I am glad I shall be in my grave before these generations find out their mistake.

Peggy was already gathering up her belongings to get off, and I followed her. We were driven through the town to our hotel. Imagine a sort of Eden, created in an amphitheater made by lofty mountains on one side and bounded by a splendid balustrade above the sea on the other, opulent with red blossoms and all tropical greenness, with satanic statues glistening everywhere against the green, and amazingly beautiful buildings with gilded, fancifully decorated domes, but no spires: the kind of Eden the devil would make if he were a multimillionaire and wished to attract all the doubtful Adams and Eves in creation. This is Monte Carlo, incomparably beautiful, terribly significant, sneering gloriously at all that is faithful and poor and just good. It may be that the imagination of an old church-going woman has its prejudices, but this is the only place I ever saw where the architecture appeared to be brazen and conscienceless as well as beautiful.

After dinner Peggy announced her intention of going to the casino. I tied on my bonnet with many misgivings. Peggy looked like a little heavenly dove, with a white hat on her head that clasped her temples in a pair of peacefully folded wings. We entered the wide hall and were directed to a desk where we had to give our names, ages, pedigree and home address. I did not like it. For the first time in my life I was tempted to give an alias. You do not want the devil to be too sure where to find you, in case of a moral accident to your human nature. The clerk wanted to gossip. He said we should very probably find friends inside, that everybody came there except Mr. Rockefeller. He said Mr. Rockefeller had never been known to do more than stop outside the door and look in. I thought better of the old man. He is a good Baptist at home. Besides, why should a man with a nation for his casino make himself conspicuous where the stakes are too small to tempt his mind, accustomed to playing successfully for much higher stakes?

We went first to the concert, where the finest band in the world plays the greatest music in the world. I could not see that the audience differed from those to be seen in any other opera houses, except that it consisted for the most part of people who wore more subdued clothes, and there were more old men and women dozing about than one usually sees at an opera. I experienced a decided satisfaction at the sight of numerous old women like myself wearing bonnets with the strings tied under their innocent double chins. Misery is not the only lady who loves company. Sinners must have it. You can do right alone and bravely, but when it comes to something questionable, one wants the strength of a corporation of fellow humanity to back the deed. I felt that I was doing wrong—for Peggy's sake. And I was glad to see so many other elderly women doing the same thing. At the end of a particularly inspiring Wagnerian number, two red doors were thrown open invitingly by ushers dressed in white breeches and ludicrously gay, ill-fitting frockcoats. Everybody arose, and the crowd streamed into a wide hall that had in it half a dozen long tables. More than five hundred men and women were jammed round these tables, the inner row sitting down, the outer circles crowded close, with their eyes fixed upon what was going on upon the tables. I began to understand what the music was for—to evaporate the hardness of crystallized consciences, cast a sort of emotional spell over the old table of stone Ten Commandments, and make you forget everything but the gratification of the gambling instinct which, I reckon, is older in every man and woman than any of the Scriptures. It was an idea that never occurred to me before, but since visiting Monte Carlo I have no doubt Satan keeps a choir of fallen angels to sing in the ante-chamber of hell. And it is probably the finest music in the universe. Such angels would have more to sing about than mere cherubim. They'd have deeper wailing notes in their awful hymns, grander, higher ones of awful triumph.

Nothing We Saw There Touched Me Like These Young Lads From Every Nation in the Civilized World

"Look, Peggy!" I Whispered, "the Wife of Regulus!"

Gambling Gamboling Grandmothers

IT IS not for me to describe a roulette table. I didn't understand the thing. It was divided into checked lines with numbers in the corners, and everybody seemed bent upon putting money, varying from five-franc pieces to hundred-franc notes, upon these numbers. Every time the little ball on a golden disk stopped spinning, men who had short rakes—like the one we have at home to clean the soot out of the bottom of the stove—dragged in all the money and gave back a few little pieces to the people who had wasted it. One thing impressed me as being very different from the descriptions I had always heard of gamblers. There were no glaring, excited faces, no apparent intensity. Everybody looked calm and peaceful, except those who were watching but not playing. There is breeding among gamblers, and I reckon we were seeing the best-bred gamblers in the world. Among them were several of the nice-looking old women I had observed with their bonnets tied under their chins. They still looked innocent, good, grandmotherly. But I observed that one of them, at least, seemed to get about ten times as much as she put down. For the first time in my life I realized to what evil uses courage could be put. It takes nerve to lose large sums of money without a change of expression. And these men and women had that kind of vicious courage. Now and then we recognized an American in the keen profile of some face that had a touch of the North American Indian in its expression. Still there were ghosts in the company. One, a tall woman dressed in black, with dark circles under her tragic eyes, moved restlessly from one table to another, quietly distracted because she had nothing else to lose. And when we came out of the casino two hours later we saw a man whom we recognized as one we had seen playing hundred-franc notes earlier in the evening. He was standing near the balustrade above the sea, one shoulder lifted, his head turned as if he was flinching at his own thoughts, his hands tightly knotted together. One had the feeling that when they dragged his body out of the surf Sunday morning nothing would be said about him. There would be no newspaper notice of his death. At Monte Carlo everything is done quietly without any sensational fuss.

As we wandered along home in the blue moonlight—the Riviera sky remains blue all night—I said sternly:

Digitized by Google

"Peggy, the women we have seen this evening would not make good citizens. Many of those men are still capable of voting in the interests of good society, but a woman is not like a man, who has two natures always—his own weak one and his other public good one. A woman has just one, either a good one or a bad one. And if she ever gets the ballot, she will vote according to her nature, and nothing else!"

I was thinking not only of those we saw seated about the tables, but the innumerable painted shes that circled like white carrion birds in the background, waiting for those who had won to get up and come to them.

I recalled one in particular, a slim creature with wide brown eyes, thick red lips. She wore a big black hat, a dreadful smile and an embroidered chemise with a gold girdle under her breasts. If she had on anything under this garment it was her purpose to produce the contrary impression. I never saw any woman in a public place who came so near giving the impression of being practically naked.

Peggy was sad, bemused; she wanted to go back and call somebody to look after the man we saw standing by the balustrade.

"No," I said; "leave him to his fate. He'd better be in the sea than in that casino, and he knows it."

The next morning it turned out that Peggy preferred to resume our journey rather than to spend Sunday at Monte Carlo. So we went on.

It is a good thing to be able to forget. Time heals us of some sights as it does of some diseases. It blurs them. And there are two things we saw in the Old World that I should like to forget utterly: the bullfight at Madrid and the casino at Monte Carlo. But even yet, after many weeks, I can still see that dying bull, covered with blood, mildly regarding his tormentors as he sank to his knees in the sand. And I can still see the woman in the white chemise with her golden girdle and her wide red smile, standing waiting behind the tables in the casino. The man leaning over the balustrade above the sea in the blue moonlight is not nearly so terrible to think of. He had come to the end. God was about to get the chance to take charge of him.

We should have known the moment we crossed the boundary into Italy, even if we had not passed through the customs at the frontier, by the number of soldiers everywhere. The war between Italy and Turkey in their contention over Tripoli had been in progress for several weeks, and at every station we saw troops getting into trains or passing through. A sort of joyful excitement electrified the air. This is the queer thing about war in its first stages, before the mothers and widows of it get the news that sends them into mourning, that a spirit of exaltation and keen pleasure seems to abound. For many of these young lads in their olive-green uniforms the feast of death was already spread in the desert round Tripoli. They were the vintage of life that was about to be poured out there. Yet they were extravagantly happy. The air pulsed with the bugling of martial music. They sang, they yelled, they threw kisses at old women. That was the significant difference. It is only when a man thinks maybe he is going to his death that he is inspired to throw kisses to ancient mother women. On our train there was a car loaded with a company of infantry. And every time we passed an old peasant woman by the way, the soldiers stuck their heads out of the windows and cried to her, "Farewell, Mother!"

Peggy Greets the Soldiers

ONE ancient dame stood petrified a moment, her gray hair blown in the wind, then she threw up her hands and began to wail. The soldiers laughed. But the last we saw of her, she was standing with the mountains behind her, the sun shining over the tears upon her face. She had probably lost her husband or sons in the war of Independence under Garibaldi. She understood. They did not. Later on four hundred of them perished in the oasis round Tripoli.

At one station we were detained for a long time, waiting for a train loaded with soldiers that must have the right of way. Peggy and I descended and walked up and down outside our coach. On another track a little distance away was a long line of freight cars filled with cavalrymen and their horses. The door of a boxcar opposite was open. We saw three horses in the back of it and three young cavalrymen lounging in the doorway. They had evidently traveled all night and showed signs of fatigue. One of them was munching a piece of dry bread. We heard the whistle of the incoming train for which we had been waiting. Suddenly I missed Peggy. I looked this way and that in great alarm. Then I saw her picking her way across the track like a young bird, hopping along with her purse open, the rose in her belt wagging, and her eyes fixed like a guardian angel's upon the cavalrymen, who stared at her as if they had been petrified. The next moment she was dividing her lire among them. There was a shout; other cavalrymen came running from up and down the train.

"Peggy!" I screamed.

She paid no attention. She emptied her purse of every centime. Then she stood in the midst of them smiling, with the tears in her eyes, shaking her empty purse to show that she had no more to give. A young officer pointed to the rose. She pulled it out of her belt and gave it to him, then scampered back across the tracks. I was beside myself. I never heard such a din in my life. What she had done seemed to pass with lightning rapidity from car to car. The earth was covered with cavalrymen, the station rocked and roared with their cheers. Fortunately at this moment our train pulled out.

We were followed with strains of distracted bugles, every man had his cap off, and the last one we saw was the young officer waving his rose like a banner and yelling like a madman. Peggy sat gazing at them and looking as if she had just received a holy baptism and was now ready to be translated.

"Peggy," I sobbed, "what made you do it?"

"I could not help it," she answered shamelessly. "They looked so hungry and tired! I felt as if I had to do something for them."

There is your American girl! She is so innocent of the merely female consciousness that she can always dare to do what the maiden of no other nation would conceive of risking, and come out of the performance with a halo round her head instead of a shamed face. At first it seemed to me a mere accident that she had not been grossly insulted. Then I reflected that she had back of her the everlasting law of that deep honor in men when they know they are in the presence of the sublimely innocent good woman.

That night we rested at Pisa, in an old hotel under the very shadow of the famous leaning tower. The next morning Peggy engaged the hall porter in a conversation. He knew just enough English not to understand the American tongue, which is altogether different in its emphasis and pronunciation from the "papa, prunes and prisms" inflections of an English woman's speech. The porter looked like an old withered reed that had had its joints bent into a perpetual cringing attitude.

"Have you any suffragists here?" inquired Peggy. She was in Italy and wanted to get down to business at once.

"Oh, yes, Signorina, many. Come, I will show you them!" was the astonished answer.

He led the way into the front room of the hotel, which should have been a drawing room. It was filled with every conceivable shape made into marble, from a bas-relief of Napoleon Bonaparte to statues of Venus and the Virgin Mary, but not one living woman, of course.

Peggy looked confused. The old man looked greedily expectant. I began to laugh.

"He thinks you asked him if he had any statuettes!" I explained.

Peggy was crestfallen. We had heard so much about the woman's movement in Italy that it took us some time to discover that there are only about eight hundred women and eighteen men there who would even recognize the word "suffragist" if they heard it spoken.

"Have You Any Suffragists Here?" Inquired Peggy

The Angels of the Seed Bags

THERE is one thing in the Genesis account of creation that has always impressed me. Those were great days when the light was parted from the darkness, and when the earth was divided between the land and the sea, and of course a very great day when Adam got up out of the dust and sneezed. I have often wondered why, with all the fête days we have invented since then, we never keep these most memorial of all days. Maybe we do when we keep the Sabbath. But too little is said about the other part of creation. The animals, male and female, created He them. And the trees, the corn, the flowers, they also were created. But I have always liked to believe that after that first great creation little sowing angels with their seed bags went out of Heaven and wandered over all the earth, planting it thick with the living things of the soil, each kind in the place it belonged according to sun and seasons. The frost angels sowed edelweiss and firs on the mountain-tops. The warm ones planted palms and cacti in the tropics. They all sowed corn and flowers. And to this day the descendants of those seeds spring year after year, the larkspur and goldenrod and roses. Oaks grow in the lands where the paradise acorns fell. The men migrated and died and sprang again in new countries, but the same flowers bloom, the same shadows from the same kind of tree still spread out at evening over the same kind of grass that grew there from the first sowing. A pine that was a pine in the beginning is still faithfully evergreen, still loyal to the soil that made it and to the first angels that gave it. There are not enough Burbanks in creation to change the real laws of vegetation. The earth is obedient about her own green things. But the human products in any given locality change every two or three thousand years. We call it a change of civilization, but before this happens the men and women have become different. They tear down their old religions and old institutions as they cast off their old clothes, because they are worn out, because they no longer fit. And scientists may give what explanations they can about emigration and migration's being the causes, but for me, I believe the old brown, grass-haired mother of us all has much to do with the metamorphosis of men and nations, just as she got rid of her mastodons and ichthyosauri when the time came for elephants and asses. I do not believe any kind of animal, human or creature, would remain true to type forever, not even if it were sequestered absolutely from outside influences. There is something in the queer things that the angels did not plant that grows and changes in spite of all gods and all angels. It wouldn't surprise me at all if eventually a horse got an extra pair of ears next to his tail, or if men developed eyes in the backs of their heads. I do not say that I'd want to drive such a horse or live with such a man, but they may exist.

Some such reflections as these passed through my mind during our first week in Italy. You can find more signs of man in it than in any other country we visited. I mean that he has been there longer and has done more to it. But no one who looks at a modern Italian, as light and whimsical as one of Verdi's operas in his spirit, can discover even the faintest resemblance to the ancient Romans who made the Appian Way or built the Colosseum, which stands now in the midst of this new facetious city of Rome, like the ragged, half-toothless gums of an ancient civilization altogether different in aims, religion and character.

I am not disparaging the current Italians, but I am saying that what they do, what they build, is as fragile as lace compared with what the old Romans did; and what they think and hope is as transient. They are utterly different, like the unsubstantial hyphen between an immortal past and an unconceived future. In no other country was I so conscious of the fact that all was in a state of transition—ideals, religion, government, everything.

The first walk Peggy and I took in Rome was a revelation, not of the immemorial past, as we expected, but of this incredible future. The streets in many parts are narrow still, but the life that flows through them does not differ nearly so much from that in New York as does the life of any city in our Southern states. The shops have the same things in them that we buy on Broadway. The shopgirls are exactly like shopgirls in New York. The women seen along the fashionable drives look like Americans in their clothes, but not quite American in their faces. The men look like ordinary brisk business men. It was only when we stepped out of the streaming, noisy street into some old cathedral or church that we seemed to pass into medieval ages. If you happened to be there between four and five o'clock in the afternoon, something miraculous happened, out of the order of Nature and intelligence in our times. Softly the doors opened and closed, letting in groups of young priests, literally hundreds, who fell upon their knees and remained with their eyes fixed upon the images above the altars, apparently wrapped in piteous contemplation. Nothing we saw there touched me like these young lads from every nation in the civilized world, who came to Rome for their education in the priesthood. Without bodily exercise, anemic, with weak, prayerful hands, thousands of them are to be seen kneeling at this hour in every church in Rome.

The Wife of Regulus

THE medieval in religion was as far back as we could see in Rome. But of the life back of that, which really made the place immortal, there is not a sign today except in the ruins. Neither Cæsar nor Cicero would recognize in these light, singing, graceful, busy people one feature that distinguished them two thousand years ago. And when you think about it, that is a very short period of time in which to change the character of a race.

Women always preserve the original type longer than men do, however, and there are still to be seen in Italy, especially in the southern part, women who belong to the days of Pompey and Cæsar. They are usually employed in Rome as models for artists and as picturesque nurses for the children of rich families. One occasionally sees in the narrowest fashionable street in the world, Corso Umberto in Rome, peasant women from the Campagna, with yellow handkerchiefs tied over their heads and earrings that reach six inches down dangling on their shoulders, carrying beautiful children in their arms or flitting in and out of artists' studios. And at last we came upon some who belonged to the age of Juno and oracles. There are only a few of these, like tall, golden illuminated initials in the present book of life in this great city. They live in Trastevere, that oldest part of Rome on the other side of the Tiber. One day as we were loitering in one of the narrowest streets of this place I happened to look into a little shop where antiques were sold.

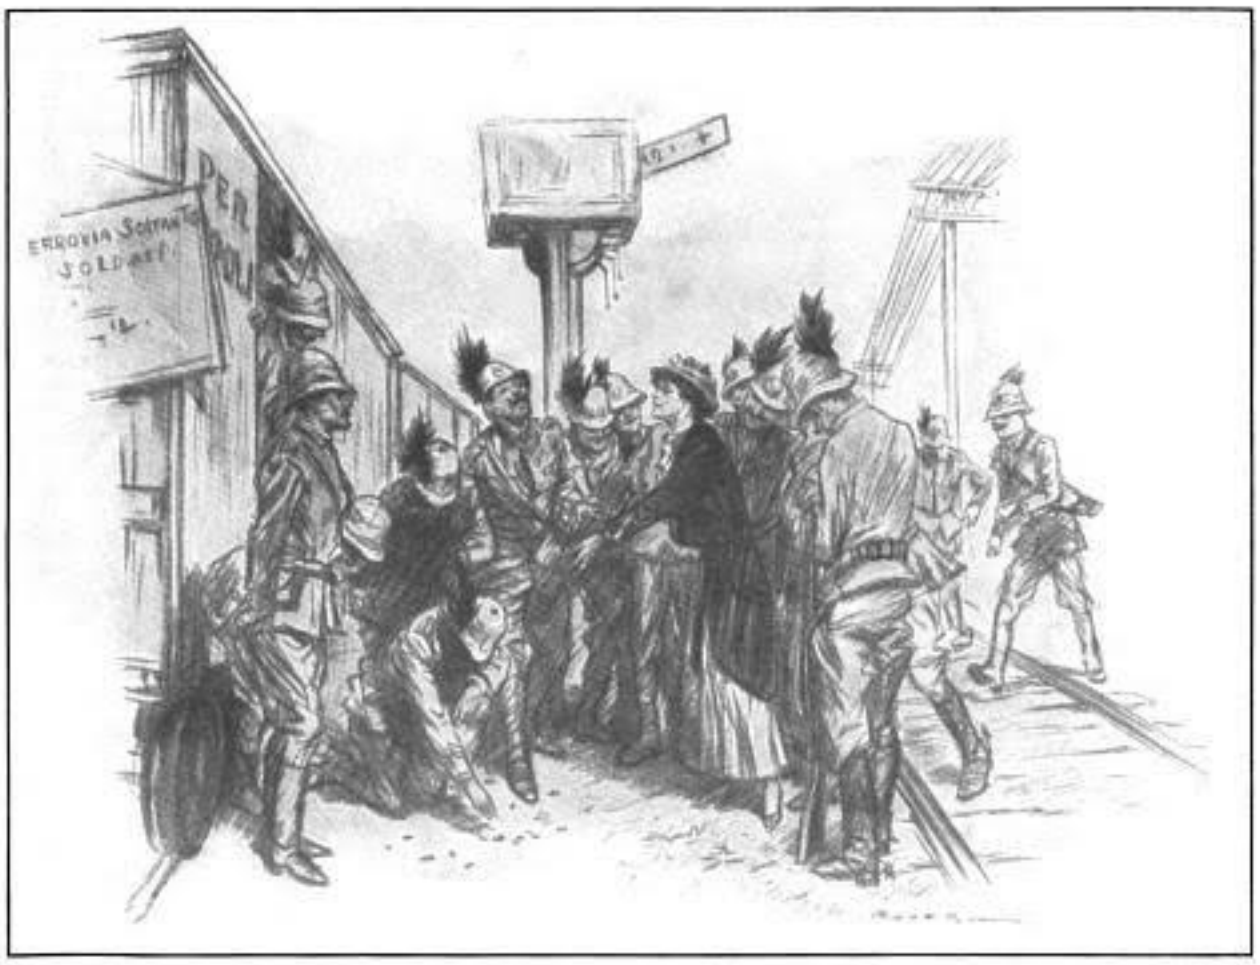
"Look, Peggy!" I whispered; "the wife of Regulus!"

She stood back in the brown gloom, with the tones of time all about her in the dull coppers, and faded pictures and broken statues, an immense figure gravely posed, as if the ages had left her there forgotten, as if twenty centuries separated her from the glaring light of her own doorway. She could not have been less than six feet in height, and she was young. She had that singular livid, clear skin that is so different from what is known as the olive dark complexion, no richness in it, merely an icy coldness. Her lips were almost colorless, with the faintest tinge of purple. Her hair was drawn over her low brows like two fluted black wings, it was so evenly curled. Her features were colossal, but fiercely feminine. You might have said that she was terribly ugly, or terribly beautiful, but you knew she could have led an army and cut off her right breast if necessary to do it. No words can describe the astonishing and thrilling impression she gave of ageless strength and courage.

"Shall we go in?" whispered Peggy, who was as curious as she was awed.

"No," I replied. "I should not think of asking a woman who looks like that to sell me anything less than the head of Catiline, and she probably hasn't got that among her antiquities!"

Coming as we did straight from Spain to Italy, the comparison between Spanish women and Italian women was instinctive. And the difference is remarkable. The Spanish women have a softer beauty and less vivacity of expression. The faces of the Italians are too broad at the top, too narrow at the bottom for beauty. One feels that their faces are the masks of tragedy, of something immemorially sad. And while the grace of Spanish women is natural, that of the Italians is dramatic, always suggesting the stage, the advent of a little prima donna with her toes turned out and her arms lifted like hovering wings in a dance. When Signorina welcomes you to her tea table you may not see her do it, but she leaves the impression of having caught a fold of her gown on each side as she places one brisk little foot forward and inclines her head to you. And you miss the proper climax because she does not whirl upon her toes and do a sprightly dance. Not that any one has a reason for expecting a minuet at a teaparty, but because, potentially speaking, Signorina suggests the stage more than she does a lady at home in her own drawing room. In one particular only are the women of these two nations identical. Among the common people there are no really old ones. They are gray, withered until their faces are brown and wrinkled like parchment, but they retain the quick, erratic, elastic motions of restless little girls to the last. There is something illogical, astonishing in their activity. One feels that the mind has never had much effect upon such a plastic body.



However, as I have already indicated, the great mass of women in Northern Italy impress me as being distinctly modern. This led me to say to Peggy one day that I thought she would find plenty of her "new women" among them. But it was only after we reached Italy that my niece was forced to realize that the suffragists are perhaps the smallest wing of the greatest woman's movement in the world. There are only eight hundred Italian women enrolled as suffragists. But in no other country are so many women in every circle of life advancing in the scale of things. The same restrictions exist that are to be found limiting them in other Latin countries. All the young girls of the better class are practically imprisoned until their marriage. And in Sicily at least, this imprisonment is a a sort of life sentence. The husband not only has the right to lock his wife in the house when he leaves in the morning, but often he actually does do it. The parents of a girl twenty-five years old, even in Rome where customs are lax, still open all of her letters before she sees them. The law permits women to enter most of the professions, it is true, but where the parents are of any distinction they do not permit it. And some pretenses of the law are as amusing in Italy as they are in Tennessee where, legally speaking, a woman is classed with minors and idiots. For example, the husband cannot spend his wife's dowry, but neither can she without his consent!

Women Satisfied With Their Lot

THERE is more insanity among American women than among those of any European nation, and less of it among those in Latin countries, especially in Italy. This is due to several causes. First, these women have not yet fully arrived in consciousness to a rational sense of the gravity of human existence. You cannot very reasonably go insane until you have come to sanity, which has a good deal of pessimism in it. These women, although they have more of what is called temperament than our women, are still controlled more by instinct than intelligence. So far as men are concerned, they are yet in the unquestioning, submissive, romantic period. And you will observe this, that the two things that drive women insane everywhere are love and religion. Few of them become unbalanced as men do from dissipation or worry about business. Now it is certain that Italian women are not nearly so well cared for by their men as we are in America. And they are more heavily burdened in every way. But they have not yet discovered the injustice of their condition. The workingmen's wives and daughters in Italy endure hardships and privations, but an investigation will show that our insane asylums are filled with country women who have become deranged from overwork and from lack of proper attention. This is because they have a frightfully keen comprehension of what they suffer, and the Italian peasant woman has not. Therefore she does not suffer at all. She spends her life working for one lira a day, and is satisfied because she has no ambitions or hope.

So much I have written by way of some general interpretations of Italian women. But now we come to her comparatively new relation to the order of things. What to do with the ever-increasing number of superfluous women has become a serious question in every country. Formerly those of Italy went into convents, and that was the last of them as far as human society was concerned. But now they are no longer willing to become nuns. They have lost the "vocation." They are remaining in the world, and it seems to me that more of them are taking hold of the issues of life for just women, and in more practically domestic ways, than in any other country we visited. But the history of the awakening of Italian women differs from the stir among all other women. They have been permitted for the last ten years to enter the universities and receive what is called higher education. While they are availing themselves of these opportunities the training they have received does not appear to have made them restless and dissatisfied, as is the case, say, with the English woman. The real movement began years ago, when the women of high rank banded themselves together to encourage feminine industries, like lace-making and embroidery, and to market the work of the peasant women living on their estates, thus rescuing them from the loss incident to selling to

THE LIGHTED WAY

By E. Phillips Oppenheim

ILLUSTRATED BY A. B. WENZELL

Copyright, 1912, by The Curtis Publishing Company

XIII

RUTH welcomed Arnold with her usual smile—once he had thought it the most beautiful thing in the world. In the twilight of the April evening her face gleamed almost marble-white. He dragged a footstool up to her side.

"You are looking pale," he declared. "Give me your hands to hold. Can't you see that I have come just at the right time? Even the coal barges look like phantom boats. See, there is the first light."

She shook her head slowly.

"Tonight," she murmured, "there will be no ships, Arnold. I have looked and looked, and I am sure. Light the lamp, please."

"Why?" he asked, obeying her as a matter of course.

She turned in her chair.

"Do you think that I cannot tell?" she continued. "Didn't I see you turn the corner there—didn't I hear your step three flights down? Sometimes I have heard it come, and it sounds like something leaden beating time to the music of despair. And tonight you tripped up like a boy home for the holidays. You are going out tonight, Arnold."

He nodded.

"A man whom I met the other night has asked me to dine with him," he announced.

"A man! You are not going to see her then?"

He laughed gayly and placed his hand upon the fingers that had drawn him toward her.

"Silly girl!" he declared. "No; I am going to dine alone with her brother, the Count Sabatini. You see I am private secretary now to a merchant prince, no longer a clerk in a wholesale provision merchant's office. We climb, my dear Ruth. Soon I am going to ask for a holiday, and then we'll make Isaac leave his beastly lecturing and scurrilous articles and come away with us somewhere for a day or two. You would like a few days in the country, Ruth?"

Her eyes met his gratefully.

"You know that I should love it, dear," she said, "but do you think that when the time for the holiday comes you will want to take us?"

He sat on the arm of her chair and held her hand.

"Foolish little woman!" he exclaimed. "Do you think that I am likely to forget? Why, I must have shared your supper nearly every night for a month while I was walking about trying to find something to do. People who have lived through such times don't forget, Ruth."

She sighed. Strangely enough her tone had in it something of vague regret.

"For your sake, dear, I am glad that they are over," she said.

"Things will improve with you too," he declared. "They shall improve. If only Isaac would turn sensible! He has brains and he is clever enough, if he weren't stuffed full with his foolish fancies."

She looked around the room and drew him a little closer.

"Arnold," she whispered, "now that you have spoken of it, let me tell you this. Sometimes I am afraid. Isaac is so mysterious. Do you know that he is away often for the whole day, and he comes back white and exhausted, worn to a shadow, and sleeps for many hours? Sometimes he is in his room all night, but awake. I can hear him moving backward and forward and hammering, tap, tap, tap, for hours."

"What does he do?" Arnold asked quickly.

"He has some sort of a little printing press in his room," she answered. "He prints some awful sheet there which the police have stopped. The night before last he had a message and everything was hidden. He spent hours with his face to the window, watching. I am so afraid that sometimes he goes outside the law. Arnold, I am afraid of what might happen to him. There are terrible things in his face if I ask him questions. And he moves about and mutters like a man in a dream—no, like a man in a nightmare!"

Arnold frowned and looked up at the sky signs upon the other side of the river.

"I, too, wish he were different, dear," he said. "He certainly is a dangerous protector for you."

"He is the only one I have," the girl replied with a sigh, "and sometimes, when he remembers, he is so kind. But that is not often now."

"What do you do when he is away for all this time?" Arnold asked. "Are you properly looked after? You ought to have some one here."

"Mrs. Sands comes twice a day always," she declared. "It is not myself I trouble about really. Isaac is good in that way. He pays Mrs. Sands always in advance. He tries even to buy wine for me, and he often brings me home fruit. When he has money I am sure that he gives it to me. It isn't that so much, Arnold, but I become afraid of his getting into trouble. Now that room of his has got on my nerves. When I hear that tap, tap in the night I am terrified."

"Will you let me speak to him about it, Ruth?"

Her face was suddenly full of terror.

"You mustn't think of it!" she begged. "He would never forgive me—never. The first time I asked him what was going on there I thought that he would strike me."

"Would you like me to go in and see next time he is out?"

She shivered.

"Not for the world," she replied. "Besides, you couldn't. He has fixed on an American lock himself. No one could open the door."

"You have never seen what he prints?"

"Never," she replied. "He knows that I hate the sight of those pamphlets. He never shows them to me. He had a man to see him the other night—the strangest-looking man I ever saw—and they talked in whispers for hours. I saw the man's face when he went out. It was white and evil. And, Arnold, it was the face of a man steeped in sin to the lips. I wish I hadn't seen it," she went on drearily. "It haunts me."

Arnold did his best to reassure her.

"You have been up here too long without a holiday. Wait till Saturday afternoon, when I draw my new salary for the first time. I shall hire a taxicab. We will have it open and drive out into the country."

Her face lit up for a moment. Her eyes were soft, although a few seconds later they were full of tears.

"Do you think you will want to go when Saturday afternoon comes?" she asked. "Don't you think, perhaps, that your new friends may invite you to go and see them? I am so jealous of your new friends, Arnold."

There was something very pathetic in her complete dependence upon him, a few months ago a stranger. They had both been waifs, brought together by a wave of common adversity. Her intense weakness had made the same appeal to him that his youth and strength had made to her. There was almost a lump in his throat as he answered her.

"You aren't really feeling like that, Ruth?" he begged. "Don't! My new friends are part of the new life. You wouldn't have me cling to the old any longer than I can help? Why, you and I together have sat here hour after hour and prayed for a change, prayed for the mystic treasure that might come to us from those ships of chance. Dear, if mine comes first it brings good for you too. You can't believe that I should forget? Don't you remember our money-box for the doctor? Even that will come, Ruth. The day will come, I am sure, when we shall carry you off to Vienna or one of those great cities, and the cure will be quite easy. I believe in it really."

She sighed.

"I used to love to hear you talk about it," she said, "but, somehow, now it seems so far off. I don't even know that I want to be like other women. There is only one thing I do want and that is to keep you."

"That," he declared fervently, "you are sure of. Remember, Ruth, that awful black month and what we suffered together. And you knew nothing about me. I just found you sitting on the stairs with your broken stick, waiting for some one to come and help you."

She nodded.

"And you picked me up and carried me into your room," she reminded him. "You didn't have to stop and take breath as Isaac has to."

"Why, no," he admitted, "I couldn't say you were heavy, dear. Some day or other, though," he added, "you will be. Don't lose your faith, Ruth. Don't let either of us leave off looking for the ships."

The girl smiled.

"Very well," she said, letting her hand fall once more into his; "I think that I am very foolish. At least," she added abruptly, "I am not going to spoil your dinner by keeping you here talking nonsense. Carry me back, please, Arnold. You must hurry up now and change your clothes. And, dear, you had better not come in and wish me good night. Isaac went out this morning in one of his savage tempers, and he may be back at any moment. Carry me back now and have a beautiful evening. Tomorrow you must tell me all about your good time."

He obeyed her. She was really only a trifle to lift, as light as air.

"And now, please, you are to kiss my forehead," she said, "and run away."

Arnold had little enough time to dress, and he descended the stone steps toward the street at something like a run. Halfway down, however, he pulled up abruptly to avoid running into two men. One was Isaac. His worn, white face, with hooked nose and jet-black eyes, made him a noticeable figure even in the twilight. The other man was so muffled up as to be unrecognizable. Arnold stopped.

"Glad you're home, Isaac," he said pleasantly. "I have just been talking to Ruth. I thought she seemed rather queer."

Isaac looked at him coldly from head to foot. Arnold was wearing his only and ordinary overcoat, but his varnished shoes and white tie betrayed him.

"So you're wearing your cursed livery again!" he sneered. "You're going to beg your bone from the rich man's plate."

Arnold laughed at him.

"Always the same, Isaac," he declared. "Never mind about me. You look after your niece and take her out, if you can, somewhere. I am going to give her a drive on Saturday."

"Are you?" Isaac said calmly. "I doubt it. Drives and carriages are not for the like of us."

His companion nudged him impatiently. Isaac moved away. Arnold turned after him.

"You won't deny the right of a man to spend what he earns in the way he likes best?" he asked. "I've had a

A Pale Face, a Narrow Chin, and a Mouth That Seemed Set in a Perpetual Snarl

Digitized by Google

rise in my salary and I am going to spend a part of it taking Ruth out."

Isaac laughed scornfully.

"A rise in your salary!" he muttered. "You poor slave! Did you go and kiss your master's foot when he gave it to you?"

"I didn't," Arnold declared. "To tell you the truth, I believe it would have annoyed him. He hasn't any sense of humor, you see. Good-night, Isaac. If you're writing one of those shattering articles tonight remember that Ruth can hear you and don't keep her awake too late."

Arnold walked on. Suddenly his attention was arrested. Isaac was leaning over the banisters of the landing above.

"Stop!"

Arnold paused for a moment.

"What is it?" he asked.

Isaac came swiftly down. He brushed his cloth hat farther back on his head as though it obscured his vision. With both hands he gripped Arnold's arm.

"Tell me," he said, "what do you mean by that?"

"What I said," Arnold answered; "but, for Heaven's sake, don't visit it on poor Ruth. She told me that you had some printing press in your room to get out your pamphlets, and that the tap, tap at night had kept her awake. It's no concern of mine. I don't care what you do or what rubbish you print, but I can't bear to see her getting frailer and frailer, Isaac."

"She told you that?" Isaac muttered.

"She told me that," Arnold assented. "What is there in it?"

Isaac looked at him for a moment with an intentness that was indescribable. His black eyes seemed on fire with suspicion, with searchfulness. At last he let go the arm he was clutching and turned away.

"All right," he said. "Ruth shouldn't talk, that's all. I don't want every one to know that I am reduced to printing my little sheet in my bedroom. Good-night!"

Arnold looked after him in surprise. It was very seldom that Isaac vouchsafed any form of greeting or farewell. And then the shock came. Isaac's companion, who had been leaning over the banisters waiting for him, had loosened the muffler about his neck and opened his overcoat. His features were now recognizable—a pale face with deep-set eyes and prominent forehead, a narrow chin, and a mouth that seemed set in a perpetual snarl. Arnold stood gazing up at him in rapt amazement. He had seen that face but once before, yet there was no possibility of any mistake. It seemed, indeed, as though the recognition were mutual, for the man above, with an angry cry, turned suddenly away, buttoning up his overcoat with feverish fingers. He called out to Isaac—a hurried sentence in a language that was strange to Arnold. There was a brief exchange of breathless words. Arnold moved slowly away, but before he had reached the street Isaac's hand was upon his shoulder.

"One moment!" Isaac panted. "My friend would like to know why you looked at him like that?"

Arnold did not hesitate.

"Isaac," he said gravely, "no doubt I seemed surprised. I have seen that man before, only a night or two ago."

"Where? When?" Isaac demanded.

"I saw him hanging round the house of my employer," Arnold said firmly, "under very suspicious circumstances. He was inquiring then for Mr. Rosario. It was the night before Rosario was murdered."

"What do you mean by that?" Isaac asked hoarsely.

"You had better ask yourself what it means," Arnold replied. "For Ruth's sake, Isaac, don't have anything to do with that man. I don't know anything about him—I don't want to know anything about him. I simply beg you for Ruth's sake to keep out of trouble."

Isaac laughed harshly.

"You talk like a young fool!" he declared, turning on his heel.

XIV

THE apartments of Count Sabatini were situated in the somewhat unfamiliar quarter of Queen Anne's Gate. Arnold found his way there on foot, crossing Parliament Square in a slight drizzling rain, through which the figures of the passers-by assumed a somewhat phantasmal appearance. Around him was a glowing arc of lights and, dimly visible beyond, shadowy glimpses of the river. He rang the bell with some hesitation at the house indicated by his directions—a large gray stone building, old-fashioned and without any external signs of habitation. His summons, however, was answered almost immediately by a man-servant, who took his hat and coat.

"If you will step into the library for a moment, sir," he said with a slightly foreign accent, "his Excellency will be there."

Arnold was immensely impressed by the room into which he was shown. He stood looking round him for several minutes. The whole atmosphere seemed to indicate a cultivated and luxurious taste, kept in bounds by a certain not unpleasing masculine severity. The coloring of the room was dark green, and the walls were covered with prints and etchings and trophies of the chase and war. A huge easy-chair was drawn up to the fire, and by its side was a table covered with books and illustrated papers. A black-oak writing-desk stood open, and a huge bowl of violets set upon it was guarded by an ivory statuette of the Venus of Milo. The furniture was comfortably worn. There was a faint atmosphere of cigarette smoke—the whole apartment was impregnated by an intensely livable atmosphere. The glowing face of a celebrated Parisian *danseuse* laughed at him from over the mantelpiece. Arnold was engaged in examining it when Sabatini entered.

"A thousand apologies, my dear Mr. Chetwode," he said softly. "I see you pass your time pleasantly. You admire the divine Fatime?"

"The face is beautiful," Arnold said. "I am afraid I was a few minutes early. It began to rain and I walked fast."

Sabatini smiled. A butler had followed him into the room, bearing on a tray two wineglasses full of clear yellow liquid.

"Vermouth and one tiny cigarette," Sabatini suggested, "the best *apéritif* in the world. Permit me, Mr. Chetwode—to our better acquaintance!"

"I never need an *apéritif*," Arnold answered, raising the wineglass to his lips, "but I will drink to your toast with pleasure."

Sabatini lit his cigarette and, leaning slightly against the back of a chair, stood with folded arms looking at the picture over the fireplace.

"Your remark about Fatime suggested reservations," he remarked. "I wonder why? I have a good many curios in the room and some rather wonderful prints, but it was Fatime who held you while you waited."

"To tell you the truth," Arnold admitted simply, "I think that it was the actual presence of the picture here, rather than the subject, that interested me most. Your room is so masculine," Arnold added, glancing round. "It breathes of war and sport and the collector. And then, in the middle of it all, the picture of this girl. There is something a little brutal about the treatment, don't you think?"

Sabatini shrugged his shoulders.

"The lady is too well known," he remarked. "A single touch of the ideal and the greatness of that picture would be lost. Grève was too great an artist to try for it."

"Nevertheless," Arnold persisted, "she disturbs the serenity of your room."

Sabatini threw away his cigarette and passed his arm through his companion's.

"It is as well always to be reminded that life is many-sided," he murmured. "You will not mind a *tête-à-tête* dinner?"

Some curtains of dark green brocaded material had been silently drawn aside, and the two men passed into a smaller apartment, of which the coloring and decoration were the same as those in the larger room. A round table, lit with softly shaded candles, before which stood two high-backed, black-oak chairs, stood in the middle of the room. It was very simply set out, but the two wineglasses were richly cut in quaint fashion, and the bowl holding the violets was of old yellow Sèvres. Arnold sat opposite his host and realized how completely the man seemed to fit in with his surroundings. In Mrs. Weatherley's drawing room there had been a note of incongruity. Here he seemed so thoroughly in accord with the air of masculine and cultivated refinement that dominated the atmosphere. He carried himself with the ease and dignity to which his race entitled him, but, apart from that, his manner had qualities that Arnold found particularly attractive. His manicured nails, his spotless linen, his links and waistcoat buttons—cut from some quaint stone—the slight affectations of his dress, the unusual manner of brushing back his hair and arranging his tie, gave him a note of individuality. Every word he spoke—and he talked softly but continually during the service of the meal—confirmed Arnold's first impressions of him. He was a man, at least, who had lived a man's life without fear or weakness and, whatever his standards might be, he would adhere to them.

Dinner was noiselessly and perfectly served by the butler who had first appeared and by a slighter and smaller edition who brought the butler the dishes. There was no champagne, but other wines were served in their due order, the quality of which Arnold appreciated although more than one was strange to him. With the removal of the last course fruit was placed upon the table, with a decanter of Château Yquem. On a small table near was a brass pot of coffee and a flask of green liqueur. Sabatini pushed the cigarettes toward his companion.

"I have a fancy to talk to you seriously," he said, without any preamble.

Arnold looked at him in some surprise.

"I am not a philanthropist," Sabatini continued. "When I move out of my regular course of life it is usually for my own advantage. I warn you of that before we start."

Arnold nodded and lit his cigarette. There was no safety in life, he reflected, thinking for the moment of the warning that he had received, like the safety of poverty.

"I am a man of forty-four," Sabatini said. "You, I believe, are twenty-four. There can, therefore, be no impertinences in the truth from me to you."

"There could be none in any case," Arnold assured him.

Sabatini gazed thoughtfully across the table into his guest's face.

"I do not know your history or your parentage," he went on. "Such knowledge is unnecessary. It is obvious that your position at the present moment is the result of an accident."

"It is the outcome of actual poverty," Arnold told him.

Sabatini assented.

"Ah, well," he said, "it is a poverty, then, that you have accepted. Tell me of your ambition. You are young and the world lies before you. You have the gifts that belong to those who are born. Are you doing what is right to yourself in working at a degrading employment for a pittance?"

"I must live," Arnold protested.

"Precisely," Sabatini replied. "We all must live. We all, however, are too apt to accept the rulings of circumstance. I maintain that we all have a right to live in the manner to which we are born."

"And how," Arnold asked, "does one enforce that right?"

Sabatini leaned over and helped himself to the liqueur.

"You possess the gift," he remarked, "that I admire most—the gift of directness. Now I would speak to you of myself. When I was young I was penniless, with no inheritance save a grim castle, a barren island and a great name. The titular head of my family was a cardinal at Rome, my father's own brother. I went to him and I demanded the means of support. He answered me with an epigram that I will not repeat—besides, it is untranslatable. I will only tell you that he gave me a sum equivalent to a few hundred pounds, and bade me seek my fortune."

Arnold was intensely interested.

"Tell me how you started," he begged.

"A few hundred pounds were insufficient," Sabatini answered coolly, "and my uncle was a coward. I waited my opportunity, and although three times I was denied an audience the fourth time I found him alone. He would have driven me out, but I used the means that I have never known to fail. I left him with a small but sufficient fortune."

Arnold looked at him with glowing eyes.

"You forced him to give it you!" he exclaimed.

"Without a doubt," Sabatini answered coolly. "He was wealthy and he was my uncle. I was strong and he was weak. It was as necessary for me to live as for him. So I took him by the throat and gave him thirty seconds to reflect. He decided that the life of a cardinal was far too pleasant to be abandoned precipitately."

There was a short silence. Sabatini glanced twice at his companion and smiled.

"I will read your thoughts, my young friend," he continued. "Your brain is a little confused. You are wondering whether indeed I have robbed my elderly relative. Expunge that word and all that it means to you from your vocabulary if you can. I took that to which I had a right by means of the weapons that have been given to me—strength and opportunity. These are the weapons that I have used through life."

"Supposing the cardinal had refused?" Arnold asked.

"One need not suppose," Sabatini replied. "It is not worth while. I should probably have done what the impulse of the moment demanded. So far, however, I have found most people reasonable."

"There have been others then?" Arnold demanded.

"There have been others," Sabatini agreed calmly, "always people, however, upon whom I have had a certain claim. Life to different people means different things. Life to a person of my tastes and descent meant this—it meant playing a part in the affairs of the country that gave me my birthright; it meant the carrying forward of a great enmity that has for hundreds of years burned within the family of Sabatini for the house that now rules my country. If I were a person who sought for excuses I might say that I have robbed my relatives for the cause of the patriot. Life to a sawer of wood means bread. The two states themselves are identical. The man who is denied bread breaks into riot and gains his ends. I, when I have been denied what is vital to me, have also helped myself."

"I am not sure," Arnold protested frankly, "whether you are not amusing yourself with me."

"Then let me put that doubt to rest once and for all," Sabatini replied. "It does not amuse me to trifle with the truth."

"Why do you make me your confidant?" Arnold asked.

"Because it is my intention to make a convert of you," Sabatini said calmly.

Arnold shook his head.

"I am afraid that that is quite hopeless," he answered. "I have not the excuse of a country that needs my help—although I have more than one relative," he added with a smile, "whom I should not mind taking by the throat."

"One needs no excuse," Sabatini murmured.

"When one ——"

He hesitated.

"I have no scruples," Sabatini interrupted, "in using the word that seems to trouble you. Perhaps I am a robber.

Digitized by Google

What, however, you do not appreciate, Mr. Chetwode, is that nine-tenths of the people in the world are in the same position."

"I cannot admit that either," Arnold protested.

"It is, then, because you have not considered the matter," Sabatini declared. "You live in a very small corner of the world and you have accepted a moral code as ridiculously out of date as some forms of religion. The whole of life is a system of robbery. The strong help themselves, the weak go down. Did you call your splendid seamen of Queen Elizabeth's time robbers because they nailed the English flag to their mast and swept the seas for plunder? 'We are strong,' they cried to the country they robbed, 'and you are weak. Stand and deliver!' I spare you a hundred instances. I speak with many experiences behind me. I had ancestors who enriched themselves with fire and sword. I would much prefer to do the same thing. As a matter of fact, when the conditions admit of it I do. I have fought in whatever war has raged since the days when I was eighteen. If another war should break out tomorrow I should weigh the causes, choose the side I preferred and fight for it. But when there is no war I must yet live. I cannot drill troops all day or sit in the cafés. I must use my courage and my brains in whatever way seems most beneficial to the great cause that lies nearest to my heart."

"I cannot imagine," Arnold said frankly, "what that cause is."

"Some day and before long," Sabatini replied, "you may know. At any rate we have talked enough of this for the present. Think over what I have said. If at any time I should have an enterprise to propose to you, you will at least recognize my point of view."

He touched the bell.

A servant entered almost at once, carrying Count Sabatini's overcoat and silk hat.

"I have taken a box at a music-hall," he announced. "I believe that my sister may join us there. I hope it will amuse you."

Arnold rose eagerly to his feet. His eyes were bright already with anticipation.

They glided softly along the crowded streets and up into Leicester Square, where the blaze of lights seemed somehow comforting after the cold darkness of the night. They stopped outside the music-hall and Arnold followed his guide with beating heart as they were shown to their box. The door was thrown open. Fenella was there alone. She was sitting a little way back in the box so as to escape observation from the house. At the sound of their entrance she turned eagerly toward them. Arnold, who was in advance, stopped short in the act of greeting her. She was looking past him at her brother. She was absolutely colorless, her lips were parted, her eyes distended as though with terror. She had all the appearance of a woman who has looked upon some terrible thing.

"For Myself, I Shall Remain. They Tell Me That the Second Ballet is Excellent"

XV

THE few minutes which followed inspired Arnold with an admiration for his companion that he never wholly lost. Sabatini recognized in a moment his sister's state, but he did no more than shrug his shoulders and continue taking off his wraps.

"My dear Fenella!" he said in a tone of gentle reproof.

"You haven't heard?" she gasped.

Sabatini drew out a chair and seated himself. He glanced round at the house and then began slowly to unbutton his white kid gloves.

"I did not buy an evening paper," he remarked. "Your face tells me the news, of course. I gather that Starling has been arrested."

"He was arrested at five o'clock!" she exclaimed. "He will be charged before the magistrates tomorrow."

"Then tomorrow," Sabatini continued calmly, "will be quite time enough for you to begin to worry."

She looked at him for a moment steadfastly. She had ceased to tremble now and her own appearance was becoming more natural.

"If one had but a man's nerve!" she murmured. "Dear Andrea, you make me very ashamed. Yet this is serious—surely it is very serious?"

Arnold had withdrawn as far as possible out of hearing, but Sabatini beckoned him forward.

"You are missing the ballet," he said. "You must take the front chair there. You, too, will be interested in this news that my sister has been telling me. Our friend Starling has been arrested after all. I was afraid he was giving himself away."

"For the murder of Mr. Rosario?" Arnold asked.

"Precisely," Sabatini replied. "An unfortunate situation. Let us hope that he will be able to prove his innocence."

"I don't see how he could have done it," Arnold said slowly. "We saw him only about ten minutes or a quarter of an hour later coming up from the restaurant on the other side of the hotel."

"Oh, without a doubt he will come very near proving an alibi," Sabatini declared. "He is quite clever when it comes to the point. I wonder what sort of evidence they have against him."

"Is there any reason," Arnold asked, "why he should kill Mr. Rosario?"

Sabatini studied his program earnestly.

"Well," he admitted, "that is rather a difficult question to answer. Mr. Rosario was a very obstinate man, and he was certainly persisting in a course of action against which I and many others had warned him—a course of action that was certain to make him exceedingly unpopular with a good many of us. I am not sure, however, whether the facts were sufficiently well known ——"

Fenella interrupted. She rose hurriedly to her feet.

"I am afraid, after all, that you will have to excuse me," she declared, moving to a seat at the back of the box. "I do not think that I can stay here."

Sabatini nodded gravely.

"Perhaps you are right," he said. "For my own part, I, too, wish that I had more faith in Starling. As a matter of fact I have none. When they caught Crampton one could sleep in one's bed; one knew. But this man Starling is a nervous wreck. Who knows what story he may tell, consciously or unconsciously, in his desperate attempts to clear himself? You see," he continued, looking at Arnold, "there are a great many of us to whom Mr. Rosario was personally, just at this moment, obnoxious."

Fenella swayed in her chair as if about to faint.

"I am going home," she murmured.

"As you will," Sabatini agreed. "Perhaps Mr. Chetwode will be so kind as to take you back? I have asked a friend to call here this evening."

She turned to Arnold.

"Do!" she pleaded. "I am fit for nothing else. You will come with me?"

Arnold was already standing with his coat upon his arm.

"Of course," he replied.

Her brother helped her on with her cloak.

"For myself," he declared, "I shall remain. I should not like to miss my friend if he comes, and they tell me that the second ballet is excellent."

She took his hands.

"You have courage, dear one," she murmured.

He smiled.

"It is not courage," he replied; "it is philosophy. If tomorrow were to be the end would you not enjoy today? The true reasonableness of life is to live as though every day might be one's last. We shall meet again very soon, Mr. Chetwode."

Arnold held out his hand. The whole affair was intensely mysterious and there were many things he did not understand in the least, but he knew that he was in the presence of a brave man.

"Good-night, Count Sabatini," he said. "Thank you very much for our dinner. I am afraid I am an unconverted Philistine and doomed to the narrow ways, but, nevertheless, I have enjoyed my evening very much."

Sabatini smiled charmingly.

"You are very British," he declared, "but never mind. Even a Briton has been known to see the truth by gazing long enough. Take care of my little sister, and *au revoir!*"

Her fingers clutched his arm as they passed along the promenade and down the corridor into the street. The car was waiting and in a moment or two they were on their way to Hampstead. She was beginning to look a

PHILADELPHIA, JANUARY 27, 1912

Disrupting the Party

WE ARE interested in a good Democrat's impassioned statement that the nomination of Judson Harmon would disrupt the party; but we rather doubt it. In one campaign the Democratic party nominated Mr. Bryan; in the next—largely under the benign auspices of Mr. Belmont—it nominated Judge Parker; and in the next it nominated Mr. Bryan again. In the short space of eight years, therefore, it circumnavigated the political globe and went from a hundred and fifty in the shade to ninety below zero and back again. There were numerous individual disruptions—but as a political organization the party remained intact.

We rather doubt that the nomination of Mr. Taft will disrupt the Republican party. Mr. Taft and Mr. Harmon or Mr. Wilson and Mr. La Follette are much more akin than Mr. Taft and Mr. La Follette or Mr. Wilson and Mr. Harmon; but it is still doubtful whether, for some time to come, certain Progressives and certain Conservatives will not continue to call themselves Democrats, while other Progressives and Conservatives label themselves Republican. In Congress and on the stump there is much talk of putting principle above party; but when it comes to a showdown there seems to be a lingering doubt about it in both wings of both camps. Both organizations still possess a valuable baggage train in those inert, thick-and-thin adherents who vote automatically. There is considerable hesitation, all round, to cut loose from the train.

A French Example

FOUR hundred and forty-one members of the French Chamber of Deputies voted the other day on a motion to terminate the government privileges of the Bank of France. This bank, of course, exercises much greater power over business in France than any institution or any tangible group of institutions does in this country. It holds eight hundred million dollars of gold and silver, constituting nearly the whole available stock of precious metals in the republic. It can issue unsecured notes, circulating as money, to the amount of fifty-eight hundred million francs, and might do about anything it pleased with the discount market. Other French banks are more or less under its wing; and, though the government has plenary power in the management, the bank, in fact, is largely "run" by eminent financiers. The French Chamber of Deputies is so prevalently radical that, twice within a decade, it has elevated a Socialist to the head of the administration. Nevertheless, the motion above mentioned received only eight affirmative votes against four hundred and thirty-three negatives.

Possessing a mogul engine, in short, the French—radicals and conservatives alike—do not purpose to discard it and return to ox-teams simply because the engine, if improperly managed, might run over somebody.

The Money Trust

AN EMINENT attorney, who has an extensive Wall Street practice and experience, concludes that "less than a dozen men are, for all practical purposes, in control of the direction of at least seventy-five per cent of the deposits of the leading national banks and trust companies in the city of New York, and of allied institutions in various parts of the country." Seventy-five per cent of the deposits of all the national banks and trust companies in New York would amount roughly to one and three-quarter billion dollars. This, then, is the "Money Trust," which a great deal of vague and half-baked opinion would have the Government somehow or other abolish.

All these banks and trust companies are circumscribed by law. All of them are open to the most complete investigation by national and state authority. If they are doing anything that is not lawful the state or Federal Government should be able to put its finger on the crime very promptly. The Money Trust is alleged also to control the big life-insurance companies; but they, like the banks, are completely open to public inspection and constantly under public surveillance—everything they do is prescribed by law.

The Money Trust is commonly referred to as the darkest, most secret and elusive of all our octopi; but, in fact, it lives in a glass house and can scarcely wiggle a tentacle unseen. Less than a dozen men may possibly be "in control of the direction" of the beast; but squads of expert policemen stand at their elbows and can see exactly what they do.

Our Most Refined Vaudeville

ODDLY enough, the Vaudeville Trust and scalpers of theater tickets have overlooked the most flourishing branch of their trade. We refer to the business of getting up a grand banquet under some plausible title, securing several distinguished speakers, and then inviting a large number of indulgent citizens to attend the banquet and foot the bill by paying so much a plate. If the chief magistrate is to speak, the price, we understand, is usually ten dollars. If the headliner is a Supreme Court justice, a very famous senator or the speaker of the House, the price may be anywhere from five dollars to seven and a half; while governors and congressmen fetch about one-fifty.

Obviously the Vaudeville Trust ought to take over this business. By organizing proper circuits and making long-term contracts with the leading attractions, it could effect quite a saving. There is an opportunity, also, for ticket-scalpers to do a brisk trade by putting invitations on sale at the best hotels. Thus travelers with an unoccupied evening and some spare change could take their choice of the opera, a legitimate drama, a musical comedy, the wings-of-the-dove banquet or the dinner of the Sons of Mars.

The Tariff Board

THE Democratic House cannot afford to starve the Tariff Board. It should, on the contrary, support it liberally. The country has had more than enough of superficial, partisan, ex-parte tariff investigation. It wants something different—a comprehensive, disinterested, intelligent inquiry into the important facts. There is no good reason to doubt that the Tariff Board is willing and able to supply this want. No such inquiry was ever before undertaken in this country. To organize its staff and map out the groundwork cost the board months of time and a great deal of money. It is now in good running order and, as must always be the case with every similar body, it gains in efficiency with experience. To check the board now would mean to throw away, in good part, the time, effort and money that have been expended in organization and preliminary work—leaving all that costly work of organizing a staff and mapping out the ground to be done over again at some later day; for if this Tariff Board doesn't do it some future Tariff Board will. The country will not be content until it has a tariff inquiry of this scope and nature.

Congress, of course, is not in the least bound by the board's conclusions. In the woodpulp and wool reports the board presents a body of facts that are above the suspicion of party bias. Different conclusions may be derived from these facts, according to the tariff leanings of the concluder; but there is a basis of fact to begin with. No one can attack the board without giving occasion for a suspicion that he prefers conclusions first and facts afterward.

Objections to the Parcels Post

WE STILL receive letters from individual merchants and from retail associations protesting against the establishment of a parcels post because it will "eliminate, to a large extent, the country retail business," resulting in a decay of the country town, which will react unfavorably on farm values and accelerate the movement of population from country to city.

These fears seem to us vastly exaggerated, and there is surely no reason to assume, as some of our correspondents do, that the Government will conduct a general parcels-post business at a loss, thereby giving mail-order houses and city department stores the advantage of transportation to country customers at less than its cost. Undoubtedly the mail-order business has grown to large proportions of late years. It seems still to be growing and to be very profitable. It has had no advantage of cheap transportation; so the causes of its growth and profitableness must be sought elsewhere. The main cause undoubtedly lies in buying large quantities and selling strictly for cash.

The largest retail enterprise in the world, we believe, is found in England; and it has grown up side by side with the development of the parcels post. We refer to the Rochdale Stores, which buy in large quantities through coöperation and sell strictly for cash. We are convinced that the indiscriminate credit system which generally characterizes the country retail trade does immeasurably more to put that trade at a disadvantage in competing with mail-order houses than any possible—or probable—system of transportation could do.

Does the Commerce Court Help?

THE first session of the Commerce Court was held February 15, 1911. The last annual report of the Interstate Commerce Commission is dated December 20, 1911. In this period of ten months—to quote from the report—"out of twenty-seven cases passed on by the Commerce Court, preliminary restraining orders or final decrees have been issued in favor of the railroads in all but seven cases, and of these only three are of any magnitude." Also, reviewing one of these decisions, the report says: "If the Commerce Court is correct in stating that, where the facts are admitted, it is for that court to determine whether the rate is unreasonable or the discrimination undue, then ninety-nine per cent of the orders of this commission can be reviewed upon the question of fact by the courts." In short, instead of having one Interstate Commerce Commission we shall have two, with conflicting powers.

Formerly the railroads could appeal from the commission to a United States Circuit Court and from that court to the Supreme Court. These courts would inquire and determine whether, as a matter of law, the commission had exceeded its powers. They would certainly protect the railroads against any unlawful exercise of power by the commission. When the Commerce Court was created the objection was raised that it would have little to do except to hear appeals from the commission. That would practically be its occupation. That the inevitable result will be to multiply appeals from the commission and to hold up the commission's work while the new court inquires into it seems clear; otherwise the new court's occupation, relatively speaking, would be gone. Not that the new court is biased in favor of the railroads—that we do not suggest or believe; but, being created for the special purpose of reviewing the Interstate Commerce Commission, it will inevitably tend, we think, to interfere with the work of the commission to a greater degree than the regular law courts would. Whatever its decision may be in a case of real importance, an appeal will be taken to the Supreme Court.

Selling Raw Materials

THIRTEEN years ago we sold the world five hundred million dollars' worth of food, consisting of grain, flour, provisions and dairy products. In the last two fiscal years our exports of food have amounted to but little over half that. Deduct food from the exports of thirteen years ago and you have a remainder of only seven hundred millions. Deduct food from last year's exports and the remainder is almost eighteen hundred millions—an increase of two hundred and fifty per cent. Roughly speaking, this represents increased sales abroad of the products of American industrial labor—competing with foreign industrial labor and paying the freight. This, of course, seems odd, in view of the dogma that our labor cannot possibly compete with foreign labor—even in the home market, where the freight is in its favor. Export figures no more accord with the doctrine of high protection than anything else does.

Railroad Competition

THE Railway Age calculates that the railroads spend eight hundred and fifty thousand dollars a year to maintain their city ticket offices in Kansas City, St. Louis and Chicago, and that by maintaining one joint ticket office in each of those cities they could save half of that sum—which would pay the interest on some nine million dollars of railroad bonds. Much the same condition is found in nearly all of our larger cities. There are anywhere from half a dozen to a score of separate ticket offices that might be combined into one joint office at a large saving in rent and clerk-hire. That the one joint office would be far more convenient for travelers is self-evident. More costly, probably, than the ticket officers are the separate staffs of freight solicitors. If the roads were permitted to pool there could be a large saving here, with no harm or inconvenience to the public. The roads spend a good deal of money to maintain a shell of competition after the meat has been extracted—for they all charge the same rates and give about the same service. Whatever this cost may be, travelers and shippers, of course, foot the bill.

WHO'S WHO—AND WHY

Serious and Frivolous Facts About the Great and the Near Great

ILLUSTRATED BY M. L. BLUMENTHAL

You See He is Dignified, is Mr. Turner

Turner's Art

THE Honorable George Turner, of Spokane, has acquired another job. As an artistic annexer of advantageous adornments in the shape of titles that afford abundant access to Government payrolls, the Honorable George stands almost without a peer. As an example of that intelligent versatility that enables a patriot to land inside the breastworks, no matter what the political stress outside, the Honorable George is posi-grand-tively and pre-superb-eminently peerless.

Assuming that there is a gamut of politics, the Honorable George has run it—no; not that—has strode it with stately mien; and whenever anything good was being handed out he has been there with a sedate platter to get his. It would be unfair to say he ever ran anything—even a gamut. That would imply haste and a lack of dignity. Stride expresses it. He has strode—not to say has stridden—about all phases of our politics. You see he is dignified, is Mr. Turner—as dignified as a newly laundered dress shirt. He is one of those men whom solemnity befits and who wears his instinctive seriousness as a garment. He is always thinking deep thoughts; and when one sees him one involuntarily, after taking a look, says: "Gee! I'll bet he knows a heap!" So he does, having the mental goods to back his appearance; but, however well supplied he is with said goods, he hasn't half so much goods as he looks to have. Do you get that? You would if you could see him once.

Not so long ago, when there was some presidential talk, or some talk for the President, of putting Franklin K. Lane, of the Interstate Commerce Commission, on the Court of Commerce, there was also some presidential search for a man and a Democrat from the Pacific Slope Coast to replace Mr. Lane—he coming from California. Of course the name of Turner was suggested. The name of Turner always is suggested. So a wire was sent to Spokane, to somebody in Turner's confidence, asking if Mr. Turner would consider the place on the Interstate Commerce Commission in case Mr. Lane was put on the Court of Commerce. "No," came the reply. "Former Senator Turner would not consider a place on the Interstate Commerce Commission; but he would take under advisement an appointment to the Supreme Court of the United States!"

Noting this concession, the President made haste to put Mr. Turner on the International Waterways Boundaries Commission—or whatever the name of that fishing club is—to replace the late Thomas H. Carter. And Mr. Turner, being off the payroll at the moment, consented to accept gravely and with much dignity, on the ground, probably—or on the water—that his previous services on boundary matters would make him a valuable member of that organization—and, then, its permanence had its charm. So he moved in with Jim Tawney and Judge Streeter, and is daily giving those two boundary amateurs the benefit of his suggestions and advice.

Turner's Studies in Solemnity

TAKING oneself seriously is a profession, but being taken seriously is an art. The combination always wins. History does not record when Turner began to exude solemnity and appear wise, but the symptoms became most marked when he was in the Senate. Since that time, in his various governmental occupations, he has grown more and more weighted down with his responsibilities; and now he is prepared to put a dull gray background into all the deliberations of the fishing club—which is as it should be, for Jim Tawney and Judge Streeter are inclined to be frivolous anyhow.

Turner's solemnity must have been of gradual growth; for when he was twenty-six he moved down from his native Missouri to be United States Marshal for the southern and middle districts of Alabama. This was in 1876 and Turner was a lifelong Republican up to that time, as every carpet-bagger had to be. He continued as a lifelong Republican for some years. Indeed, he was one of the lifelong Republicans who, in 1880, went to the Republican National Convention and voted for Grant. He was one of the Three Hundred and Six, and it is likely such other Alabama brethren as he brought with him were also. This fealty to the principles of the Grand Old Party brought its reward, for presently—in 1884—we find him in the territory of Washington as a judge—a member of the Supreme Court of Washington; his appointment thereto coming from a Republican president.

And Whenever Anything Good Was Being Handed Out He Has Been There With a Sedate Platter to Get His

Washington was admitted as a state in 1889 and Turner's service as a judge terminated in 1888. Looking over the ground, he decided the place for him was the United States Senate; but that was one time he didn't decide rightly, for he was defeated. It was only a temporary defeat, as it happened, but it opened the eyes of Turner to the folly of being hidebound in political convictions and relying too much on any one party for rewards for services unselfishly rendered.

Inasmuch as the people didn't want him for Senator as a regular Republican, Turner thought it expedient to try them out on other lines. Warmly embracing the doctrine of the free and unlimited coinage of silver at the ratio of sixteen to one, without the consent of any other nation whatsoever, he modified his regular Republicanism to silver Republicanism and, by a masterly combination of this party, the Populists and the Democrats of the state, took over that Senatorship that had been denied him previously.

When he arrived in Washington he found that silver Republicans, as Senators, were not of much nutriment to themselves or anybody else; and, inasmuch as he had given the tenets of the Republican party a faithful trial and had reaped a goodly reward therefrom in consequence of his allegiance, he decided to see what was doing in the Democracy. So he announced his lifelong Democracy shortly after he took on his toga.

His Senate service concluded in 1903, and he returned to Washington—the state—full of honors and dignity. Thinking it absurd to remain in private life, he ran for governor on the Democratic ticket. However, Washington had become normal the while and he was not elected. This gave Mr. Turner pause. What profits it a man to become a Democrat and not get a governorship? Not a leaf stirring in the what-profits-it business, I should say—not a breath of air!

So, as became a man of broad and catholic spirit as to his politics, Turner became bipartisan. Of course he never renounced his lifelong Democratic principles, but he held them well in hand; and when the Colonel asked him to become a member of the Alaskan Boundary Tribunal he had reached that judicial attitude that enabled him to look on these great international questions without partisan bias, and he took the place—the *per diem* being satisfactory.

The boundary dispute was settled and Turner maintained his bipartisan attitude. Then came along the Northeastern Fisheries Arbitration; and, his eminent qualifications for the presentation of our side of that historic contention—settled, as you will remember, by the United States getting all the press notices and glory and Great Britain getting all the fish—being admitted on all sides, he went to The Hague as counsel on the part of the United States.

He is Always Thinking Deep Thoughts

And now he is a member of the International Waterways Boundaries Commission, which has the prettiest mahogany desks in Washington. It is a good job too—a very good job—and permanent if some of those Progressive Senators do not mess it up by asking what it's for. In the ordinary course it takes a commission about sixteen years to settle sixteen miles of boundary dispute. Imagine the happy days in store for those intrusted with the delicate negotiations having to do with water boundaries stretching all the way from the Atlantic to the Pacific! They will be settling those boundaries in 2239 A. D.

Lest it may be thought that I have no adequate conception of Mr. Turner's abilities other than those of a political and perquisitorial nature, let me hastily print the fact that he is an able lawyer—an exceedingly able lawyer—and has won high praise for his work both in London and at The Hague. Still, these big cases do not happen along every day; and it probably seems well enough for Turner to employ himself with smaller boundary matters until another big one appears worth his serious attention, which is the only kind of attention he bestows—serious. And there is a precept in that which can be extracted by all who have the time.

On the Safe Side

A LARGE, shaggy, rough-necked person came into a haberdashery in Washington and asked the clerk—a bored young person who wore a very high collar and was much interested in the polish on his nails—for a shirt.

The clerk passed out two, one pink and one blue.

"Which of these is best?" asked the customer.

The clerk yawned, examined his nails and said: "Oh, it's just a matter of taste."

"But which kind would you get if you was a-buyin' one of 'em?"

"Personally I should prefer the blue one," answered the salesman, drumming on the counter and yawning again.

"That so?" asked the shaggy customer. "All right, I'll take the pink one. Here, wrap 'er up."

Close-Mouthed Crothers

WHEN Austin Lane Crothers was Governor of Maryland he had the reputation of being harder to get information out of than any man the Maryland reporters ever knew. He wouldn't talk about any official matter.

A reporter who knew him very well was trying to find out whether he would call a special session of the legislature.

"Mr. Crothers," said the reporter, "in your conversations with Governor Crothers what does the Governor say to you about a special session of the General Assembly?"

"My son," whispered the Governor, "the Governor never talks to me on the subject. I can't get a word out of the close-mouthed old rascal."

Safeguarded Against Satan

TWO darkies were looking at a window display of computing scales in Evansville, Indiana. One was explaining to the other how the scales work.

"I reckon," said the negro to whom the explanation was made, "dey wouldn't be no use er Satan tappin' a man on de shoulder ef he was wukkin behin' one er dem things!"

Waiting for Compliments

A JUNIOR officer on a warship was dressing to go ashore and sent for his attendant, a newly recruited negro boy.

"Sam," said the officer, "give my compliments to the executive officer and tell him I desire permission to go ashore"—which is the usual formality.

"Yes, suh," said the boy, who stood at attention and did not leave.

"Well," said the officer sharply, "why don't you go?"

"Why, suh," replied the boy, "I ain't heerd no compleemints yit!"

Is Music made by REASON Or by INSTINCT?

PLAYER pianos could be made to run like music boxes, when turned on, if people wanted them like that.

But people don't. More than half the joy of having a player piano lies in the pleasure of Personal Expression.

This pleasure can be had only in two ways: by working numerous "interpreting" devices, or by *Instinctive* control—the Virtuolo way.

But how much more pleasure there is in expressing yourself, impulsively and instinctively, than there is in manipulating machinery!

We think that musical expression has to do with Feelings, Emotions, Passions, and that these things have naught to do with mechanical devices, but are things that rise and fall and flow from human beings *Instinctively*.

Instead of trying to *force* you to walk a figurative tight-rope of fixed interpretation, the Virtuolo aims to *lead* you to express yourself in your own instinctive way—to let your *instinct* for expression be stirred into flame.

Four sensitive buttons to touch—that is all!

They respond to your musical desires like nerves in your own finger-tips! How this is done is too much to try to tell in advertisements. The best way to explain it is to let your fingers rest on the four expression buttons, and let the Virtuolo, itself, tell you the marvels of instinctive playing. If you do this at the store where Virtuolos are sold, you will sell the Virtuolo to yourself.

VIRTUOLO

THE NEW INSTINCTIVE PLAYER PIANO

PRICES AND TERMS

(East of the Rocky Mountains)

The Virtuolo in Hallet & Davis Piano, special mahogany case, Colonial design, complete, $700. In Hallet & Davis Piano, Arts-and-Crafts case, $775. The Virtuolo in Conway Piano, mahogany or walnut, $575. Lexington Player Piano, $450 to $465.

Terms: Three years in which to pay if you desire. Simple interest on deferred payments. Pianos and ordinary player pianos taken in exchange at fair valuation.

"THE INNER BEAUTY"

(Send for FREE copy)

It tells how the new Virtuolo is designed to call forth your expressive instinct and respond to it. Tells how music is a language by which the composer tells you of his feelings, thoughts, imaginations. It is a book extraordinary. Richly illustrated with the world's most famous paintings inspired by Music.

If you send for a copy today you'll be glad you didn't forget to send for it.

PIANOS—MANY MAKES

Hallet & Davis Pianos—pre-eminent among artists since the immortal Franz Liszt praised them above all other pianos at the Paris Exposition, 1867. Price $365 up.

Conway Piano $300 up. Lexington Piano $250 up. Also fine pianos of all makes, accumulated in exchange for new Virtuolos. Terms: By our easy payments, you can have your piano to play on while saving to pay for it. Write for Special Bargain Bulletin, or tell us the make and price you're looking for.

Oddities and Novelties

The Ear Flower of the Aztecs

THERE is a prospect that the more costly brands of chocolate supplied to the market for eating purposes may soon have a new and delicious flavor, derived from a flower which the ancient Aztecs knew, but which has only recently been rediscovered.

This was known to the Aztecs of old as the "ear flower," because of the resemblance of its individual petals to a human ear. It was regarded as sacred and was much used for flavoring chocolate ground up for drinking. Francisco Hernandez, who was sent by Philip II to Mexico in 1570, to study its resources, described the blossom in question, speaking of it as "giving a very fragrant odor and flavor to that celebrated drink which they called 'chocolate.'" Afterward, however, all knowledge of its identity was lost.

Recently, however, it was discovered by Mr. W. E. Safford, a tropical botanist of the Department of Agriculture, that the flower was that of a plant which is known today in Southern Mexico and Guatemala as the "Orejuela." The first hint that he got in this direction came to him from accounts given by recent travelers in that part of the world, who spoke of a delicious chocolate which they found there—a chocolate with an unfamiliar and delightful flavor, derived from the blossoms of the plant above mentioned.

Later on he came across a photograph of the plant, taken by one of our agricultural explorers in Guatemala, and noticed that the petals of the flowers were much like a human ear in shape. He learned incidentally that these flowers were offered for sale in the markets of that country, both fresh and dried. Specimens of the plant, secured in 1906, were found by Mr. Safford in the National Herbarium, and the petals of the blossoms when chewed proved to be pungently aromatic.

These facts, with the help of a drawing made by the Spaniard Hernandez himself, were sufficient to identify the Orejuela with the long-lost sacred plant of the Aztecs.

"The plant could probably be cultivated wherever coffee will thrive," says Mr. Safford in the Annual Report of the Smithsonian Institution; and he suggests that it be grown for the sake of its usefulness as a spice and for flavoring purposes, and also on account of the wonderful fragrance of its flowers.

Coldproof Apples From Asia

TO OBTAIN hardy varieties of apples that will stand the climate of the northern tier of states in the West is an earnest ambition of the Department of Agriculture. Much help in this direction is likely to be obtained from certain "finds" made recently by Dr. F. N. Meyer, one of our Government plant-hunters, in the desert region of Eastern or Chinese Turkestan, which lies between the Karakoram range of the Himalayas and the great Tian-Shan range of Western Mongolia.

During the last year Doctor Meyer, in that region, has been engaged in the most difficult piece of agricultural exploration yet undertaken. On foot or in native carts he has gone from oasis to oasis, studying the native fruits and grains. He found many valuable plants; but most important of all were the apples which he discovered growing wild at an altitude of about a mile and a half above the sea, in the Tian-Shan Mountains.

Here, on the barren slopes of a region where winters are cold and long, and summers short, hot and dry, he found thousands of bushy little apple trees; in fact, the whole valley of the Chong Djighilan proved to be one vast wild apple and apricot garden, with a host of varieties differing in size and form to choose from. These varieties are all of necessity very hardy, and Doctor Meyer believes that some of them will prove extremely valuable.

Cuttings will be used at the agricultural experiment stations in the Northwest for crossing with some of the finest cultivated strains of apples and apricots, with a view to obtaining new varieties that are coldproof as well as satisfactory for eating purposes.

"And only one maid! How do you manage so nicely?"

HOW does any woman with only one maid—or sometimes with no help at all—manage dainty little luncheons and other company affairs with perfect smoothness and ease?

She takes advantage of modern ideas. She avoids needless and useless labor. For one thing, the modern house-wife wastes no time and energy in soup-making—she uses

Campbell's SOUPS

By selecting the particular Campbell "kind" best suited to each occasion, she is sure at least of beginning the affair in a pleasing and satisfying way. And that is half the battle.

Wouldn't an assortment of these excellent soups always at hand simplify some of *your* household problems? Why not find out *today?*

Sense and Nonsense

Mose and the Law

BOZEMAN BULGER, a baseball writer, says that in his home town, down in Southern Alabama, a darky was brought into court to answer a charge of murder.

"Mose Tupper," said the judge, contemplating the prisoner over his spectacles, "you are accused here of one of the most serious crimes known to our laws—to wit, the taking of a human life. Are you properly represented by counsel?"

"No, suh," said the darky cheerfully.

"Well, have you talked to any one about your defense since your arrest?"

"I told the sheruff about the shootin' when he come to my cabin to fetch me heah," said the prisoner—"but tha's all."

"And have you taken no steps whatever to engage a lawyer?"

"No, suh," said Mose. "I ain't got no money to be wastin' on lawyers. Dey tell me lawyers is mighty costive."

"If you have no funds," insisted the judge, "it lies within the power of the court to appoint an attorney to defend you without charge."

"You needn't be botherin' yo'se'f, jedge," answered Mose.

"Well, what do you propose to do about this case?" demanded his Honor.

"Jedge," said the negro, "ez fur ez Ise concerned you kin jes' let de matter drap!"

Terry's Remark to the Goddess

LOU TERRY is a well-known Salt Lake City business man who thinks his own country is just about the best ever. He became a little more hidebound in that opinion as the result of a recent trip to Europe. Terry didn't have a very good time abroad. He was bothered by Continental customs officers, tormented by his inability to speak any language other than his own, and mussed up over the different varieties of money with which he had to contend. Lou really didn't know a moment's peace until he started homeward; and his long-pent-up feelings found expression as his ship sailed up New York Harbor and passed the Statue of Liberty. Terry looked up at the towering figure of the goddess.

"Old girl," he sighed contentedly, "all I want to say is, if you ever see me again you'll have to look the other way!"

Hauling Out

Oh, Clytie, in our homeward flight
Bid all the homeless follow!
Your shipyard shed will house at night
The seagull and the swallow.
Since first your sail, that day in spring,
Blew like a silver feather
Along the sound—why, wing to wing,
Our flock has cruised together.
How oft, when Pilot Dawn would break
The glooming drift to leeward,
Those gulls would skim our dappled wake
Or cry a welcome seaward.
And when, through sunset's blackening shroud,
Burst fanlights redly burning—
Like wreck-fires on a reef of cloud
To mariners returning—
Have I not heard the swallow's hail
To warn of wreckers' luring,
Ere Clytie, with a furling sail,
Swept swanlike to her mooring?
The smuggling crow in moonrise mist;
The osprey, privateering;
The crane, becalmed in amethyst
When twilight skies are clearing—
Since we've cruised far on summer seas,
All argonauts together,
Shall you and I seek home, with these
Unhavened from bleak weather?
Lo, what a crew for winter's night!
But now the sun is failing—
Your keel has touched; the tide is right—
Here ends our summer's sailing.
Yet, through the snowy night always
I'll dream of woe and crying—
Of icy nests and castaways
And wrecks, where they are flying;
And whistling dusk of tempest lit
With one gray bolt at even,
Where screaming fowl clash wings and flit
Like spirits beat from Heaven.

When mellow seas at sunset foam
'Tis sweet to have them follow—
But where in winter seek the home
Of seagull and of swallow?

—*Calvin Johnston.*

An Edible Weapon

IN A VIRGINIA courthouse a negro was describing how a cutting scrape started.

"Dis here Johnson nigger started toward me," said the witness; "and ez he done so he stuck his hand down in his hip pocket. And I says to him, 'Nigger,' I says, 'whutever you has got your hand on now better be a chicken, 'cause I suttinly is gwine to make you eat it!"

The Wop

When the line is surveyed through the scenery
For tunnel and culvert and cut—
When the contractor has his machinery
The "big job" is ready—all but ——
"All but" means the shovel and pick of it—
The hunkies who work till they drop.
And so, in the dust and the thick of it,
Look for the Wop!

The big bosses bear all the fret of it—
They are the fellows who plan;
But the backbreaking strain and the sweat of it
Fall to the laboring man—
Dago and Russ and Hungarian—
All of the immigrant crop.
Where is the job we could carry on—
Save for the Wop?

Subject for scorn and bedeviling;
Victim of fraud and chicane—
Still, with his spade, he is leveling
Routes over mountain and plain.
Progress? His soul is the breath of it;
Lacking his hand, it would stop.
Facing the danger and death of it,
Here is the Wop!

He knows the hardest and worst of it;
He knows the hard-driven toil,
The ache and the heat and the thirst of it—
Never the dream—or the spoil.
Caves and explosions make mud of him—
Who cares a damn? Let him flop!
Progress is stained with the blood of him—
Only a Wop!

—*Berton Braley.*

Uncle Sam's Job

SENATOR SWANSON, of Virginia, says that undeserving men often receive Government jobs.

Their attitude is like that of old Uncle Sam, who had been seen for several days patiently sitting on the bank of the Rappahannock River, near the dam, holding his shotgun in his hand.

Finally he attracted the attention of a passer-by, who asked:

"Well, Uncle Sam, are you looking for something to do?"

"No, suh," answered Sam. "Ise gittin' paid fo' what Ise doin'."

"Indeed!" said the other. "And what may that be?"

"Shootin' de muskrats dat am undermininʼ de dam," answered Sam.

"Why, there goes one now!" exclaimed the stranger excitedly. "Why don't you shoot?"

"S'pose I wants t' lose mah job, suh?" answered Sam complacently.

Fully Specified

AT THE Lambs Club in New York they are telling a story of a Shaksperean actor who was left stranded in a small town in Michigan.

He obtained board at the local hotel until a remittance arrived to take him back to dear Broadway. As he had no funds for tipping purposes he got scant attention from the servants.

One day he pushed and pushed the push-button in his room without getting an answer. Then he got out of bed, put on his trousers and overcoat, turned the coat collar up about his bare throat and ventured through the hallway until he came to the rotunda opening down upon the office floor.

"Bellboy! Bellboy!" he called in his best speaking voice.

"Watcher want?" answered back the menial impertinently.

"Bellboy," said the Thespian with much dignity, "I desire that my laundry shall be brought to me forthwith!"

"G'wan!" said the boy. "You didn't have but half a shirt when you hit this town."

"That," said the actor, "is the laundry to which I refer."

Tire Misery Must Go!

Get Protection Pleasure

GET rid of tire misery *now*. You can't afford to delay using these tire protectors. You can't afford it from either a money-losing or pleasure-losing standpoint. And now you never need endure another of those costly tire troubles, not even the least of them. They are all ended. For here is a tire protection that protects. Protects against puncture, blowout, stone cut or bruise, chafing, and all the other forms of wear and tear. Think of riding on one set of tires for more than two years' constant travel, over good roads and bad, without a single tire trouble. Thousands of motorists who have found that Standard Tire Protectors keep tires uninjured, sound and good as new long after the longest lifetime of unprotected tires, are getting the pleasures and making the savings that you can get and save with

Standard Tire Protectors

No freakish fillet or leather tread! The toughest rubber ever produced—a new rubber—is used exclusively in Standard Tire Protectors for 1912. With layers of fabric that will stop nails, glass and all other tire dangers—this new and toughest rubber makes Standard Tire Protectors almost like armor plate around, over and outside your tire. All disappointing "retreading" unnecessary longer!

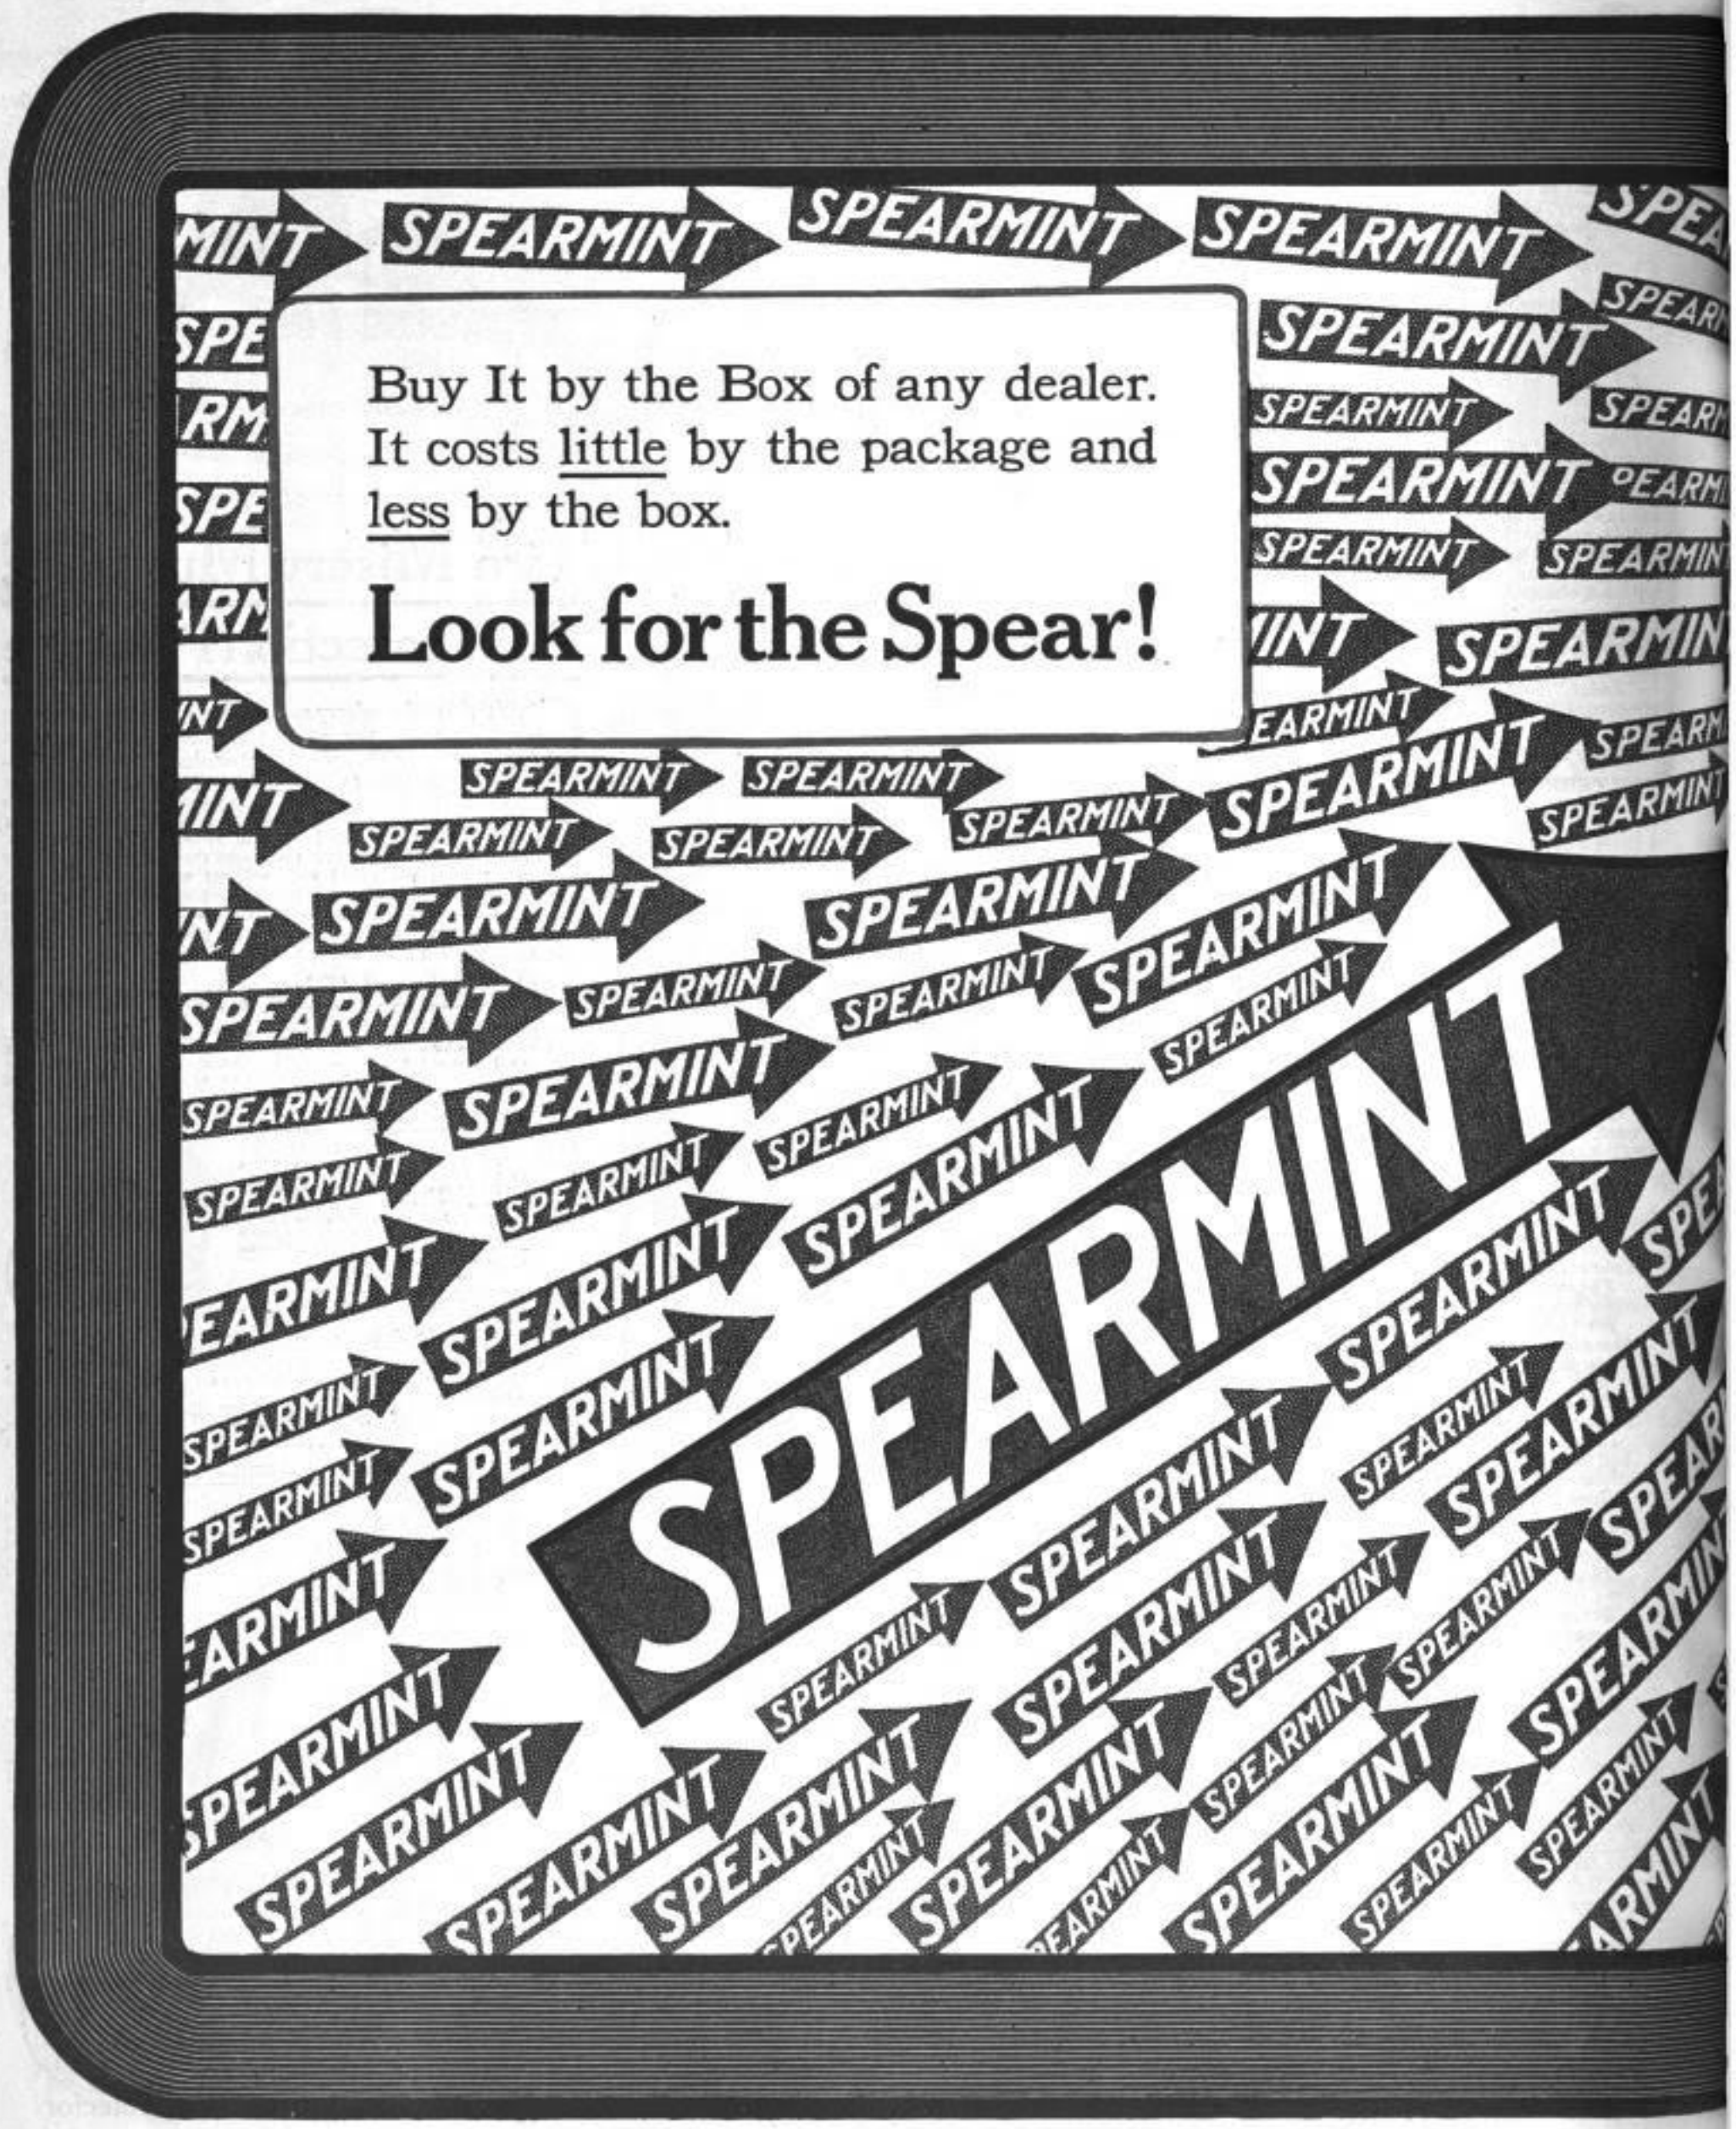
Lower Prices This Year

are the result of our new manufacturing facilities. On all the popular sizes, fully 20 per cent reduction from 1911 prices removes the least reason for you to hesitate. Standard Tire Protectors would be an economy at several times the prices you will pay for them. They save you cost of missing trains, failing to meet business appointments on time, getting to the theatre when the play is half over,—they save you the costs of delay at all those times when delay means agony.

Skidding protection is combined with tire protection—the economy of double protection at just one single cost—by our famous non-skid tread, which may be had instead of plain tread if desired.

FREE Book on Tire Protection

You will find it full of valuable information and convincing proof that your tires need no longer be the bane of your motoring pleasures. Write for this free book and ask for sample of this new, toughest rubber.



Standard Tire Protector Co.,
111 E. Market Street, Akron, Ohio

DEALERS—1912 New Prices

20 per cent average reduction to consumers and new scale of larger discounts to dealers, make Standard Tire Protectors one of your best-paying lines of auto accessories. You know that your last year's sales of Standard Tire Protectors would have been more than doubled had it not been for that troublesome price question. It is now solved. Our 1912 prices to consumers are far lower, dealer's discounts higher and the product far better than ever. The advance orders prove we shall sell five times as many Standard Tire Protectors in 1912 as we sold in 1911. You want to get your share of this increasing business. We are advertising nationally—reaching all motor car users. They will expect to get Standard Tire Protectors from you. Write us for new prices, terms, and particulars of co-operation offered.

A WALL STREET WIFE

(Continued from Page 11)

They that were in the market at the time will recall the day's events. After the first news of San Francisco's vast disaster there was a pause. The market hung suspended. It neither rose nor fell, as if, indeed, the men whose specialty is to trade on disaster were themselves appalled by its immensity. But not for long—no! A few acute minds at once grasped its significance. My husband was among them. He plunged. With every cent at his command he went short on the securities most likely to be affected. It was a case of make or break; and to this moment I recall with what terror I learned that our entire fortune was pledged on the outcome! For a week—a month, I might say—I suffered agonies that would have made a fit addition to the tortures described in the classic limbo of the Greeks. Yes—for I knew now my husband could never return to a humdrum daily round of grubbing away in some business occupation. He was done for, I was assured! Of course he might take a place somewhere; but, as I knew, as I had seen to be the case with other men, every dollar he could lay his hands on would still be poured into some brokerage office—some bucketshop or the like. Strong talk, you may call this—nevertheless, it was in our case true.

However, as I say, Steve did not lose. He won. He won steadily; for presently the insurance companies, to pay their losses, began pouring into the Street all the securities they held in reserve. The market dropped with a crash, hundreds of weakly margined accounts adding to the downfall; and my husband, having gone short at the top, now began to "pyramid"—that is, to use his profits to sell more and more. Ultimately he was obligated to the extent of eight thousand shares in all. In other words, each and every one-point drop in the market meant eight thousand dollars added to his winnings. The mere thought of it confounded me. In three months' time my husband's fortune—or rather let me say the effigy of a fortune, his paper profits—amounted to no less than one hundred and sixty thousand dollars!

I had my motor now, my limousine. Its cost was forty-five hundred dollars. With my car I had also my chauffeur, whose wages were one hundred dollars a month. I had also a twelve-room apartment in Riverside Drive, the rent of which was three thousand a year. I had a lady's maid besides; and, added to all this and the rest of it, in the near future I contemplated an extended tour abroad. In short, my early longings seemed fulfilled, for at last I found myself in reality provided with all those luxurious externals I had lusted for so long.

And now did I confess myself appeased? Am I to declare, in point, that my heart rejoiced fitly, filled with enviable content? I wish I could! It is true, of course, that for the interval of a week or so, possibly for a month—even more—I wrenched my mind away from the old qualms of doubt, of fear, and set myself to enjoy to the limit all the pleasures of this newfound fools' paradise that surrounded me. A fever of hurry seized me. I wished to go everywhere. I wished to see everybody and everything. As is the case with every woman suddenly enriched, I considered social advancement. To have remained at home, to have sat there quietly reading, sewing, attending to my household duties—to have tried this, I say, at that moment would, I believe, have been utterly beyond my powers of endurance, my force of self-control. It would have been, in fact, as far beyond me as it would have been to refrain from disporting my rise in fortune—not that by nature I cared to make a show, but that now my money forced me to.

It was an encounter—in short, a meeting with Mrs. Mosher—that brought me to my senses. One afternoon, on a day in winter as I recall, my motor broke down far up toward the head of Riverside Drive. As there were no taxicabs in sight, I started to walk to the nearest subway station. Halfway down a gloomy side street, a thoroughfare lined with cheap and dingy down-at-the-heel flathouses, I saw her emerging from one—perhaps the dingiest.

She was no longer the same lady who but a few months before had affected to yawn at my dinner. I may say I had even some difficulty in recognizing her. "Why, Fanny!" I exclaimed; and from the exclamation I have no doubt she clearly read my mind.

"Oh, howdy-do?" she answered stiffly; then added, almost with a sneer: "Rather out of your way, aren't you—up here in Harlem, I mean."

I explained awkwardly that my motor had broken down. Try as I would, though, while I said it I could not keep my eyes off Mrs. Mosher's dowdy hat—that and the whitened seams of her thin broadcloth coat. Even though I had done so, however, my nostrils would still have been aware of the acrid odor of gasoline that emanated from both the coat and her gloves.

"Oh, you have a motor now, have you?" she interrogated with another sneer, one as sorry as it was ill-concealed. "Well, take my advice, Lily," she laughed, giving me a mirthless grin; "use your motor all you can—yes! all you can—while it lasts!"

However, this meanness was no more than a moment's flash of spirit. Before I quit her she stood there in the street weakly sniveling, clinging to my arm, with the tears starting down her cheeks. Not only was all their money gone, but all their possessions too—the most personal of her belongings included! Mosher had pawned everything in the effort to recoup himself. The proceeds, however, had only fattened a few brokers and a somewhat greater number of bucketshop proprietors. Mrs. Mosher was now doing her own housework, while her husband—Mosher, once the gay—well, Mosher had now come down to "touching" his friends, his acquaintances—any one—for a couple of dollars—a dollar—half a dollar—anything!

I dare say all this sounds like drama—melodrama—the Fourteenth Street kind besides. It was. Moreover, that it was is exactly what I'm trying to show. Men may laugh; especially may those brokerage gentlemen laugh, at tales of the dabbler, the piker, who gets his fingers burned—I, however, fail to see the joke. Nor will others circumstanced like myself see in such a story any cause for humor. We women are the ones upon whom the burden falls. The man has his fever, his mania for gambling, to support him. Hopeful to the last, he looks forward to the moment when, by some stray turn of the wheel, he will make his "killing." Meanwhile, uptown, his wife wonders whether he'll be able that night to bring home the three dollars she owes the butcher!

Do not laugh. Fanny Mosher's case is perhaps extreme; but so, too, is mine. I know she wept again when I offered her the seven dollars I had in my purse—she took it, too, let me add.

I went home as if I was returning from a funeral—my funeral. Steve was away that night, as, indeed, he was away many nights nowadays. I don't know where he was; nor did I make it my duty to ask, the fact being that he and I, by this time, were unconsciously drifting apart. I suppose the truth is that, in the craving which too-quick money engenders, home must have proved too dull for him to stand. However, I was glad he wasn't home. I wanted solitude in order that I might reflect. What I pondered was the more or less selfish thought of how I could put off the day when I, like Fanny Mosher, should have to do my own housework—should wonder where the next month's rent would come from—should figure out, by rote, what I should give the butcher this time in place of his expected three dollars.

I failed to imagine. At two or three in the morning I gave up the effort to imagine. Some time along toward daylight Steve lurched in and, with an apologetic giggle, handed me another of his now innumerable conciliatory presents. It was an emerald bracelet. As he told me, it had cost him close to fifteen hundred dollars. However, he assured me I need not bother about the cost. A short sale in Reading that afternoon had put him thirty-five hundred to the good.

It was an inspiration, that gift was—or so I thought it. Instantly a thought leaped into my head; and, affecting disappointment, I tossed the bracelet aside.

"Say, what's the matter with you?" Steve demanded thickly. "Don't the bracelet suit?"

I still affected to be peevish.

"Oh, yes," I answered; "only I rather hoped, Steve, you'd get the pearl necklace I've been looking at."

He gave a gasp, for even he was staggered by such extravagance.

I Want to *Give* You "Human Energy"

My book explains for the first time, as far as I know, the laws governing right exercise. It shows clearly and concisely why a few minutes daily of movements scientifically directed to reach your internal organs—all of which are muscular—will do infinitely more for your health and strength than hours of random exercise.

I offer it to you free, because I want you to understand the principles underlying

The Thompson Course

which has brought thousands of men from uncertain health and inefficiency into fuller, more useful and serener life.

Sooner or later you will adopt the principles of my course—all men of sedentary life will. You will find "Human Energy" a real contribution to the science of making the most of oneself. It is startling, yet obviously true. Sending for it puts you under no obligation, except to read it as though it were written by a friend.

J. Edmund Thompson

Suite 13, Exchange Building, Worcester, Mass.

TRADE Shir Gar MARK

Holds the Sox up. Holds the Shirt down.
Does not bind the leg.

Long or short drawers. No bulging of Shirt bosom. Fine for full dress shirts. Only garter endurable with varicose veins. Styles A and B in Silk, 75c.; Lisle, 50c. Style C, 25c.

Satisfaction guaranteed. At your dealers or send price and receive a pair postpaid.

Shirt Garter Co., Box 101, Columbia, Tenn.

HOLDS COAT AND SKIRT — HOLDS COAT AND TROUSERS

The WEST ELCO SUIT HANGER

Two Hangers in One

USE either way, back or front. Press spring to open skirt or trouser hanger—release to close—one hand does it all.

Clamp made of hard wood—won't rust.

Sold by all department stores for 25c. If not at your dealer's, don't accept any other hanger, but send dealer's name and 25c and hanger will be sent prepaid.

WEST ELCO SUIT HANGER CO., 45 So. Front St., Philadelphia

"Why, you look here, Lily!" he stammered. "You're not asking me, are you, to lay out fifteen thousand in a necklace?"

I coolly shrugged myself. "Gilsey's wife has one, hasn't she?" I demanded. Gilsey, I'll explain, was one of our new friends, another dabbler in the market. "Birds of a feather," and so on, you know—a saying nowhere truer than in Wall Street—and the Gilseys were now our intimates. However, as Gilsey had done no better than my husband had, I insisted that I, too, must have a necklace.

Steve gazed at me curiously.

"Lily," he remarked; "what've you got up your sleeve anyway? It's not like you," he added queerly, "to try to pull my leg like this."

I replied that I was merely disappointed not to have a necklace.

"All right," said Steve, reaching for the bracelet. "I'll get it for you. I've got a hundred and ninety thousand in profits now. I guess I can stand it."

Then and there I threw all caution to the winds. My inspired plan was itself forgotten for the moment.

"Steve! Steve!" I urged. "If you have all that let's cash in—let's quit and retire! Don't you see?" I protested. "With all that money we can retire, now—never worry again!"

After his first astonishment, Steve gave a derisive chuckle. "Gad! Quit on a shoestring?" he mumbled contemptuously. "Not on your life, Lily! I'm going to run it up to an even half-million—then I'll quit."

My heart left me. It was not the first time he'd given me that answer; so I returned desperately to the topic of the necklace. That night before he left me to go to his bed I had his check for fifteen thousand dollars.

I did not buy the necklace. Instead, at a cost of three hundred and fifty dollars I had its exact replica made. No doubt, for a mere imitation, the price was high; but at the same time it was worth it, the fact of the matter being that not even an expert, unless he examined it closely, could have told it from the genuine. However, that it should deceive my husband was all I required; and in this it succeeded admirably. The remainder of his check—fourteen thousand six hundred and fifty dollars—I secretly deposited in a trust company.

Nor was this my only provision against the day that I now felt sure was inevitable. At the time, the value of my other possessions—my real gems, you understand—approximated twenty thousand dollars. These, too, I had copied, duplicated in the imitation; and, having stored the originals in a safe-deposit vault, I refilled my jewel case with the substitutes. The truth is, Mrs. Mosher's tearful confession had given me a strong hint of the possibilities. In her case the first knowledge of disaster was the fact that Mosher, without her knowledge, had pawned all her gems to remargin his tottering account.

There are many ways a Wall Street plunger's wife may lay an anchor to windward. I developed one and all. A rich field lay in the household accounts. Gradually they had arisen to a startling figure; we were, in fact, living at a rate of no less than ten thousand a year—ten thousand in the house alone—and at one stroke I cut a full third from this expense. My husband, however, knew nothing of this reduction, for all that I saved I also secretly deposited. My dress allowance added still further to my secret fund. Instead of paying for a gown a hundred dollars, a hundred and fifty, two hundred, as the case had formerly been, I now bought dresses that cost perhaps a third—though, of course, I omitted mentioning this economy to my husband. Whenever a new gown came home—and they began now, let me say, to be delivered with surprising frequency—I gouged out of him a check for three times the dress' value. Then, again, I made every out-of-town trip a source of saving—journeys to Atlantic City, Lakewood, Narragansett Pier. My husband never joined me now; for, submerged as he was, head over heels in the market, he dared hardly to leave it for a day. Consequently, instead of registering at the smart, higher-priced hotels, I began to frequent shabby, second-rate establishments. Leaving my maid at home I paid, say, three dollars a day, where formerly I'd laid out anywhere from ten to fifteen. To delude my husband, I gave him as my address one of the hotels I'd formerly frequented. Every day I went to this hotel for my mail; but once I was nearly caught. Steve wired he was coming to join me; and to this day I still graphically recall the dumfounded astonishment of the room clerk where I was staying when, just at the dinner hour, I fled frantically with all my baggage to the near-by establishment.

The first signal of impending trouble came through a dun, the collector for a certain fashionable dressmaking establishment. Foolishly I had put myself in the power of this concern, the head of which was a woman. To befool husbands was by no means a new side to her business; for, as seductively she had made known to me, it was her custom to advance money to her patrons, then to charge it on the bill—charge it at usurious interest, let me add. At any rate, when I began to lay out my anchor to windward I found this person a ready accomplice. She readily consented to charge on the bill whatever I suggested; and when the bills were paid she turned over the balance to me—that is, minus her interest for the accommodation.

Eventually the bill was not paid however. By now there had come a pause to the market's downward plunge. The bears who for months had been having an easy time of it, now no longer found things so much to their liking. The bull element—those whose effort it is to drive the market upward—had rallied and were making a desperate stand. Had my husband cashed in then he would have stood perhaps two hundred and fifty thousand to the good. But no! He was still inspired to make it half a million; and he still hung on. Moreover, since he had now more than doubled his holdings of stock, he required every cent of cash he possessed to maintain his margins. Consequently he had paid none of our current bills.

My situation was now, indeed, grotesque. Here I was, the wife of a man whose fortune, had he possessed the will-power to close out at that moment—would have amounted to no less than two hundred thousand dollars—two hundred thousand dollars!—yes! And still I was forced to stand at my door and lie to a dun—and for what? For a paltry six hundred dollars! Much worse—I had to lie, too, to that other dun, our grocer! His bill was only one hundred and ninety dollars.

Wait! I did not lie. The fact is, I had not yet come to that. When my husband said gruffly, "Aw, let those fellows wait!" I paid them off with checks drawn on that secret account of mine. Then I sat down at my desk, got all our bills together and figured to a dollar the exact sum total of all our outstanding indebtedness. It staggered me.

I did not pay those bills. Very few of them were ever paid. The crash came before I could do it.

Many of those who read this will recall Wall Street's now historic "red-necktie panic." The story of it involves a certain firm of brokers—themselves speculators—who overstayed their market. Like my husband, they went short at the top; by pyramiding their winnings they, too, had rolled up a fortune—profits that in the aggregate were enormous. Like my husband's, however, theirs as well was only a paper fortune. Greedy for more, they would not "realize," but hung on fatuously until the market turned against them; then, in the effort to save themselves, they sought to create a flurry that would again drive down prices and enable them to get out. The effort was engineered on the floor of the Exchange by the firm's senior member, who wore always a red necktie. Hence the name—"the red-necktie panic."

On a midsummer Saturday morning the trap was sprung. For an hour—two hours—chaos ruled; then the bulls rallied. The red-necktie firm went down with a crash; and in the pinch that followed every bear in the market was made to pay through the nose.

All that day our telephone rang and rang. My husband's brokers were calling him for margins. Where he was I do not know; but at seven o'clock Monday morning he slipped in while I was asleep and as secretly slipped out again. I knew, because my maid so informed me. Her tone was curious. At nine o'clock, though, he returned—and then I saw him.

I awoke from a doze to see his face staring at me over the footboard of my bed. His eyes were inflamed; he was unshorn, unkempt; and beneath the stubble of his beard the man's skin had taken on a startling, claylike pallor. His voice, when he spoke, was thick; it quavered with

Madam—Your Grocer Will Tell You the Facts About Heinz Tomato Soup

We believe, Madam, that you would have Tomato Soup more often in your home if tomato soup were easier to make. Or, if you knew just how Heinz Tomato Soup measures up to the very best home-made—with none of the bother and fuss.

Everyone likes Tomato Soup, and Heinz Tomato Soup needs only an introduction to make it a steady and welcome visitor to your home. It is ready to serve in next to no time—just heat.

Your grocer knows what the Heinz Pure Food Institution stands for, and what the Heinz label means on *any* food product.

He knows that on Heinz Tomato Soup it means choice tomatoes—picked at the prime of ripeness—prepared the very day they leave the vines—with the addition of rich cream and pure spices.

He knows the pains-taking *care* that has made Heinz quality possible. And he should tell you—for *his own interest* as well as ours—that he is satisfied to make a little less profit on Heinz 57 Varieties in order to give you more quality for your money.

These are the facts about Heinz Tomato Soup and it is the easiest thing in the world to satisfy yourself of its goodness. Just try one can.—If you do not like it your grocer will refund your money.

Should Be in Every Kitchen

because that is the place where it is most essential to have perfectly clean hands, and also the place where this *new substitute* for the roller towel has the most uses, and where the convenience can be most readily appreciated.

ScotTissue Towels
"use like a blotter"

have a dozen different uses in the kitchen—first it can be used in place of the roller towel, which, no matter how often it is changed, can never be as clean as a ScotTissue Towel that is used but once and thrown away—next it does away with the washing of the fabric towel—again it is the very best thing that you can use for polishing glass and for removing the surplus fat from doughnuts, oysters and potatoes, etc., cooked in grease.

For drying the hands and face they are simply fine—absorb *all* of the moisture and leave the hands dry, clean and the skin delightfully soft.

After shaving they leave the skin smooth and perfectly dry—no danger of chafing.

Photographers—amateur and professional—find "ScotTissue" towels absorb the surplus moisture from prints, drying them in the shortest possible time and without cracking or destroying the finish.

These are a few uses—in every household there will arise daily a dozen and one uses for these towels.

"ScotTissue" Towels are snow-white, the manufacture is guarded with the greatest care, gloved hands handling it at each operation and each roll of 150 towels is packed in a carton, keeping it free from dust until placed in the fixture for use.

The price of "ScotTissue" Towels is 35c. a roll—3 rolls for One Dollar—fixtures 25c. to $1.00.

They are carried in stock by the leading Druggists, Grocers and Department Stores.

SCOTT PAPER COMPANY
664 Glenwood Avenue, Philadelphia

Makers of Established "ScotTissue," "Scotkins" and other toilet paper specialties.

rancor, violent and unrepressed; and in his hands he held my necklace, the imitation pearls. With a gasp I realized all.

"Tried to flimflam me, did you?" he rasped. "You wanted to make a fool of your husband, eh?"

I saw quite clearly what had happened. He had tried to dispose of the necklace and some pawnbroker or jeweler had revealed to him the cheat.

"Now what've you done with the money?—blown it in on yourself?" he rumbled.

"No," I said brazenly. "I thought I could make a little money too. Mrs. Gilsey does, you know." It was as I said. In New York there is more than one brokerage office and more than a few bucketshops, as well, that make a specialty of "ladies' accounts." I saw my husband start, then flinch as if I'd struck him. "Oh, yes," I said pitilessly. "I tried—but I lost it all!"

Do not think I relish the telling of all this. To this moment I cringe at the memory of the cry that burst from him.

"Oh, my God!" he said; then added: "Lost?—I'm ruined, then!"

Why prolong it? That gleam of cunning on my part availed nothing. Already overstraught, I weakened when I saw him begin stamping to and fro—distressed, biting his fingers, beating his hands together. Arising, I sat down at my desk and from a secret drawer drew out my checkbook. I had decided now to let him have ten thousand—half the fund it was; the remainder I would save.

He snatched the checkbook from my hand. "Twenty thousand!" he gasped as he read the figures on the stub. I saw his face grow livid. "You'd cheat me, would you?" he demanded. "You'd try to hold out on me, would you? What were you doing anyway?" he inquired with a sudden change of tone—"Holding back enough to light out if I got busted?"

He flung down the checkbook as he spoke; and, without answering him, I filled out a check for the full amount. I was done for. I was "all in"—to use the vulgarism. Three days later my husband's brokers did for him what he had failed to do for himself. Regardless of the twenty thousand he had just added to his margins, they closed him out!

In the final adjustment of the account a balance of only three thousand dollars remained. In five weeks it, too, was gone—for the market had now turned "spotty" and irregular, so that the uncertainty of every deal now became fourfold.

Our first step was to dispose of the motor. The next was to move. We gave up our costly apartment—to be frank, the rent was so long overdue that we were asked to give it up. Ten blocks farther uptown, and in a dingy side street, we took a seventy-dollar flat.

Our life now, for these last few years, has been curious. Rather frequently we move. Sometimes we pay in rent as much as one hundred and fifty a month; once it was only forty. However, as to this—as to how we live or where—I no longer make objection. I move where I am told. Sometimes I am able to pay my bills promptly and sometimes I am not. At such times as the duns do not trouble me I sit at home and sew and read. When the duns become active, though, I leave the house early in the day and do not return until after nightfall. The new public library has become a great godsend to me. Often I spend the entire day there.

It all depends, however, on the market—on whether stocks are active or not. If they are active, and if my husband happens to guess right on his trades, the bills are fairly well paid; and, on occasions, I have even a little money to spend on myself; but not often. Always my husband seems to need cash to margin up his account. To deal in small lots does not interest him, though now and then—rather often, I may as well say frankly—he finds it necessary to do so. You see, like all the others that have his habit, he cannot rest even for a few days. He must always be active—always on the lookout for "action," as he says. Occasionally, as a result, he is compelled to trade in bucketshops. This is because a bucketshop will as gladly take a ten-dollar or a twenty-dollar bill as an Exchange broker will take your check for five hundred. As yet, however, my husband has not been reduced to becoming a "tout," a tipster. I am very glad for that.

Three months ago Fanny Mosher left her husband. Some of her relatives thought she ought to try another start in life; so they clubbed together and sent her out to Reno. I hear she has resolved courageously to begin afresh, as simply as when she and Mosher were married. Whether I should have courage enough to do as she has done I cannot say; but that is not the point. It is, instead, whether you love peace of mind more than you love your husband. I don't. I still love my husband.

THE SIGN OF THE WINDMILL

(Continued from Page 8)

minutes we was all out in that kitchen and facin' as mad a chief cook and bottle-washer as ever hailed from France or anywheres else. You see, 'twas time to put the lobsters and clams and all the rest of the truck on the fire, and we wa'n't willin' to see 'em put there.

The chief or "chef," or whatever they called him, fairly hopped up and down. The madder he got the less English he talked, and the less everybody else understood. Bill Bangs done most of the talkin' for our side and he had the common idea that to make furriners understand you must holler at 'em. Some of the other fellers put in their remarks to help along—all hollerin' too; and such a riot you never heard outside of a darky camp-meetin'. While the exercises was at their liveliest, the telephone bell rung. After it had rung five times I went into the other room to answer it. When I got back to the kitchen I got Alpheus to one side and says I:

"Al," I says, "this thing's gettin' more interestin' every minute. That telephone call was from the man that's ordered the big dinner here today. There's thirty-two in his party and they've got as far as Cohasset Narrows already. They'll be here in an hour and a half. He 'phoned just to let me know they was on the way.

"Humph!" says he. "What did he say when you told him there wouldn't be no dinner?"

"He didn't say nothin'," says I, "because I didn't tell him. The wife was a hard one and he couldn't bear losin', so he lost patience and run off—and I never will know whatever I wanted to say after that, and the party got here. I don't want to be mean anything. You can explain to 'em they're hungry folks that trusted us and we failed in the pinch—if you want to. I don't."

"What had we better do?" he says.

"Well," says I, "I cal'late we'd better shorten sail and haul out of the race—for a spell anyhow. At any rate, we'd better clear out of this kitchen and leave that chef and the rest to get the dinner. I know it's our stuff that'll go to make that dinner, but I don't see's we can help it. A few dollars more won't——"

He waved his hand for me to stop. "No use," he says solemn; "you're too late. The Frenchman's quit."

"Quit?" says I.

"Um-h'm!" says he. "Bill Bangs told him that we fellers had took charge of this roadhouse, and he and the rest of the kitchen help quit right then and there. They're out in the barn now, holdin' a council of war, I shouldn't wonder. Bill seems to think he's done a great piece of work; but I don't."

I didn't either; and, after I'd hotfooted it to the barn and tried to pump some reason and sense into that chef and his gang, I was surer of it than ever. They wouldn't listen to reason—not from us. They wanted to see the boss, meanin' Mr. Frank. He was the one that had hired 'em and they wouldn't have anything to say to anybody else.

I come back to the kitchen and found the boys all settin' round lookin' pretty solemn. My joke about the jail wa'n't half so funny as it had been. Bill Bangs, who's been the most savage outlaw of us all, was the meekest.

"Say, Cap'n," he says to me nervous-like, "hadn't we better clear out and go home? I don't want to meet them auto people when they get here. And—and I'm scared that stewardess has gone after the sheriff."

"I presume likely that's just where she's gone," says I.

"Oh-h-h," says he. "Oh-what'll we do?" says he.

Equipment for young railroad managers

Let that youngster expand. Develop his ingenuity with

An Ives Miniature Railway System

Just as playing with wooden blocks is laying the foundation by which to later solve the problems of Euclid—

So the Ives Miniature Railway, though extremely simple, teaches the fundamentals of Physics.

After he has conquered the elementary miniature railway system, add to it. Give him more trackage, cars, stations, semaphores, or bumpers. Each new piece of trackage, turn table or tunnel presents a new problem.

If he has not an Ives Miniature Railway, buy one. It is splendid for his development. It affords unequaled pleasure for him and—

For the whole family.

Bank presidents, débutantes, college professors and other grown ups have caught the fascination in Ives Railways bought for youngsters in their families.

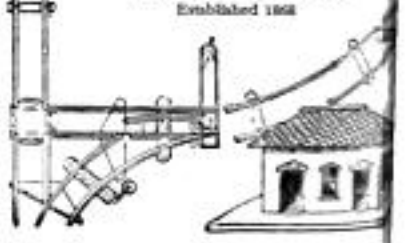
Invariably the miniature railway has become an institution in the house.

Mechanical and Electrical

We are the oldest and largest exclusive manufacturers of miniature railways in the country. We don't have to say much about quality. People know that our miniature railways are as well made as any can be.

Trains Complete $1 to $25

Engines are of iron.



In the electrical we use the Third Rail System. The mechanical engines are operated by clock work.

Parts are interchangeable. Cars may be operated on either system, changing only the engines and trackage. Ives Railways are standard and may be added to other railways of standard gauge (miniature).

The best toy, hardware and department stores carry our goods. If you cannot obtain them readily in your town communicate with us direct. We will see that you are supplied. Our beautiful three-color illustrated catalog, showing these and other toys, free if you give the name of your toy dealer.

DEALERS: Toy, Hardware and Department Stores: If you are not now selling the Ives Miniature Railways communicate with us at once.

"Don't know," says I; "but I do know that the time for backin' out is past and gone. We started out to be pirates and now it's too late to haul down the black flag. We've got to stand by our guns and fight to the finish—that's all I see. If the rest of you have got anything better to offer, I, for one, would be mighty glad to hear it."

Everybody looked at everybody else, but nobody said anything. 'Twas a glum creditors' meetin', now, I tell you. We set and stood round that kitchen for ten minutes; then we heard voices in the dinin' room.

"Heavens and earth!" sings out Ed Cahoon. "Who's that? It can't be the automobile gang so soon!"

It wa'n't. 'Twas a parcel of women. You see, some of the crowd had told their wives about the council at the store, and that more'n likely we'd pay a visit to the Sign of the Windmill. Church bein' over, they'd come to hunt us up. There was Alpheus' wife, and Cahoon's, and Bangs', and Bearse's, and Jerry Doane's daughter, and Mary Blaisdell. They was mighty excited and wanted to know what was up. We told 'em, but we didn't hurrah none while we was doin' it.

Then Mary Blaisdell took me by the arm. Her eyes were sparklin' and she looked excited.

"Cap'n Snow," she whispered, "come here a minute. I want to speak to you. I have an idea."

"Lord!" says I, groanin'; "I wish I had. What is it?"

What do you s'pose 'twas? Why, that we ourselves should get up the dinner for the auto people. Every woman there could cook, she said—and so could some of the men. We'd seized the stuff for the dinner already. It was ours—or, at any rate, it hadn't been paid for.

To make a long yarn a little mite shorter, that's what we done. Every one of them women could cook plain food, and Mrs. Cahoon was the best cake and pie maker in the county. We divided up the job. All hands had somethin' to do, includin' me, who undertook a clam chowder.

The last thing was ready and the last plate set when the autos—six of 'em—purred and chugged up to the front door. We expected Frank, or the stewardess, or the constable—or all three of 'em—any minute; but they hadn't showed up. The dinner crowd piled in and set down at the tables; and the head man of 'em, the one who was givin' the party, come over to see me. And who should he turn out to be but the stout man I'd met at the store—the one who had told me he'd been waitin' for a chance to get even with Frank! I don't know which was the most surprised to meet each other in that place, he or I.

"Hello!" says he. "What are you doin' here? You joined the Forty Thieves? Where's the boss robber?"

I told him the boss was out; that there was some complications that would take too long to explain.

"But, at any rate," says I, "your meal's ready, and that's the main thing, ain't it?"

I told him not to expect too much, but to set down and be thankful for whatever he got. He didn't understand, of course; but he set down and we commenced servin' the dinner.

We started in with Little Neck quahogs and followed them up with my clam chowder. Then we jogged along with bluefish and hot biscuit and creamed potatoes. After them come the lobsters and corn and such. Eat! you never see anybody stow vittles the way them New Yorkers did!

In the middle of the lobster doin's I bent over my fleshy friend and asked him if they was satisfactory. He looked up with his mouth full.

"Great Scott!" says he. "Cap'n, this is the best feed I've had since I first struck the Cape, and that was ten years ago. What's happened to this hotel? Is it under new management?"

I didn't feel like grinnin', but I couldn't help it.

"Yes," says I; "it is—for the time bein'."

The final layer we loaded that crowd up with was blackberry dumplin', and they washed it down with coffee. Then the fat man—his name was Johnson—trotted out cigars and the males lit up and started puffin'. I went out to the kitchen to see how things was goin' there.

Mary Blaisdell, with a big apron tied over her Sunday gown, was washin' dishes. Her sleeves was rolled up, her hair was rumpled, and she looked pretty enough to eat—at least, I shouldn't have minded tryin'.

"How was it?" she asked. "Are they satisfied?"

"If they ain't they ought to be," says I. "And tomorrer the dyspepsy doctors'll do business enough to give us a commission. But where's our old college chum the chef, and the waiters and all?"

"They're in the barn," says she. "They tried to come in here and make trouble, but Mr. Perkins wouldn't let 'em. He drove 'em back to the barn again; but they're dreadfully cross."

"I shouldn't wonder," I says. "Well, goodness knows what'll come of this, Mary; but ——"

Bill Bangs interrupted me. He come tearin' out of the dinin' room, white as a new tops'l and his eyes poppin' out of his head.

"My soul!" he panted. "Oh, my soul, Cap'n Zeb! They're comin'! They're comin'!"

"Who's comin'?" I wanted to know.

"Why, Mr. Frank and that stewardess! And John Bean, the constable, is with 'em. What shall I do? I'll have to go to jail!"

I hadn't any more than reached the dinin' room, where all the comp'ny was still settin' at the tables, than in through the front door marches Mr. Edwin Frank, of Pittsburgh, and the stewardess, and John Bean, the constable. The band had begun to play and 'twas time to face the music.

Frank looked round at the crowd at the tables, at Mrs. Cahoon and Alpheus, and the rest who'd done the waitin'; and then at me. His face was fire-red and he was ugly as a shark in a weir-net.

"Humph!" says he. "What does this mean? Snow, what high-handed outrage have you committed on these premises?"

I held up my hand. "Shh!" says I, tryin' to think quick and save a scene—"Shh, Mr. Frank!" I says. "If you'll come into your private cabin I'll explain best I can. Somebody had to get dinner for this crowd. Your Frenchmen wouldn't work; so we did. All we've used is our grub—that which ain't been paid for; and ——"

His teeth snapped together and he was so mad he couldn't speak for a second. The stewardess was as mad as he was, but it took more'n that to keep her quiet.

"Fred!" says she—and even then, upset as I was, I noticed she didn't call him by the name he give Jacobs and me—"Fred, have him arrested. He's the guy that's responsible for it all. Officer, you do your duty. Arrest that Snow, there! Do you hear?"

She was p'intin' to me. Poor old Bean hadn't arrested anybody for so long that he'd forgot how, I cal'late. All he did was stammer and look silly.

"Cap'n Zeb," he says, "I—I'm dreadful sorry; but—but ——"

Then he was interrupted. A big, tall, gray-haired chap, who was settin' about amidships of the table, got to his feet.

"Just a minute, officer," says he quiet, and never lettin' go of his cigar—"just a minute, please. The—er—lady and gentleman you have with you are old acquaintances of mine. Hello, Francis! I'm very glad to see you. We've missed you at the Conquilquit Club. This meetin' is unexpected, but not the less pleasant."

He was talkin' to the Frank man. And the Frank man—well, you should have seen him! The red went out of his face and he almost flopped over on to the floor. The stewardess went white too, and she grabbed his arm with both hands.

"My Lord!" she says in a whisper-like. "It's Mr. Washburn!"

For just about ten seconds the three of 'em looked at each other. Then Frank made a jump for the door—and the woman with him. They was out and down the steps afore poor old Bean could get his brains to workin'.

"Stop 'em!" shouts Washburn. "Officer, don't let 'em get away!"

But they'd got away already.

"Well!" says I. "Well!!"

Johnson pushed through the excited bunch and took the gray-haired feller by the arm.

"Say, Wash," he says, "you're havin' too good a time all by yourself. Let us in on it, won't you? Your friends are goin' some; no use to run after them. Who are they?"

"Well," he says, "the masculine member used to be called Fred Francis. He was

Aims Easy as Pointing Your Finger

Unseen Peril Menaces Burns
—*as it does You*

DETECTIVE WILLIAM J. BURNS carries in his hip pocket constantly a Savage Automatic.

During the detection of the Dynamiters, Burns had definite information that his life was in peril. Therefore, this greatest American Detective, whose moves were breathlessly watched by the whole country, protected his life with the greatest arm of defense—the Ten Shot Savage Automatic.

Every property owner knows in the bottom of his heart that the unseen peril of the burglar may become a reality any night. He knows, as well as Detective Burns knows, that if he has a Savage Automatic he is a match for any emergency. That even in his absence his wife and family are protected. That he has placed in his household "*the greatest weapon ever invented for the protection of the home*," as Detective Burns has stated.

The Savage Ten Shot Automatic aims easy as pointing your finger. Shoots eleven powerful shots, gets into action quick with the first vital shot. Follows with one shot to every trigger pull. Reloads and recocks itself automatically. When empty ten more shots are loaded in a second. Examine the Savage at your dealer's today.

THE NEW SAVAGE AUTOMATIC

The American Telephone and Telegraph Company has 60 of our trucks in service.

Mack and Saurer

This company was formed for the purpose of assisting the business public in solving its transportation problems, rather than to sell a particular kind of truck.

It is an association of the only truck manufacturers who have been in business long enough to justify the initial expense of their product by proved length of life and economy.

The only organization devoted exclusively to the manufacture and sale of motor-trucks, and offering trucks of sizes from 1 to 10 tons capacity, which is equipped to supply the most economical truck for every kind of merchandise, and to manufacture every type of body in its own plant.

Sales and Service Stations established in the most important centres and rapidly being extended. The strongest financial connections to insure stability of product and thoroughness of service.

You cannot afford to settle your transportation problems without taking this organization into account.

Price $50 and Why?

We have undertaken to buy—to get the minimum price—1,000 Oliver Typewriters (Model No. 3) per month. On this enormous transaction we are able to quote the lowest price ever offered on Olivers in perfect condition.

We have selected for our purpose the No. 3 model, because of its utter simplicity. Another model is necessary for foreign languages. Another is better for intricate billing. But for 99 in each 100 users, the simple, everlasting, efficient No. 3 is the expert's choice. It is the model we use ourselves. It was the No. 3 model which won for the Oliver its world-wide prestige against all competition.

Our order calls for machines equal to the best machines of this model. Each machine is rebuilt for us in the original factory—they are rebuilt so thoroughly that they are actually as good as ever. The working parts, the pieces that wear, are replaced. There is no wear on the base or frame work of a typewriter so that when these indestructible pieces are scraped and re-enameled, restenciled and renickeled they are identical with and equal to any. The assembling and inspecting work is done by the same factory that built the machine originally. When completely rebuilt by the manufacturer in this manner the machines turn out the same work in the same manner and are just exactly as good as ever. They are sold and unconditionally guaranteed as perfect typewriters, free from flaw or defect in material or workmanship. We have shipped over 5,000 machines, exact duplicates of the one we will ship you—saving approximately $250,000 for our customers.

Sent on 5 Days' Trial No Deposit

Our economy comes in our enormous selling, and in getting rid of agents and salesmen. We send the machine to you on five days' trial without any deposit, and let it sell itself. If you don't want it, return it at our expense. If you find it the best machine on the market, send us $5 per month for ten months.

At this price you get every perfection, every device which ever went out with this model. You get all the extras—metal case, baseboard, ribbon, tools, instruction book, etc. Tens of thousands of people have paid to agents $100 for the Oliver No. 3.

Oliver Points

Over 350,000 Olivers have been sold to date. They are used by 183 railroads. They are used by the largest mail order concerns, two of whom use over 1,000 each. Its simple efficiency, lightness and durability have made it the choice of those who know typewriters best.

Writing always in sight.
Writes in colors without changing ribbon.
Has Universal keyboard.
The type is beautiful and nothing can mar it.
It is the lightest of all the standard machines.
It has the lightest action and fewest parts.
It has the patented U-shaped type bar, insuring perfect alignment.
It is easily learned, because it is simple. Instruction book with each machine.
One can write on ruled lines with it. One can draw lines with it.
Makes 20 carbons at one writing if desired.
Does any practical thing which any typewriter can do.
Lasts a lifetime
Nothing to wear out.

Sold on Credit or 5% Cash Discount

Send us this coupon and we will send a machine on 5 days' trial without any deposit. We send it just as others send agents. To accept it involves no obligation whatever.

If you don't want it, return it and we'll pay the express. If you do want it, send $5, then $5 monthly until $50 is paid. If you are not rated by the mercantile agencies please send a couple of references.

steward of the Conquilquit Country Club, on Long Island, for some time. He cleared out a year ago with a thousand or so of the club funds and we haven't been able to trace him since. He was a first-class steward and sharp as a steel trap—but he was a crook. The woman—oh, she went with him. She is his wife."

. . . . . .

A whole month more went by afore Jim Henry Jacobs was well enough to come home. When he got off the train at the Ostable Depot, thin and white, and lookin' as if he'd been hauled through a knothole, I was waitin' for him. Maybe we wa'n't glad to see each other! We shook hands for pretty nigh five minutes, I cal'late. I loaded him into my buggy and drove him down to the Poquit House and took him upstairs to his room, which had been made as comf'table and cozy as it's possible to make a room in a boardin' house.

He set down in a big chair and looked round him.

"By George, Skipper!" he says, fetchin' a long breath, "this is home, and I'm mighty glad to be here. Where'd all the flowers come from?"

"Mary Blaisdell's responsible for them," I told him. "She thought they'd sort of brighten up things."

"They do, all right," says he grateful. "And now tell me about business. How is everything?"

I told him everything was fine; trade was tiptop, and so on. He listened and was pleased, but I could see there was somethin' else on his mind.

"There's just one thing more," he said, soon's he got the chance. "I knew the store must be O. K.; your letters told me that. But—er—but"—tryin' hard to be casual and not too interested—"how is Frank doin' with his restaurant? How's the Sign of the Windmill gettin' on?"

Then I told him the whole yarn, almost as I've told it here. He listened, breakin' out with exclamations and such every little while. When I got to where the Washburn man told who Frank and who the stewardess was, he couldn't hold in any longer.

"A crook!" he sung out. "A crook! And she was his wife!"

"So it seems," says I. "And that ain't all of it neither. You remember the doctor said he'd drawn his account out of the Ostable Bank? Yes. Well, that account didn't amount to much—he'd used it about all anyway; but there was another account in his wife's name at the Sandwich Bank, and that was fairly good size."

"Did you get hold of that?" he asked, excited.

"No; we didn't. 'Twas in her name and we couldn't have touched it if we'd wanted to; but we didn't get the chance. She drew it all the very next mornin' and the pair of 'em cleared out. I judged they'd planned to skip in a few days, anyhow, and our creditors' raid only hurried things up a little mite. We ain't seen 'em from that day to this." He was shakin' all over.

"You ain't seen 'em since?" he shouted. "Why not? What did you let' em get away for? Why didn't you set the police after 'em? What sort of managin' do you call that? I—I——"

"Hush!" says I, surprised to see him act so. "Hush, Jim! You ain't heard the whole of it yet. Our bill ——"

"Bill be hanged!" he broke in. "I don't care a dum about the bill. I invested fifteen hundred dollars of my own money in that roadhouse, and you let that faker get away with the whole of it! You're a nice partner! You ——"

I was surprised now, and a good deal cut up and hurt. 'Twas an understandin' between us—not a written one, but an understandin' just the same—that neither should go into any outside deal without tellin' the other. So I was surprised and hurt and mad; but I held in as well as I could.

"That's enough of that, Jim Henry!" says I. "I'll talk about that later. Now I'll tell you the rest of the yarn I started with: After that critter who called himself Frank, but whose name, it seemed, was Francis, had galloped away with the stewardess woman, there was consider'ble excitement round that dinin' room, now I tell you! However, Johnson and Washburn and me managed to get together in the private office and I told 'em all about how we come to be there, and about our gettin' their dinner, and all the rest of it. They seemed to think 'twas funny—laughed like a pair of loons; but I was a long ways from laughin'.

"'Well, well, well!' says Johnson when I'd finished, 'that's the best joke I've heard in a month of Sundays. You sartinly have your own ways of doin' business down here, Cap'n; but the dinner was a good one and I'll pay you for it now. How much?'

"'Well,' says I, 'I suppose I ought to get what I can for the crowd to leave with their wives and relations afore we're carted off to jail. Course the meal you got wa'n't what you expected and I can't charge that Frank thief's price for it; but I've got to charge somethin'. If you think a dollar a head wouldn't be too much, I ——'

"'Look here!' said Johnson; 'I was to pay Frank—or whatever his real name is—two-fifty a plate. Yours was wuth three of any meal I ever got here; but if you will be satisfied with the contract price I made with him I'll give you a check now. And, Cap'n Snow, let me give you a piece of advice: Now you've got this hotel, keep it—keep it and run it. If you can furnish dinners like this one every day in the week you'll have customers enough. Why, I'll engage twenty-five plates for next Sunday myself. I've got another week-end party—haven't I, Wash?'

"'If you haven't I can get one for you,' says Washburn. 'Johnson's advice is good, Cap'n. Keep this place and run it yourself. Don't be afraid of Francis. Confound him! I ought to have him jailed. So long as he doesn't trouble you I'll keep quiet; but if he does trouble you—if he ever comes back—just send for me.'

"And," says I to Jim Henry, "he ain't ever come back. I talked the matter over with Mary and Alpheus and a few of the others; and, after consider'ble misgivin's on my part, we reached an agreement. I decided to run the Sign of the Windmill myself. We bounced the chef and his helpers and the furrin waiters, and hired Alpheus' wife and Cahoon's daughter, and four or five more. We fed ten folks that next day and they all said they was comin' again. They did and they fetched others. The upshot of it is that all that hotel's outstandin' bills have been paid, the place is out of debt and the outlook for the next season is somethin' fine! There, Jim Henry, that's the yarn!"

"Skipper," he says sort of broken, "I—I don't know what to say to you. I ——"

"It's all right," says I pretty sharp. "Your fifteen hundred's all right, I cal'late. The furniture and fixin's are wuth that, I guess. Is there anythin' else you want to ask me? If not I'm goin' to the store."

I was turnin' to go, but he stepped for'ard and stopped me.

"Zeb," he says, his face workin', "don't go away mad. I've been a chump! You ought to hate me; but I—I hope you won't. I was a fool! I thought because you was country that you hadn't any head for business; and when you wouldn't invest in that Windmill proposition I was sore and went into it myself. My conscience has plagued me ever since. I'm a lowdown chump! I deserve to lose the fifteen hundred and I'm glad I did. By the Lord Harry! you've got more real business instinct than I ever dreamed of."

He looked so sort of weak and sick and pitiful that I was awful sorry for him—in spite of everything.

"Don't talk foolish!" says I. "You ain't lost your money."

He shook his head.

"Not much," he says. "You don't suppose I'll take a share in that hotel, after you and your smart managin' saved it, do you? I ain't quite as mean as that, no matter what you think. No, sir; you've made good and the whole property is yours. All I want you to do is to give me another chance. If I live I'll show you how thankful I ——"

"There! There!" says I, all upset. "Don't say another word! Of course we'll hang together in this, same as in everything else. Shake, and let's forget it."

We shook hands, and his was so thin and white I felt worse than ever.

"Skipper," he says, "I can't thank ——"

"No need to thank me," I cut in. "If you've got to thank anybody, thank Mary Blaisdell. She's been the brains of that eatin'-house concern ever since I took hold of it. She's a wonder, that woman! If she'd been my own sister she couldn't have done more. I wish she was!"

He looked at me pretty queer.

"Skipper," says he, smilin', "if you wish that you're a bigger chump than I've been—and that's sayin' a heap."

What in the world he meant by that I didn't know—but I didn't ask him.

Chiclets

REALLY DELIGHTFUL

The Dainty Mint Covered Candy Coated Chewing Gum

The singer's tones are more dulcet, the speaker's voice more clear, when Chiclets are used to ease and refresh the mouth and throat. The refinement of chewing gum for people of refinement. It's the peppermint—the *true* mint.

There's a story in each face

HERE is an opportunity for ***you*** to write an advertisement that will be read by millions and millions of people. For the best advertisements ***written by amateurs*** on Dr. Lyon's Perfect Tooth Powder for the illustration above

$400 will be awarded

First Award, $100 Second, $50 Third, $25 10 Awards, $10 Each 25 Awards, $5 Each

Write your advertisement in your own way in simple terms and short sentences. You can get facts and arguments about

Dr. Lyon's PERFECT Tooth Powder

in the advertisements now appearing in The Ladies' Home Journal, Woman's Home Companion, Delineator, Designer, New Idea, McCall's, Everybody's, Munsey's and other publications, one of which you probably read. While it is not compulsory to buy Dr. Lyon's Tooth Powder to enter this contest, the literature in the package, as sold everywhere, will give additional helpful information.

Do not tear out this page. Use it only as an inspiration and guide. Write your advertisement on one side of plain sheet or sheets of paper just as you would any composition. Avoid big words. Awards will be made on neatness, simple language, sound reasoning and brevity.

We suggest that you write a short introduction based on the ideas you get from the picture, such as the consequences of neglected teeth and the benefits of well-cared-for teeth, this to lead up to the highly efficient, beneficial and safeguarding qualities of Dr. Lyon's Perfect Tooth Powder—in all 200 to 300 words. No person engaged in the advertising business or member of his or her family is invited to enter this contest.

Contest closes with last mails reaching New York March 1st; foreign entries April 1st. Mail your advertisement, signed with address, to Contest Dept. A, Dr. I.W. Lyon, New York City. Awards will be made by jury appointed from their advertising departments by the following publications: Everybody's, McClure's, Cosmopolitan, Munsey's, Delineator, McCall's, Woman's Home Companion, Collier's, Literary Digest. Winning advertisements will be published after May 1st with names of winners.

Sweeping Supremacy

Every tribute paid to superiority and every honor which belongs to the best, have gone to the Waltham Watch.

The United States, Canadian and Foreign Governments have officially selected the Waltham Watch for scientific work.

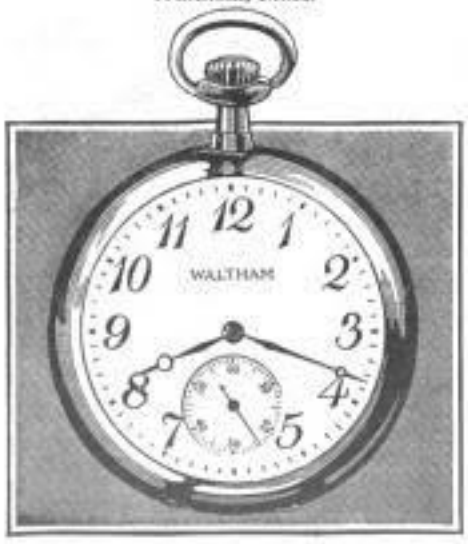
Waltham Watches have been awarded the gold medal at every international exhibition held in the United States since 1876, and highest honors in every world contest wherever entered.

WALTHAM WATCH

The Waltham was the first watch officially adopted by railroads here and abroad, and in this exacting service, as in all others, is universally recognized as the standard.

But more important than these or a score of other Waltham triumphs we might name, is the fact that there are more than eighteen million Waltham watches in use throughout the civilized world.

The *Colonial*, the thin Watch de Luxe, is a favorite for professional, business and social life. It is a graceful model, as thin as it is safe to make a reliable watch. We recommend a *Riverside* grade, which is carefully adjusted, cased and timed at the factory.



Riverside Colonial watches range in price from $50.00 to $100.00 according to the quality of the case selected.

WALTHAM WATCH COMPANY

Waltham, Mass.

HOW PITTSBURGH GOT HALF A LOAF

(Concluded from Page 5)

the bill could not pass with the initiative and referendum in it. So the Pittsburghers, not wishing to beat the bill altogether, simply threw up their hands and accepted what they could get.

What they asked for was a conservative modification of the commission form of government. What they got was a council reduced to nine members who were to be selected at large, instead of by wards—without initiative or referendum or recall or non-partisan ballot. This new charter was not to be submitted to the people of Pittsburgh for their approval or disapproval, as under a genuine commission plan. The people were to have nothing whatever to say about it. Moreover, the first members of the new council were not even to be elected by the people. They were to be appointed by the governor, to hold office until January 1, 1912.

Thus, with no election, no initiative, referendum or recall, the whole legislative power of the city was absolutely at the mercy of the governor, who also, it is needless to say, belonged to the machine. Naturally this remarkable situation provoked some gloomy forebodings; but Governor Tener was both merciful and wise. There was to be an election in November; and if he had named unfit men they would undoubtedly have been turned out of office at that time. Governor Tener did, in fact, appoint nine excellent men, who were accepted with high satisfaction by the people of Pittsburgh. Two of them presently resigned, their places being filled by vote of the remaining seven.

With those changes the council consisted of E. V. Babcock, a big lumberman and several times a millionaire; W. A. Hoeveler, president of a warehouse company; W. G. Wilkins, a civil engineer; Enoch Rauh, manufacturer and wholesaler of men's furnishings; John M. Goehring, a lawyer and former state senator; Dr. S. S. Woodburn, a physician who had been identified with several movements for civic improvement; Dr. J. P. Kerr, physician; Robert Garland, president of a nut and rivet manufactory; and P. J. McArdle, president of the Amalgamated Association of Iron, Steel and Tin Workers—the big labor organization of the Pittsburgh district.

The new council took office on June tenth, by grace of the legislature and the governor, the people of Pittsburgh having no voice in the matter. However, the state has a direct primary law. I do not know just how the machine ever came to grant the people that one opportunity of participating effectually in their own government. The law is there, however, and because of it the voters of Pittsburgh were permitted, at the September primary election, to say for themselves whether or not they liked their new city council.

The Winning Nine

The nine stood solidly for reëlection and the decent citizenship which had fought for the new charter solidly backed them. The local press supported them unanimously; but twenty-five other candidates entered the field. Some were merely freaks; some were actually independent. It appeared, however, as the campaign progressed, that the machine hoped to break into the nine. If it could capture five places in the council—a majority—its grip upon the city government would be stronger than ever. If it captured only four places its strategic position would be vastly improved, because six votes in the council—two-thirds of the whole—were required to pass any ordinance over the mayor's veto. If the machine got a majority of the council the people, without initiative, referendum and recall, would be quite as helpless as under the old order.

It was one of the warmest campaigns ever fought in Western Pennsylvania. "Vote for the nine!" was the slogan of the reformers. The opposition took it up. "Vote for the nine!" it cried; but the nine it asked the people to vote for contained only one or two—or possibly in some instances three or four—of the genuine nine, the remaining names upon the ballots being those of friends of the machine.

When the votes were counted it was found that the genuine nine led their strongest opponents by more than two to one. In short, the people of Pittsburgh at the first opportunity overwhelmingly indorsed the new council; and at the November election the nine were continued in office without opposition.

When the votes were counted another significant thing was discovered—namely, that some of the candidates who were least acceptable to the reformers had carried their own wards. Under the old ward system these patently unfit men would have been returned to the city council. As to some wards in every city, a man may serve certain elements in the ward so well that, no matter how badly he serves the city as a whole, it is impossible to defeat him in a ward election. When the electorate of the whole city gets a chance at him, however, the ward boss falls.

The nine members of the Pittsburgh council are business and professional men. In the main, their political experience had been just that of the average intelligent, well-to-do citizen who is actively engaged in his own affairs. With the exception of Mr. Goehring, none of them, I believe, had been a candidate for an elective office. They took office in the middle of the city's fiscal year, when all the appropriations had been made and there was nothing to do on the fiscal side except carry through a program which their predecessors had made. When they came into office the primaries were little over three months ahead. They would then have to stand for reëlection and some or all of them might be defeated.

Moreover, they were very far from having a free hand. They had to reckon with the mayor, who retained all his old powers, including the power to veto any ordinance passed by them. It presently appeared, also, that two of the nine would resign and must be replaced by new men.

Pittsburgh's Political Plums

Under all these conditions important constructive work could hardly have been expected from the council up to this time, and it has produced none. It is natural that nine men, inexperienced in governmental affairs, possessing unspotted reputations which they are anxious to keep in that condition, and more or less surrounded by a vigilant foe, should wish to move cautiously for some time.

Possibly the council has erred on the side of being too careful. However, the people of Pittsburgh—looking back to a time when their city was governed by a council which no prudent man would have trusted with a red-hot stove—feel that this is a small matter as weighed against universal confidence in the new council's integrity.

The situation of the nine is illustrated by one of the first matters they took up. Pittsburgh has a treasurer to collect taxes before they become delinquent and then a delinquent-tax collector to collect them afterward. The delinquent-tax collectorship is merely a political plum and is said to net the incumbent twenty thousand dollars or more a year. It is generally understood, however, that the collector retains only a portion of this for his personal use, turning the remainder into the machine's warchest. Of course any honest and intelligent board of directors of a business concern discovering such a situation would at once abolish the sinecure. This the new city council has been unable to do. It passed an ordinance empowering the mayor to turn the collection of delinquent taxes over to the city treasurer, but the mayor desired no such power. It then sought to cut down the collector's compensation, with the result that the matter has now landed in the courts.

Pittsburgh's city controller is vested with considerable power quite independent of mayor and council. E. S. Morrow, the present incumbent, has been in the office as deputy and as controller for many years, and—no matter what the rest of the city government might be—he has always possessed the confidence of the people. In the worst times, indeed, Controller Morrow has been regarded as a sort of lonesome but stanch rock in a stormy sea. Thus Pittsburgh's finances have not fallen into the disorder which frequently characterizes inefficient and corrupt city government; and on the purely fiscal side the new council has had little to do.

Stepping into the wholesale establishment of one of these councilmen, you at once notice a large placard that reads: "Mr. Enoch Rauh will be pleased to see citizens in reference to city business on Tuesday and Wednesday of each week, at two-thirty P. M., in the council chamber on the second floor of the City Hall." That is one of the signs of the new order. The other councilmen make similar arrangements. The city's legislative business is aboveboard and in the open. Not only council meetings but committee meetings are public. Everybody knows that nine honest, intelligent, public-spirited men are giving their best abilities to the city's affair. Probably, indeed, these men give more time and thought to the city's affairs than they do to their own; for in a formal way they spend three to five hours a day about five days a week on city duties, and nobody knows how much municipal thinking and figuring they do at other times.

As part of the new charter fight an act was obtained from the legislature abolishing the old system of school government—so beautifully "democratic" in theory, but so absurd in practice—by which three hundred and odd members of schoolboards were elected in many petty subdivisions of the city.

The new act created a single board of education of fifteen members, to be appointed by the county court, in which control of the schools should be vested. The new board, comprising twelve men and three women, took office in November, greatly to the satisfaction of good citizens.

The legislature also created a new court, modeled upon the municipal court in Chicago; but here again it was necessary to compromise. Each ward elects an alderman, who is a petty magistrate with about the same powers and of about the same ability and character as a justice of the peace in other cities. When the justices' courts became intolerable in Chicago that city procured an act abolishing them and creating a single municipal court. In Pittsburgh, however, the aldermen were not disturbed and the new court merely facilitates appeals.

Pittsburgh by no means succeeded in overthrowing the "Chinese Wall to keep out the great wave of municipal reform." By hard fighting she did make a breach in it—demonstrating that even in Pennsylvania an aroused and determined city can regain some measure of actual self-government.

When the legislature next meets Pittsburgh will undoubtedly renew the attack, demanding at least initiative, referendum and recall. Meanwhile Philadelphia has elected an independent reform mayor and Senator Penrose has spoken very kindly of the commission form of city government.

Model Management

THE big street-railroad companies across the country have stood abreast of the steam roads in their endeavors to find methods of keeping in touch with the men. Paying much less than their steam brethren for men in similar classes of service, their problem has been the more acute.

One big city system recognized this problem eight or ten years ago and met it by establishing employees' clubs, very much after the pattern of those on the Harriman lines. These, in turn, were followed by insurance and pension systems, and even lunchrooms at the carbarns on the outskirts of the town, where the saloon problem was as imminent as the steam transcontinentals have found it at some of their more forlorn division points.

An abandoned carbarn was transformed almost over night into a model theater. That theater runs all winter—and yet its seats are never sold, for the street-railroad company not only hires the talent but distributes the seats among the sixty-five thousand men and women who are directly or indirectly dependent upon it for their living.

Sometimes the performances are strictly amateur, for the company has discovered that it has latent talent among its own people. A big, husky-voiced starter, who directs travelers in one of its terminals, has made a splendid Marc Antony upon that little stage; while two conductors, whose runs were regularly through the Jewish portions of the town, developed a "backfire talk" that has since become a feature of the vaudeville circuits.

BILLY FORTUNE AND THAT YOUNG FEELING

(Continued from Page 14)

pitch-dark when I stumbled up against the place. I'll never tell you how it happened. Mebbe it was just my fool luck; or mebbe it was the swearin' I done; or mebbe it was the prayin'. Did you ever know a cow-puncher could pray? Well, he can, if you put him in a pinch and it ain't himself he's prayin' for.

Anyway, I made it, and there she was, settin' huddled up over the stove with just a little glimmer of firelight. You'd have figured she was right thankful for company, the way she acted, because when I come to after a bit, she had me by the stove, layin' on the floor with my head in her lap, and was rubbin' my face and hands and arms with snow. I expect she'd read that in a book somewheres. It was just exactly the right thing to do; it sure saved me a few ears and fingers. And while she was rubbin' she was makin' funny little soft sounds in her throat, like I was a kid that had got a splinter in its thumb. I didn't make any holler for her to quit, neither; I just laid there with my eyes shut and listened at her till I got ashamed, and then in a minute I got up.

Well, I needn't have bothered, she told me. She was half laughin' and half cryin', and scoldin' and fussin' at me. Did I think she hadn't a bit of sense? Did I believe she didn't know enough to keep in out of the wet? The way she explained it to me, it looked pretty reasonable too. It was just the first day of school and she'd sent the kids home early, and then she'd stayed to get their lessons strung out for 'em, and then when the storm struck she hadn't moved a step outside the door, nor she didn't mean to till it was over. That was what she said. She hadn't been afraid a mite; but all the same she wasn't sorry for company.

The storm didn't let up till away along next day; and then it was just the wind that quit, with the snow keepin' right on thick and heavy, pilin' up deeper and deeper. That didn't matter though. By noon we'd eat all the grub I'd brought from the shack—just a loaf of bread and a couple cans of truck—so I started off to get some more. She wasn't goin' to try to go home yet; it wasn't any use, anyway, because the schoolhouse was a heap more comfortable than her shanty. I fixed it up with her that she wasn't to say nothin' to nobody about my havin' been there. The boys would just have deviled the life out of me; and besides I had somethin' in my mind. When I'd got her convinced I struck off through the drifts.

The rest of it sounds as ridiculous as one of these song-and-dance shows. You won't hardly believe it, I expect. The first place I headed for was the next ranch down the cañon, where Red McGee was horse-wrangler. When I got there he was out with the boss and another lad, tryin' to look after some of the critters and fussin' round. After we'd talked some about what a blazer it had been I coaxed Red off to one side beyond the alfalfa stack.

"Red," I says, "I'm right worried about that schoolma'am, ain't you? What do you reckon has happened to her off there by herself on her claim?"

Red's eyes commenced to pop out. "Well, great snakes!" he says; "I never once thought about her. The poor little thing!" She was a good half a head taller than Red. "The poor little thing!" he says. "It's a darned shame, so it is, us leavin' her that way. She just never come into my head, with the wrastlin' round we've had to do with the stock here."

"Listen, Red," I says to him, gettin' him up closer to me by his sleeve. "Listen—the man that rescues her is goin' to stand ace-high with her, ain't he? She's a fine woman, ain't she? I expect I'd have tried it myself if I'd been a marryin' man. But you know I ain't, like you are. Why don't you go and make a try for it?"

It sure caught him by the attention. He stood there silent for a minute, shiftin' from one foot to the other one and broodin' over it.

"Do you reckon so, Billy?" he says. "I don't know; I never had no luck with wives." They said he'd had three or four of 'em, scattered round different places. "But she's different. Mebbe it would work better. Do you reckon so?"

"Why, certainly it would," I told him. "Go on, Red! Her shack ain't more than six miles away. You can make it by dark. Go on!"

After he'd lit out I got some grub at the house and packed it over to the schoolhouse, and when I'd fixed her up comfortable I started off the other way to get some more of 'em converted. It was terrible easy. I had to use different ways with different ones, but there wasn't one of 'em that wasn't right willin'. By the middle of the second day when the snow quit there was seven of 'em at the schoolhouse, and three more had blew in by night. A couple of 'em had thought of it by theirselves, but the rest I'd got. All but one of 'em had gone over to her claim first, like I'd told 'em, but they'd wound up at the school—ten of 'em by dark, that had come to rescue her and save her life and make her grateful to 'em.

Only they couldn't work at it none, could they? You can see they couldn't, can't you? All they could do was just to bunch up round the hot stove and tell her different things about what a terrible storm it had been, and the time they'd had gettin' there, and how horrible anxious they'd been about her, and keepin' their eyes on each other till mebbe the rest would go away and give 'em a chance. Yes, only there wasn't none of 'em that would pull out. We'd most of us brought her a mess of truck to keep her from starvin' to death, and she fixed supper for us and we eat it; and then every last man went out and begun to root out a bed-ground for himself in the snow and get ready for night. Not one of 'em quit. The girl, I guess she was enjoyin' herself fine, because I'd slipped her word about what I'd been up to and it had tickled her most to death. She certainly had a good eye for fun.

A couple of days afterward it had been turned to a rank picnic. The news had got circulated all over the country about how we was rescuin' the school-teacher, and everybody commenced to take a hand at it. There was trails wore to the schoolhouse from twenty ways, packed so hard you could ride 'em on a dead run for miles and miles, and the boys was comin' from everywhere. You'd have thought the girl was some kind of a queen. The inside of the schoolhouse looked like Christmas, with the loads and loads of stuff that was brought to her. I expect she never did have no better time, and she wasn't in a speck of a hurry to have it quit. Yes, sir, she certainly enjoyed it. There's no tellin' how long it would have lasted if it hadn't been for the professor.

I'd rode down to Sunrise on Friday, on account of her sayin' how good a box of chocolate candy would taste after a whole week of canned stuff and such, and I run up on him just as I was leavin' the commissary. I judged it had been a sort of a fretful week with him, because he was lookin' peaked and frayed out, with a couple of bright red spots in the middle of his cheeks and his eyes excited as a couple of hot coals. He was right glad to see me, by the way he laid hold of me.

"Mr. Fortune!" says he; "I have been in torment, sir. What a frightful week! Tell me: do you know—can you give me any information—have you any news concerning ——" He was gettin' all tangled up.

"Who?" says I. "Teacher? Why, yes, professor. I guess you might say she's one of the survivors. She's snowed in the schoolhouse up in the cañon; but she's livin' yet."

He gripped hold of my arm with both hands. "Thank Heaven!" he says; and then this: "I'm going to save her! I must, sir. Take me to her at once—at once, sir! Can we reach the schoolhouse by conveyance from Sunrise?"

Wasn't that just exactly like him? It sent a laugh all through me; but I was holdin' my face straight. "Well, Billy," I says, "what do you think? Will we let him do it?" "Oh, why not?" says I; "it can't do no hurt to have one more workin' at it, can it? And don't you reckon it'll help out with the fun? Let's let him go." And then I spoke to him.

"Which?" I says. "Conveyance? You mean a buggy? Why, not hardly, professor,

Rexall

"93" SHAMPOO PASTE

Thoroughly cleanses hair and scalp. Removes dandruff and discourages its return. Promotes head comfort. Tends to prevent premature loss of hair by its cleansing, antiseptic effect upon the scalp.

A favorite with women because it aids to make the hair soft, silky, fluffy and easy to dress. Price, 25c. a jar.

Rexall products are sold by only one druggist in a place, the leading druggist whose store is known as

The Rexall Store

There are nearly 5,000 of these stores in the United States and Canada

Tired Out!

IT sometimes happens that a woman, on the death of her husband, is left without any means of support. Her duties have not fitted her to meet the problems of making a living for herself and her children, and she has to fall back upon her skill with a needle. Such skill is so poorly paid that poverty and privation stare her in the face.

No man has any excuse for subjecting his wife to such a future. Whatever he earns, a part of it should be used to guarantee her against it.

The Travelers Insurance Company in its Guaranteed Low Cost Monthly Income Policy has the best safeguard ever devised for just this emergency.

I Want Some of

The Black Shells

Stand in front of your dealer and say that. Take what he hands you and give 'em a trial.

You will not "guess they're all right." You will say, "Crackee! those BLACK SHELLS are the quickest and surest that ever came my way." That's what they all say.

The improvements in the BLACK SHELLS are big enough to count. Here are a few—think 'em over:

The ***Non-Mercuric Primer*** is better than the old mercury-and-ground-glass kind, because it's uniform, sure and quick. The United States Government has discovered this and no longer uses mercuric primers for high explosives, fuses or small-arms ammunition.

The ***Flash Passage*** (the hole in the head through which the flame passes from the primer to the charge) is 100% larger than in ordinary shells. That means *speed*, and a fraction of a second counts when you're stopping a bird on the wing.

The BLACK SHELLS are really waterproof—even a ducking won't hurt them. They'll not stick in the barrel and they'll not cut off.

There are *three* classes of BLACK SHELLS:

ROMAX, a black powder shell with 5/16-inch brass.

CLIMAX, the most popular smokeless (both dense and bulk) shell made. Has one-half-inch brass.

AJAX is the highest grade smokeless (both dense and bulk) shell made. Has long, one-inch brass.

Send for book about shells. If you enclose 10 cents we will send a beautiful colored poster, 20 x 30 inches, called "October Days." Sure to please every shooter.

up through the cañon. Can't you ride horseback?"

"I cannot," says he, "but I will. Will you be good enough to secure a mount for me? Please make haste, sir, won't you? This suspense is becoming more than I can endure. Another hour of it would make a nervous wreck of me. Be quick!"

Se we went over to the sheds where they kept the mine stock and I started negotiatin' with Snub Harrison. "Somethin' for the professor, Snub," I says—"somethin' safe and reliable."

"Oh—reliable!" says Snub, with his eye on me. "You mean it, Billy? Well, what's the matter with Old Reliable himself? He ain't doin' nothin', with the snow on."

"That's him!" says I; and in a minute here he come, with the saddle on him and his ears droopin', meek as Moses. Old Reliable, they called him, because you never could tell what he was goin' to do. He was the big, hide-worn roan mule that run one of the dumpcarts at the mine. I couldn't help feelin' real pleased with the look of him somehow, without knowin' just why.

We boosted the professor up onto him and then I started ahead on my pony; but I didn't get far. "Wait!" says the professor. "Geddap! Go on, sir. Wait, Mr. Fortune, please. Geddap!" That's what he was sayin', because Old Reliable was just standin' there with his head down and his eyes half shut and his big ears wavin', not stirrin' a step. Nor he wouldn't either. Snub tried several different ways, with me lookin' on; and then I tried some more, with Snub lookin' on, and a couple of the Greeks from the mine stoppin' to look on, and the big yellow tomcat that used to hang round the place comin' up to rub against Snub's legs and look on. It didn't matter; that mule wouldn't budge.

"Well, Billy," says Snub, sort of casual, with his eyes rovin' round—he didn't have a real responsible mind, Snub didn't—"Billy," says he, "here's this cat. We don't exactly need this cat."

"Why, sure!" says I. "That's the very thing." And then Snub caught the cat and took it and tied it to the mule by their two tails, with the professor screwin' round in his saddle and doin' the lookin' on. Askin' questions too, he was. It seemed to be a kind of a new notion to him. But Snub he explained it real reasonable. Snub's one of these scientific liars; if you give him half a chance he can make anything in this world sound right, if there's any devilment in it.

"It's just one of Old Reliable's funny ways, professor," he says, workin' away with a piece of balin' wire, wrappin' their tails up. "He was brought up this way, because they done it the first time he was broke and he got sort of used to it. We've got to keep doin' it with him regular. Only it uses up an awful lot o' cats. We have to keep bringin' 'em up from Hartville by the dozen, and they been costin' us four bits apiece, till we got this old Tom. He's lasted three trips already, and I guess he's good for another one. All set, professor?" And then he let the cat loose.

Oh, I know what you're thinkin'—you're wonderin' how far off it was the professor lit. It wouldn't have done any hurt if he had, with the snow layin' three foot deep; but he didn't. That mule was a bad disappointment to me. There the cat was, hangin' head downward, spittin' and yowlin', and pretty soon he reached out and got hold of the mule's hindleg and started to climb up. And what do you reckon the mule done? He just stood there and turned his head backward to see what the trouble was, and then he didn't do a thing but sit right down. Yes, sir, he sat down. And then he got up again and started off, slow and steady, with the cat danglin' along behind him, just exactly as if Snub had been tellin' the solemn truth. The cat, he was considerable out of shape, but you could tell he was a cat yet. It surprised me so I couldn't do a thing but tag after the mule up the trail; and when I looked back once, there was Snub in the yard with his mouth wide open and his hands in his pockets, starin'. The professor, I couldn't tell what he was thinkin'.

We was quite a ways out before the talk started, and then it didn't amount to nothin'—just limped along. I don't remember a word of it, except once the professor made his mule stop and twisted round to look behind. "Most extraordinary!" says he. "But really, Mr. Fortune, don't you think you might remove that object now? It would be very embarrassing to appear thus in the presence of a lady." So I got down and untied the cat and threw it away. And then what do you think? Well, sir, I'm a liar if that mule didn't just stand stock still and refuse to stir another step till I went and got the remains and tied 'em back on again. You don't believe me, do you? I don't care a hoot whether you do or not; it's the truth. The cat, he was pretty shabby by then with draggin' along through the snow, but it seemed as if havin' that thing knockin' against his legs kind of kept the mule's mind distracted from balkin'. Don't that sound likely to you? Anyway that's just exactly the way we got to the schoolhouse. You can ask anybody in the country if it ain't so.

When we come near the place I don't know where the boys had gone to. There wasn't one of 'em there. It was right early in the afternoon and the day had turned off fine, pretty near as warm as before the storm.

"Yonder she is," I says. "That's the schoolhouse right there. You go ahead now and save her. I'm goin' to just kind of drag along behind." And there he went, straddlin' his old mule and danglin' his old cat. I wish I had a picture of him.

If I couldn't hear it all from where I was, I could hear some of it and I could see a-plenty. When he got up closer she opened the door and studied him for quite a spell, leanin' forward and shadin' her eyes with her hand tryin' to make him out; and then all of a sudden she got to her feet and took a couple steps toward him with her arms stretched out.

"*Alexander!*" she sung out; "why, what in this world!"

I couldn't hear a word of what he said. It looked as if he made a try to get down off his mule and couldn't. I expect he was plumb saddle weary. She had to go and reach up and help him; and then I saw her duck back to the step and set down again, hidin' her face on her arm against the post. If he hadn't liked bein' laughed at before I wonder how he relished it now. She certainly did laugh—laughed and laughed and laughed, and then dropped her head on her knees and laughed some more, and set up and rocked herself backward and forward and laughed some more; and all the while there he stood in front of her, straight and stiff and solemn as a telegraph pole, with his arms folded, lookin' down at her and waitin' till she'd get through. She took her time to it, but by-and-by she stuffed her handkerchief in her mouth to choke it off; and then he commenced. I don't know what he was sayin'; he was makin' her an oration, I expect, by the look of it, because he was makin' the motions. Anyway, he made her quit her laughin'.

In a minute she was just settin' with her hands in her lap and her pretty head droopin' over; and after that, all of a sudden she lifted her head and put out her hand to him, and what did the professor do but take it and bend in the middle and stoop down and kiss it. That was all I wanted to see. I just jerked my pony's head round and slapped in the spurs.

You tell me this, now—you wouldn't have picked out the professor for one of the bouncin' kind, would you? You'd have figured that the bounce had all oozed out of him years and years before he was born. But there's where you'd have been fooled, because he sure had it in him. Yes, sir, that solemn old beanpole was just as young as anybody.

HERE IS PROOF OF SOLID WORTH

THE NEW YORK TIMES, THU

BOGUS MONEY MILL FOUND ON A FARM

Secret Service Agents Pounce Down on a Connecticut Place, Capturing Three Men.

PLANT COMPLETE, THEY SAY

Three Other Prisoners Taken Here and a Large Amount of Silver Confiscated.

Following the arrest of three men in this city last night on charges of counterfeiting, Capt. Flynn of the Secret Service told of a raid that he and six of the Secret Service agents made yesterday on an alleged counterfeiting plant on a lonely farm four miles from Wilton, Conn.

On reaching New York the Secret Service men started after Rocco Figliozzi, a prisoner. They expected to get him in a saloon on Mulberry Street, but got a clue that led them to the Grand Central Station. They hurried there and arrested him as he was sitting in a train that left for Norwalk at 2.32. He was taken off the train and made a prisoner. He carried a suit case, and in this, Flynn says, he found engraved metal plates, such as was used at the farm to make the bogus paper money.

Next the Secret Service men went to 58 Mott Street, where they arrested Joseph Poggio, who, Flynn says, is owner of the house in which the bogus money was made.

The paper used in the National Currency is considered the strongest and most durable possible to manufacture for the purpose, and at the same time possesses such qualities as are capable of producing the highest type of engraving. So when counterfeiters, having hundreds of papers to choose from, select

er," she replied. "I only hope that
shall."
y not?"

"Because I am a gambler," she declared; "because to me it would mean risking everything. And I have seen no man in the whole world strong enough and big enough for that. You are my very dear friend, Arnold, and you are feeling very sentimental and your head is turned just a little, but after all you are only a boy. The taste of life is not yet between your teeth."

He leaned closer toward her. She put his arm gently away, shaking her head all the time. She was looking up at him, her eyes filled with a curious light, her lips slightly parted. She was so close that the perfume in which her clothes had lain, faint though it was, came to him.

"I don't think that you have a heart at all!" he exclaimed.

"It is the old selfish cry, that," she answered. "Please do not be foolish, Arnold. Do not be like those silly boys who only plague one. With you and me things are more serious."

The car came to a standstill before the portals of Pelham Lodge. Arnold held her fingers for a moment or two after he had rung the bell. Then he turned away. She called him back.

"Come in with me for a moment," she murmured. "Tonight I am afraid. Mr. Weatherley will be in bed. Come in and sit with me for a little time until my courage returns."

He followed her into the house. There seemed to Arnold to be a curious silence everywhere. She looked in at several rooms and nodded.

"Mr. Weatherley has gone to bed," she announced. "Come into my sitting room. We will stay there for five minutes at least."

She led the way across the hall toward the little room into which she had taken Arnold on his first visit. She tried the door and came to a sudden standstill, shook the handle, and looked up at Arnold in amazement.

"It seems as though it were locked," she remarked. "It's my own sitting room. No one else is allowed to enter it. Groves!"

She turned round. The butler had hastened to her side.

"What is the meaning of this?" she asked. "My sitting room is locked on the inside."

The man tried the handle incredulously. He, too, was dumfounded.

"Where is your master?" asked Mrs. Weatherley.

"He retired an hour ago, madam," the man replied. "It is most extraordinary, this."

She began to shiver. Groves leaned down and tried to peer through the keyhole. He rose to his feet hastily.

"The lights are burning in the room, madam," he exclaimed, "and the key is not in the door on the other side! It looks very much as though burglars were at work there. If you will allow me I will go round to the window outside. There is no one else up."

"I will go with you," Arnold said.

"If you please, sir," the man replied.

They hurried out of the front door and round to the side of the house. The lights were certainly burning in the room, and the blind was half drawn up. Arnold reached the window-sill with a spring and peered in.

"I can see nothing," he said to Groves. "There doesn't seem to be any one in the room."

"Can you get in, sir?" the man asked from below. "The sash seems to be unfastened."

Arnold tried it and found it yielded to his touch. He pushed it up and vaulted lightly into the room. Then he saw that a table was overturned and a key was lying on the floor. He picked it up and fitted it into the door. Fenella was waiting outside.

"I can see nothing here," he announced, "but a table has been upset."

She pointed to the sofa and gripped his arm.

"Look!" she cried. "What is that?"

Arnold felt a thrill of horror and for a moment the room swam before his eyes. Then he saw clearly again. From underneath the upholstery of the sofa a man's hand was visible, stretching into the room almost as far as his elbow. They both stared, Arnold stupefied with horror. On the little finger of the hand was a ring with a blood-red seal!

1912 Atlas WITH NEW CENSUS GIVEN

To the readers of THE SATURDAY EVENING POST who take advantage of this **Offer** now made in connection with

Webster's NEW International

New from cover to cover

In Rich, Full Red Leather Binding.

400,000 Words and Phrases
6,000 Illustrations
3,000 Pages
New Gazetteer of the World
New Biographical Dictionary

Readers of THE SATURDAY EVENING POST can now secure this **Newest** and **Most Complete Reference Library** in Dictionary Form on the following remarkably easy terms: The entire work in full leather (with Atlas)

Delivered for $1.00

and easy payment thereafter of only a few cents a week in the United States or Canada.

WHAT EMINENT AUTHORITIES SAY

United States Court of Claims: "We consider the work a distinct advance over other dictionaries which have come under our observation."

Nicholas Murray Butler, President Columbia University: "Marks new advances even upon its excellent predecessor."

Dr. C. H. Parkhurst, New York City: "It is a marvel of completeness and an indispensable feature of the library of every man who either reads or writes."

New York Sun: "Not a word or a definition in which some change for improvement has not been made."

"To have this work in the home is like sending the whole family to college."

To those who respond at once we will send a copy of an amusing "Test in Pronunciation" (with key), entitled "The Americanization of Carver," and also a "Red Fac-simile Booklet" of interesting questions, with references to their answers.

The ATLAS

is the New Census 1912 "New Reference Atlas of the World," containing 128 pages of maps beautifully printed in colors with marginal reference indexes, besides illustrated description of **PANAMA CANAL**, all handsomely bound in red cloth, size 10½ x 13½. Mail this coupon at once to

The Bally Little Bottles

PARADOXICAL as it may seem, there is no better custodian of a secret than a newspaperman. Any one of a dozen reporters, by betraying a state secret, might have caused serious international complications between England and Europe during the Spanish-American War. The story is an old one now, known perhaps to a hundred newspapermen; so there can be no harm in making it public. In substance, it follows:

When George Dewey, commanding the American fleet, received word at Hongkong to take Manila, Admiral Sir Edward Hobart Seymour's flag flew from a British man-of-war in the harbor. The day before Dewey sailed on his mission a flag officer from Admiral Seymour's ship visited the Olympia. He was met by a subaltern of equal rank.

"I just came over to make a little call," the Britisher explained.

The American and the Englishman went to the wardroom, where each drank to the other's health. The Britisher after a while called the American aside.

"I say, old chap," he said, "my old man told me to tell your old man that if you need any supplies or anything he would be most delighted to outfit you with them. You know we have some good Scotch, some most excellent mineral water and a good many other bally little things you are likely to need on a cruise of this kind."

The American didn't have to be hit between the eyes.

"Well," he replied, "what we need most are six-inch bottles. If you have more of those than you require we would be glad to borrow a few."

The American was told that he could have all the "six-inch bottles" desired if he would send a vessel to a certain deserted little cove. An expedition was sent to the described spot and there the American gunners found the "six-inch bottles" they sought. They took them aboard, sailed the next day, and history has told just how effective those "bottles" were in silencing the Spanish guns!

A Collector's Luck

THE collector of antiques changes his taste as he advances, of course, and collectors differ in their fancy. You will find people who will go into ecstasies over plain pieces of undoubted age. The truth is that in the old times, as today, some furniture was made for persons of means and taste, and other furniture for persons of moderate circumstances. The distinction between gentlemen's stuff and peasant stuff has remained through all these years. Eventually you will lean toward the former in your preference if you are collecting, as the writer always has, not for the purpose of sale but for personal use or, rather, personal ownership. Beautiful things always have cost money.

Sometimes gentlemen's stuff got into peasant use, and sometimes it has gone back again to the homes of gentlefolk. No one can tell the history of some of the good old pieces which he finds offered for sale in dealers' collections, or even in private ownership. The most unhappy moment I ever spent in my life was in the presence of two absolutely splendid Sheffield trays which rested in the dining room of a Southern lady's home.

"I see you envy me, sir," said she, smiling.

"Yes!" I sobbed.

"Do you know what I gave for those two fine trays?" she asked.

"Oh, I suppose about two dollars each, maybe—it is just the luck of some people!"

"You are very nearly right," said she. "I found them out in the country at an old farmhouse; and how do you think they were being used? The man had a stone wall round his front yard, and he used these two big trays as gates to keep the pigs from running through gaps in the wall! Of course I had them all replated."

What are pieces such as these worth to the owner? No one can tell. To be sure, they had to be replated—electroplated in this case—and electroplate is not the old rolled plate; but they were copper, not white metal. These trays were almost four feet long, the largest and finest I ever saw.

"Now, will I make them as beautiful as they are practical," said O. H. L. Wernicke—the father of Sectional Bookcases—when he became president of The Macey Co.

Macey Book Cabinets

Do Not Look Sectional—, But They Are

They have the style of Old Master furniture. You can see it yourself; it stands out so you can't help seeing it.

You may have them in Colonial, Chippendale, Sheraton, Artcraft or Mission design, any size; any finish; and they actually cost less than *ordinary* bookcases.

You would like them in your home!

Macey Book Cabinets are on sale with merchants in every locality and are warranted to give complete satisfaction.

A 72-page style book and price list, which is full of helpful information, may be had for the asking, by addressing the designers and makers, *The Macey Co., No. 940 So. Division St., Grand Rapids, Mich.*—"*The Home of Good Furniture.*"

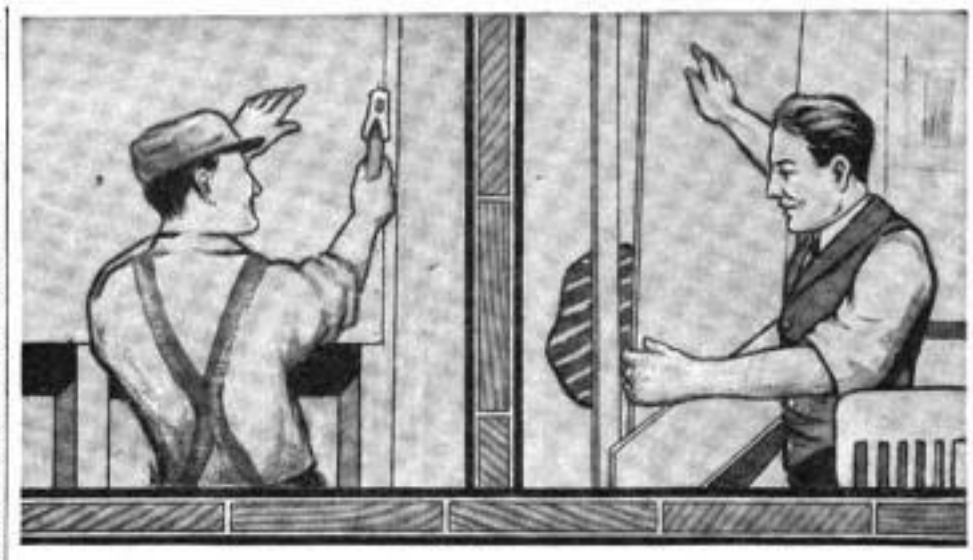
Bulwarks of Business Policy

(Continued from Page 18)

In making customers the same dislike of change has always governed him. He would work three times as hard to hang on to the merchant who had bought goods once as to persuade some dealer who had never bought at all. In the early days of the business serious distrust of the goods had to be overcome in the trade, for even merchants who were disposed to order a small stock were afraid that the public might not take them off their hands. That led to a policy whereby goods were made returnable, so that each sale really became a connection. The same assurance was extended to consumers—when anybody bought that device the company stood back of it, ready to repair, alter, exchange or give the customer's money back, just as he pleased. On this basis the article that was making its way slowly as a novelty soon became a tried staple of the trade.

In hiring employees the same dislike of change leads him to select people who will stay with the business, grow with it and be loyal; and employees are expected to make connections along the line of the general policy. One morning the boss became much interested in the newspaper report of a dinner given by dealers in his trade. The speeches had touched on important business questions. It was the third dinner of that sort within a month. Retailers, wholesalers and factory men all through the industry seemed to be getting together for discussion and associations were being formed to abolish trade evils. None of his people had been present, however, and the reason was an odd one—salespeople and factory men did not possess evening clothes. The president immediately bought evening clothes for every salesman at the home office and all the branches, and for heads of factory departments, with the suggestion that they get in touch with the "joiners" in their respective lines and do what they could to help along any work for the betterment of the trade, without reference to business. And the increase of sales within a few weeks more than covered the tailors' bills.



The Cost of Conceit

In contrast with an executive of this type it is easy enough to find in almost any line of business the man who not merely neglects connections but even goes out of his way to break them and make enemies.

Some years ago an ambitious young man left the employ of a large brokerage concern and started business for himself. During his first year he was remarkably successful. Resources were slender, but he had fresh ideas; and his negotiation of several difficult deals during the first twelvemonth set him up solidly. At that period he went out of his way to make friends. There were any number of business men ready to give him information, suggestions, references or backing. Clerks and subordinates in different lines knew him and liked him because success had not puffed him up, and they were on the lookout for him. Newspaper reporters kept track of his progress and he was always free to give them information touching his line of business.

During the next two years, however, his success was so much greater that it began to turn his head. The ideas with which he started led to new methods that were almost irresistible. Old concerns, following old methods, apparently could not compete with him. Prosperity made it easy to execute his projects. Success followed success, and one big deal came on the heels of another. By-and-by he became cocksure and unapproachable. Instead of keeping old friends and making new ones, his whole energy went into putting through bold deals, irrespective of the other fellow's side of the bargain—let the other fellow look out for himself! He played the magnate, chilled former allies, big and little, and was too busy and great to see the humble newspaper reporter. People began camping on his trail. Instead of giving him useful information, they quietly gathered facts that could be brought against him. Customers who had got the short end of some spectacular transaction through overvaluation, or misrepresentation that was as legal as it was shrewd, resolved to go gunning for that young man.

Today, after five years, he is still prosperous; but he does business with strangers.

Before You Build or Remodel Learn About

Compo-Board

The Modern Wall Lining

WOULDN'T it be worth while to put walls and ceilings in your house that will last as long as the house; that will never peel, sag or crumble; that will keep your rooms comfortably warm in winter and delightfully cool in summer and dry and sanitary at all times: walls and ceilings that can be beautifully decorated by stencilling, water colors, oil paints, kalsomine or wall paper, or that can be artistically paneled if desired?

Compo-Board, as its name implies, is a composition board. It has three principal parts: its surfaces of heavy paper, the wooden core and the cement. The paper is heavy, close pressed. The cement is of very great strength, and the slats thoroughly dried and put in indiscriminately as to grain, which prevents warping.

The whole, after the parts are assembled, being subjected to very heavy pressure and intense heat, makes a smooth straight sheet of very great strength—one quarter of an inch thick, and four feet wide.

While Compo-Board is extensively used as wall lining, many of our customers are using it for numerous other purposes with equal success.

It is ideal for partitions—for making extra rooms in the attic or basement, for summer cottages, for making dry and vermin proof walls in the barn or chicken house, for making any number of useful articles such as wardrobes, shelves, lap boards, and dressing boxes, etc. You can save money by using Compo-Board under the rugs with parquet flooring around it. Many manufacturers use it around their factories and in their products.

Compo-Board is sold by dealers in most every town. It can be bought in sheets 4 feet wide up to 18 feet in length. Write us if you can't find a dealer in your town.

Sample Free

Send for our illustrated booklet and sample. The booklet will tell you of some of the many uses and advantages of Compo-Board; the sample will show just what it is.

S. E. P.

The whole weight of his community is against him. Some day he will venture upon a step that is not wholly legal. He will put one foot slightly over the line and his foot will slip—and instantly the pent-up resentment in his town will be upon him. It will put him down and out, and will rejoice if a way can be found to send him to jail.

Sometimes a very slight rootlet of stability and right intention will have a long life. At the head of a Wall Street bondhouse is a man who insists upon lasting connections as the main policy of his business. When a subordinate leans to the quick, profitable thing instead of the lasting one he tells a favorite story.

In Civil War days paper currency depreciated. State governments were hard pressed financially, as a rule. When they had an issue of bonds coming to maturity they paid them off in depreciated paper, so that the holder got less than the state had borrowed originally. The state of Massachusetts had some bonds to pay off. Instead of following the easy plan, it sent to London, bought gold at a stiff premium and paid bondholders at par. It is said that the London investment market has never forgotten this. An understanding of our state differences is apt to be rather vague in Threadneedle and Lombard streets. It is taken for granted that cowboys are as picturesque a feature of the streets in New Jersey as they are supposed to be in Texas, while the little distinctions between a New York corporation and one in Nevada may not be understood; but one point is clear to London, it's said—that a Massachusetts security has some special excellence and stability. London may not know why. The Civil War episode has been forgotten. Yet tradition whispers; and a definite something in the make-up of the British banker, the broker and the family solicitor leads them to put more confidence in even the bonds of a trolley company doing business in Massachusetts.

The Passing of the Parish Pump

Business confidence is a good deal like capital. Nowadays few men are rich enough to finance an important enterprise on their own capital. The savings of other people must be got behind it. The combined savings of the world perform the world's big work. A manufacturer raises capital, organizes a company, equips a factory and makes goods. When they are ready for market he must begin raising confidence. Confidence accumulates like savings. The grocery-consumer's confidence in a town will be on deposit chiefly with a few capable retail grocers; and drygoods confidence, jewelry confidence, and so forth, are massed in the same way. The retail merchant doesn't shut up this confidence in his office safe. He deposits it, in turn, with the wholesale houses, so that all the trade confidence in a state will be centered in a few solid jobbing concerns. In the market, confidence is as powerful a buying force as unlimited cash, because it represents outlets for goods, very often built up by more than one generation of fair dealing and service. The manufacturer with goods to sell must draw upon those reserves of confidence. He must demonstrate his own fairness in dealing, his integrity in maintaining quality, his willingness to put principle before profit.

The present era in American business life is peculiarly one in which reserves of confidence are being put behind square business through attention to the making and maintaining of good connections. Not so long ago the general conception of business was warfare—each man carried on an independent rough-and-tumble fight for himself; but that notion began to die out when it was discovered that business did not center round the parish pump. Increase of capital brought increase of production. National distribution followed. The manufacturer found himself tied up with the jobber, the retailer and the consumer. Today all are banded together to bring about economies of distribution. According to the extent, strength and stability of connections, goods move through the national distributing machinery with the least friction, waste and expense. Buyer and seller, big concern and little one, are being drawn closer and closer; and the policy-maker of a business who is working in harmony with the times loses no opportunity to further the understanding, open dealing and coöperation that make connections.

Editor's Note—This is the fifth and last of a series of articles by James H. Collins.

Finest Walls
Half Cost of Plaster

Applying Wall Board to Studding

Send for Free Book and Big Free Sample

BISHOPRIC WALL BOARD comes to you in sheets 4x4 feet, all ready to nail on studs. Any man can put it on.

Build right through the winter and save a month's time. Ready at once for paper, paint or burlap. Makes handsomest walls, ceilings and partitions in residences or cottages. Cellar, attic or cellar. Proof against cold, wind, dampness, rats or other vermin.

BISHOPRIC WALL BOARD

Better Than Plaster and Costs Less

Bishopric Wall Board is asphalt mastic (toughened asphalt in which kiln-dried dressed lath are imbedded). Surfaced with strong, well-sized cardboard. Lath is the only thing that makes wall board rigid and keeps it flat. Bishopric Wall Board is the only wall board made with lath.

Bishopric Sheathing Saves 75 Per Cent

of the cost of application and is far better. No knot holes, no cracks. Made of the same material as Bishopric Wall Board. Ideal binder for cement and stucco.

Makes rat-proof, bug-proof, moisture-proof bins, storehouses, barns, stables, dairy buildings.

Price of Bishopric Wall Board.—Each crate contains 16 sheets, 4 x 4 feet, making a total of 256 square feet. Price, $6.40 per crate of 256 square feet, or $2.50 per square of 100 square feet, f. o. b. Cincinnati.

Price of Bishopric Sheathing.—Each crate contains 16 sheets, 4 x 4 feet, making a total of 256 square feet. Price, $6.00 per crate of 256 square feet, or $2.35 per square of 100 square feet, f. o. b. Cincinnati.

The story of a muslin sack

THE real wonder-story of the tobacco that is smoked by *more millions of men* than all other high grade tobaccos *combined*—

GENUINE "BULL" DURHAM SMOKING TOBACCO

In quaint old Durham, North Carolina—that's where the story starts.

That's where those golden leaves first grew in the sunny fields of Greene's farm. That's where they first filled those simple muslin sacks with good, sweet, native tobacco—fifty-two years ago.

No thought then of fancy packages—or of "processes" for improving on Nature.

Just surprisingly good tobacco! *That* was what they had *discovered*—that was what interested those critical Southern smokers who gave a rousing welcome to "Bull" Durham as the greatest tobacco they had ever tasted.

And then the soldiers came. They came—and smoked—and were captured!

Scattering to their homes all over the nation they carried the fame of this wonderful smoke.

Wasn't that Durham postmaster busy with letters from up and down the land asking how to get *more* of that "Bull" Durham!

And—for over half a century, just because it's so down-right *good*—it's been *earning* and *winning* and *holding* new friends faster than any other tobacco ever grown.

Faster! Twenty-two million pounds—352,000,000 packages—were sold and smoked last year! Yet this was merely the normal growth over the year before.

That sack might have been displaced by a fancy box. But the increasing millions of smokers who have an affection for this plain, convenient muslin cover have shown that *they* want the value where it belongs—in the tobacco. You can't smoke the cover!

"Bull" Durham has stood the long test. Its purity—its natural, undoctored goodness as a smoke have held and splendidly multiplied its friends—have won for it the leadership over all the tobaccos of the world.

Wherever they sell tobacco you can buy "Bull" Durham

YOU Can Rise to a Position of Power

To hold a position of power you need to know more about *your particular business.*

The secret of power and success is to KNOW EVERYTHING ABOUT SOMETHING.

Right along these lines the International Correspondence Schools train men for Positions of Power.

The I. C. S. gives you "concentrated" knowledge—specialized training—that enables you to *master* easily and quickly everything you need to know to advance.

If you can read and write, the I. C. S. can help you to succeed in the occupation of your own selection. To be convinced of this, just mark and mail the coupon—the I. C. S. will send you detailed information as to just how you can be qualified for promotion.

Marking the coupon involves no obligation on your part—do it now.

An Old Woman and a New One In the Old World

(Continued from Page 18)

agents. An American girl who married an Italian Count was among the first to protect the peasant women on her husband's estates from becoming the prey of these agents. For this reason it has been claimed by some of us that American women started, fostered this enterprise, and are chiefly responsible for the better condition of women in Italy. But this claim is scarcely justified by the facts. Nevertheless, we have the result that in Italy the women have made the most consistent advance all along the line and in every walk of life—and that without antagonism to any class of society. The new woman in Italy is rarely a suffragist, but a worker in her own behalf, a strictly domestic being still, who is rapidly becoming the mistress of every conceivable feminine fine-arts trade.

But mere thrift and trade could not do for any woman what has been accomplished among these in Italy; what has so quickly and noiselessly loosened the coils from round her, so that she is now trembling joyfully in the very doorway of a broader life and liberty. For once I could not fix the blame upon the men. There, as well as everywhere else, they are the same creatures, quizzically blind to the real situation as far as women are concerned. But there is something wonderful about this when you consider it. Within the last two or three years the various unions organized in all the large cities for the purpose of disposing of women's work have become flourishing industries incorporated, and the stock is owned by the women! There are so many schools for the industrial training of girls that in this particular the women in Italy bid fair to rival the manual-training school system of Germany—and besides all this we must not forget those who are crowding into the universities. Meanwhile, the men are rocking along as usual. It is queer to see only the women stirring to a new impetus. Peggy declared that she believed it was due to the "spirit of the times."

After the Earthquake

"In that case," I replied, "what is the matter with the men? I never heard before of the spirit of the times skipping the men when things had to be stirred up. And these men are not changing any."

Besides, I have observed this about the spirit of the times—it will remain just over the border in some other country forever and never cross it, unless something happens, something as definite and startling as if Jove had made a fuss scratching a match on the seat of his pants. Then it flares up and spreads. Now the whole world thinks that the earthquake at Messina a few years ago was the greatest calamity that has happened in Italy in a thousand years. And it was. But besides being merely a calamity, I reckon it was God shaking the folds of fate to awaken His people. And it is always the women who are soonest aroused to the needs of those who have suffered a great and literal misfortune. This is what happened in Italy. The hearts of her women were touched by the frightful privation and losses and distress of the helpless women and children who survived at Messina. Something womanly and effective had to be done, and done at once. And they have been doing it—everything to provide employment, shelter, food, clothes for these people. They have enlarged themselves accordingly. The unions have become organized business corporations, capable of handling the greatly increased amount of hand work done by the rescued women. The charity schools that had existed as mere fads became serious, well-equipped institutions, which are today filled by the Messina orphan girls, and lately with girls from everywhere in Italy. Hospitals for the training of nurses have been opened. Everything that can offer bread and security to a woman in such a country was placed within her reach almost before the earth quit shaking at Messina.

There is no doubt about one thing. The Lord knows how to manage the men and women He has made. He takes His time, but He does it. If they do not pay attention at once, He gets it at last and their obedience, even if He has to kick the crust off of a volcano and spill fire and brimstone over the whole countryside to do it. You may call it "personal providence" or the "forces of nature"—anything you please—but something always happens when it is time for a nation to wake up and move along in the scale of things, and it generally moves. If it does not, something else happens.

One day Peggy and I were invited to meet Signora G. More than once we had received such invitations, each time supposing that we should have an Italian matron for our hostess, only to discover that she had been born in England or America. But Signora G.'s husband is a senator and a famous professor in the University of Rome, and as we ascended the stairs of the old palace where the G.'s lived Peggy was confident that at last she was to talk with a real Italian suffragist.

Signora was very cordial, and if her accent was foreign, we were too foreign ourselves to notice. I thought I recognized something Teutonic in her ample waistline, in the broad, fair head staircased with furrows of thought, in the straight blond hair so severely drawn back from the gracious open face with its wide, friendly smile. But I held my peace, while she and Peggy discussed the present and future outlook of suffrage for women in Italy. The men were less amused, better impressed by the idea as time passed, she explained. They had eighteen of them—some senators and deputies—on their committees, yes. But the women, many of whom at first had been favorable to the idea, had even worked for it, were now withdrawn or indifferent, and so forth and so forth.

Finally I could no longer restrain my curiosity.

"Signora, are you an Italian?" I asked.

"Oh, yes!" she answered. "I have lived in Italy thirty years." Obviously she was at least fifty.

"But you were born——"

"In Heidelberg," she replied, smiling.

That accounted for her wide, detached grasp of conditions, for her long perspective and patient faith in the future of the cause. She was a German married to an Italian, accustomed to wait patiently and think far into the future while she waited.

As we descended into the street and made our way home through the golden sunlit city, I was far from suspecting that this interview concluded our last study of women in the Old World. I supposed my niece was contemplating a tour of Denmark and Norway. And it would not have surprised me if she had made up her little eaglet-clawed suffrage mind to take in New Zealand and Australia. But if you are a woman you cannot trust anything but the honor and respectability of another good woman, especially if she is a young one. Her heart is still in Nature's keeping. And Nature usually disposes of it in the end to your utter bewilderment and confoundment.

Peggy's Surprise Party

I had observed a subtle change in Peggy after that night in Paris, when with so many tears she had confessed her mistake about Philip Ring. When a young girl starts out merely as Miss Peggy March, and becomes in quick succession "Fraulein Peggy," "Mademoiselle Peggy," "Señorita Peggy" and then "Signorina Peggy," so many changes of titles are apt to affect her nervous system. And that was what I noticed more particularly. She was nervous, often abstracted, as if she had sneaked off privately into some one of her many rôles to act a part behind the scenes in her own mind. She would start violently and sometimes change color when the maid knocked at the door.

"Peggy, you are nervous; you are not sleeping enough," I would say.

"Oh, yes, I am; I am all right." Then she would begin the same old feverish discussion of the woman question, which was very tiresome to me. All my long life I have had the good sense of a normal mind to be more interested in men than in women, and it was a great trial to be obliged to fix my poor old faculties day after day upon these new wildcat women, bent upon clawing the world wrong-end-to, just to see what they could do with it hindpart before.

One of Many Dishes Prepared with Dates

There are almost as many recipes for preparing dates as there are for eggs. And what finer food could you ask—so rich in nourishment and so sweet to the taste?

As with everything else, there is a wide variation of quality in dates. Those sold from open boxes are never as fresh, as clean or as good as

Dromedary Dates
From the Garden of Eden

Layered and wrapped in waxed paper, they are packed in a dust-proof carton. The original flavor and moisture are retained so that you get the fruit almost as rich as when picked from the palm in Arabia.

If you knew the many extra-choice dishes it is possible to make with dates, you would see why they should be one of the most used foods in your house. Write for our

Free Cook Book

Unique and valuable in every respect, giving over a hundred prize recipes for preparing Dromedary Dates, Currants, Figs, etc. If you will mention your dealer's name (a postal is sufficient), we will send it free. And besides, if you wish us to, we will send a sample-size packet of the dates for 10c to cover expenses.

Holstein Cows' Milk Will Help Your Baby

Is your baby happy and contented, gaining ground every day? Don't be satisfied if baby is only "pretty well," but bear in mind that the first few months decide baby's whole future. If baby is poorly nourished now, he will be handicapped for life.

Though cows' milk is the only food that can properly sustain a "bottle" baby, *yet poor nutrition is often due to the inability of the average baby to digest a rich, heavy milk with its excess of butterfat.* That's why the great specialists everywhere prescribe Holstein Cows' Milk, which is much like mother's milk and contains only as much butter fat as baby needs.

Then too, in Holstein Milk the minute globules which contain the butter fat yield readily to the digestive fluids instead of forming tough, greasy curds to disturb baby's delicate digestive processes.

The milk of the Pure Bred Holstein has the strongly vitalizing quality that will build up your baby's power of resistance and carry him triumphantly through all the dangers of infancy.

Send for our free booklet, "The Story of Holstein Milk," and let us know if your milkman is unable to supply you with Pure Bred Holstein Milk.

POST OFFICE MISSION, WORCESTER, MASS.

On this particular evening, after our visit to Signora G., we were sitting in the little drawing room of our hotel, blissfully digesting a good dinner—at least this was what I was doing—when we heard a commotion in the hall. As usual Peggy started up, pressed one hand to her heart, turned a consistent tea-rose color all over her face and fixed her eyes upon the open door. The next moment this door framed the figure of a tall young man in gray traveling clothes. His red hair stood up in a stiff militant pompadour, his eyes were shining, his lips parted in the longest smile I ever saw on a man's face. At the sight of Peggy—he did not appear to see me at all!—he dropped the bulging suitcase that he carried in one hand, made a stride forward and caught my niece in his arms.

I stumbled to my feet and glared furiously. Neither of them noticed me. Peggy could not. She was partially buried in the young man's coat, nothing but the back of her head showing at the top. I began to circle round them, wringing my hands.

"What does this mean?" I cried.

A Wedding in Sight

The young man turned his head slowly toward me with a great effort, as if he had a crick in his neck. I realized that this was Philip Ring. But still I thought I must be dreaming. It flashed through my mind that I ought not to have eaten creamed carrots for supper. Then in my sleep I called out again:

"Philip! Philip Ring, is that you? And what does this mean?"

"It means a wedding!" he answered, still smiling.

Peggy began to snicker, but without lifting her shameful little head. I backed off and sat down. I began to whimper. I realized that I was not always asleep, that Peggy was not a new woman, that she was the kind of irresponsible young female who always winds up by betraying her trusting elders in this fashion.

"But it does not mean anything of the kind. I will not have it!" I sobbed.

Peggy turned round, showed her face glistening like a rose that has been kissed by the stars in the moonlight.

"I thought you liked Philip, Aunt Peg!"

"I do," I wailed; "that is, I did—but I do not like a bandit! This is scandalous! Peggy, come here!"

She refused to budge, stood there with his arm round her as serenely unembarrassed as if he'd been a nightingale.

"It's all settled," he began; "we'll be married at once, tonight in the ——"

"You'll do no such thing!" I stammered.

"I've brought my wedding garments and the ring—both rings!" he laughed.

"But Peggy isn't ready to be married. She hasn't got any wedding things."

Then I held my breath, shocked by a sudden new realization of my niece's perfidy. For more than a month she had been buying all manner of frocks and expensive lingerie. I had done what I could to restrain her extravagance, but never once had a suspicion of her purpose entered my mind.

I stared at the two guilty young wretches smiling at me. Then Peggy rushed forward, fell upon her deceitful knees, put her arms round me and began to laugh and cry all in the same breath. Philip stood over us in a cheerfully blessing attitude.

"Well," I gasped at last, "Philip may have his wedding suit and you have cheated me into seeing you buy your trousseau, but *I* haven't got anything suitable for such an occasion. And I will not see my niece married, in an old bombazine silk that I have worn for two years! You will have to wait at least till I get ready!"

"Oh, my darling, you will look perfectly lovely in that new crêpe de chine gown that you got in Paris, and that you have never had on—don't you remember?"

Yes, I had forgotten, but now I remembered Peggy had wheedled me into buying a beautiful black gown the day before we started to Madrid, with the plea that it would be the very thing to wear at the annual reception of the Daughters of the Confederacy, which would take place in January after we returned home. I looked down at the mischievously smiling face on my shoulder.

"Peggy," I exclaimed, deeply wounded, "I'll never trust you again!"

Editor's Note—This is the seventh of a series of articles by Corra Harris. The eighth and last will appear in an early issue.

The Senator's Secretary

AVERY wise and perhaps somewhat cynical man sat in his office in Washington on March 4, 1909, and looked out at the snow. President Taft had just gone by on his way to the stand where he was to review his inaugural parade. Former President Roosevelt, escorted by Troop A, of New York, had clattered to the railroad station and was on his way to Oyster Bay.

This very wise and perhaps somewhat cynical man had lived a long time in Washington and he had known Taft from boyhood. Moreover, he had a good working knowledge of Roosevelt. He was meditating on presidents, present and past—and mayhap future.

"There he goes!" he said. "There he goes—Big Bill Taft; happy, elated, full of the joy of achievement and unconscious of the troubles that are before him. And there goes Roosevelt too—the man who nominated Taft. He nominated Taft, and I presume Taft is grateful to him. Anyhow, Taft should be grateful to him in the light of Taft's understanding of the situation; but, if he only knew—if he only knew!"

"What in thunder are you driving at?" asked a friend.

"Why," replied the wise man, "just think what Roosevelt has done to Taft!"

"Well, what has he done? Nominated and elected him president—a pretty tidy little service, I should say."

"My boy," continued the wise man, "you haven't a glimmer of the circumstances! To be sure, Roosevelt nominated Taft and, to be sure, Roosevelt elected him; but what did he do to him? Think it over."

"Nothing that I can see beyond putting him in the biggest place in the world."

"Pshaw!" exclaimed the wise man. "Nothing? Why, Roosevelt has killed him—politically, I mean—killed him! Roosevelt has left Taft the tariff and the tariff will break his back."

The Sleeping Dog Wakened

That was a wise man. Roosevelt left Taft the tariff. There never was a moment during the seven and a half years Roosevelt was in the White House when he fussed about the tariff. He was too wise for that. His only known utterance about the tariff—officially—was not an utterance at all. In one of his messages—in the advance copy—he put in this line: "I shall treat of the tariff in a future message." They heard about that up at the capitol, and Senator Aldrich and Senator Hale and Uncle Joe Cannon and others hurried to the White House and besought Roosevelt to let the sleeping dog of the tariff lie—and he did. The sentence was cut out of the message; and when Mr. Roosevelt left Washington he left Mr. Taft the tariff. A few days after Mr. Taft's inauguration the Congress began talking tariff—and the Congress is still talking tariff and will be talking tariff for many months to come.

There is no escape. The country is tired of the tariff. The Congress is tired of the tariff. Mr. Taft is sick of it. So is everybody else; but there it is and there it will continue to be—ubiquitous, unsettled, perplexing—and the first campaign orator after the nominations will shout tariff, and so will the one who makes the last speech before election day. It is inevitable. Mr. Roosevelt, cagey citizen, left Mr. Taft the tariff, and Mr. Taft's inheritance will vex and harass him until the end of his term.

Congress has begun the third grind at this depressing subject since Mr. Taft went into the White House. The Tariff Board sent in a bunch of reports that you couldn't crowd into a freight car and carefully neglected to make any recommendations as to what should be done in conformance with this mass of knowledge. Mr. Taft has contented himself with the general recommendation that there should be revision downward in some of the present schedules; and the dry-as-dust but most important discussion is on. The Democrats in the House are making their own tariff bills. The Republicans in the House are making theirs. The Republicans in the Senate—the standpatters—are going to make theirs. We shall have plenty of tariff bills.

Now comes the information that Mr. Taft's kind of a tariff bill will be the tariff

How I Get My Repeat Orders

Nearly every one of my customers sent me his first order for cigars in doubt. In other words, my claims sounded good, he read them month after month, and they puzzled him. "Can they be true?" he questioned. And one day he picks up a magazine, reads my advertisement and says to himself:

"Hang it all, I am a good judge of cigars. I know the taste of Havana, and I know a hand-made cigar. Now I am going to accept this fellow's offer and let him send me a box, and if they don't make good, I'll fire them back so quick it will make his head swim."

That is the sort of mental attitude I have to contend with. I have to send this man a cigar that will not only sell itself to him, but will be so much superior to what he has been smoking that he will re-order as fast as his supply runs low. Else I lose money.

And I get that repeat order because—

I can and do sell the 10c cigar of the retail trade for five dollars per hundred. I can do it because I sell from my factory to the smoker. I get in touch with my customers by advertising. And this advertising costs me no more than the advertising of any regular retail cigar.

I import Cuban grown Havana tobacco and make up my cigars in my clean Philadelphia factory, employing only skilled adult men cigarmakers. The wrapper of my Panatela is genuine Sumatra.

I sell this Panatela on a plan that is all my own, a plan that has actually become known in the mail order world as the "Shivers Plan." I am proud of this fact because it means something to me and, I believe, to you.

Shivers' Panatela EXACT SIZE AND SHAPE

HERE IS MY OFFER: I will, upon request, send fifty Shivers' Panatela Cigars on approval to a reader of *The Saturday Evening Post*, express prepaid. He may smoke ten cigars and return the remaining forty at my expense if he is not pleased with them; if he is pleased, and keeps them, he agrees to remit the price, $2.50, within ten days.

In ordering please use business stationery or give reference, and state whether mild, medium or strong cigars are desired.

HERBERT D. SHIVERS
913 Filbert Street **Philadelphia, Pa.**

Ten-Pinnett—A Money-Making "Ten-Strike"

Do you want a business? Here's one for you—Ten-Pinnett, the sensation of the times—an automatic bowling game with ten balls and ten-pins and unlimited combination plays. A healthful, thrilling bowling game—a fun-producing exercise that old and young, rich and poor, go wild over when there's a chance to play. Many owners of Ten-Pinnett alleys are making $150.00 to $300.00 a month on an original investment of $500.00, and no operating expense other than rent. It's the game that pays for itself in a fifty. You have

Nothing to Do but Pocket the Money!

You have sighed hundreds of times to be in business for yourself. Grasp the opportunity—one without the responsibilities of the everyday business man. Our proposition plans in the most elaborate, original and flattering manner devised. If you want the right money in your locality send us your name tonight—before someone beats you to it.

An Open Break

One ball in—and good position! It looks like a run, but the slightest inaccuracy will change the entire situation and give the other man his chance.

Billiards and Pool are good, clean, wholesome games for the whole family—games that inspire keen, friendly rivalry. You can play them now without frequenting a public poolroom. You can have in your own home a

BURROWES
Billiard and Pool Table

and play while you are paying for it. No special room is needed. The Burrowes Table can be set on your dining-room or library table or mounted on its own legs or compactly folding stand. Only a moment is required to set it up or to take it down and set it out of the way. Sizes range up to 4½ x 9 feet (standard). Complete Playing equipment of balls, cues, etc., free with each Table.

Burrowes Tables are used for home practice by some of the foremost professionals. Every Table of whatever size is scientifically accurate in proportions to the smallest detail and adapted to the most expert play. The most delicate shots, calling for skill of the highest type, can be executed with the utmost precision.

$1.00 DOWN

Prices are $6, $15, $25, $35, $45, $55, $75, etc., on terms of $1 or more down and a small amount each month.

FREE TRIAL—NO RED TAPE

On receipt of first installment we will ship Table. Play on it one week. If unsatisfactory return it, and on its receipt we will refund your deposit. This ensures you a free trial. Write today for illustrated catalog, giving prices, terms, etc.

The Emerson Typewriter Co., Box 208, Woodstock, Ill.

bill the Republican regulars in the House and Senate decide upon—and not any other kind. Senator Smoot, who is the present tariff sharp in the Senate, announced that he intends to frame a bill, or a series of bills, that will revise but maintain the sacred principle of protection. Whereupon Sereno E. Payne clambered up to the White House to inquire in frenzied tones where Reed Smoot got any authority to make any tariff bills until the members of the House of Representatives had their first whack at it, it being the right of the House to originate revenue bills as per the Constitution—et cetera and so forth. The Democrats are framing their bills in absolute disregard of what the Tariff Board has reported and there is enough tariff round and about to make one's head ache.

The curious thing about it all is that the reports of the Tariff Board were merely compilations of information without deductions therefrom. Some day, I suppose somebody will find out what the Tariff Board reported about. Somebody may have the patience to dig into this mass of stuff and see what it is all about. Somebody is sure to do this. Former Senator Peffer, of Kansas, has sat for ten or twelve years in the Congressional Library digging out and classifying something from the files of the Congressional Record, and it is quite probable that somebody will do the same thing to the report of the Tariff Board.

A Wicked Insinuation

There are wicked persons in Washington who say the Tariff Board was ready enough to put in the conclusions it had arrived at as regards wool and the other exciting subjects it had been investigating; but there came a warning cry of "Desist! Desist!" from the White House. These wicked persons say the reason the White House was so anxious to have the report go in without deductions and summaries and conclusions and recommendations was because, if the natural and proper and legitimate and correct recommendations, based on the knowledge concealed in the mass of stuff the Tariff Board sent to the Congress, had been made, two big and illuminating facts would have stood forth:

First: That Mr. Taft had absolutely no excuse for signing the Payne-Aldrich tariff law, and did have every excuse—both political and economic—for vetoing it; and

Second: That Mr. Taft had no excuse for vetoing the tariff bills presented to him by the Congress last summer, and did have every excuse, as per the results of the investigations of the Tariff Board, for signing those bills.

Anyhow, the reports were made without public recommendations and Mr. Taft made no specific recommendations in his message. And now comes another tiresome, long-drawn tariff fight—a fight that will extend to the next campaign, and a fight that will be bitter and intense. The Democrats will do as they please. Mr. Taft will have the Republicans do as he pleases. The result will be conversation, computation, conglomeration and chaos.

That was a wise man who said Mr. Roosevelt had left Mr. Taft the tariff and the tariff would break Mr. Taft's back. Up to date it hasn't quite broken his back, but it has bent it—and the break is bound to come. Meantime Mr. Roosevelt is using whichever sleeve he favors for laughing purposes and the business of the country is waiting to see what will turn up. Any way you look at it, the business of the country is getting the worst of it. The business of this country is a vital and vigorous institution—else it would have perished long ago. Any country that can stand four years of almost incessant tariff agitation and not come out of it with souphouses is doing pretty well.

Meantime, if there isn't enough tariff to keep things stirred up there certainly is enough politics. Always political, Washington is now so political that the man who takes your ticket on the street car wants to discuss with you the probabilities of Teddy's running again, of Taft's getting the nomination and of whom the Democrats will name. The waiters in the restaurants ask what you think of it and the barbers cease trying to sell you hair restorer in their eagerness to cite their opinions as to the situation.

I have seen a good deal of politics in my time and have mixed in many exciting campaigns; but if this coming campaign is as feverish as the symptoms now are hectic it will be just as well for everybody to quit

THE Waverley SILENT Electric

THE drive from the Sheridan Rhodes' home to the theatre and back was a pleasure quite equal to the play and the supper.

Within the long, broad Silent Waverley Electric Limousine there was ample room for the Misses Rhodes and their three guests.

There was no anxiety as to the crushing of delicate gowns, for each had ample room on the deeply upholstered seats.

Miss Evelyn Rhodes drove the car both ways. The full view ahead through the large front window, and the instant response of the car to the pearl handles of the controller and steering lever, completed a charm which she insisted was the 20th century improvement over the magic carpet.

The car sped along silently. Beneath, a powerful motor obeyed the mystic current—steel and bronze were busy—long, full elliptic springs took up every shock—and the machinery gave forth no sound. So perfect is modern electric carriage building.

Send for the beautiful Waverley Art Book on Town and Suburban Cars. It shows ten models. Prices $3,500 down to $1,225. Also the Waverley Catalog of Commercial Vehicles. Exide, Waverley, National, Ironclad or Edison Battery.

business for a few months and get into the game. There will be no business done. We have heard the old complaint that a presidential campaign "unsettles" business. This coming one and its preliminaries will do more than that if it takes hold of the people with anything like the grip that the advance skirmishes indicate.

When you come to look at it, it is a lovely situation! You can get any angle on it you like by stopping for fifteen minutes in any hotel lobby or by talking to any statesman you meet. You can hear more absolute inside, straight, copper-riveted information about the thoughts, aspirations, purposes and intentions of any given candidate in half an hour than you could get if that candidate should unbosom himself to you unreservedly for half a day. The town is so crowded with persons who know exactly what is going to happen, and why, that you have to be careful to avoid stepping on them when you move about.

Take the position of Mr. Taft, for example. In the confines of one hotel lobby on any evening you can discover—from absolutely authentic inside sources: that Mr. Taft intends to withdraw; that nothing but death can keep him out of the race; that he is assured Mr. Roosevelt will not be a candidate; that he is certain Mr. Roosevelt will be a candidate; that he has demanded that Mr. Roosevelt shall state his position; that such a demand is beneath the dignity of a president and will not be made; that he is certain of enough votes to control the convention; that he is already beaten; that he will go on if he only has one vote; that unless he is certain of enough votes he will quit at the last moment; that he would quit if he could get the promise of a place on the Supreme Bench—and so on.

And, if there is some talk about Taft there is forty times as much about Roosevelt. Washington is jammed with people who know Mr. Roosevelt's innermost thoughts. There are five hundred expert mind-readers here who practice exclusively on the Colonel. You can find out what he is going to do and what he is not going to do by consulting your newsboy or your bootblack. Everybody knows—especially the correspondents. They know differently every day, too, which adds to the gayety of the occasion. And La Follette! He will and will not—must and must not—retire from the race. He is a stalking horse for Roosevelt—and he is not any such a blamed thing! And Cummins is double-crossing La Follette; and Roosevelt is triple-crossing everybody else—and all is lost save conjecture.

When to Dig Cyclone Cellars

Nor have the Republican prognosticators any patent on this sort of talk. There are just as many Democratic seers as Republican. One set of delvers into the mysteries of the motives and minds of men devotes its attentions to Mr. Bryan. Mr. Bryan would have to be sixteen different persons to do all the things scheduled for him to do. Likewise the hidden recesses of the Harmon boom and the Wilson boom, and the ultimate intentions of Tammany Hall, and the way the West will swing and where the Progressives will land—and all the rest of it—are discounted five hundred times a day. If it keeps up this way everybody will be crazy before next November!

There is a head bellman at the Arlington Hotel named Brown. Brown has been at that hotel for thirty years. He knows about every important person in the country. Just before the close of the campaign of 1908 I asked him which candidate he thought would be elected.

"Well," he said, "I hope Mr. Bryan will be elected. You see the Republicans have been in for a long time now, and the gentlemen who come to this hotel know as much as I do. If Mr. Bryan should be elected a new set of gentlemen would come who would demand my services and information. That is my personal view of it, of course. So far as the general effect on the country is concerned, I haven't considered that at all."

Looking at it from Brown's viewpoint, considering it from the angle of excitement and interest, and not regarding the effect on the country, if Roosevelt could be nominated by the Republicans and Wilson by the Democrats there would be a campaign that would necessitate the building of cyclone cellars in every community. However, it isn't necessary to begin digging the cyclone cellars yet.

After Motoring

After motoring don't content yourself with half-way measures. Be Hygienic and give yourself a *real* clean-up.

Daggett & Ramsdell's Perfect Cold Cream

Is the most hygienic clean-up there is. Smear some on a wet cloth, and apply it first to the face and then to the hands. It will remove the dirt and impurities from the pores—give the skin a feeling of freshness and cleanness that makes you feel better all over.

The regular use of Daggett & Ramsdell's Perfect Cold Cream is a matter of hygiene—not vanity. It is primarily a cleanser, but also has a soothing effect which makes it a real luxury after shaving, traveling, outdoor sports and occupations of any kind.

Try it once, and see.

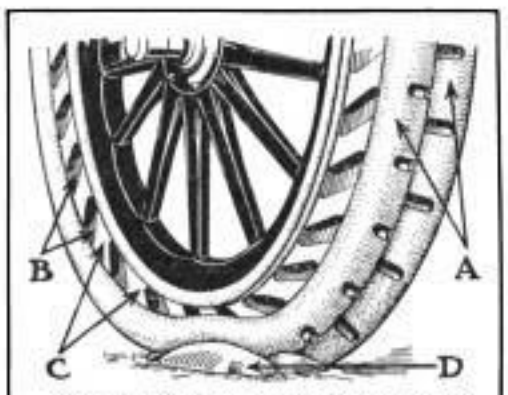
"—and, Daddy, we'll have those new Motz Cushion Tires on our car, so Mother and I can drive it, won't we?"

Too many men, in buying automobiles, overlook the fact that *pneumatic* tires, because of *dangerous skidding, punctures, rim-cuts* and *blowouts*, render a pleasure car unfit for women to drive. Evidently they do not realize that there is now a tire which never causes the slightest trouble and yet is every whit as resilient as any properly-inflated pneumatic tire—*the Motz Cushion Tire.*

This new tire is totally different from any other, both in *composition* and *physical construction.* It is of *secret-processed rubber*—has *double, notched treads, undercut sides* and *slantwise bridges.* These patented features are what give the Motz Cushion Tire its amazing resiliency.

Note, too, the *economy* of this tire—no breakdowns—no delays—no repair bills—no extra tire equipment. It's all gone. 75 per cent of all upkeep expense is thus eliminated.



And Motz Cushion Tires are *guaranteed* for 10,000 miles—two years. In nearly every instance they far outstrip their guaranteed mileage. Thus we give you tires which, on the average, outwear five sets of pneumatics.

Do not confuse the Motz Cushion Tire with solid rubber tires or so-called "semi-solid" or commonplace cushion tires. Such tires are hard—utterly lacking in resiliency and easy-riding qualities. They injure the mechanical parts of a pleasure car. They constantly jolt and skid.

You will not only find Motz Cushion Tires most practical for your wife and daughters, but *also* for *your own individual use.* Nothing but unfamiliarity with Motz Cushion Tires could make any practical man cling to expensive tires, such as heretofore were universally used.

The Utility Tire

While the Motz Cushion Tire first won fame as the tire for pleasure electric cars, it is now proving equally practical for all types of utility cars—doctors, lawyers, dentists, merchants, manufacturers and others, every minute of whose time has money-value, are making their cars vastly more dependable by equipping with Motz Cushion Tires. Owners of taxicabs, town cars and fast-going commercial cars are doing likewise. *In the past twelve months the sales of Motz Cushion Tires have actually multiplied five-fold.*

The amazing resiliency of this tire is produced by means of *double, notched treads, undercut sides, slantwise bridges* and *secret processed rubber.*

A—shows *double*, notched treads.
B—shows undercut sides.
C—shows slantwise bridges.
D—shows absorbing means when passing over an obstruction.

Easy to Put On

Motz Cushion Tires are readily applied to any car. They fit any standard clincher, universal quick-detachable or demountable rim.

Write for Further Facts

We publish an attractive booklet on Motz Cushion Tires. It is interesting—not too technical. Contains letters from owners of pleasure cars equipped with Motz Cushion Tires. Get this booklet and know the advantages and construction of these most practical tires, before you buy a new car, or before buying new tires for your present car. Please ask for booklet 146 or simply use the coupon below.

To Dealers and Garage Men!

We have a splendid agency proposition for you. Write for Exclusive Agency Terms. Please address letters pertaining to agency to S. E. P., Main Offices, Motz Tire and Rubber Co., Akron, Ohio.

See our Exhibit at the Chicago Automobile Show, space 2-3; at the Boston Show, space F 535 and 536.

Leading Builders of Electric Cars Use Motz Equipment

Leading makers of Electric Pleasure Cars, who make 95 per cent of the electrically-driven automobiles, have adopted Motz Cushion Tires as standard equipment.

And *they* pay *more* for Motz Cushion Tires than they would for either pneumatic or solid tires. Yet, in most cases, *you* pay nothing extra by getting a car equipped with Motz Cushion Tires. The pleasure car maker stands this extra expense in order to give you an efficient, easy-riding car, free from trouble, worry and expense.

The following automobile manufacturers include Motz Cushion Tires as standard equipment. Names are listed alphabetically:

ARGO—Argo Electric Vehicle Co., Saginaw, Mich.
BABCOCK—Babcock Electric Carriage Co., Buffalo, N. Y.
BAILEY—S. R. Bailey & Co., Amesbury, Mass.
BAKER—Baker Motor Vehicle Co., Cleveland, O.

More Than a Million Miles

The Winton Co. guarantees every statement made in **WINTON SIX** advertising to be true without qualification

Most Exhaustive Automobile Test the World Has Ever Known Stands to the Credit of the

WINTON SIX

FOR four years, individual owners have been putting their Winton Six cars through an exhaustive test.

These owners have sent us monthly reports of miles traveled and repair expense incurred, and have sworn to the accuracy of their reports.

The result is a record of direct interest to men who own motor cars and pay repair bills.

For this record shows that, when you own a car as good as the Winton Six, you are practically free from repair expenses and from the annoyance and the humiliation that repair expenses carry with them.

World's Record Cars

Our complete records cover 170 cars, standard Winton Sixes, manufactured in 1907, 1908, 1909, 1910, and 1911.

Fifty of these cars made the world's lowest repair expense record of 22.8 cents per 1000 miles. We have already advertised these figures.

The natural thought is that the other cars "didn't do as well." But let's see.

Ran Without Expense

Sworn records show that 46 other cars (cars not included among the world's record cars) traveled 400,000 miles, averaging 8750 miles each, without incurring a single cent of repair expense.

These cars were not placed by the judges among the world's record cars because the world's record cars averaged a greater distance (14,800 miles each), and with so little expense that it was practically nothing at all.

Poorest Performances

Now consider the worst performances of all.

There were 27 cars whose repair expenses were high—$65.87 per car on total mileage of 300,000 miles, or 11,000 miles each.

Nothing much to be proud of in that record—because the other Winton Six records are so much better.

Still Other Cars

There were still other cars—47 of them—among the 170. These 47 cars, not otherwise classified, traveled more than 425,000 miles, or 9000 miles each, at a total repair expense of $300, averaging $6.39 per car, or 70 cents per 1000 miles. A fine performance.

Send catalog and Upkeep Book mentioned in *The Saturday Evening Post.*

Cleveland, Ohio

Complete Record of All Cars Traveling 5000 Miles or More Each in the Four Annual Winton Six Upkeep Tests of 1908, 1909, 1910, and 1911

CLASSIFICATION	Number of Cars	MILEAGE		REPAIR EXPENSE		
		Total Miles	Average per Car	Total	Average per Car	Average per 1000 Miles
Cars making the world's lowest repair expense record	50	744,426.2	14,888.5	$ 170.27	$ 3.41	$0.228
Cars making the poorest records	27	299,896.1	11,107.2	1,778.42	65.87	5.93
*Cars running without repair expense	46	402,801	8,756.5	. . . .	. . .	. . .
Cars not otherwise classified . .	47	426,668.5	9,078	300.53	6.39	.70
Totals for four years	170	1,873,791.8	11,022.3	$2,249.22	$13.23	$1.20

*Not included in any other classification.

Average repair expense for 170 cars, traveling 1,873,791.8 miles, is $1.20 per 1000 miles. All these cars were regular stock-model Winton Sixes, driven in the service of their individual owners. Each owner made monthly reports of mileage and repair expense, supported by his sworn affidavit.

More than a Million Miles

How exhaustive this four-year test has been is shown by the mileage.

These 170 cars averaged 11,000 miles each (more than three times the distance across the American continent), and traveled a total distance of 1,873,791.8 miles.

That's a distance almost beyond comprehension.

It is 580 times the distance from New York to Paris.

Or, almost 75 times the distance around the earth at the equator.

And nearly eight times the distance from here to the moon.

Wonderful Expense Figures

Sworn reports of the owners of these 170 cars place the total repair expense for this marvelous mileage at $2249.22, which is less than the purchase price of one Winton Six.

The average repair expense for each car was $13.23 for 11,000 miles, or—

Just $1.20 per car per 1000 miles.

And that's less than one-eighth of a cent per mile.

Expense is the Acid Test

Repair expense is the acid test of a car's merit. As every owner knows.

For the merit that enables a car to keep down repair expense is in the *car itself.*

This test of more than a million miles, participated in by 170 Winton Six cars and 170 Winton Six owners, shows the merit of the Winton Six.

You would be happy if your car were a Winton Six.

Same Model: Fifth Year

We are the pioneer makers of sixes exclusively.

Our present model is the same car we have made for four years *without a single radical change.* Now in its fifth season.

It is the original self-cranking car: has been a self-cranking car since June, 1907. Our self-cranking motor is no experiment.

This car represents all the quality a motor car can have, and, because we do business on bed-rock business principles, we can sell it profitably at $3000.

If you want to know its worth, compare the $3000, 48 H. P. Winton Six with cars priced as high as $5000 and $6000.

And remember that the Winton Six is the only car in the world whose repair cost is definitely known through the sworn statements of individual owners.

We shall be glad to send you our Upkeep Book that gives the million-mile facts and figures in detail, together with our thoroughly descriptive catalog. Clip the coupon and mail it today.

THE CHECKERBOARD TABLE

By Mary Roberts Rinehart

ILLUSTRATED BY MAY WILSON PRESTON

AGGIE, of course, really deserves the credit in the Forsyth case, if any one deserves credit for what is an inherited talent. For after it was all over she had to confess that her mother's half-sister, Aunt Sadie Briggs, used to be able to make a cane-seated chair follow her round a room merely by putting one finger to its back and saying: "That's a good chair; come, now! Come! Come!" And the chair would follow her like a dog.

And, of course, it was in Aggie's family that somebody was dug up years after she was buried, and they found her hair had grown to be fully ten feet long and was curly, whereas in life it had always been straight—Aggie has some of the hair in a locket. But in spite of all that, we had never suspected Aggie's psychic power, although so long as we'd known her, for thirty years or more, she'd been able to light the gas by running a comb through her hair and then holding it—the comb, of course—to the gas tip. And once or twice, by putting on a pair of woolen stockings and rubbing her feet vigorously on the carpet, she had been able to send quite a spark from her knuckle to my ear or nose, as the case might be.

Tish suggests that possibly Aggie's being, as one may say, surcharged with this mysterious current accounts for the fact that during the sittings—oh, yes, we had sittings!—during the most exciting moments Aggie really took on a sort of phosphorescence.

But even Aggie—she admits this herself—would have been helpless without the Checkerboard Table. The most remarkable thing about the whole affair is the part the Checkerboard Table played in it, and how, after having solved the mystery during those three terrible nights, it settled down into an ordinary parlor table again, its work being done. As Tish says, it acted precisely as if it had a soul and an intelligence. Or are they the same? And if they are, will my cat—a handsome and intelligent creature, but highly immoral—be eternally damned?

It is a strange thing that after thirty years of respectable living in Letitia Carberry's parlor, holding family photographs and being soap-and-watered and chamoised every spring and fall, the Checkerboard Table should have become suddenly possessed of a devil. We have really never accounted for it, although the explanation may possibly lie in the fact that on that very day it had had its spring cleaning and had been washed with Honeysuckle Soap!

It was Honeysuckle Soap, you know—but to go back. The table had been given to Tish's father by a murderer named Adolph Degelman when Mr. Carberry was warden of the penitentiary. You may have heard of the case. It was Degelman, you know, who boiled his wife in a vat at the soap factory where he was night watchman, and to bury her properly the soap company had to buy an entire cemetery lot and inter three carloads of Honeysuckle Soap! You can see why we thought the spring cleaning might have had something to do with it.

The table was photographed for the Star—Charlie Sands' paper—later; but the picture did not show the top. It was an inlaid checkerboard, made, I think Tish says, of twelve kinds of wood, and in a corner there was carved a skull and crossbones, with A. D.—the maker's initials—beneath. The D is not quite complete, Mr. Degelman either having been hanged sooner or having carved somewhat slower than he had expected.

Tish and I took Sunday dinner that week with Aggie and went to Bible class in the afternoon. It was on the way home that Tish sprung the bombshell.

We'd stopped to look up at the weather flag on the top of the stock exchange building, which is twenty-four stories high, and I said it made me dizzy to look up. I recall the scorn with which Tish turned on me.

"Dizzy!" she said. "If things turn out as I expect, in three or four months from now I'll be looking down from heaven's blue vault, and a twenty-four-story building like the stock exchange will bear a strong resemblance to a straw stack!"

"What do you mean?" I demanded with much the same sinking feeling that I had when Tish had insisted on buying an automobile to run herself.

"She means she's going to die!" Aggie said suddenly, and felt for her handkerchief.

But Tish wasn't thinking of dying. She'd seen a photograph of a woman in a flying machine, and Tish was going to fly. She said as soon as she could get used to the idea of the bloomers she was going to take a lesson or two, and by watching the papers until an aviator was killed she could likely get his machine cheap second-hand.

"If the thing has fallen from the 'blue vault of heaven' that you're so crazy to explore," I said scornfully but with the sinking feeling I mentioned, "there won't be much to buy."

"I've thought of that," Tish replied calmly; "I'll wait until one drops in a river or a lake. It stands to reason it wouldn't be much smashed."

Here Aggie burst into loud sobs and we were obliged to change the subject, but the next day I went to see Charlie Sands, Tish's nephew. He is something on a newspaper.

"No!" he said when I told him. "Not really!"

"Really!"

"Perhaps if she took a ride as a passenger she'd get over the idea."

"She'd buy the thing in the air."

Charlie Sands rubbed his chin.

"What's got into the old girl anyhow?" he demanded. "She used to be satisfied with trying to marry me to somebody or other and with making flannel petticoats and panties for the kids in the family. Used to make 'em by the gross—one leg longer than the other mostly. I know; I used to wear 'em."

"Your Aunt Letitia has developed," I said sternly. "She represents the unrest of the times among women who, finding their time no longer monopolized by spinning, by bearing and rearing children ——"

"Look here," he broke in. "Don't you think if she had a baby—adopted one I mean, of course—and could fuss round it and take it out in a perambulator and—er—make more panties for it ——"

"She'll adopt a child over my dead body," I snapped. "She's about as fitted for maternity ——"

"Vicarious maternity," said the young scamp.

"——as you are," I finished.

"All right, babies barred. The idea is, of course, to switch her on to something else, to find a safe outlet for her energy. Harnessing the wild sea waves isn't in it. She's got Niagara looking like a purling brook. How about Christian Science?"

"I won't meddle with her religion," I said firmly.

"Spiritualism?"

"That's a religion."

"I mean the phenomena. Get her to tipping tables."

"I don't like it; I'm afraid of it."

"Afraid of what?" he scoffed. "Don't you know if you let her buy one of those flying machines, inside of six months you and Miss Aggie will be sitting by a table in a dark room trying to get a message from her on the inside of a closed slate and asking her, if she is present, to rap three times?"

Well, I was desperate and Charlie was right. That very evening he took three of us to a séance, and Tish had a long talk with her great-grandmother who'd been dead eighty years. Her great-grandmother said that the old fourpost bed should have gone to Tish; and that she was well and happy and liked Heaven; and how was Tish's father? Which was strange, for Tish's father, the warden, had been dead for twenty-five years.

We Found Her With Books on Spiritualism and Spirit Phenomena All Round Her

Digitized by Google

We went home very thoughtful, and Tish said there was certainly something in it and she would like to do a little investigating on her own account.

Aggie said little or nothing. She had a headache because a banjo had come out of a cabinet and hit her on the head and she was inclined to be sulky. If any one had told me that night that Aggie was psychic I should have scoffed!

Tish asked us both to supper the next evening, Monday. We found her with books on spiritualism and spirit phenomena all round her, and during the meal she read an account of a medium, or psychic, who—tied hand and foot to a chair in a dark room—had made a tin horn in the middle of a table stand up on its small end and recite The Charge of the Light Brigade.

While Hannah Thompson, who had been with her for years, was clearing up for dessert she read that during a séance round a dining-room table something had materialized under the table and could be felt rubbing against the legs of the sitters. Aggie got up and sat on her feet and I must admit my own legs felt creepy. And at that minute, as Hannah was putting the junket on the table, she screamed and dropped the tray on the floor. It was only a cat from the apartment next door, but it shows what a state we were in. We gave Hannah a tablespoonful of blackberry cordial and I dried the dishes for her, but she looked queer all evening and hardly spoke a word.

When I went back to the parlor I was hardly surprised to find Aggie and Tish, with the light out, sitting one on each side of the Checkerboard Table, which had been cleared of its cover and of Charlie Sands' picture, that usually sits on it in a silver frame.

"Don't you feel something?" Aggie was saying, and sneezed.

"Nothing but a cramp in my foot," Tish snapped. "Sit down, Lizzie. Rest your hands lightly on it and don't talk."

"What will happen?" I asked, feeling round in the dark for a chair.

"Nothing at all, likely," said Tish. "You will keep on asking questions probably and Aggie will keep on sneezing. That's all. You're neither of you psychic so it could be noticed."

Of course, as I say, we did not know then about Aggie's mother's half-sister.

Well, the room was dark and I was tired. Pretty soon I must have dozed off, for the next thing I knew something under the table struck me a violent blow on the shin. I sat up with gooseflesh all over me. The room was still dark and Aggie and Tish were still on either side of me, only I thought Aggie looked phosphorescent.

"So—something knocked me on the leg!" I gasped with my tongue stiff with fright.

"I did," snapped Tish. "You were snoring. Oh, for somebody to take a real interest!"

"I have a very queer feeling in my arms," said Aggie. Her voice was slower than usual and her eyes were fixed on something near the window. It made me creepy to look at her; but when I followed her gaze she was only looking at Charlie's silver picture frame. A bit of light from somewhere on the street was shining on it and it looked almost lit up.

"What sort of a feeling?" Tish demanded, leaning forward. "A pulling?"

"A tingling," Aggie said thickly. "And the table is throbbing. Can't you feel it?"

Tish thought she could, but I felt nothing. I tried to think I could, but I couldn't. My nose was itchy and I did not dare lift a hand to scratch it. Try as I would to concentrate I could only concentrate on my nose.

"I could lift the table," Aggie went on in a sing-song tone that made me shudder, "but I'm so weak—so weak!"

Tish reached over with her foot and prodded me.

"That isn't Aggie's voice!" she whispered.

It didn't sound like Aggie, but I would have been more impressed if it hadn't been for my nose.

"I've got to scratch my nose, Tish," I whispered back. "It's driving me crazy."

"Scratch it on the edge of the table," she ordered. "Don't move a hand!"

"So weak!" said Aggie faintly. "Get Hannah. Get—Hannah!" Her voice trailed off to nothing, but she was still sitting bolt upright staring at the picture frame. As I looked at her her face drew up terribly and Tish forgot her hands and grabbed my arm.

"Watch her," she said wildly. "She's going into a trance!"

But in a second the truth burst on us. She was not going into a trance—she was going to sneeze. And she did.

The next minute, in her ordinary voice, she was wondering where she'd left her handkerchief and the spell was broken. Tish was ready to scream with disappointment.

Well, we lighted a light and found Aggie's handkerchief and wakened Hannah Thompson out of a sound sleep and brought her in in her nightgown, with a red flannel petticoat over her shoulders, and the four of us sat until midnight. But nothing more happened.

However, Tish said it often took several sittings to get anything, and as it was too late to go home Aggie and I stayed there all night in Tish's guestroom, which opens off the parlor. Tish's room was just beyond.

About four in the morning I was wakened by somebody shaking me violently. It was Tish with a candle.

"For Heaven's sake come into the parlor!" she said. "The Checkerboard Table is moving round."

"You've been dreaming."

"Listen!" said Tish, with the candle dripping melted tallow over the bed. "Listen to that!"

Well there *was* a sound, a sort of shuffling noise as if some piece of furniture without castors was being shoved over the carpet. I sat bolt upright and Aggie turned over and spoke in her sleep.

"It's throbbing," she said thickly; "the table's throbbing. If I had a little help I could move it."

"Wake her," Tish commanded, looking alarmed. "She's as safe to trust with psychic power as a baby with a loaded gun. Wake her!"

"Aggie," I said, and shook her. But she never opened an eye. She'd taken hold of the edge of the blanket and was tugging at it as if it weighed a ton. Tish bent over and held the candle near her and I saw she was shaking.

"This will teach us to fool with powers we don't know anything about!" I exclaimed in a rage. "She thinks she's lifting the table!"

Suddenly Aggie stopped tugging and raised the edge of the blanket about eight inches and an expression of heavenly peace settled on her face.

"Thank you, Adolph!" she said.

Adolph! Adolph Degelman!

At that very instant came a crash from the parlor, and a draft of air through the open connecting door blew out the candle.

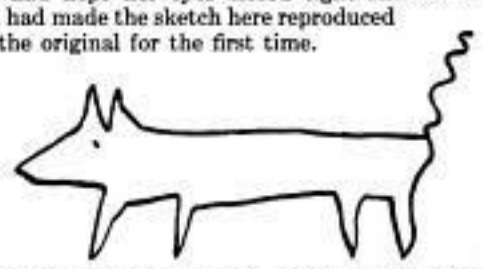
"For mercy's sake what did that?" said Tish. But the only answer was a snore from Aggie.

Tish hopped up on the bed and gathered her feet under her, and we stayed that way until dawn. As Tish said, if we had unloosed the Powers of Darkness the only way to do was to wait until cockcrow at dawn or, lacking the cockcrow in a city, until the early milk wagons warned the uneasy spirits back to Highgate Cemetery or hell, as the case might be.

We heard the scraping movement once at half past four and again just at dawn, when there was a sort of bang from the parlor, which was probably a sort of farewell demonstration.

At a quarter after five we roused Aggie, and each holding the other we went to the parlor door and looked in. It was much as we had left it, but Charlie Sands' photograph lay on the floor with the glass in a dozen pieces!

Before Me Stood a Nice-Looking Young Man, Very Bald, But Pleasant



II

WE TOLD Aggie about Adolph that morning, and instead of being pleased, as we'd expected, she was rather disagreeable about it.

"If you're trying to insinuate that my control, if I've got one, is the murderous wretch that made the Checkerboard Table, you ought to be ashamed of yourselves," she snapped. "What if I did call out his name in my sleep? The time Lizzie had a nightmare and yelled that she was being chased by a cream cheese didn't mean that she was controlled by a cream cheese, did it?"

But after Tish had explained what we had seen and how we had distinctly heard the table move just as she'd asked Adolph to help her do it, and how Charlie Sands' picture had been found on the floor smashed, she looked more serious. It was then that she told about her half-aunt Sadie Briggs, and she admitted that she had often thought she was psychic. She read The Phantom World all morning, and by noon she'd accepted Adolph and was sitting by the Checkerboard Table with a pencil poised over a sheet of paper hoping for "independent writing." She had Tish and me try first, but the pencil wouldn't move.

At two o'clock she called us and said she had felt an irresistible impulse in the pencil to move over the paper. Aggie had kept her eyes closed tight and of itself the pencil had made the sketch here reproduced from the original for the first time.

Sketch Drawn by Aggie. A Fine Example of Independent Work

But although she sat most of the afternoon the pencil did not move again, and indeed this is the only piece of automatic work that she succeeded in getting during the entire three days. It was only three days in all, for, as you know, with the solving of the Forsyth mystery Aggie's power left her as suddenly as it had come.

By six o'clock, when Charlie Sands came to supper, Aggie had given up the attempt. But, as I say, she had adopted Adolph by that time and was lifting the parlor rug because she said she had a feeling that Adolph wanted the floor bare. Only she said she "sensed" it.

"To think," she said plaintively to Charlie Sands—"To think that, if I had only known, perhaps Mr. Wiggins need not have 'passed over.' I recall distinctly raps all over the furniture the very night before he fell off the roof."

Aggie had been engaged years before to a roofer who "passed over" the edge of a roof.

None of us ate much supper except Charlie Sands. Aggie took only a cup of tea. She said most mediums worked on an empty stomach. Charlie Sands said flippantly that he hoped they wouldn't work on his, and Tish reproved him for his levity.

"I have decided," Tish said, "to get Great-grandmother Carberry again and ask her where the fourpost bed is. She must mean the mahogany four-poster that she sold just before she died."

"Mahogany four-poster," said Aggie dreamily, and stirred her tea.

We did not start immediately after dinner. Charlie Sands said that a wealthy young woman named Forsyth had disappeared the night before from Melrose, a borough six miles from the city, and the Star was trying to locate her. He spent an hour at the telephone talking to reporters, and Tish said she thought it was a police matter and not a newspaper's business. But he only grinned and said that in these days a newspaper reporter had to be a detective, a contortionist, a baseball fan, a football expert, a diplomat, a politician, a sleight-of-hand man and an amateur actor, and have a diploma in "first aid" as well as be a crack shot and a professional photographer. If he knew jiu jitsu also he might get twenty-five dollars a week. And he was willing to bet that his men would locate Miss Ida Forsyth either in an abandoned well or in the marriage license office by noon the next day.

It is strange, after that, to realize that with all their qualifications, the Star people had to take off their hats to a frail woman like Aggie and to a Checkerboard Table, neither of them, as Tish says, being either a diplomat or a detective, knowing nothing of jiu jitsu and fainting at the sight of blood—Aggie, of course, not the table.

Well, while Charlie Sands was at the telephone Tish read about the experiments of an Italian named Lombroso with a medium whose name I've forgotten. The article gave a detailed account of wardrobes moving out from the wall and giant hands materializing out of the ether. I had cold chills up and down my spine, but Aggie sat by and listened with a patronizing smile—Aggie, who jumps into bed with a single leap after she has put out the light!

"'A draft of cold air blew out into the room,'" Tish read. "'Two clothespins placed on a table in the cabinet drummed with marvelous rapidity and precision. Finally a spectral hand—three times the normal size—came out and clutched Doctor W—— by the neck.' Good heavens, that's terrible!"

Digitized by Google

"We'd better have a curtain of some sort," said Aggie placidly. "Of course I don't promise hands, but I have a feeling that something is going to happen."

As Tish said afterward, it was an astonishing exhibition of the influence of mind over matter. Under ordinary circumstances Aggie would have been sitting forward on the edge of her chair, looking like a scared sheep and sneezing at every climax. But the idea of spiritualism was born full grown in her mind, like Minerva from the head of whoever it was.

She got up finally and sauntered into the kitchen, and when she came back she had two clothespins and a rolling-pin in her hands.

"We might as well do the thing properly," she said, looking at Tish defiantly. "The portières over the door there make a sort of cabinet and we can put these things on a chair inside."

"What sort of a chair do you want?" Tish asked meekly.

"A cane-seated chair. Aunt Sadie Briggs always used a cane-seated chair."

"It's up to you of course," I said rather scornfully, for I admit at that time I was skeptical. "But if you're looking for drumming you don't want a cane-seated chair."

"Why not?" Aggie looked at me with her nose twitching. "If they're going to drum at all they can drum on the rungs—or anywhere in the room for that matter."

I gave up then and sat watching them while they pulled the portières out, and set the chair and the rolling-pin and clothespins and a table bell Tish brought from the dining room behind the curtains. I thought they had gone crazy and told them so, until Tish said that disbelief wouldn't affect the control but open belligerency would, and that I might at least keep my mouth shut.

Charlie Sands was ready at nine and they showed him what they had done.

"We'd better have test conditions," he said, lifting the chair and looking at its legs. "No silk threads tied to anything? It looks all right. Where does that door lead?"

"To the next apartment," said Tish. "The two apartments are sometimes let as one. The door is locked and the janitor has the key."

Charlie Sands shook the door.

"Seems all right," he said. "Who lives beyond?"

"The man who keeps the corner drugstore," Tish explained with dignity. "Hannah says he's away with his wife and baby for a week. I don't know them. And if you are intimating, Charlie Sands ——"

"Revered and respected kinswoman, I'm not intimating anything. I am merely trying to prove to you and to myself, for our comfort later, that if the rolling-pin comes out from behind that curtain and fractures anybody's skull, which isn't unlikely considering what we know of Adolph, we must not blame each other—or the druggist."

Well, we put the Checkerboard Table in the middle of the room and placed Aggie where she had been the night before, with Charlie on one side of her and Tish on the other. I sat across the table from them.

We sat for an hour and nothing happened! Both my arms went sound asleep, and at last Tish whispered she had a cramp in the middle of her left foot and she'd have to get up and stamp on it.

"There!" Aggie wailed, "I was just getting the tingling in my arms and now you've spoiled it all. Just a minute, Tish. Are you there, Adolph?"

And as surely as I sit here there was a distinct tap in the very center of the table!

"One tap!" said Tish. "That means 'no,' he isn't here."

"How could he rap if he isn't here?" Aggie demanded tartly. "Adolph, if we ask you some questions will you try to answer?"

But Tish's cramp got worse at that minute and she had to break the circle to take her shoe off. It was only when we lighted the gas that we saw why nothing had happened. Charlie Sands was sound asleep, and of course the psychic current, or whatever it is, hadn't been able to get through him.

Aggie was ready to cry, but she refused to give up, so we wakened Charlie and Tish went and got Hannah. She would not come at first. She said she was ready for bed and anyhow she had a toothache. She was really very disagreeable about it; but Tish filled a hot-water bottle and tied it to her cheek and turned the light out so she could come in in her kimono without Charlie Sands seeing her.

So we sat down again in the dark round the Checkerboard Table and Aggie said she felt a pulling at her arms almost immediately. For half an hour nobody spoke or moved and nothing at all happened. The room was dark, but a bit of street light shone in on Charlie's silver frame and made a faint illumination all through the room. And then suddenly the table bell tumbled off the chair behind the curtain!

We all turned and looked, and as we stared we saw the curtain over the locked door push out into the room as if somebody stood behind it!

"Adolph," Aggie murmured faintly. And then she sneezed!

III

OF COURSE the curtain flattened out at once and Tish was furious at Aggie. She said she'd try to find a psychic who didn't have hay fever, and Aggie retorted that anybody was likely to sneeze and that she'd wanted to sneeze for an hour and had held it back long enough for Adolph to appear, at the risk of her head flying off.

But the Pencil Wouldn't Move

It was only by main force that we kept Hannah in her place. She said her tooth was jumping, and anyhow she hadn't agreed to work all day and then sit up all night and see the grave give up its dead.

She gave Tish notice then and there—although she'd been with her for years—and Tish accepted it, but she said Hannah's week wasn't up until Wednesday noon and this was only Tuesday evening. Hannah gave up then and sat the rest of the evening sulking and dozing. Really, under the circumstances, that we got any result at all was marvelous.

Charlie Sands was skeptical. He insisted that there was some one behind the curtain and finally we agreed to let him look. But Tish refused to break the circle, so with our little fingers linked we all went over and Charlie shoved the portière back with his head.

There was nothing behind the curtain. The door was closed and locked and the rolling-pin and the clothespins still lay on the chair. But the bell was on the floor, just outside the cabinet! It was astounding.

Hannah was breathing in gasps and she pleaded to be allowed to go back to bed and put her toothache under the covers. But Tish was inexorable.

"Don't be a fool," she said. "We've made a good start and we're not going to stop now. Perhaps Miss Aggie can induce Adolph to put something in your tooth."

But Hannah was almost ugly about this, and as you probably know, if you've read Tish's report to the Society for Psychical Research, our further demonstrations that evening were limited to the Checkerboard Table.

The clock in Tish's dining room struck the half-hour when we were settled again and Charlie said it was half-past ten. He asked Aggie's permission to ask the table some questions and Aggie granted it ungraciously.

"Now, Adolph," said Charlie Sands, leaning forward, "this ringing of bells and tapping on tables is all very well. But it's hardly your size, I should think. Let's get down to business. Have you seen the evening papers?"

From right on top of the table came one sharp rap.

"No?" said Charlie Sands. "That's too bad. Well, Adolph, a young lady named Ida Forsyth is missing from her home, a pretty young lady, Adolph ——"

The table suddenly quivered under our hands.

"She went home from a dinner at the Melrose Country Club, went upstairs to retire, partially undressed, wound her watch and put it on the bedside table, failed to go to bed at all and hasn't been seen since. Rather unusual, eh?"

The table gave no sign this time, and Tish said she didn't think much of the idea.

"Anyhow the girl's probably making the sensation herself," she said. "Do you remember that niece of yours, Lizzie, who wrote she was going to drown herself and was found in the hayloft the same day with three sofa cushions, a box of candy and a volume of Airy, Fairy Lillian?"

"Possibly," Charlie Sands said calmly. "But why then should her sister attempt to kill herself this afternoon? She did, and only failed because a steel in her —hello!"

For the table had pushed fully four inches to one side and gave a terrible groan. Even Tish was startled, but Aggie was quite calm.

"It will probably lift up in the air in a moment," she said placidly. "Adolph, be careful of Miss Carberry's chandelier." But the table sat quiet in its new position and gave no hint of rising.

"Now, Adolph," Charlie Sands went on, "you've got a good bit of local talent to draw on where you come from—Poe and Gaboriau—and Sherlock Holmes is dead, isn't he? See if you can't get a line on Miss Forsyth, won't you?"

Without any warning at all the side of the table next to Tish lifted suddenly. We felt it coming up under our hands, and it stood for a second or two, balanced on two legs, before it settled back again. Even then it didn't drop back, but slid back gently.

"Who did that?" Charlie Sands said sharply. None of us had touched it and we said so. The next minute it came up again and tried to climb into my lap!

"Is that you, Adolph?" asked Charlie.

No answer.

"Perhaps," Aggie said coldly—"perhaps if you will allow me to interrogate him he will answer."

"Help yourself," Charlie returned cheerfully, "although personally I hardly call Adolph a ladies' man."

"Hush," from Tish.

"Adolph," Aggie began gently, "are you trying to put the table in Miss Lizzie's lap?"

Three sharp knocks came instantly from some part of the Checkerboard Table.

"Will you let the table down gently?"

The table slid off my knees to the floor with only a light creak.

"Are you alone?"

"No"—one rap.

"There are other spirits here?"

Three loud raps, this time from a table leg.

"Holy saints!" said Hannah, and tried to cross herself, but Tish and I held her hands.

"Is your wife here?"

The table began a series of wild oscillations back and forward. It was terrible. At the last it came down on my ingrowing toenail and I am not certain what came next.

After that we had a few moments of quiet. The table did not move and there were no raps. Charlie suggested that we lay our hands lightly on the table with our little fingers touching and this we did. But Adolph seemed to have gone. I had a suspicion that Hannah had gone to sleep. I could hear her breathing deeply beside me and sighing now and then. But I hadn't the heart to waken her to her toothache and Adolph again.

Charlie Sands said he thought Adolph was probably off consulting Sherlock Holmes. Finally he said:

"Adolph, are you here now?"

The table rapped three times.

"Have you found out where Miss Forsyth is?"

The table rose very feebly in front of Aggie.

"Hah!" said Charlie Sands. "Set a thief to catch a thief! Has she been murdered?"

The table rose twice.

"He's not certain," Tish whispered.

Charlie Sands was leaning forward in the dark. "Are you sure nobody here is lifting that table?" he asked.

"Not unless you are!" Tish said sharply.

"Now, Adolph," he went on, "do you say you know where Miss Forsyth is? Where is she?"

But instead of answering the table began to groan and creak as it had done the night before. It seemed to twist without either lifting or moving along the floor.

"I'm going into a trance!" Aggie called suddenly.

"All right, sit tight," said Charlie Sands coolly, as if she had said she was going to wash her hands.

"Now, Adolph, I am going to say over the alphabet slowly. I want you to spell out where she is. Just come up once at the letter you want."

"Yes," said the table. But he had gone over almost the entire alphabet before it rose again. Then it came up at S. After that came—I-A-N.

"Sian," said Charlie. "If you mean Siam, Adolph, I doubt it, if the lady is still on the earth plane."

"S-I-A-N" we got again.

Then with hardly a pause we got "Ida."

Digitized by Google

"By Jove," said Charlie Sands, "that's interesting, isn't it? Interesting but not enlightening. That's her first name. I believe you read the papers after all, Adolph. Did she leave because she was worried?"

"Yes"—three raps on the table top.

"Now then, Adolph," said Charlie Sands, "this is a young girl in distress, a nice young woman. Now what have you and Gaboriau decided is the trouble?"

"O-M-A-R" spelled the table. And then without stopping, "O-M-A-R" again.

"Sian—Omar," Charlie Sands said rather flippantly; "sounds Persian, Adolph."

To our surprise the table rapped "yes" violently.

"Well, if I had a cigarette I might figure that out. Do you mind if I smoke, Adolph?"

The table did not deign to reply.

"You'll start Aggie sneezing," Tish objected. "And anyhow there's no use making Adolph feel bad. Perhaps he used to smoke himself."

"There was a letter in the grate in Miss Forsyth's room, burned. Who burned that?" The table lifted twice.

"That's a Good Chair; Come, Now! Come! Come!" And the Chair Would Follow Her Like a Dog

"Ah! You don't know. Well, who sent Mrs. St. John the special-delivery letter just before she shot herself?"

The table did not move.

"Do you know?"

"Yes."

"And you won't tell?"

"No."

Charlie Sands whistled.

"Well, talk about sleuths!" he said. "Old Adolph has Sherlock Holmes locked in a pantry and begging for air! So you know and you won't tell! What about the broken pitcher, Adolph?"

"O-M-A-R" spelled the table.

But after that it went to pieces. We got "Pain," "Peaches" and then "Pain" again three times. And at that Tish insisted on ending the sitting.

"It's cruelty to keep on," she said; "the poor thing's been eating peaches and has a pain. I insist on letting him go."

"Considering where the spirits of murderers are supposed to reside, it might be kinder to keep him here," said Charlie Sands. "But if you insist ——"

He lighted the gas and a cigarette with the same match and the circle broke up. Aggie said her arms were numb and cold, which she'd got from Tish's books, and that she felt weak, which she'd got from the tea and toast. She took all the credit to herself and looked exalted.

Hannah was sound asleep. We could hardly rouse her, and she tottered back to bed like a cripple. She looked white and worn, and Tish told her I would get the breakfast.

Seen in full light the cabinet showed nothing supernatural. The door was locked and there was no key on either side. We pushed a pencil through the keyhole.

Before he left Charlie Sands went over and looked at the Checkerboard Table.

"Well, Adolph," he said, "I'm sorry, old chap, but it's back to the flames and brimstone for you until tomorrow night. *Au revoir*, old sleuth."

The table said nothing, but it stared at him coldly with every one of its checkerboard eyes. It made me creep.

IV

THE following clipping, from the Globe of Thursday morning, March the thirteenth, was submitted to the Society for Psychical Research, with Tish's report of the sittings and their result; and the whole thing was published in the Annual Report of the Society, under the heading of The Psychic in the Detection of Crime:—

"Miss Ida Forsyth, daughter of the late Martin Forsyth, of the Forsyth Coal Company," [the clipping reads], "is mysteriously missing from her home in Melrose. Although the young woman, who is well known and prominent socially, has been gone only thirty-six hours, the circumstances of her disappearance are so unusual that detectives have been at work since noon of yesterday.

"The situation is further complicated by the attempted suicide, yesterday afternoon, of Mrs. St. John, a sister with whom Miss Forsyth made her home.

"Miss Forsyth, who has recently joined the Melrose Valley Colony, is wealthy and socially prominent. Mr. Martin St. John, her brother-in-law, is M. F. H. of the Valley Hunt, and Mrs. St. John is one of the best-known hostesses of that exclusive borough.

"Miss Forsyth disappeared Tuesday night. With the St. Johns she had dined at the Country Club and motored home by moonlight. She complained of being fatigued and retired to her room at once on arriving at the St. John house. She has not been seen since.

"The police refuse to discuss the case; but from a servant in the house it was learned that Miss Forsyth had partially disrobed and had apparently left the house in slippers and a dressing gown. A careful search of the grounds and of the neighborhood, however, produced nothing of any importance. At first the discovery of the dead body of Miss Forsyth's pet cat, found amidst the shrubbery in a ravine on the property, caused some excitement, but the body of the cat—a large, prize-winning Persian named Omar—bore no marks of violence.

"At three o'clock yesterday afternoon, immediately after a conference with Detective Sloane, of the Sloane Agency, Mrs. St. John retired to her room. At half-past three Mr. St. John, returning in his machine from a fruitless search for his sister-in-law, found his wife unconscious in her boudoir. She had shot herself in the left side, and the bullet, deflected by a rib, produced a painful but not fatal wound.

"Coming immediately after the other sensation Mrs. St. John's attempt at suicide startled the entire community, where both sisters had been prominent and popular.

"The motive for the deed is unknown. At nine o'clock last night Mr. St. John personally saw a number of newspaper men. He said that his wife was resting quietly, but had given no reason for the shooting. He explained that it was probably a nervous collapse from strain, and this opinion was confirmed later by the physicians.

"Up to a late hour last night no clew had been discovered as to the whereabouts of Miss Forsyth."

"Omar!" said Tish, putting down the morning paper and looking at us. "So Omar is a cat!"

"Was," Aggie corrected her, placidly buttering some toast. "The poor thing has 'passed over.' I felt last night that he was a cat."

"Humph!" said Tish, staring at her. "Did you have any inspiration about 'Pain' and 'Peaches' and 'Sian'?"

Aggie broke her toast slowly. In the last twenty-four hours she had developed a maddening air of detachment, of ox-eyed superiority, of placidly surveying us from the heights of a spirit level.

"Well," she said, "of course my guides haven't really taken hold of this affair, but I sense that Omar ate peaches and died in pain."

"Did you ever see a cat eat peaches?" Tish demanded.

"No," Aggie replied, calmly sugaring her tea, "and I never saw a cannibal eat a missionary—but I believe it is done sometimes."

Tish stared at me across the table; we could hardly believe it was Aggie.

"And Sian?" she asked almost meekly.

"Probably where he was born," said Aggie. "Good gracious, Lizzie, did you boil the tea?"

For I had got the breakfast, Hannah having hunted a dentist at daylight.

I do not recall the events of that day with any clearness. Tish had decided on another sitting that night, so Aggie and I stayed. At eleven o'clock that morning Aggie dressed and went downtown, still with her maddening air of being up in a cloud and viewing us from a remote height. She came in at one o'clock with a largish bundle, which she stored under the guest-room bed.

To our inquiries she replied that we should know what was in it in good time and were not to disturb her for an hour. She was going to sit with Mr. Wiggins' photograph in the hope of getting a message from him that night.

"Nothing of the sort," Tish said angrily. "We are going to carry on the investigations we commenced last night. You can talk to Mr. Wiggins any time."

Aggie gazed through her calmly.

"If you intend to be disagreeable, Tish," she remarked, "you can have Adolph yourself. I'm sure I don't want him. I am perfectly willing to form a circle of my own choosing in my own house."

Of course Tish surrendered at that. She knew she wasn't psychic and neither was I. Aggie was different. She had slept with a dreambook under her pillow for years, and twice when she dreamed of having a tooth pulled somebody in the family had died. Also she had dreamed of muddy water the very night her niece, Elizabeth Watson, eloped with her father's chauffeur. Oh, Aggie's psychic power was not a complete surprise when we got to thinking about it.

Tish crawled under the bed during the afternoon and reported that the large package felt like a drum, yet she couldn't be sure; but, as you will see, it was not a drum.

Charlie Sands dropped in during the afternoon and brought us the first edition of his paper. Of course, as he said, the morning papers had stolen all his thunder. "But wait until tomorrow, Aunts Tish, Aggie and Lizzie," he said. "Oh, just wait until tomorrow! How's Adolph?"

"Don't be flippant," said Tish, seeing Aggie look annoyed.

"Flippant—with a murderer!" he exclaimed. "I am not brave enough, dear Aunt Letitia." He opened the door and turned in the doorway. "Oh, yes," he said, "be sure to have Hannah. There is something solid and dependable about Hannah. When I begin to sink in a sea of doubt and immoral specters Hannah's hand is a virtuous actuality, a plank to cling to."

The afternoon passed slowly. Aggie shut herself away and read The Phantom World. Hannah moped round with a bandage over the lower part of her face and a scowl on the part that was visible. I put fresh ruching in my waist and Tish went out about four o'clock, returning in an hour with two bolts of white tape and a spool of heavy silk thread.

"We'll have test conditions while we're about it," she said. "I don't insinuate anything against Aggie, but mark my words, she'll get a message from Wiggins tonight if she has to send it to herself. She's just about worked up to that."

"She'll never sit if you tie her," I declared.

"Sit!" said Tish. "She'll sit until we are through with her and then some." Tish is not usually addicted to slang, but she was excited. "She'll sit until we release her with a tacklifter. I'm going to nail her to the chair!"

And she did.

For the conditions under which we "sat" that remarkable night I think it best to refer to Tish's report to the Society for Psychical Research.

It was in part like this:

"The sitters were the same as in the circle the previous evening. The psychic, Miss Agatha Pilkington, sat with her back to the improvised cabinet previously mentioned, said cabinet consisting of a portière hung over a locked door. Between the door and the portière a chair had been placed and chalk marks drawn by Mr. Sands indicated the exact position of the chair legs.

"The psychic having taken her place on a kitchen chair we requested that she submit to strict test conditions. To this she agreed; but on learning that we intended to nail her dress to the chair and to the floor became indignant and threatened to end the sitting. Such demonstrations are not unusual on the part of psychics, and have been accounted for by Mitchell and Crookes as denoting, not a desire to have the limbs free to assist the phenomena, but a natural resentment against the accusation of fraud thus tacitly shown.

"After some argument and an assurance that the tacks would not injure her best broadcloth skirt, the psychic consented to the conditions imposed. As with the chair in the cabinet chalk marks were drawn round the legs of the kitchen chair to mark its position. Strong tapes were then attached to the psychic's wrists, carefully knotted by Mr. Sands, the tapes crossed over the psychic's breast and nailed to the back of her chair. Some demur followed this, the psychic objecting that she could not take a deep breath. However, on the writer's pointing out that she could breathe oftener, using shallow respirations, she acquiesced.

"Tapes were then attached to the psychic's ankles and carried through the rungs of the chair to the floor eighteen

THE LAYMAN AND THE LAW

By MELVILLE DAVISSON POST

DECORATION BY H. DEVITT WELSH

WHEN one takes his case to an attorney he ought to remember that he is merely employing an expert to present it to the court in an orderly and formal manner. It remains with him to furnish the attorney with the necessary evidence to support his case.

Causes are won not by eloquent speeches or the ingenuities of cross-examinations but by the evidence produced. The very first thing to do, then, is to look up this evidence. It is a good rule to go at once to persons who, you think, will be valuable witnesses, talk with them and make an abstract in writing of what they will say upon the witness-stand, together with a careful record of their names and addresses. The habit of taking a summary in writing of what the witness will testify helps to fix it in the witness' mind and also furnishes the attorney with a record of what he will be able to prove at the trial. When this is done the client should continue to keep track of his witnesses, carefully noting any change of address in order that he always may be able to locate them when the case is called for trial.

It is not always possible to say when a case will be tried. It may be called on any day of a term or it may be continued, and always one must be ready to obtain his witnesses in the event of an unexpected trial.

One should remember when he brings a suit that he must be prepared to prove every important allegation he makes. He must be able to do this from his own side of the case and he must not expect to obtain any of the evidence from his adversary. The defendant may not introduce any evidence whatever, but wait for the plaintiff to make out his case; and if the plaintiff is unable to do this from his own side the defendant need do nothing—and the court will dismiss the action.

The necessity, then, of having proper evidence to support one's case cannot be overestimated. And here another matter of the first importance arises. Everybody ought to know, in a general way, what is and what is not competent evidence in a court of law; otherwise he might go to great trouble and expense in procuring documents that would not be admitted as evidence, and in bringing witnesses whose testimony would not be permitted.

The Kind of Evidence the Courts Demand

THE average citizen is very much confused by the arguments he hears in the courtroom relating to the admissibility of evidence. These arguments often seem to him not unlike the famous argument between the executioner and the king, in Alice in Wonderland, relating to the decapitation of the Cheshire Cat. The executioner's argument was that you could not cut off a head unless there was a body from which to cut it off; while the king's argument was that anything that had a head could be beheaded.

It is not essential that one familiarize himself with all the refinements of the law with respect to the admissibility of evidence. He can usually get along if he bears in mind one or two general rules. The most important is that one must produce "the best evidence of which the case, in its nature, is susceptible." This general comprehensive rule, if borne in mind, usually suffices for the litigant. It means that if a certain paper, letter or record is in controversy you must produce that paper, letter or record, and not a copy of it. It is true that if the original paper is lost or destroyed, or cannot be produced for some reason unquestionably beyond your control, then you can prove it by a copy or even by a witness who has seen it. If it is in the hands of adverse parties, or hostile or disinterested persons, who refuse to produce it, they can be made to do so by proper legal procedure.

This rule also means that you must produce as witnesses those who were present at the incident in controversy and not those who have heard of it or have gotten their information in any indirect way. This rule is so clear that one has only to apply it as one would a yardstick and he can at once see whether or not the evidence which he is considering is competent.

There are also a number of rules of evidence that are curiously interesting, though not, perhaps, of the first importance to a layman. As, for instance, the fact that in some jurisdictions, and in criminal cases in the Federal courts, one cannot prove a disputed writing by going out and bringing into court a genuine writing to compare with it. This rule, however, does not seem to be founded on the best reason, and at least three-fourths of the states have changed it, either by statute or judicial decisions.

There is also a rule with regard to what are called "dying declarations" which seems, at first sight, extraordinary to the layman. Thus, if the decedent has said, "I am dying. It was John Smith who shot me," that evidence would be admissible; but if he said, "It was John Smith who shot me; when I get well I will kill him," that statement is not admissible.

The reason is that the law requires evidence to be given under the sanctity of an oath and the jeopardy of cross-examination; and when it is not produced under these conditions there must be some other strong reason for telling the truth. Now, the common experience of men is that persons who believe themselves in the immediate presence of death do not usually lie; and, therefore, if the statement is made by a person who believes himself at the time to be near dissolution it will be received as evidence. If, however, the statement shows that the person making it entertains a hope of life, then it will not be received. And, of course, as in the last instance, where the statement is accompanied by a threat of what one will do when one recovers, it is certain such a statement was not made in the solemn manner the law requires.

When one follows and carefully studies all the rules of evidence he will come to see that every one of them, no matter how curious it may seem upon a casual scrutiny, will be found to have its origin in sound principles of common-sense and to be justified by some experience of the English-speaking people.

As Sir James Stephen has so aptly said, one of the most difficult things in the world is to determine whether or not a man who has an incentive to lie is, in fact, speaking the truth. It is, therefore, of the first importance that the testimony of such persons should be tested by every device known to the law.

When Confucius was minister of justice he said: "Surely the grand object to achieve is that there shall be no litigation at all."

It usually happens that attorneys are held responsible for the multiplicity of suits; but, in fact, it commonly arises because the litigant has not taken proper precautions in advance of his coming into court.

For instance, there are a number of things which no man ought ever to undertake to do except upon the advice of a competent attorney. Primarily and by all odds the most important of these things is the drafting of a will. One without a competent knowledge of the law should no more undertake to draw his own will without the advice of an attorney than he should undertake to amputate his own leg without the service of a surgeon. So much fraud has arisen about the devising of estates that the law has thrown a great number of safeguards round such transactions. Certain exact technical things are required in the structure of wills. These requirements differ in different jurisdictions. The laws of all states are not alike with respect to them, and they must be accurately followed or the will may prove to be void and ineffective.

Experts Needed for Wills and Deeds

WHEN one has a will to prepare he should go to the best and the most reliable attorney he knows in the jurisdiction in which his estate lies, and have the will properly drawn and all the requirements of the law met with respect to it. To do anything else is to endanger the validity of the will and perhaps throw the whole matter into long and expensive litigation.

There is no language strong enough to characterize the folly of one who undertakes to draft such a paper from his own knowledge or at the direction of friends and neighbors.

The same suggestions apply to the drawing of deeds. Deeds in some jurisdictions require certain formal words; if these formal words are not present the deed is void. They require usually formal acknowledgment before a notary public, and usually without such acknowledgment they cannot be admitted to record. It is nothing short of criminal negligence for a little farmer, who has laboriously earned enough to purchase a tract of land, to trust the drawing of the deed to some inexperienced person.

And here it ought also to be added that before men purchase lands, especially farmers and the like, they should have the title carefully examined by some competent person. The lawbooks are full of pitiable cases in which men have lost their lands because they failed to take these precautions. Men have relied upon the rumor in the neighborhood that the title was good, or because a certain person had held it for a great length of time, or because the person from whom the purchase was made was reliable and solvent.

Working to Save Wood Waste

NEW USES FOUND FOR WOODWORKERS' BY-PRODUCTS

By FORREST CRISSEY

ON THE nineteenth floor of a modern steel skyscraper, in the business center of a city of more than two million inhabitants, is located an office of the United States Forest Service.

Many a chance passer has paused before this door, read the words, United States Forest Service, and smiled in amusement at the seeming absurdity of the situation. One stranger from the cattle country, straying about the upper mesas of this almost woodless building, read the legend written on the door and remarked:

"Nice roost for a bunch of forest rangers! I don't see what standing timber they can find to inspect in these parts except the leadpencils in their pockets and the toothpicks in the tumblers on the lunch counters."

Yet there is not a busier or more useful Forest Service office in America than this. The eleven employees in it hustle as if they were working for a private individual or a soulless corporation instead of for Uncle Sam.

When Mr. H. S. Sackett, the forester in charge, was asked, "How does a forestry office happen to be located here in the heart of Chicago?" he quickly answered:

"Because this is the Office of Wood Utilization and Chicago is the greatest lumber market and wood-using city in America; because it is the headquarters of more than twenty of the largest associations of wood-users in existence and entertains more timber and wood men than any other city; because it is the center of information concerning more different kinds of wood-using activities than any other place on the continent."

Acres of Sawmill Waste Available for Pulp

Laying a Foundation of Statistics

"OUR main job is to teach the lumberman of the United States how to utilize the whole of the tree, clean out to the bark; just as Chicago's great packing houses have learned to use all of the pig, even down to its squeal. Without doubt there is much waste at the present time, but it is neither willful nor malicious. I do not believe there is a lumberman or a wood-using manufacturer who is wasting any material that he knows how to use except at an outright expense. In other words, this waste is caused by an ignorance of the possibilities of utilizing it; and the purpose of this particular office is to dispel that ignorance and tell the lumberman and the manufacturer how to convert the waste into a profit.

"Coöperation is the keynote of our work. We aim to take up only practical problems and work them out by coöperation with associations or with various individual wood-using concerns. We are here to work for and with the users of wood—not against them. Whenever a lumberman or a manufacturer in wood comes to us with a trade problem or with a question as to how a waste product may be utilized, a welcome is always found waiting. This was the purpose for which the office was organized in July, 1909."

Uncle Sam did not, however, start his Office of Wood Utilization by simply hanging out a shingle bearing the legend: Wood-Users' Problems Solved Here. Consultation Free.

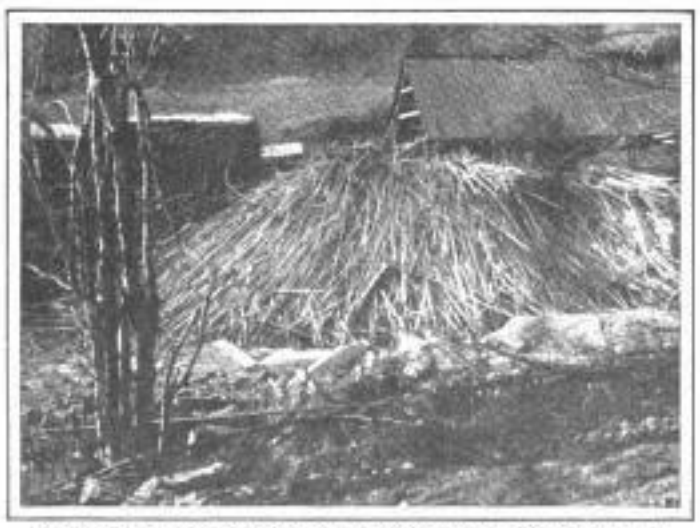
A broad and thorough groundwork of fact had to be laid first. This involved a searching inquiry into the wood-using activities of one state after another and a scientific analysis and arrangement of the information disclosed by the investigation. These studies have been completed in Massachusetts, North Carolina, Maryland, Illinois, Wisconsin, Louisiana, New Mexico, Arizona, Colorado, Utah, Wyoming, Nevada, Oregon and Washington. They are now going on in Arkansas, Missouri, Michigan, Virginia, New Hampshire, Vermont, Connecticut, Rhode Island, Tennessee, Alabama, Mississippi and California. All the other states will be covered as rapidly as possible.

What does this investigation of a state's wood-using activities involve? And what is it worth to the manufacturer after it has been completed?

After lumber leaves the sawmill, some of it passes directly into buildings; but a big part of it is subjected to further manufacturing processes before it is ready for use. Wood-working machines of many kinds change its form and it is shaped by skilled labor into boxes, door and window frames, vehicles, boats, baskets, musical instruments, furniture, brushes, toys, and hundreds of other articles.

Up to the time the Office of Wood Utilization began its work, definite information as to what happened to lumber after it left the saw was about as scarce as mahogany stumpage in Michigan. When a man of perniciously inquisitive turn of mind attempted to find out what forms were given that portion of the lumber product which passed through a secondary process of manufacture after leaving the sawmill, into what commodities it entered and in what proportions, he was plainly "up a stump." To fill this void and to reduce the wood-using activities of every state to a business-like analysis, a directory of manufacturers was the first undertaking of this office. It was a big job; but, without this classified information as a foundation, the office felt that its future work would be little better than beating the air. The questions asked of every wood-using manufacturer in the state under investigation covered these points: the products manufactured; the field of trade; the kinds of wood used; the specific nature of that use; the amount used annually; the cost at the factory of a thousand feet or a cord; the source of the material and the character of the waste, and what attempt may have been made to utilize it in any way excepting as fuel.

A new business house beating the bushes for trade prospects and fighting against established competition for a foothold could not put up a more thorough or energetic campaign than that followed by this Federal office in pursuit of its foundation statistics. Take the case of a state having two thousand wood-using concerns. To compile a directory of these manufacturers required the time of one person for two months, at a cost of two hundred dollars. Then a letter was sent to each firm explaining the purpose of the campaign and asking for the information required. Along with each letter was sent a blank card to be filled out, a sample card showing how that should be done, a circular letter fully explaining the work of the office, and a return envelope. All outgoing envelopes were addressed by hand. It was found that many firms paid no attention to the first appeal. About two weeks later the operation was repeated in the case of all these delinquents. Again, many of the firms that did respond gave incomplete information, which necessitated an individual letter. Of this class there were about one thousand. Altogether, the number of hand operations required was sixteen thousand.



Meantime fieldwork, equal to six or eight weeks' labor for one man and costing five hundred dollars, was required. This work involved traveling three thousand miles, visiting about five hundred firms and factories, besides telephoning to about two hundred more.

Next came the tabulation and analysis of all these data at the office. This took twenty weeks for one person at a cost of five hundred dollars. Literally miles of adding-machine paper strips were used in making the calculations to show the average cost a thousand feet and the percentage of each kind of wood used by each separate industry, as well as summary tables for all the industries and all the species of wood.

Practical Points for Wood-Users

FINALLY came the preparation of the report for that state, including a discussion and analysis of the uses of each kind of wood and of the work of each industry. To this was added a list of all the concerns that coöperated with the Office of Wood Utilization. Writing the report required three weeks' labor on the part of one person and cost one hundred and fifty dollars.

These reports are not given a peaceful burial in the filing cabinets or the pigeonholes of the office. They are promptly printed by thousands and distributed to the lumbermen, the wood-using manufacturers and others having a live interest in the subject throughout the various states. Manufacturers are not the only men who may study these reports with an eye for increased profits; owners of timber and woodlots are equally interested. In the report for his own state, the woodlot owner has before him, in concise form, a statement of the kinds of wood

demanded by the various industries, together with the quantity of each species used, the prices paid at the factories and the list of the commodities into which each wood is manufactured. Also the report tells him what part of the total demand for any particular wood is met by the forests and woodlots of his own state and what part is supplied from without. With this information in hand, the woodlot owners who are looking to the future can determine what kinds of timber promise the best returns and give these preference. Owners of timber tracts can also form from these reports a more accurate and intelligent opinion as to where the best markets can be found for their timber.

Wasted Hearts Turned Into Money

ON THE other hand, the manufacturer who is in the market for woods of certain kinds will have before him the means by which to determine whether he may serve his advantage by buying his supply near home or bringing it in from another state; and a statement of average prices paid by all in the business will show him whether he has been buying on an equal footing with his competitors. In a word, these reports furnish a short cut to a closer acquaintance between buyer and seller—to a better understanding of what one has to sell and what the other wishes to buy.

But how does this work out in actual practice? Does it "take"?

Here is what happened in one typical case: A lumberman in one of the Southern states received a "news note" sent from the Office of Wood Utilization to the trade. It stirred his curiosity and he wrote to the office, saying that he understood that Uncle Sam had started in to try to help lumbermen utilize their waste and sell their product to greater advantage. He intimated that he had been working at the same identical job for a good many years and was a little skeptical as to the ability of the United States Forest Service to show him any selling secrets that he had overlooked; but, at the same time, he was willing to admit that he did not know it all and he could use any money that could be made from the utilization of his waste or from a clearer knowledge of general and special market requirements.

The office sent him reports covering his own and several adjacent states. About a month later he met Mr. Sackett, who is in charge of the Office of Wood Utilization, and made a cheerful confession.

"When I opened those reports I hadn't much of an idea that I should find anything practical in them; in fact, it didn't seem reasonable to me that an outsider, no matter if he did represent the United States Government, could tell a live, hustling lumberman, who had been in the business up to his ears for the better part of his lifetime, anything worth while about selling his product or handling his business. Now, as you know, I am right down in the original persimmon belt. We cut a lot of it and it is an important factor in our trade.

"Well, as I was turning the leaves of one of those reports my eye hit on the statement that heart persimmon is used for parquetry flooring. I pricked up my ears right there, because my trade had no use for heart persimmon and for years I had been throwing away or burning up persimmon heart by the cord. My attitude toward that report suddenly changed from mild curiosity to practical business interest. In the back of the book I found a list of all the wood-using manufacturers in that particular state and among them were several firms that made parquetry flooring. That day I wrote a letter to each of them and received a prompt reply from each instructing me to ship at once all I had, and naming a price that was pleasant to think about. At the moment, I had on hand two carloads of this waste stuff and made the shipment immediately. In a few days I received a check for about a thousand dollars. As a specialist in advising old hands at the wood-selling game, you have made a hit with me right off the edge of the saw."

The fact that one item in one report from the Office of Wood Utilization enabled this manufacturer to convert his accumulation of a certain waste into a check for one thousand dollars is only a beginning of benefits to him. Each year he will be able, in the same manner, to add in the neighborhood of two thousand dollars to his net income; but perhaps the most important benefit to him is the fact that he will study every report from the Office of Wood Utilization with the eye of faith and a keen determination to find other profitable leads that he has overlooked—and will find them!

Often the large associations of manufacturers bring their problems to the Office of Wood Utilization for a solution. Not long ago the Association of Cypress Manufacturers of the South put this into Mr. Sackett's question-box:

"Where can we find a market for our odd lengths and short scraps?—this stuff is of various widths and from one foot to four feet in length. Today it is absolute waste and the volume of it is large."

Recognizing the validity and importance of this problem, Mr. Sackett at once applied his best energies to its solution. After careful study he decided that its use in the manufacture of boxes for plug tobacco offered the most plausible field for the utilization of this particular form of waste. The only obstacle to the practicality of this plan was the possibility suggested by the manufacturers of plug tobacco, that the cypress might impart to the tobacco an odor or flavor that would be objectionable to the users of that commodity. The only thing to do was to try it out, and he had no difficulty in securing the coöperation of the box manufacturers who supplied the plug-tobacco trade. A sawmill in the South sent a shipment of cypress waste-length pieces to the box manufacturer and he made them into boxes and passed the problem along to the plug-tobacco factory. The boxes were there packed with various brands of "plug" and sent to the warehouse, where they were allowed to stand for fully four months. Then they were taken out and distributed to a score or more of men who were supposed to be connoisseurs of sweet tobacco. In due time each one of these expert chewers rendered his decision. The consensus of these findings was that the tobacco carried no flavor of the cypress and that its quality was as unimpeachable as if it had been packed in the usual boxes of sycamore and red gum.

Saving the Core

THE problem is now up to the cypress mills. Backed by strongly favorable findings from a test conducted under the joint auspices of the United States Government and the manufacturers of plug tobacco, it would seem an easy task for them to sell their waste lengths to the tobacco-box manufacturers. There seems to be every probability that this one experiment will result in a saving of several hundred thousand dollars a year to the cypress mills of the South.

The wideawake mill-operator or wood-manufacturer does not wait to have the leaders of his particular association detect his problems and put them up to the Office of Wood Utilization—he takes them there himself and thereby saves time. The smallest manufacturer finds just as warm a welcome as the largest association in the office that is always looking for troubles in wood.

In North Carolina there is an alert manufacturer of veneer for baskets and crates. When he learned of the existence and the mission of the Office of Wood Utilization he promptly offered it his problem under a two-cent postage stamp.

"What better use can I make of my veneer cores," he asked, "than burning them under the boilers of my engine or sawing them into crating strips?"

In the manufacture of veneer, a steamed log is revolved against the edge of a long knife and in this manner turned into veneer strips until only a small center, a few inches in diameter, remains. This remainder is known as a "core."

The question passed up by this progressive manufacturer of veneer was by no means an easy one. Perhaps this, together with the fact that it came spontaneously from a private individual, added zest to the work of its solution. The quest involved a search through many formidable lists of

Ideal Forestry in a National Forest in the Black Hills. The Logs are on Skidways. Top Logs Have Been Cut Into Cordwood, and Brush and Limbs Piled for Burning. Young Trees are Left for Future Forest—No Danger of Fire

Digitized by Google

"wood specialties," and even this research did not bring to the surface any suggestion that seemed to be clearly the right one. At length the idea suddenly came to Mr. Sackett that all these cores needed in order to transform them into finished "mine rollers" was the boring of a hole through the center of each core. In coal mines having horizontal shafts the cars are pulled out by a power cable; the return portion of the cable underneath the tramway rests upon a series of rough wood cylinders called "mine rollers." Ordinarily the miners go out into the woods, cut young trees and then turn them in a lathe down to a diameter of six inches. As the veneer cores happened to be of exactly the same length and diameter as the regulation mine roller, all that remained to be done was to bore them for the insertion of the central rod. The veneer man had, in fact, been manufacturing mine rollers without knowing it—and then burning them up.

Instantly on receiving Mr. Sackett's suggestion, this pushing veneer man gave orders that not another core should be burned or made into crating. Then he had a few cores properly bored and with them he started out after contracts for rollers from the coal mines of the horizontal shaft type. When the mine operators found they could buy good black-gum rollers from the veneer man for a little less than the actual cost of the labor of cutting down young trees and turning them into shape, they were quick to place their contracts at a price that was practically all profit to the veneer factory.

What have been the results of this veneer man's enterprise in calling on the Office of Wood Utilization for advice on how to get something out of his waste cores? Today the big income-producing end of his business is not his veneer output, but the manufacture of mine rollers. The tail has wagged the dog; the waste that he burned under his boilers has been converted into his main product through his first attempt to secure aid from Uncle Sam in his capacity as a specialist in wood utilization. By the growth in this end of his business he has been forced to put in special machinery for the manufacture of mine rollers direct from the black-gum saplings that are too small to yield veneer and are practically useless for posts or any other purpose. The young trees that were formerly cut down by the mine-owners and turned into rollers were, as a rule, of varieties valuable for timber, and if they had been left standing would have produced good timber trees in the course of time. On the other hand, the black-gum saplings now sacrificed by the veneer man in order to fill the surplus of his demand unsatisfied by his waste veneer cores themselves represent a waste product on account of their cheapness and their unavailability for any other purpose than a cheap grade of veneer and mine rollers.

Money Made and Birch Trees Saved

THE Office of Wood Utilization does not always wait for the manufacturer to ask for aid; it is in the business of saving wood waste, and when it sees an opportunity to do this by bringing two or more manufacturers together it does not hesitate to take the initiative.

In the course of his preliminary investigation of the wood-using industries of the New England states, Mr. Sackett received a return card from a certain manufacturer of brush backs, who stated that he was able to use only the heartwood of the birch tree and that his largest volume of waste consisted of birch sapwood. A little later another return card came in from a spool factory which specified its principal waste as birch heartwood and added "we can use only the white sapwood of the birch." Instantly the return card from the maker of brush backs was called for and the two were compared. It was found that these two factories were located less than a hundred miles apart. Each was wasting the very material from which the other manufactured its output. Letters were at once written from the office to each of these manufacturers, with the result that they entered into a mutual waste-buying arrangement that was greatly to the advantage of both. From the viewpoint of the Government forester, however, the most important feature of this exchange of raw material was the fact that only half as many birch trees were required to feed these factories after the professional waste-saver had interposed as were demanded before.

Not infrequently, in the course of a personal investigation of a manufacturing plant, close visual contact with processes suggests to the alert eye of the Federal investigator means of waste-saving that would otherwise have escaped attention. When Mr. Sackett was passing through a large plant devoted to the manufacture of wooden pulleys he suddenly stopped before a boring machine and said to the proprietor of the concern:

"Instead of building all your smaller pulleys into wheels of solid wood and then cutting out the center with a big borer, why do you not build round the center, leave a square hollow inside, and thus save thirty to fifty per cent of your pulley wood, which is growing scarcer and dearer each year?"

"Because," was the quick reply, "it is a mighty hard trick to bore a square hole into a round one. We've tried it and spoiled a lot of good material that way."

"Of course," returned Mr. Sackett, "you can't do it with an ordinary borer of this type. There is a special machine made for just that purpose—and it is not very expensive either. I will give you the address of the shop that makes them."

Because of this suggestion that pulley manufacturer is now saving nearly fifty per cent of his material used in the manufacture of the smaller sizes of pulleys. In many other instances the Office of Wood Utilization has been able to effect large and permanent savings of valuable materials through suggesting new and improved types of machinery; in fact, it might be said that the machinery used in any industry is nearly always considered as a cardinal factor in the solution of the waste problem.

The Office of Wood Utilization does not play any favorites. Its policy is pronounced on this point. All the information that it gathers is at the service of the entire wood-using public. Its facts are not collected by stealth or secret-service methods, but openly and aboveboard; consequently, when the office discovers that some firm or individual has turned a clever trick in the utilization of waste, it has no compunctions about giving the entire public the benefit of that discovery. If it is considered of sufficient importance it is briefly described in a "news note" and sent to all the manufacturers and trade journals likely to be immediately benefited by it.

The investigation of the wood industries of a certain Southern state disclosed the fact that one of its wagon factories was selling its hickory dust. Hickory spokes and other parts of wagon gear made of this wood are polished by the use of sanding belts. In every instance excepting the present one, this fine dust has to be scooped up and thrown away at an outright expense. Therefore, when the Federal wood-utilization expert found that this factory was selling its hickory dust he promptly started an investigation—for the utilization of sawdust is regarded as a permanent and standing problem in the Office of Wood Utilization. It was found that a shrewd man living in the locality of the wagon factory had discovered the value of this hickory dust as an ingredient in floor cleansers and jewelry polish. At once he began to drive a thriving trade as a dust broker, selling this queer commodity to the manufacturers of floor cleaners and jewelry polish. Now every wagon manufacturer in the country knows the value of his hickory dust and where it can be sold.

"Hickory," declares Mr. Sackett, "is undoubtedly our most indispensable wood and it is growing scarcer and dearer with every passing year. Nothing should be left undone that may prevent the waste of a particle of it. More than thirty thousand cords of good hickory are used every year by the great meat-packing houses to impart the hickory flavor to certain brands of smoked hams and bacon. Then, to give a still finer aroma to these meats, mahogany sawdust is sprinkled over the hickory wood in the smokehouses. Though this hickory-mahogany smudge certainly does give the meat a delicious flavor that perhaps costs the consumer an additional ten cents a pound, at the same time it seems to me that this sacrifice of thirty thousand cords of good hickory wood—so indispensable for the spokes of wagons, carriages and automobiles—is lamentable. This office indulges the hope that such a sacrifice of hickory can be eliminated with entire satisfaction to the great meat-packing houses. Possibly this may be done through the use of the sawdust—not the sanding dust—from the sawpits of the mills where the hickory logs are cut into materials for the factories, as well as from the wagon factories themselves. At any rate, we are working on this problem and have strong hopes of solving it before we quit. We want to save that thirty thousand cords of good spoke hickory if possible."

The Demand for Osage Orange

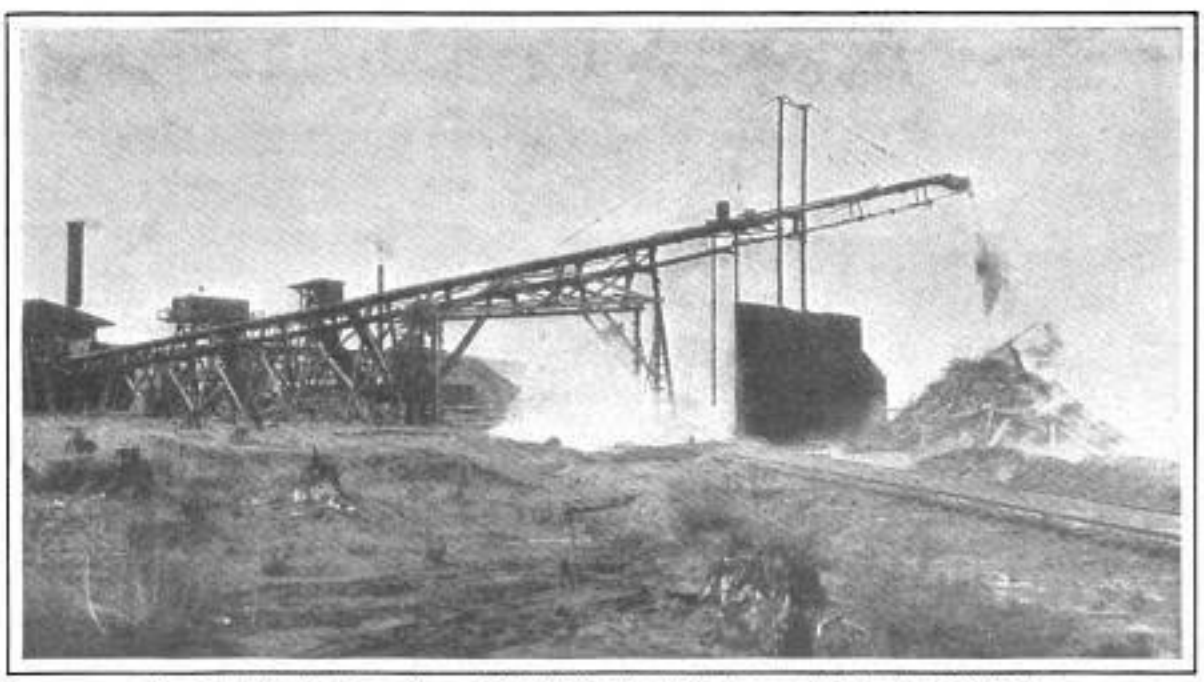
MANY of the largest problems that are put up to the Office of Wood Utilization properly come under the head of Supply and Demand Questions. A problem of this character generally calls for an extensive and costly investigation; but the intrinsic merit of the problem is the only thing considered.

Recently a representative of the National Wagon Manufacturers' Association called on Mr. Sackett and asked:

"How much osage orange or bodark timber is there in this country?"

Evidently he expected an immediate answer in definite figures, but he received this reply:

"I don't know; why?"



"Because we've got to know," responded the wagon manufacturers' representative. "In the first place, there is no timber grown that will take its place in the manufacture of wagon felloes for those sections of the country where it rains for a few months and is hot and dry for the rest of the year. Next, it seems to be getting suddenly scarce and the price is climbing higher and higher; in fact, it has every symptom of having been cornered by a trust. Right now it costs us three times what it did a few years ago. We've got to find out how much of it there is, whether it's been cornered and what is the future outlook for the supply. You see the farmers in the arid states simply refuse to accept any substitutes for osage orange or bodark wagon felloes. They're willing to pay a premium of fifteen dollars for a bodark wagon. It's about the biggest question we've been up against in our association, and we've got to find out where we're at."

"I'll try and find out for you," answered Mr. Sackett; "but it's too big a question to be answered in a day or a month—it will take time and travel and investigation."

"If we find the supply is going to pinch out on us," remarked the man from the Wagon Manufacturers' Association, "we've got to start in on a campaign of education to drill out of the heads of those Texas and Southwestern fellows the notion that nothing but bodark will do for wagon felloes."

"Or, perhaps," suggested Mr. Sackett, "get the men who grow that kind of wood to grow more of it—or, if that does not seem feasible, find another wood that is really just as good under actual test and not so expensive."

The investigation was started at once. First, it was definitely determined that the preference for osage felloes in the arid regions was not a mere prejudice; that, in the case of a wagon having osage felloes on its front wheels and those of oak on its rear wheels, the osage felloes were in sound and serviceable condition while the oak felloes shed their tires and fell apart. The investigation also disclosed that the osage wood, of timber size and character, is mainly produced in a restricted region in Northeastern Texas and Southeastern Oklahoma; and that, considering its present consumption, the bulk of it is bound to be gone in ten years. Also it was found to be uncontrolled by a trust. The wagonmakers found out where they were "at"; and that if they hoped to have anything like a permanent supply of this wood they must encourage the planting of it. The fruits of the investigation, however, were finally presented in a fourteen-page bulletin covering every phase of osage-orange-wood utilization.

The Sawmill's Necessary Shame, Which is Passing With Improved Methods of Utilization

Editor's Note: This is the first of two articles on wood waste. The second will appear in an early number.

JAN TINGLOFF

By James B. Connolly

ILLUSTRATED BY ANTON OTTO FISCHER

SHE came of good people, but they died off too soon. All she knew of life, and especially of men, was what she learned in the dance-halls near the waterside; and it was a hero of the dance-halls she married—a handsome fellow, who dressed like a tailor's model and left everybody to guess where he got the money to do it.

She thought it was for love when she married this fellow and for some little time thereafter; but she was only seventeen on her wedding day—and at seventeen a girl probably does not know much. At twenty-two, when this story opens, she surely knew more. Her husband was then lessee of a transients' lodging house on a side street near the waterfront. She took care of the rooms upstairs, while he ran what the signboard said was a poolroom in the basement.

Jan Tingloff, knowing nothing of all this, but seeking a room handy to the waterfront, came along one day and noticed the Rooms-for-Rent sign. A woman who preceded him like a discouraged shadow showed him the room, but it was to the man in the basement that he paid the money. "Yes; I take the rent—always," this man said; and his eyes brightened as Jan pushed the money across the cigarcase at him. And he wore rings out of all keeping with the dark little place; but he had a pleasant smile for Jan and Jan smiled back at him; for Jan was one of those friendly natures who prefer to be pleasant, even to a man whose looks they do not like.

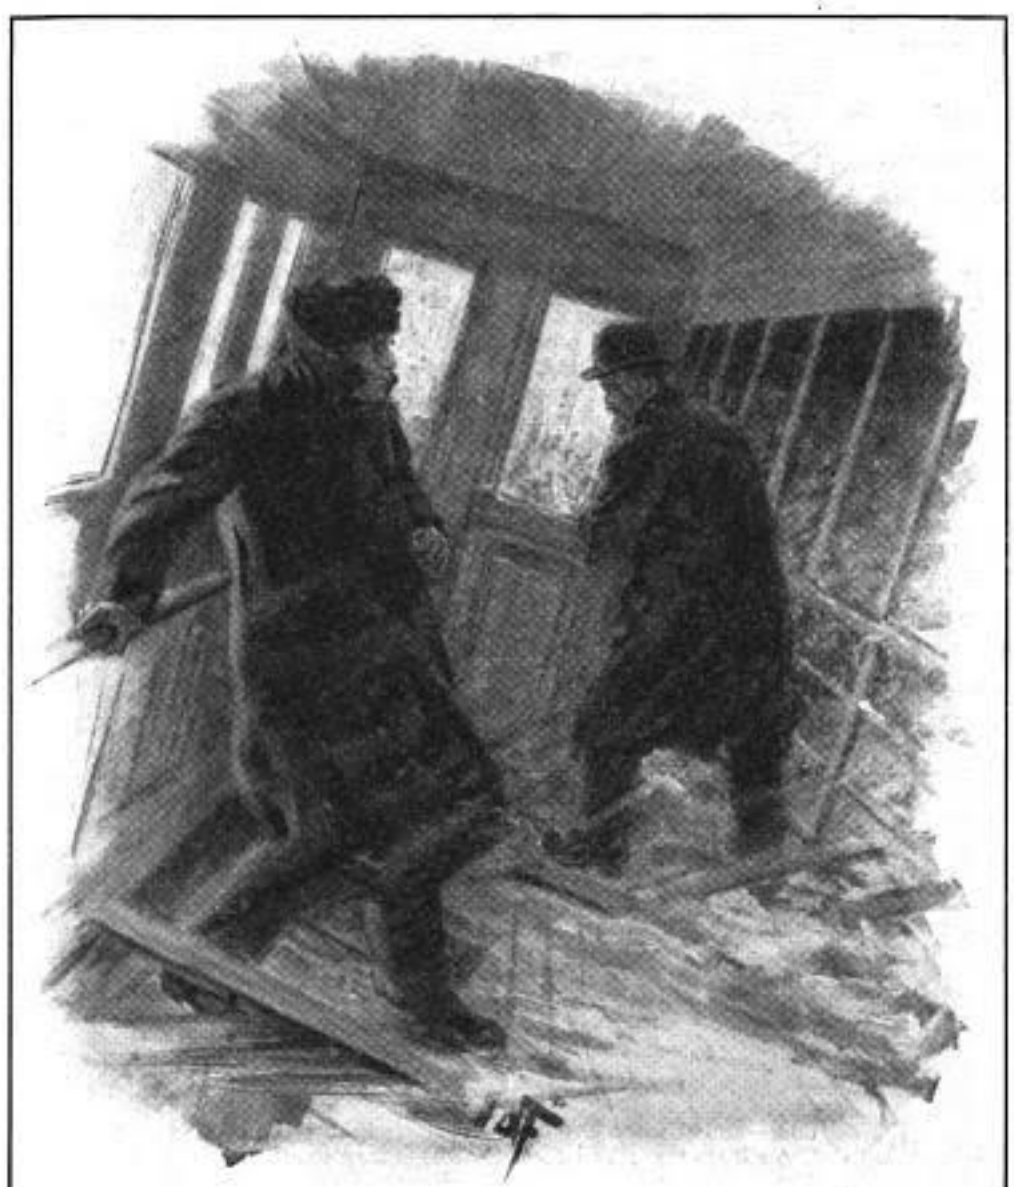
Jan Tingloff slept in his new quarters that night. He saw nobody connected with the house as he passed out in the morning; but that evening as he opened the front door he heard a cough. It was a woman's cough and dimly he saw a woman's form—a rather slender form. Jan's senses were the kind which see a thing large at first and then go back for details; and he hurried to close the door so that the cold November wind would not endanger the poor creature further. As he closed the door she said:

"Good evening."

Jan hurried to take off his hat.

"Good evening, ma'am."

"You go off early mornings, captain?"



"Yes, ma'am." He peered into the twilight of the hall and saw a hand lighting the suspension lamp. "But I'm not a captain, ma'am. I was a seafaring man one time; but I am a ship-carpenter now in a repairing job on a big coaster in the drydock, and I have to be over there early to get my gang started."

She was turning the wick of the lamp high and then low, and high again, and Jan was vexed to think he had not offered to light the lamp for her in the first place, especially as he now recognized in her the same sad-eyed woman who had showed him his room the evening before. It was twilight then, too, but she had lit no lamp in the hall or in the room, and Jan guessed why and did not blame her for it. The furnishings here, as in his room, were shabby.

Jan began to feel a pity for her. There was that in the curve of her back which caused him to address her with unwonted gentleness—and ordinarily Jan was gentle enough for anybody's taste. Yes, she was the same woman; but if he had met her anywhere else he would not have known her. She was now all tidied up. Her clothes were fresh, her shoulders had lost their droop. Her face was less pale and there was a glow in her eyes.

Jan's room was on the second floor and now he ascended the stairs to go there. At the top of the stairs he glanced back; but catching her looking at him he looked quickly away. From the darkness of the second-floor hallway, however, he could peer down and she could not see him. She was still there, standing under the lamp which was now at full blaze. One arm had been raised high in regulation of the wick and now she raised the other to steady the lamp, which was swinging. Her figure was in the shadow from the waist down, but her bust, her neck, face and long, slim hands were in full light.

"I'd never took her for the same woman—never!" thought Jan.

"Don't You Open Your Mouth When You See Her"

Next evening Jan saw her again, this time in the narrow second-floor hallway near the stairs. She shrank against the stair-rail to let him pass. Jan drew up against the wall. She mutely indicated that he should pass.

"After you, ma'am," said Jan, and resolutely waited.

"Thank you," she said, and passed on. At the head of the flight of stairs she turned her head. Jan was still there.

"Is your room all right?" She asked the question hurriedly, awkwardly.

"All right, ma'am."

"And not too noisy for you here?—the basement noise, I mean."

"Noisy? Huh! What's any noise they can make to the roar of wind and sea? And a ship-carpenter, too, ma'am—he soon gets used to noise."

"Of course." She glanced furtively at him. "Good night." She hurried downstairs.

That night when Jan, who read romantic fiction to relieve his loneliness, laid down his stirring medieval tale to go to bed, he did not follow up the intention with immediate action, as usual.

By-and-by he raised the window-sash; and the cool, damp sea-air feeling good he leaned well out to enjoy it. It was a cloudy night, with a touch of coming snow in the air; but for all that a night to enjoy, only for the racket ascending from the poolroom.

"I don't think much of those people down there," thought Jan as he lowered the sash all but six or eight inches for fresh air and picked up the alarm clock from the rickety dresser. "I wonder if she's one of 'em?" And he began to wind the clock. "But sure she ain't—sure not."

Jan had been holding the clock absently in his hand. Suddenly he set it down and scolded himself—"Jan Tingloff, remember you has to be up at six in the morning!"—and undressed, blew out the light and slid into bed, and tried to go to sleep. And he did after a while; but his last thought before he fell into slumber was: "Who'd ever think one day a woman could grow so young-looking the next day?"

. . . . . .

Many an evening after that Jan met the landlady on the stairs or in the hall, and always she stopped to ask him how he was coming on with his ship; but never any more than that or a brief word as to the weather and his comfort, though there were times when Jan felt he would like to become better acquainted—times when he even had a feeling that if he had asked her to sit down somewhere for a talk she would be willing. Jan had learned, however, that she was married. It had been a shock to learn that. It had come about by his noticing after three or four days the plain gold ring on the wedding finger. He had kept staring at it until she could not help remarking it; and by-and-by, in a casual sort of way, she had told him she was married.

"And is your husband living, ma'am?" asked Jan.

"He's living—yes," she answered slowly.

That made a difference. Even though a man didn't know anybody in the city except the men he worked with and it was terribly lonesome of evenings—even so, her being married made all the difference. And she must have been a wonderfully pretty girl once—and was pretty yet, now he had a chance to look good at her. Pretty—yes; but—well, Jan didn't know what it was, except that she was all right. Jan knew he didn't know much about women, especially strange women—and he knew, too, that he never would; but he would never believe she wasn't all right—never!

Yes, it was pretty lonesome at times; and there was the girl who roomed on the top floor. Jan was thrilled by alluring glimpses of her in the half-dark recesses of the back halls, but the glimpses remained only glimpses after he saw her one Sunday by daylight. Only then was Jan convinced that she painted. She was a little too much and he took to dodging her. Yet it was a pity—oh, a pity! and Jan, still thinking what a pity, was going out for a lonesome walk one night, when who should meet him on the front stoop but that same top-floor girl! And no sliding by her this time. She nipped the lapel of his coat with a dexterous thumb and forefinger.

"Why, hello, cap! Where yuh goin'?"

"Nowheres."

"Then you got time, ain't you, to buy a girl a glass o' ——" She stopped and winked sportively.

"Glass o' what?"

"Why, ginger ale!" She laughed at his surprise. "You thought I was goin' to say beer, or maybe somethin' stronger, didn't yuh? But I don't drink no hard stuff. No. An' I was dyin' for a drink o' somethin' when yuh pops out that door. An' I know yuh ain't any hinge."

"How do you know I ain't a hinge?"

"Oh, don't I? Leave it to me to pick a sport from a piker."

"But I'm no sport either."

"You could if yuh wanted tuh. An' yuh ain't any hinge, even if they do say you're a Dutchman. Come on an' let's go in back an' have a couple o' bottles o' ginger ale in Hen's place."

And Jan followed her into the private room beyond the poolroom—the room to which, as he had gathered before this, the street girls of that section steered drunken sailors. The ginger ale was brought in by the proprietor himself. Jan threw down a ten-dollar bill. Jan had a good many bills with him that evening—his month's wages; and seeing it was the fashion round there to show your money when you paid for anything, why, he'd show them—even if he was a Dutchman—that he could carry a wad too.

"Say, cap, but yuh must be drawin' down good coin?"

"Oh, a boss ship-carpenter gets pretty good wages." And with one splendid sweep Jan emptied his glass.

"I should say yes. An' there's tinhorners round here that if they had half your wad Hen'd have to ring in the fire alarm to put 'em out—they'd feel themselves such warm rags. But what d'yuh say to another ginger ale?"

"Sure," said Jan, and called aloud for them. And again Hen brought in the ginger ale in two long glasses, but also with two empty bottles to show Jan by the labels

Digitized by Google

that it was the real imported and no phony stuff; and Jan said, "I know! I know!" as he paid and waved Hen away.

A door led from this back room into the lower back hall of the house, and in the shadow of the back hall Jan thought for an instant that he saw the landlady's figure; but he wasn't sure. Two minutes—or it may have been five minutes—later, a boy whom Jan had noticed round the house came into the room by way of that same door and said to the girl:

"Mrs. Goles wants to see you a minute."

"Tell her I got no minute to spare—not now."

The boy went out and quickly came back.

"Mrs. Goles says for you to come out and see her or she'll have the policeman in off the beat. He's at the corner now."

The girl went out.

"Who's Mrs. Goles?" asked Jan of the boy.

"Why, she's the landlady."

"Oh!" said Jan. So that was her husband, the handsome proprietor with the evil eyes. "Poor woman!" muttered Jan, and absent-mindedly drank his ginger ale.

The boy was still there. "Where is Mrs. Goles now?" asked Jan.

The boy jerked his head. "Out there on the back stairs."

Jan stood up. "Here!" He handed the boy a quarter. "A wonder a boy like you hangs out round here!"

"I run Mrs. Goles' errands. I been runnin' 'em since I was a kid. My mother used to work for her mother."

Jan was heading for the side door, the door which led into the alley.

"Will I tell her you're comin' back, mister?"

"Tell who?"

"Why, that girl you was with."

"Tell her nothing. Nor"—Jan nodded his head toward the poolroom—"him. Better go home. This is no place for a good boy like you."

Jan went out by the alley; and from there, after peeking to see that nobody was looking out of the poolroom windows, he stepped quickly up the front steps of the house.

Cautiously he unlocked the door. He could hear voices, but not distinctly. Quietly he tiptoed toward the head of the back stairs. It was Mrs. Goles talking.

"Didn't I warn you again and again never to bother him?" Jan heard.

"An' why not?"

"Why? He's a lodger—that's why."

"Is that why? Say, but ain't you takin' an awful sudden interest in yer lodgers though! Are yuh sure you don't want him for yerself? Are yuh sure he ain't something more than a lodger?"

"You—you ——"

"Me—me! Yes, me. D'yuh think I ain't been on to yuh? D'yuh think I ain't seen any o' that billy-dooin'—yuh an' him upstairs in the entryway—huh? An' d'yuh think Hen ain't wise too? D'yuh think he gave me the top-floor room for nothin'—huh? Oh, yes; we're a couple o' come-ons—Hen an' me—oh, yes! Run along now, Salomey—he's there, waitin' for me. D'yuh hear—waitin' for me! They all fall when yuh play 'em right. All of 'em. Thought yuh had'm to yerself—huh? Well, guess different next time; for he's out there waitin' for me—the soft-headed Dutchman! Beat it! Beat it when yer gettin' the worst of it. An' talk any more about a policeman—an' see what Hen says to it!"

Jan could hear Mrs. Goles running up the stairs behind him. He hurried up, intending to get to his room and hide away before she knew; but it was the last key of the bunch which fitted the lock; and before he had the door opened she was up with him.

She turned the hall light up to see him better.

"Weren't you downstairs in the back room a minute ago?" she asked at last.

"I was; but ——" Jan reached up a heavy hand and rubbed his forehead. "I was—I know I was; but ——" somehow he was feeling bewildered.

She drew nearer to him.

"Come nearer the light. Stand where the light will be on your face. Let me see your eyes. There—you can't keep them open. Did you drink that second glass of ginger ale—after it was brought in all opened up? Never mind trying to speak—just bow your head. You did? Oh, you poor innocent boy! Here—hurry into your room. And wait there. I'll be right back. Light the lamp if you can while you're waiting."

Jan managed to light the lamp.

She was soon back with a bowl of something hot which she held to Jan's lips—a nasty-tasting stuff. While he stopped once to get his breath she stepped to the door, took the key from the outside and set it on the inside. She stepped to Jan's side again. "Finish it!" she ordered. "Every drop. There—but sh-h!—hear 'em?"

"Hear what, ma'am?"

"The footsteps—coming upstairs. Creeping up. Hear 'em?" She jumped to the light and blew it out. She jumped to the door and turned the key.

"Oh-h!" Jan had fallen backward on the bed and now was rolling from side to side. His stomach was griping him like a burning hand.

"Hold in for a minute if you can!" she whispered.

Nausea uncontrollable, as it seemed to Jan, was taking hold of him when a knock came on the door. "Sh-h!" she warned, and Jan controlled himself. He wanted more than ever to vomit, but there came another knock on the door—and another. And then the knob was turned.

A silence then; and then a voice—a man's voice: "I told you you were crazy. He felt dizzy and went out into the street for some fresh air. You shouldn't 've left him once he got the stuff into him. Take a look round the block. He's probably lying in the gutter somewhere with that load into him."

"Sh-h!" said Jan. "Sh-h! You Mustn't"

The voice stopped, the steps moved, the stairs creaked. And Jan's tortured stomach was allowed its relief. And while he retched in the dark Mrs. Goles held his head and, soaking a towel in the water-jar, bathed his forehead and face and neck, and kept wetting the towel and bathing his head with the cold water until at last, with a grateful sigh, Jan stood up and said:

"I think it's all gone now."

"That's good. So I'll be leaving you. And you ——" They had been talking in whispers, but at this point her voice broke into a cough. When she spoke again her voice was husky and pitched in a higher key. "But you—listen! You must leave this house!"

"Why must I leave?"

"It's no place for you."

"And is it for you, ma'am?" he asked her.

"For me? No—nor for any woman. But I'm talking about you. Tomorrow—don't say a word to him downstairs—but tomorrow, when your week's up, take your grip and walk out."

"The day after tomorrow," amended Jan. "Tomorrow's Saturday and I has to be at the drydock. But what will become of you?"

"There'll nothing become of me—no more than before."

"He will beat you?"

It Was the Sound of Breathing, of Suppressed Voices

"Beat me! If he don't any more than beat me!" Jan fancied she was smiling at him in the dark. "But I'd better go. Good night."

"Good night," said Jan. "And I'll see you tomorrow to say goodby."

"Yes," she said. "I'll be about. Good night."

"Good night," said Jan again, and found himself standing at the door after it had opened and closed behind her.

. . . . . .

"I wonder," thought Jan, "if he will beat her!" And he stooped to lock the door. His hand was on the key, but he did not turn it. Who was that? Jan had keen hearing. He jammed his ear against the crack. It was the sound of breathing, heavy breathing, of breathing and tramping, and now—Jan had been listening for perhaps a minute—of suppressed voices.

Jan stepped back to the washstand and poured out a glass of water. He took it at a gulp. He had another. It was cold and bracing to his fevered stomach. He stepped to the door, cautiously turned the knob and slowly drew the door to him. He peeped out.

Under the hall light he saw them—she jammed back against the stair-rail and he with his hands at her throat. His back was to Jan.

"Where is it? Come—give up!" he was saying. Jan could not hear what she said; but the man took a fresh grip and shook her. "Don't tell me anything like that! You gave in at last and got the money off him. Give it up!"

"I did not! I'm not that kind of a woman—not yet. I may be yet if you keep on—but I'm not yet. And he's not that kind of a man."

"You're not? And he's not? And you an hour in his room with the door locked! You got money off him! Give it to me!"

"N-no—no!"

"You lie, you ——" He shifted his grip to her hair and started to drag her along the hall.

Jan stepped softly out, reached his arms round Goles' shoulders, drew them tight against his own chest; and then, holding him safe with his elbows, he ran his fingers down until they felt the knuckles of the other's hands. And then he squeezed. With thumb and forefinger of each hand he squeezed. Jan could pick up a keg of copper rivets with one thumb and forefinger and toss it across the deck of a ship. And now he squeezed. Goles hung on. Jan squeezed. The knuckles began to crack. "G-g-g ——" snarled the other and loosed his grip.

Jan relaxed the grip of his thumb and forefinger, swung the man round, walked to the head of the stairs, raised his left knee, pressed it against the small of Goles' back, shifted his right hand to behind the man's shoulders and suddenly let knee and arm shoot out together. In one magnificent curve, and without touching a step on the way, Goles fetched up on the lower hall floor.

He stood up after a while and made as if to come back upstairs. As he did so Jan made as if to go down.

Goles glared up at him.

"So it is you!"

"Yes, it's me," said Jan. "Come!"

"Come? No! But you wait there, will you? Just wait there and see what happens to you! Wait!" And *even as* he called that last "Wait!" he was running for the back stairs.

Jan turned to her. She was sitting with her back against *the stair-rail.* Her knees were drawn up, and with elbows on knees she was supporting her head in her hands.

"Where is he gone to?" asked Jan.

"I don't know—to get his revolver probably."

Jan bent over to see her face. A great listlessness was all he could read there.

"Would he shoot? Did he ever shoot anybody?"

"Yes—two. But the police never found out who did it. You'd better get out while there's time."

"And won't he shoot you?"

She raised her head to look at him. "No," she answered presently—"not just now. He will some day—that's sure. He promised me that more than once, and he means it; but I don't think he will tonight."

"Then, if ever he meant it, he will tonight," said Jan. "I don't want to get shot; and I'm going. You better come too." She shook her head. "Yes." He put an arm under her shoulder. "Come."

"No, no. I mustn't."

"But you must." Jan put his other arm under her and lifted her to her feet; but yet she lay heavy, half-resisting. "Come," said Jan. "I'll take you out of here—to my mother."

"Your mother?" she repeated, and straightened up; but almost instantly fell back. "Too late!" she whispered.

"What's too late?" whispered Jan.

"Too late to go. Hear him?" Jan heard steps on the landing below; and as he listened and looked the light in the hall below went out. "You can't get out the front door in time now," she said hopelessly.

"There's more ways than front doors to get out of a house. And there's lights to put out up here too." He reached up and turned out the gas. "Come," he whispered, and led her into his room and locked the door.

He groped for the bed, tore off the sheets, twisted them tightly and knotted them together. "There!" he said, and, taking a turn of it under her arms, let her down from the window into the alley. Then he swept into his suitcase a few things from the dresser and snapped it, and dropped it out the window.

He was about to fasten one end of the twisted sheets about the bedpost, to let himself down; but hearing the doorknob slowly turning he did not finish the job. He dropped the sheet, lowered himself by his hands from the window-sill and let go. He landed all right.

"Come," he said, and led the way to the street. At the first corner he turned. At the next corner he turned. At the third corner a cab was in sight. He put her in.

"Do you know," Jan whispered to her, "a good hotel I could tell him to drive to?"

"With me looking as I am? Why, no. Tell him any hotel we can get into."

Jan addressed the cabman.

"I want"—he said it very distinctly, so that there could be no mistake—"a good hotel to take a lady to."

"A lady? And a good hotel? Sure thing," said the cabman. "Jump in."

Jan got in and sat opposite to her. She was restoring order to her hair.

"Did the cabby laugh?" she asked.

"No. Why should he?"

"Why?" Jan saw that she was staring at him. Suddenly her stare was transformed to a soft smile. "Sometimes these cabbies think they're funny."

Presently the cab stopped. Jan looked out. It was a hotel, with a wide door and a narrow one. The narrow door was marked "Ladies' Entrance," and through the transom a red light shone.

"Wait," said Jan.

He went through the wide door to the desk. "I want a room for a lady," he said to the clerk.

"Lady? Sure. Four dollars."

Jan paid the four dollars and registered. The clerk touched a bell. A boy bobbed up.

"I will bring her in by the ladies' entrance," said Jan; but in passing out to the street he caught a glimpse of a room across the hall—a room with tables, and men and women at the tables, and drinks on the tables. He halted for a longer look and went out to the cab finally with a troubled look.

"There's a room for you, but"—he took off his hat and ran his fingers through his hair—"I don't think you ought to stay here." He had put his head inside the cab and was speaking low, so that the cabman should not hear. "I don't think it's a proper place for a lady."

"But"—she almost smiled—"I'm afraid we'll have to put up with it. Look!" She spread wide her rumpled skirt. Her eyes rolled down to indicate her torn bodice. With her fingertips she touched the bruises on her face and the marks on her neck. "And I haven't even a hat on," she concluded with an undoubted smile.

Jan gave in. He paid the cabman, and led her through the ladies' entrance to where the bellboy was waiting. The boy led the way upstairs, opened a door and turned on the light.

"You wait out in the hall," Jan said to the bellboy. "The lady may want hot water and things to clean up. You know? The lady"—Jan tapped the boy on the shoulder—"fell out of a buggy and lost her hat." He handed the boy a dollar bill. "You understand now?"

The boy tucked the bill away. "I'm wise! I'm wise!" He winked at Jan and left the room.

Jan turned to her. "I'll have a few things sent up in the morning."

She was standing straight and motionless in the middle of the room.

"You're good," she said, but without looking at him.

"And—oh, my mother! I almost forgot her. She lives in Port Rock. Tomorrow night I'll put you aboard the boat for Port Rock. And I won't see you till then."

"Not till tomorrow night?"

"I has to be at the drydock early in the morning or they cannot start work. Good night." He was holding his hat very stiffly in one hand. The other hand he extended to her.

"Good night," the woman said, and took his hand and clung to it. Suddenly she lifted it to her lips and sobbed.

A woman crying and kissing his hand, and all done so suddenly he couldn't stop it—Jan was shocked at himself. "Sh-h!" said Jan. "Sh-h! You mustn't."

"I will. You're the first man ever came to the house who didn't look at me as if I was a street-walker. And he tried his best to make me one. And I fought him—and fought him; but not a soul to help me. And a woman can't hold out forever. I'd 'a' killed myself, but I was afraid to die that way. I was beginning to weaken when you came. And if you had been the wrong kind of a man ——"

"Sh-h! Don't say things like that."

"But it's so. And you helped me to get over it. Before I was married I used to dream of a man like you. But him! Almost on my wedding day he began to abuse me."

"No, no!"

"It's true. And when you told me you'd take me to your mother—that was the first message I'd got in five years from a man except what was meant for my harm. But a good mother—I'll tell her so she'll understand."

"Tomorrow is Saturday. Sunday morning you'll be in my mother's house in Port Rock."

She stooped to kiss his hand again.

"Here! Here—you mustn't!"

"I will—I will! And there! And there! And now good night."

"Good night," mumbled Jan. He hurried out of the room and all but fell over the bellboy in the hall. "What you hanging round for?" Jan almost hissed. "Go below."

The bellboy hurried downstairs.

"Say, but that's a new kind of an elopement for this shack!" he exploded to the clerk, and told him about it.

The clerk took a look at the register and read: "'Mrs. H. G. Goles, City.' Now I didn't notice that before. 'Mrs. Goles' he registered, and not himself. Goles? I wonder if that's Hen's woman? Well, if it is he'll get his good and plenty before Hen's done with him."

"Yes, and the police'll get Hen. And, say, that Swede ain't such a gink when yuh get a second look at him."

"I don't know. I didn't get a second look at him; but the way he pulled out that wad —— I charged him four bucks for a dollar-'n'-a-half room. And ——"

"S-st!" warned the boy.

It was Jan, reëntering the office.

"What's wrong?" demanded the clerk.

"Paper and envelope, please," said Jan.

"Oh!" The clerk looked relieved and passed them over. Jan took out a carpenter's thick-leaded pencil and wrote on the sheet of paper: "You must buy some things for the trip on the boat." He looked at the clerk and then at the boy, and went out into the hall, folded one ten-dollar bill and two twenty-dollar bills inside the sheet, sealed and addressed the envelope, and brought it in to the boy.

"You take this up to the lady. Give it to her and hurry away before she can open it. And if you are back in two minutes——" The boy was back in less time. Jan gave him half a dollar and passed out into the street.

. . . . . .

On Saturday evening at six o'clock the Port Rock boat was due to leave her dock. At five minutes to six the first

NOTHING FOR SOMETHING

Sharks That Swim in the Business Sea

ILLUSTRATED BY IRMA DÉRÈMEAUX

THERE was nothing about the pleasant girl at the desk to suggest the shark. She was a light-haired young woman of about thirty, with clear, gray eyes, set widely apart, and narrow lips that closed tightly on white, sharp teeth. She was dressed in a brown tailor-made suit. Her voice was low.
